REPORT OF THE SECRETARY OF THE NAVY.

NAVY DEPARTMENT, *December 5, 1864.*

SIR: In submitting the annual report of the transactions of this department and of the navy, with those of the several bureaus for the year, it affords me pleasure to assure you that the condition of affairs is satisfactory, and that the discipline and efficiency of the service continue to be faithfully maintained. After many years of peace and comparative inactivity, the officers and sailors of our navy were suddenly called to the performance of extraordinary and exacting duties, and during nearly four years of exhausting civil war they have manifested their attachment to the Union and their fidelity to the national flag by rigidly enforcing a gigantic blockade of our coast, by vigilantly patrolling the great national rivers of the interior, and by a succession of ocean and coast-wise expeditions, achievements which have not only added to our naval renown but greatly promoted our national integrity and strength.

When the change of administration took place in March, 1861, the war had already been virtually begun—the forts, and arsenals, and custom-houses, and mints, and navy yards, and national property within the rebel States had been seized without resistance. The retiring administration manifested its inability to assert the national authority, and its disinclination to vindicate the national supremacy, and closed its term, and that of the thirty-sixth Congress, without any preparatory measures for the tremendous convulsion which was even then shaking the Union to its centre and threatening our existence as a nation.

In six weeks after I had entered upon the administration of this department, a blockade, extending over more than three thousand five hundred miles of our coast, was ordered; and for this stupendous work, pronounced to be impracticable by the highest foreign authorities, we had a feeble navy, reduced to the lowest peace establishment, composed largely of sailing vessels, most of which were dismantled or dispersed abroad. Of the limited number of seamen authorized by law, only about two hundred were available at all our naval stations and receiving ships. Many of the officers became demoralized and deserted. In this enfeebled condition, without men, or ships, or ordnance, or resources placed at its disposal, the department was called upon to establish and enforce the most extensive blockade that was ever undertaken to be effectually maintained by any nation.

To make available every naval vessel, to recall our foreign squadrons, to increase our force by building new vessels, and by procuring for naval purposes, from the merchant service, every steamer which could be made a fighting vessel, to enlarge at once the capacity of the navy yards, to put in requisition the foundries and workshops of the country for supplies of ordnance and steam machinery, to augment the number of seamen, and to supply the deficiency of officers by selecting experienced and able shipmasters and others from the commercial marine, were among the important and responsible duties which were precipitated upon the department at that exciting and interesting period.

The measures promptly and energetically adopted caused an immense navy to spring into existence, not to carry on a maritime war, for the rebels had no navy to stimulate our sailors to glorious deeds, nor commerce to reward their activity ; but men, and ships, and ordnance, and supplies were speedily collected for the onerous naval duties needful to sustain our national unity and preserve our national rights.

Besides instituting the extensive blockade of the coast, naval expeditions were organized at the earliest possible period to assert and restore the national authority at important points within the insurrectionary region. The first of these expeditions was organized and sailed from Hampton Roads in August, under the command of Rear-Admiral Stringham, and resulted in the capture of Hatteras, and was the first re-conquest of a strong position which was effected on our coast. This was followed a few weeks later by the victory of Rear-Admiral DuPont at Port Royal, which secured a commodious harbor for the ships of the South Atlantic squadron. The achievements on the lower Mississippi, where Rear-Admiral Farragut dashed open the gates of the passage to New Orleans, and restored to the Union the commercial metropolis of the south, were accomplished the following spring. Those three important expeditions, comprising, in each case, a larger fleet than had ever been fitted out on this continent, and two of them seldom surpassed in naval annals, were planned, organized, and carried into execution in the first year of the war, in addition to an immense blockade, which was at the same time so vigilantly and rigorously enforced that the rebels even then felt and complained of its exhausting severity. Other harbors and places have from time to time been seized and occupied, the last being the bay of Mobile and the fortifications at its entrance, effected by the same distinguished officer who had thrown open the lower Mississippi to uninterrupted navigation two years before. Nor have the prowess and skill of our navy in this unhappy contest, involving the integrity of the Union and our national supremacy, been felt upon the seaboard alone. On our inland waters, at Fort Henry, at Donelson, at Shiloh, at Island No. 10, at Memphis, at Arkansas Post, at Vicksburg, at Port Hudson, and at almost every important place on the Mississippi, the Cumberland, the Tennessee and other rivers of the southwest, the navy has been active in re-establishing the national authority. A fleet of more than one hundred vessels has been put afloat on those waters, and most of them are now patrolling those rivers in the national cause.

It has been the policy of this department, rigidly adhered to under all circumstances, and from which it has not allowed itself to be diverted, never to permit the efficiency of the blockade to be impaired during these domestic troubles. Hence no large squadrons have been maintained on foreign stations. Cruisers and men-of-war have been sent out or ordered to important points to protect American interests, and capture or destroy the few predatory rovers which from time to time have ventured abroad to depredate on our commerce.

THE BLOCKADE.

The blockade of a coast line of three thousand five hundred and forty-nine miles in length, greater in extent than the whole coast of Europe from Cape Trafalgar to Cape North, is an undertaking without precedent in history. During our last war with Great Britain, when that power had eight hundred naval vessels in commission, not a single port of the United States was thoroughly closed. The most serious attempts of the great maritime powers have consisted in endeavors to interdict trade at a few of the principal ports of a belligerent. Immediately after closing the ports of the States in rebellion, and giving that act the character of a blockade, the efforts of this department were directed towards securing several harbors at comparatively equidistant points, as bases of operations for the several squadrons, where our naval vessels could receive their supplies and maintain themselves at their stations and on their cruising ground, without returning to northern ports for repairs and refitments. To have done this would not only have endangered the efficiency, but in some instances might have involved an abandonment of the blockade. To this end there were set on foot various coast expeditions which have resulted in our taking possession of or closing all the ports excepting Wilmington. From various causes, Cape Fear river is more difficult to blockade than any port on the coast of the United States. The two main entrances are forty miles apart, and these two are subdivided into several others, each of which affords an entrance to vessels. The water shoals gradually and regularly to the shore-line, and numerous isolated batteries are erected along the coast, so that a blockade runner of light draught is not under the necessity of making directly for the entrance, but can, by the lead, run close under the land protected by the batteries, and pass in over the bar at leisure. When coming out, a steamer will select her own time, thus securing every advantage, and she can pass either up or down the coast before making an offing, or she may proceed straight out to sea, trusting for her escape to the night and favoring darkness and mists, and the fact that she is under full speed, whilst the steamers blockading must have low steam.

Almost every vessel employed in violating the blockade has been constructed in England with great skill, regardless of cost, and with sole reference to engaging in this illicit trade, the profits of which are almost as remunerative as those attending the slave trade, a kindred traffic, that all christendom discountenances, and the most powerful maritime nations have combined in vain to suppress; yet the slave trade is carried on within limits which measure but a fraction of our extended blockade. The cupidity of English merchants, aided

by their vast resources, together with the advantages derived from those triangular depots of blockade runners and of rebel supplies—the ports of Halifax, Bermuda and Nassau, ports which will always be in sympathy with the enemies of this country—has induced them to engage in this trade. The illicit traffic with the rebels, who are making war upon our government, belongs to that code of commercial morals which prompted the smuggling of opium into China, and the rule of those who engage in it is to trade, legally or illegally. If it be illegal, it is the business of the Chinese and Americans, not of Englishmen, to prevent it.

Many who have failed to make themselves acquainted with the facts connected with the Wilmington blockade have been free and severe in their censures of the manner in which it has been conducted. The intelligent officers of the naval and merchant service who have labored with untiring zeal and assiduity, and watched with sleepless vigilance through weary months of winter and summer, and in all weathers, stimulated by the hope of benefiting their country and receiving its thanks, as well as by every inducement to fame and pecuniary reward, if successful, do not concur in the opinion that the port of Wilmington can be entirely closed by blockade.

Convinced, as this department always has been, that it is necessary to take possession of the entrances, so as to permit our armed vessels of light draught to go inside, no opportunity has been omitted to impress the necessity of joint naval and military operations for that purpose. The navy has been at all times ready to perform its part in such an expedition; but the army has not yet been able to unite in a conjoint movement. Neither branch of the service can expect to be successful in an attack upon this position independent of the other. Were there deep water at Wilmington, as at New Orleans, Mobile, and Port Royal, either of those operations could have been repeated at that point, but by reason of the shoalness of the water, an exclusively naval operation cannot be relied upon to be successful.

WESTERN GULF SQUADRON.

An object earnestly cherished by the navy, but which had been delayed for army co-operation, was the possession of the bay of Mobile. In anticipation that this would receive early attention, Rear-Admiral Farragut rejoined his squadron in January, but the operation was still further postponed for military demonstrations in Texas and on Red river.

Commodore Bell, who had been left in charge, actively co-operated with the army in its movements for the occupation of certain points in Texas.

The possession and occupation of Brownsville, briefly mentioned in my last report, was followed by a like movement at Brazos, Aransas, and Cabello passes, in all of which the naval forces detailed by Commodore Bell, and placed under command of Commander J. H. Strong, afforded all required assistance.

Prior to the occupation of the left bank of the Rio Grande, the mouth of that river had been made the rendezvous of vessels of various nationalities engaged in violating, indirectly, the blockade; the demoralized condition of Mexico, and the mutual rights of the two countries on the river and at its entrance, affording

unusual facilities to the illicit traders. Commander Strong reported some sixty vessels anchored in the Mexican waters of the Rio Grande, carrying on an extensive trade, chiefly in cotton, with the rebels through Matamoras, which had thus suddenly become a great commercial mart. This traffic, which had been prosecuted with success, in consequence of our inability, under treaty stipulations, to completely blockade the Rio Grande, was effectually stopped by the occupation of Brownsville, which was followed by the President's proclamation of February 18, 1864, relaxing, conditionally, the blockade of that port.

But this possession of the several ports of Texas was of short duration. After a few months' occupation the military forces were withdrawn, and the duty of guarding that extensive coast was thus again devolved exclusively upon the navy. Under orders, of August 18, to Rear-Admiral Farragut, the blockade was resumed on the 9th of September, and has been since maintained.

The bay of Mobile, guarded at its entrance by two imposing fortifications, constructed by the federal government in former years, was difficult to blockade, and was one of the principal ports for illicit trade with the rebels. It had been the steady purpose of this department to get possession of that bay as soon as operations on the Mississippi would permit the detachment of a sufficient co-operating military force for the expedition. But repeated co-operative movements having this purpose in view were commenced, and then abandoned for army operations elsewhere. In the mean time the rebels, availing themselves of this delay and of the advantages of this position, proceeded to the collection and construction of a formidable navy, with a view of raising the blockade.

The information received was of such a character that the department deemed it important that Rear-Admiral Farragut should resume his command, which he did, and on the 18th of January arrived off Mobile. It was no part of the plans or intentions of that officer or of the department to await the offensive movements of the rebel commander. To attack, not to defend, was his policy; and it was with some impatience that he awaited the means to justify him in putting that policy into successful operation. Knowing the disadvantage of attacking iron-cased vessels with wooden ones, and that, too, in the face and under the guns of heavy fortresses without a co-operating land force, he deferred the movement until the necessary elements of success could reach him. But in the mean time he stood ever ready to meet and measure his strength with the iron-clad fleet of Buchanan, should it venture to come out. Thus he constantly threatened an attack on Mobile, thereby aiding the army in its general movements elsewhere.

Military co-operation was secured in the early part of August, and two iron-clads from James river, and two from the Mississippi having reached him, Rear-Admiral Farragut, at 5.40 o'clock on the morning of the 5th of August, got his fleet under way and entered Mobile bay, passing between Forts Morgan and Gaines. Silencing their guns as he passed, he encountered the rebel squadron, which by 10 o'clock was dispersed, captured, or destroyed. This engagement, in many respects one of the most remarkable on record, and which added new lustre even to the renown of Rear-Admiral Farragut, was not without serious

loss on the part of his fleet. The most serious of these was the destruction of the iron-clad *Tecumseh*, one of his most formidable vessels, by a torpedo, early in the action, and the loss of her gallant commander, T. A. M. Craven, and nearly all of her brave officers and crew. It was from the *Tecumseh* that the first shot, was fired at Fort Morgan. The total casualties, not including those of the *Tecumseh*, were fifty-two killed, and one hundred and seventy wounded.

After the capture of one of the rebel gunboats by the *Metacomet*, and the retreat of two others under the guns of Fort Morgan, the iron-clad ram *Tennessee*, bearing the flag of the rebel Admiral Buchanan, maintained the contest. For a while the action was fierce and sanguinary. The wooden ships defiantly encountered the *Tennessee*, although her armor was impervious to their guns, while our iron-clads grappled fiercely with their formidable antagonist. The *Manhattan*, with one of her XV-inch shot broke through the armor of the *Tennessee*, and a monitor shot also disabled the steering gear, and thus rendered her helpless. At 10 o'clock she surrendered. Twenty officers and about one hundred and seventy men were captured in this vessel, and ninety officers and men in the *Selma*. The capture of these two vessels, and the retreat of the two remaining rebel gunboats under the guns of Fort Morgan, terminated the glorious battle of the 5th of August.

On the following day one of the iron-clads shelled Fort Gaines with such effect that Colonel Anderson, the commander, sent a communication to Rear-Admiral Farragut offering to surrender. General Granger, commanding the United States military forces was sent for, and the terms of capitulation were signed by the respective parties on board of the *Hartford*.

From this time onward movements were in progress for capturing Fort Morgan, and on the 22d of August, at day dawn, a bombardment was opened from the shore batteries, the monitors and ships inside, and the vessels outside the bay. At 6 a. m. of the 23d a white flag was displayed by the rebels, and at 2 o'clock p. m. the fort was unconditionally surrendered to the navy and army of the United States. A naval shore battery did good service on this occasion.

Fort Powell had been already attacked on the night of the 5th and blown up, the guns falling into our hands.

The capture of Forts Powell, Gaines, and Morgan, and the destruction of the rebel fleet, gave us possession of the bay, and closed the port to all ingress or egress of blockade runners. This was all that was contemplated. Possession of the city of Mobile could not make the blockade more effectual, and without a sufficient co-operating land force, which could not then be spared to take and hold the place, further demonstration was not advisable.

To obstruct naval operations, the bay had been strewn with torpedoes, and as late as the 13th of September Rear-Admiral Farragut wrote the department that he was still engaged in removing them. One hundred it was reported had been placed in the bay by the rebels.

EAST GULF SQUADRON.

The limits of the Eastern Gulf squadron have been extended so as to embrace within its cruising grounds the waters of the Bahamas and the vicinity of Cuba.

On the 7th of August Acting Rear-Admiral Bailey, whose health was suffering from the debilitating influence of the climate, turned over the command of the squadron, by permission of the department, to Captain Theodore P. Greene, the officer next in rank, and came north. Captain Greene continued in command until the 12th of October, when he was relieved by Acting Rear-Admiral C. K. Stribling.

Notwithstanding the sanitary precautions adopted for the health of this squadron, many of the vessels failed to escape the infection of the yellow fever, so much and so justly dreaded, and had to seek a northern climate during the summer. The system of promptly ordering vessels to a healthier locality the moment they became infected has been in its effects salutary, the ravages of the disease have thereby been checked, and the ship's complement soon restored to the usual standard of health.

Although the squadron was temporarily reduced by these withdrawals, no serious interruption took place in the disposition of the blockade, which has continued to be effective. Less frequent captures, and other indications, demonstrate that the traffic and communication with the Florida coast has pretty much ceased.

The monotony of blockade life has, in repeated instances, been broken by boat expeditions and armed incursions for the destruction of salt manufactories, which abound on the Florida shore, many of which are the public property of the insurgents. These expeditions, although apparently unimportant when compared with the great naval achievements which have given renown to our sailors in neighboring waters, have nevertheless inflicted serious injury upon the rebels, by exhausting their resources, and have developed the zeal and energy of our officers and seamen. A number of such expeditions have been organized during the year, and conducted to a successful issue with little loss of life, and without relaxing or neglecting the special and paramount service of the blockade.

In May an expedition was planned by the rebels for capturing or destroying one of our blockading steamers off Appalachicola. The organization consisted of some hundred men led by rebel naval officers. Information of the proposed movement was timely received, and a joint naval and military force was despatched against the party and succeeded in capturing some of them, with six of their seven boats, their ammunition, flags, and accompaniments. Detailed reports of this affair, as well as of others, which are creditable to the officers and men engaged in them, form a part of the appendix to this report.

SOUTH ATLANTIC SQUADRON.

The coast under blockade by the South Atlantic squadron is about three hundred miles in extent, and a considerable portion of it is a network of inlets

and sounds. Within the limits of this command are two of the chief seaports of the insurgents—Charleston and Savannah—cities of wealth and marts of commerce in other days, but the war which they commenced, and which they still continue to wage against the Union, has caused each of them to be sealed up, and has destroyed their wealth and prosperity.

The craving for commerce and luxuries at Charleston, which the rebellion has not extinguished, with the increasing hazards of running the blockade at Wilmington, have prompted some reckless adventurers to expose their fortunes in efforts to elude the squadron of Admiral Dahlgren. Several valuable steamers having been lost in these attempts, the efforts were for a time almost entirely discontinued.

Charleston and Savannah, besides being among the best defended points on the Atlantic coast, possess advantages for a navy, on which the insurgent leaders felt much reliance in the early days of the rebellion. There they have had armored vessels, and rams, and torpedo-boats, or "Davids" and "Divers," elements with which they threatened to achieve success over the open warfare of the naval forces of the Union. Charleston, disaffected without cause, and aspiring without enterprise, having, after long and persistent efforts, succeeded in seducing others to engage with her in assailing the national government, and attempting a dismemberment of the Union, fails to become either a naval or commercial emporium. She has dragged down others without elevating herself, and is fast becoming a waste.

No formidable independent operations, in the form of naval conflicts, have been made by the squadron during the year. A steady, unrelenting blockade has been rigidly enforced, with no attractive and exciting incidents, but which has been effective and exhausting upon the rebels.

In February a detachment of vessels was sent to the St. John's river to aid a military force intended to be thrown into Florida. Rear-Admiral Dahlgren accompanied the expedition in person, saw the proper co-operative arrangements made, and assigned an adequate naval force, which is holding possession of all points on the St. John's occupied by our army. In March a diversion was made at Bull's bay. In May a force was detailed to co-operate in an effort to sever the railroad between Charleston and Savannah. A detachment of iron-clads crossed Stono bar in July to assist General Foster in a demonstration upon the rebel works on Stono river and James's island. Rear-Admiral Dahlgren conducted the naval force in person. In these and other military movements the navy has been always active and ready to extend cordial co-operation to every army operation.

In February permission was given to Rear-Admiral Dahlgren to leave his squadron in command of Commodore S. C. Rowan. On resuming his duties in May, he found that General Gillmore had been called, with the greater part of his army, to another field, leaving behind, however, a sufficient defensive force when sustained by the navy. The withdrawal of so large a portion of the military force necessarily put a stop to further serious demonstration against Charleston.

The retention of the harbor, as well as the entire safety of that coast, depended thenceforward mainly on the iron-clads. They were indispensable for the continued possession of Morris island by our troops, and they could not have been withdrawn without putting in jeopardy the blockading fleet which, as well as the land force, would have been assailed by the armored rebel vessels. The capability of the monitors to hold position off Morris island had been controverted by the former intelligent commander of the squadron, who denied its practicability, and had deemed it his duty in June, 1863, to enter a protest against it. His representations, with those of the officers then in command of the iron-clads, that those vessels could not remain off the harbor, nor nearer to that point than North Edisto, with other suggested difficulties, caused the department to consider well its purpose before carrying out the original order, that the monitors should remain inside the bar and off Morris island, as the only effectual method of entirely closing the port, and making further demonstrations.

The views of the department were sustained by other naval officers of judgment and ability. Younger officers also made a voluntary tender of their services, as well as some of those who had doubted, each offering to take the risks which the great stake justified; while the sailors, always ready for any service or to encounter any hardship, imitated and emulated their example.

The result has been that Rear-Admiral Dahlgren has kept these vessels for seventeen months where it was insisted they could not remain, to the great injury of the original seat of the rebellion. The work has been irksome and laborious, unremunerative, and perhaps not sufficiently appreciated, for it has been quiet and undemonstrative, without those occasional captures which, before taking possession of the harbor, enlivened and rewarded the officers and crews.

Intelligence that the rebels were strengthening Fort Sumter, building bomb-proofs and mounting heavy guns on the channel faces, led Rear-Admiral Dahlgren early in the summer to entertain the thought of attacking that fortification and attempting the passage with his iron-clads. It was a question of great responsibility, for the assault, if made, would draw upon the vessels the concentrated fire of many powerful batteries; he therefore called a council of his officers in command, and after a full discussion, a large majority deemed it, under the circumstances, unadvisable. It was consequently abandoned.

Several creditable incursions have been made at various points within the limits of this command, resulting in the discomfiture of the rebels. Details of these, as of those of the other squadrons, are appended to this report. Occasional assaults have been made upon our vessels off Charleston by torpedo-boats, and in one instance with success, by sinking the steam-sloop-of-war *Housatonic*, but fortunately with little loss of life.

NORTH ATLANTIC SQUADRON.

The number of vessels and officers and men employed in the North Atlantic squadron exceeds that of any other, and its importance is certainly not less. In

addition to blockading the only remaining port of commercial intercourse in the rebel States, on this squadron has devolved the duty of guarding and holding possession of the great inland waters of North Carolina and Virginia, and an extensive co-operation with the armies which are threatening Richmond and its vicinity.

In order to secure the most thorough and efficient discharge of duty that is possible in every department of this squadron, and especially that of the blockade of Wilmington, Acting Rear-Admiral Lee, by direction of the department, established four divisions of the squadron, viz: one on James river, one in the sounds of North Carolina, and two off Cape Fear river and adjacent inlets, each of which was placed under an experienced officer, and Acting Rear-Admiral Lee removed his headquarters in July from Hampton Roads to Beaufort.

For some months previous to May last the rebels had been left in quiet possession of James river for a considerable distance below Richmond, but the progress of the Potomac army towards the rebel capital was the signal for active operations in another quarter. On the 5th of May Major General Butler moved his army from Newport News, under convoy of a naval force which had been assembled for the purpose, up James river, and made the following night a successful landing at Bermuda Hundred and City Point. The movement was quietly performed, and the landing was promptly effected. The absence of a military or naval force on the James river had been improved by the rebels to plant in its bed formidable torpedoes, by which two of the light-draught boats were destroyed.

From the landing of the army of the James in May, a naval force competent to meet the armored vessels and rams of the insurgents, had they made a demonstration, has been maintained on the upper waters of the James. On various occasions sharp but brief engagements have occurred between our vessels and the rebel batteries forming the defence of Richmond.

The naval force had anticipated an encounter with the rebel fleet which had been in the course of preparation for two years, but the military commanders, out of abundant precaution, ordered obstructions to be placed in the channel by sinking vessels for the protection of the large transport fleet that was in attendance upon the army, and which it was apprehended might be disturbed and perhaps endangered in the narrow waters, were a demonstration to be made by all or any portion of the rebel navy. The security of the transports was justly deemed of vital importance to the army, and required to be placed beyond any contingency. Hence this obstruction of the river, in addition to the protection afforded by our iron-clads and other naval vessels, was doubtless a wise military precaution, although it restricted the movements of the navy.

The operations in the sounds of North Carolina have been interesting and important. It had been a cherished idea of the rebel leaders to repossess themselves of the sounds, and to regain the principal places on them, which had been wrested from rebel authority early in the war by the united efforts of the army and navy. Preparations were long in progress for the construction of armored

vessels, and others of light draught, on the Roanoke and Neuse rivers, with intent to descend and drive out from the sounds our fleet of slightly built wooden boats, recapture Plymouth, Newbern, and other points held by our arms, and re-establish rebel power in that quarter. These schemes, though partially successful at the commencement, soon closed in disaster.

Delays in the completion of the armored vessels ordered by the department, and especially intended for service in shallow waters, which were inaccessible to the monitor vessels already built, jeopardized our possession of the sounds. There was also the want of an adequate military force in that quarter.

On the 17th of April the rebels besieged Plymouth, and two days after the rebel ram Albemarle descended the Roanoke river and attacked the wooden gunboats lying off that town. On the 20th the defences were carried, the garrison became prisoners, and the rebels obtained possession of the upper sound. In consequence of army reverses, vigorous measures were immediately taken by this department to prevent further disaster. Captain Melancton Smith, an officer of much naval experience, was sent to the sounds with vessels of heavier armament, and instructed to take command, attack the armored ram at all hazards, and use all means to destroy her. On the 5th of May the ram came out of Roanoke river, and Captain Smith engaged her with his gunboats. The action continued from 4.40 to 7.30 p. m., when darkness intervened, and the Albemarle retreated up the river. Shot fell from her armor apparently without effect, and the efforts to run her down were unsuccessful. Her consort, a small army steamer which had been captured and converted into a naval vessel, was recaptured.

On but one subsequent occasion did the Albemarle make her appearance, and then she quickly retired on being fired at. As there was no known cause to prevent her making another demonstration, a competent naval force was always in readiness to meet her. But the inactivity of awaiting her movements was irksome and paralyzing, and her destruction by other means became an object.

Lieutenant W. B. Cushing, a young officer who had on previous occasions gained the admiration of the department by his daring and adventurous heroism, was selected to destroy the Albemarle by a torpedo, properly arranged in a light picket-boat, to be placed at his disposal. The torpedo is the invention of Chief Engineer W. W. Wood, and possesses extraordinary power. It was arranged and applied to the picket boat at the suggestion and under the direction of Rear-Admiral F. H. Gregory and his able assistants. Lieutenant Cushing was directed to have the means for carrying out the views of the department prepared, and when these were completed it was quickly and brilliantly executed. With fourteen brave officers and men, who volunteered for the service, he, on the night of October 27, ascended the Roanoke to Plymouth, assailed the ram at her wharf, though guarded by a military force on shore, as well as by her crew, and sunk her. Only himself and one of his party escaped death or capture.

This daring and successful exploit removed the reliable defence of Plymouth. Commander Macomb, senior officer in the sounds, promptly availed himself of the advantages of Lieutenant Cushing's achievement. With the naval force at his command he pressed on to Plymouth, drove the rebels from their rifle-pits and batteries, and on the 31st of October took possession of the place, capturing a few prisoners, thirty-two cannon, small arms and ammunition, thus re-establishing the Union supremacy in the sounds of North Carolina.

From July, 1863, when the rebels were driven from Morris island by the combined forces of Rear-Admiral Dahlgren and Major General Gillmore, and the navy thereby gained command of the entrance to, and possession of, Charleston harbor, so that monitor vessels could remain inside, blockade running ceased almost entirely in that quarter, and was transferred to, and vigorously prosecuted at, Wilmington.

This locality possesses singular natural advantages to resist a blockade, to which the rebels have added others in the way of earthworks, with powerful guns, to cover the blockade runners, and to open on our vessels whenever they come within range. These shore batteries were made to command the several channels and the numerous inlets in that quarter.

The difficulties of closing this port entirely, while rebel forts command the channels, and which none of our ships with heavy broadside batteries can approach, by reason of the extreme shallowness of the water, can be rightly appreciated by those only who are familiar with the locality, and have had experience on that station. Without a co-operating land force, it is not expected that we could close the port of Wilmington. There has been no time within the last two years when the navy has not been ready and anxious to perform its part in such an expedition, for possession of the entrances to Cape Fear river is a necessity to stop entirely all ingress to or egress from that place. Running the blockade at that point has been made a matter of business by foreign capitalists, as well as by the rebels. Such has been and is the stringency of the blockade, that articles of commerce command fabulous prices throughout the whole insurrectionary region, thereby stimulating the cupidity of reckless neutrals. But while a successful trip begets large profits, the blockade has not been violated with impunity. Heavy losses have befallen most of those who have been engaged in the illicit trade. Sixty-five steamers, the aggregate value of which, with their cargoes, will scarcely fall short of thirteen millions of dollars, have been captured or destroyed in endeavoring to enter or escape from Wilmington. Over fifty such results have occurred since Rear-Admiral Dahlgren anchored his monitor fleet inside of Charleston bar and closed that port to commerce.

Some idea of the difficulty of closing the main entrances to Cape Fear river, which are nearly forty miles apart, can be formed when it is considered that with fifty of our steamers, some of them the fastest in the service, stationed and distributed by naval officers of intelligence and experience, off those entrances, blockade runners, watching their opportunity, and availing themselves of dark nights, good pilots and extraordinary speed, succeed in getting into and out of Wilmington.

Acting Rear-Admiral S. P. Lee, who for two years has been in command of this squadron, discharging his arduous duties with intelligence and fidelity, was relieved by Rear-Admiral Porter, who took command of the North Atlantic squadron on the 12th of October.

MISSISSIPPI SQUADRON.

The events of the year have furnished additional proof of the wisdom of the policy which dictated the organization of a powerful and efficient squadron on the rivers of the interior. Its usefulness has been demonstrated on many occasions and in various ways. Whether in convoying transports laden with soldiers or supplies destined for the army, or merchandise and produce of the people; in assisting in repelling attacks upon weak military posts; in rendering more safe the navigation of the streams to commerce and travel; in independent naval expeditions, or in co-operating in extensive military movements, its importance has been manifested.

To obtain possession of the Mississippi, and constantly patrol that great stream from Cairo to New Orleans, is in itself a work of vast magnitude. By it the rebel combinations have been broken, and their organization severed, as it were, by an impassable gulf. The Ohio, Tennessee, and Cumberland rivers have likewise been patrolled. Thus loyal citizens in their vicinity have been protected, refuge has been afforded to those escaping from anarchy and oppression, and partisan bands have been dispersed.

To insure a systematic and vigorous execution of the duties devolving on the squadron, the waters traversed by it have been divided into ten naval districts, each under the command of an experienced officer. While the vessels in each district have their appropriate field of duty, they are held ready to support each other when occasion requires, and can be readily concentrated when an emergency demands it.

The squadron is composed, to a great extent, of boats that had been employed in the carrying trade, but which have been purchased, strengthened, and fitted for war purposes. They are necessarily inferior to naval built vessels in strength; they are lightly armed, and consequently more liable to disaster. But their cost is greatly inferior to that of iron-clad vessels, or those of heavy structure for ocean service. The most extensive operations of the Mississippi squadron during the year have been in connexion with the military expedition on the Red river, which, with the attending incidents, form an interesting page in the annals of the war. The failure of this conjoint expedition to accomplish the important results desired and anticipated are attributable to causes beyond human control, and to the want of success on the part of the military arm of the service. So far as the navy was concerned, the expedition was chiefly one of co-operation with the army. It possessed, however, within itself the elements of success under ordinary circumstances, and had not natural obstacles intervened its history might have been not less brilliant than the record of other achievements of this squadron.

On the 7th of March Rear-Admiral Porter had assembled at the mouth of Red river a formidable fleet of iron-clad vessels and of light-draught wooden boats for co-operation with the army, and was there joined by a portion of Major General Sherman's force in transports, under the command of General A. J. Smith.

The joint forces moved up the river on the 12th of March to form a junction with Major General Banks at Alexandria. In their progress some of the vessels branched off into the Atchafalaya, while the main portion continued up Red river. The rebels were driven in turn from Simmsport and Fort DeRussy, the latter falling again into our possession, with its guns and munitions of war and a few prisoners. Some of the fleetest vessels were despatched to Alexandria with the hope of cutting off the rebels in their retreat, but without success. That place was occupied by our forces, and about the first of April both army and navy commenced to move up the river towards Shreveport. A part only of the naval force could proceed further up the river than Alexandria, and it was with difficulty they reached that point. But the assistance of the gunboats was so essential to success, that some risks had to be taken, and extraordinary exertions were made to pass the vessels over the falls so as to give the required co-operation. Main force had to be used to haul the gunboats. But Grand Ecore was reached without accident, and occupied without opposition. There were at this time indications of the usual rise of the season in the river, and everything promised success. Twenty-three heavy guns had been captured from the rebels since the entry into that river. Springfield landing was designated as the point for the next junction of the co-operating forces, and it was reached at the appointed time, three days after leaving Ecore, by six gunboats and twenty heavy transports. Here they learned that the army under General Banks had met a reverse, and was falling back to Pleasant Hill, some distance below. Rear-Admiral Porter was therefore compelled to turn back, with the full knowledge that in retracing his steps he would be interrupted at every assailable point. The rebels, flushed with their success against the army, availed themselves of every opportunity which offered for harassing the gunboats and transports.

Their cavalry and artillery, taking advantage of the winding stream, moved rapidly from point to point, attacking on every available occasion. But the gunboats successfully fought their way, and from time to time repelled their assailants with terrible slaughter.

On the 14th of April Rear-Admiral Porter got back to Grand Ecore, where he found the vessels which he had left at that point still detained above the bar. The river, instead of rising as customary at this season, had fallen during his absence. The army was preparing to move back upon Alexandria; the water having so receded there was little hope of getting the vessels out, and destruction apparently awaited the best portion of the squadron. But, in the words of the admiral, "Providence provided a man for the occasion." Lieutenant Colonel Joseph Bailey, acting engineer of the 19th army corps, an intelligent and efficient officer, devised a plan for the construction of a series of dams across the rocks at the falls; thus by artificial means to supply that which nature with-

held—a sufficient depth of water for the passage of the vessels. Extraordinary as was the project, and received with incredulity, the mind that conceived it was enabled to carry it into successful execution. Men were set to work; woodcutters collected; quarries opened; and, after some weeks, the undertaking was accomplished. The dams were built, the vessels passed safely over the falls to the delight of the assembled army and navy who had mutually participated in the work, and on the 16th of May Rear-Admiral Porter had the satisfaction of announcing that the fleet was relieved from danger. There is probably in naval history no other instance of such peril and difficulty so successfully and skilfully surmounted.

Congress very appropriately acknowledged the meritorious services of Lieutenant Colonel Bailey on this occasion, and they have been still further recognized by his promotion.

Interesting details of this and minor expeditions on the Washita, Arkansas, Black, and Yazoo rivers, will be found in the official appendix to this report.

Rear-Admiral Porter, having been for nearly two years on arduous and exhausting duty in this command, received leave to return east in the summer, and was subsequently detached in order to take command of the North Atlantic squadron. Captain A. M. Pennock, senior officer on the station, was left in charge. On the 1st of November Acting Rear-Admiral S. P. Lee assumed command of the Mississippi squadron, and entered on the discharge of his duties

POTOMAC FLOTILLA.

The limits of the Potomac flotilla embrace also the waters of the Rappahannock, and at present and during the year have been under the command of Commander Foxhall A. Parker. Upon the flotilla has devolved the duty of arresting the contraband trade attempted to be carried on across the Potomac from Virginia with the lower counties of Maryland, and extending from Alexandria to Chesapeake bay, including the bay itself. It has also been necessary to patrol and guard the Rappahannock. The small craft, which are the vehicles of this traffic, and adapted to it, are well calculated to elude detection. Those engaged in it are reckless, unscrupulous, and unprincipled, so that on no station are greater vigilance and more unceasing watchfulness required than on the part of the officers and men of the flotilla. It is scarcely possible to wholly prevent this species of illicit traffic and blockade running. With so long a line of communication to be patrolled, opportunities will sometimes be found by the contrabandists, who are ever on the watch, and who are aided by sympathizing associates on either shore, to elude detection and capture. Numbers have, however, been captured during the year while in transit; others have been ferreted out and their boats have been destroyed.

At all times and on all occasions the flotilla has given its active and willing co-operation to the military movements. While the army was in the vicinity of Fredericksburg last spring and summer, the services of the smaller steamers on the Rappahannock were efficient and invaluable. They opened communication with the military forces; cleared large numbers of torpedoes from the river;

drove the rebels from its banks; convoyed transports with troops and supplies going to the army, and returning with the wounded and sick from the battlefield. The vessels which are employed in this service are of light draught, and their construction is necessarily slight, consequently those who serve on board of them in a hostile country are exposed to more than ordinary peril. But whether in clearing the banks of the Rappahannock of sharpshooters, or removing from its bed dangerous torpedoes, no less daring and energy have been exhibited than by others in vessels of larger proportions and with greater protection.

PACIFIC SQUADRON.

There has been no material change in the strength of this squadron within the past year. The new steamer *Wateree* joined it, and orders have been given detaching the *Narragansett* and ordering her to the Atlantic States.

Acting Rear-Admiral Charles H. Bell, having had command of the squadron for three years, has been recently relieved by Acting Rear-Admiral George F. Pearson; the transfer took place at Panama on the 25th of October.

No hostile craft has made its appearance in the Pacific, and our commerce has been carried on in its usual channels without interruption, other than that necessarily caused by the measures of foreign powers in an attitude of hostility towards each other.

The blockade of Mexican ports on the Pacific by the French fleet rendered it important for Acting Rear-Admiral Bell to remain several months in that quarter with his flag-ship, in order to look after the interests of the United States. An exception in favor of the steamers of the Pacific Mail Steamship Company, made in the declaration of blockade, gave them the continued use of the harbor of Acapulco as an intermediate depot, and the presence of the flag-ship, or some other one of the vessels at that port, has aided in giving protection to the property of the company against the acts of lawless persons, and inspired those on board the steamers with a feeling of security from assaults of insurgent cruisers from seaward.

About the middle of April Acting Rear-Admiral Bell proceeded from Acapulco to Panama, and thence to Callao, at which port he arrived on the 25th of May, 1864.

Difficulties had arisen between Peru and Spain, which resulted in the seizure, by the naval squadron of the latter, of the Chincha islands, and it was essential that our extensive fleet of guano vessels frequenting that quarter should have within reach an armed vessel of their own country to give aid and security in the event of unnecessary interruption of their interests. The threatening attitude of these two powers induced Acting Rear-Admiral Bell to remain with the flag-ship at Callao from May until the 5th of October. The remaining vessels of the squadron have visited the Mexican and Central American ports, and it is not known that they have failed in any respect to respond to all proper appeals of our countrymen for aid and encouragement, or to observe and scrupulously regard the rights of, and courtesies due to, friendly nations.

Rumors or reports of a rebel privateer fitting out at Victoria, Vancouver's island, drew to that quarter the United States steamer Narragansett from San Francisco. The probability of such a scheme being carried into effect was ascertained to be not greater than that which had but a short time previously drawn the United States steamer Saginaw to that locality. After cruising, therefore, a short time in the Straits of Fuca and Puget's sound, and receiving the friendly assurances of her British majesty's authorities that every effort would be made to discountenance and arrest any proposed violation of neutrality, the Narragansett returned to San Francisco.

WEST INDIA SQUADRON.

The West India squadron, as an organization, has been discontinued. Acting Rear-Admiral James L. Lardner, who had command of it at the date of my last annual report, arrived at Hampton Roads, in the Powhatan, on the 3d of October, in pursuance of orders of the department.

The principal objects for which this squadron was created had ceased to be prominent, and the chief duties originally assigned to it have been transferred to the East Gulf squadron. There have been no depredations committed in that quarter during the past year. The vessels of the squadron have, in turn, given safe convoy to the California steamers over the most exposed section of their route. This convoy has been since, when expedient, extended over the entire route, by detailing an armed vessel to accompany each steamer.

PIRATICAL CRUISERS.

The three English-built piratical cruisers which, under the rebel flag, have, during the last two years, roamed the seas, robbing and destroying our merchantmen, shunning all armed antagonists, and have found refuge and protection, and too often supplies and other assistance in neutral ports, have terminated their predatory career. Their unrestrained warfare has undoubtedly had the effect of diminishing American tonnage, and caused a transfer of American shipping to English and other flags. Whether the maritime nations of the world will be ultimately benefited by this policy of fostering rebel belligerents may well be doubted. We have been compelled to encounter it as one of the incidents of this extraordinary and unnatural conflict. While notoriously engaged in plunder and in the wanton destruction of our merchant sailing ships, these English-built, and almost exclusively English-manned, rovers have never, during their entire piratical career, and of all of their many captures on various seas, sent in for adjudication and condemnation a single ship or cargo. The less bulky and more valuable portions of their robberies were taken on board the corsairs to be sold or covertly transferred in neutral ports, while the stolen chronometers and a few mementoes were retained as memorials of their achievements. All else was destroyed.

The Alabama, eluding our naval vessels at the Cape of Good Hope and Straits of Sunda, after committing sundry devastations, returned westward and proceeded to the French port of Cherbourg. Information of her arrival was

communicated to Captain Winslow, of the Kearsarge, then at Flushing, who at once proceeded off the harbor, and at 10.20 a. m., on Sunday, June 19, the Alabama was discovered standing out, accompanied by a French iron-clad steamer and the English yacht Deerhound. When the Alabama was descried the Kearsarge was about three miles from the entrance of the harbor, and to avoid any question as to the line of jurisdiction, as well as to draw the Alabama off shore, so that if disabled she could not flee in for protection, the Kearsarge stood to seaward until she had attained the distance of about seven miles from the shore. At 10.50 she came quick about and approached the Alabama, and at 10.57 the Alabama commenced the action with her starboard broadside at one thousand yards range. At 11 the fire was returned by the Kearsarge, and the vessels came fairly into action at about nine hundred yards distance.

Captain Winslow says it was soon apparent that Semmes did not seek close action, and fears were entertained that after some fighting he would make for the shore. To defeat this Captain Winslow determined to keep full steam on, run under the stern of the Alabama and rake; but the Alabama, by sheering and keeping her broadside to the Kearsarge, was forced with a full head of steam into a circular track.

On the seventh rotation the Alabama headed for the shore, disabled and at the mercy of the Kearsarge. A few well-directed shots brought down her flag, a white one was displayed, and the fire of the Kearsarge was reserved. In about two minutes the Alabama again opened fire. The Kearsarge replied, steamed ahead and laid across the bows of the Alabama for raking. The fire of the Kearsarge being again reserved, boats were lowered and an officer in one of them came alongside at 12.10 and surrendered the Alabama, which he said was in a sinking condition, and at 12.24 she went down.

The launch and second cutter of the Kearsarge, the only boats not disabled, were sent to receive the officers and crew of the sinking vessel, and Captain Winslow requested the Deerhound, which came alongside, to assist in the rescue. Two pilot-boats were also engaged in picking up the crew. Six officers and sixty-four men were brought on board the Kearsarge. At 3.10 the Kearsarge let go her anchor in seven fathoms water.

The Alabama is reported to have discharged three hundred and seventy or more shot and shell in this engagement, but inflicted no serious damage on the Kearsarge. Thirteen or fourteen took effect in and about the hull, and sixteen or seventeen about the masts and rigging.

The Kearsarge fired one hundred and seventy-three projectiles, of which one alone killed and wounded eighteen of the crew of the Alabama, and disabled one of her guns.

Three persons were wounded on the Kearsarge. The number of killed and wounded on the Alabama is unknown. Seventeen of the wounded, two of them in a dying condition, were brought on board the Kearsarge. One hundred and fifteen officers and men of the Alabama's crew reached the shores of England and France.

The battery of the Kearsarge consisted of seven guns, viz: two XI-inch, one

30-pounder rifle, and four light 32-pounders. That of the Alabama consisted of eight guns—one heavy 68-pounder, of 9,000 pounds weight; one 100-pounder rifle, and six heavy 32-pounders. In the engagement the Alabama fought seven guns and the Kearsarge five.

This has been the only fair and open sea fight which our naval men have been able to secure, as yet, during the war; and it occurred in the English channel, in sight of the two great maritime powers of Europe. In size, armament, and complement of men, the combatants were as near equal perhaps as could have been arranged. Most of the crew of the Alabama were Englishmen, and the gunners admitted to have been picked men of her Majesty's gunnery ship the Excellent.

Some latent remains of pride which belong to the profession, and which animated his earlier and more honorable life while sailing under the American flag, undoubtedly had an influence in inducing the pirate commander to meet a naval antagonist, after his long career of robbery and plunder of unarmed vessels, in the vain hope that it might, if successful, restore to him some portion of the respect he had forfeited, and at the same time relieve him of some of the debasement he has never ceased to feel, even when applauded by those foreign partisans who hated the country he had deserted. But the same dishonor marked his conduct on this occasion as during his whole ignoble career. Before leaving Cherbourg he deposited the chronometers and other trophies of his robberies on shore. When beaten and compelled to surrender, he threw overboard the sword that was no longer his own, and abusing the generous confidence of his brave antagonist he stole away in the English tender, whose owner proved himself, by his conduct, a fit companion for the dishonored and beaten corsair.

Having surrendered, he cannot relieve himself of his obligations as a prisoner of war until he shall be regularly exchanged. He, and each of his surviving officers and crew, whether received upon the Kearsarge or the Deerhound, are, and will be, held to be prisoners of war and amenable to the laws which govern civilized communities. A predatory rover may set the laws of nations, as well as those of his own country, at defiance, but in doing so he must abide the consequences.

The Florida originally sailed from England under the name of Oreto, and under that name she was, on reaching Nassau, brought before the court through the efforts of the American consul, who was satisfied that she was in the rebel interest and intended as a rebel cruiser. The neutral authorities decided in favor of the vessel, which was permitted to proceed. Leaving Nassau she went to Green Cay, where she received on board the armament sent out for her from England, ran into Mobile, changed her name to Florida, and has since, fleeing from all naval vessels, carried on predatory war on American commerce, capturing and destroying unarmed merchantmen, without ever sending in a vessel for adjudication.

In February last, availing herself of a dark night, she escaped from Brest, eluding the Kearsarge, which was off that port. In June she visited the neutral port of St. George's, Bermuda, and remained there nine days, receiving all the coal and supplies necessary for a long piratical cruise. Leaving St. George's on

the 27th of that month, she remained outside, but in sight, for three or four days, boarding all vessels that approached the island. On the 10th of July she captured the Electric Spark, near our coast, while several vessels were cruising for her, but she escaped, and was next heard from at Teneriffe, on the 4th of August. Subsequently, entering the bay of San Salvador, Brazil, she encountered the steamer Wachusett, commanded by Commander Collins, to whom she surrendered, and by whom she was brought in a leaky and dilapidated condition to Hampton Roads. Here, while at anchor, an army transport came in collision with the shattered vessel, which sunk a few days after near the wreck of the Cumberland.

The Georgia, another English-built naval vessel which cruised under the rebel flag, repaired to Cherbourg in February, and thence proceeded to the Mersey, where she changed owners. Her armament was removed from her and she left Liverpool for Lisbon. On the 15th of August Commodore T. T. Craven, of the Niagara, fell in with her in latitude $39^{\circ} 16'$ north, longitude $9^{\circ} 39'$ west, sailing under the English flag. Commodore Craven took possession of the vessel as a lawful prize, and putting a prize crew on board of her, he sent her to the United States.

The Tallahassee, an English-built blockade runner from Liverpool, which port she left in the early part of the spring under the name of the Atlanta, was engaged in violating the blockade, running between Bermuda and Wilmington. I am not aware that any valid transfer of ownership of this vessel has ever taken place, but am induced to believe she is now, while depredating on our commerce, registered as a British vessel in the custom-house at Liverpool. Whatever may be the fact in that particular, this English-built neutral vessel, which had been previously engaged in the unneutral employment of carrying supplies to the rebels who are waging war upon our government, came out of Wilmington early in August, armed, officered, and manned for predatory warfare, and under the command of J. T. Wood, formerly of our navy, commenced the piratical work of destroying peaceful merchant ships, robbing them of money and other valuables, and retaining as trophies of his heroism the stolen chronometers. Information of the operations of this vessel reached the department on the 12th of August, and orders were immediately sent for all the available vessels within convenient distance to start at once in pursuit. Several vessels proceeded to sea that evening, and within forty-eight hours sixteen vessels from New York, Boston, Philadelphia, Newport, and Hampton Roads were in search of her. But she reached Halifax in safety. Instead of remaining there nine days, getting supplies, as did the Florida at Bermuda, the authorities would permit her to receive only a limited quantity of coals, and she was therefore but a short time in that port. The Pontoosuc arrived in pursuit of her a few hours after her departure. She was at last accounts in Wilmington.

THE NAVAL FORCE.

The subjoined statements present a general exhibit of the navy, including vessels under construction on the 1st of December, 1864, with a comparative statement of the navy in December, 1863 and 1864.

A tabular statement is appended of the number of naval vessels, of every class, that have been constructed, or are in the course of construction, since March 4, 1861.

General exhibit of the navy, including vessels under construction, Dec., 1864.

No. of vessels.	Description.	No. of guns.	No. of tons.
113	Screw steamers especially constructed for naval purposes	1,426	169,231
52	Paddle-wheel steamers especially constructed for naval purposes...	524	51,878
71	Iron-clad vessels.....	275	80,596
149	Screw steamers purchased, captured, &c., fitted for naval purposes.	614	60,380
174	Paddle-wheel steamers purchased, captured, &c., fitted for naval purposes	921	78,762
112	Sailing vessels of all classes.....	850	69,549
671	Total.....	4,610	510,396

Comparative statement of the navy, December, 1863 and 1864.

No. of vessels.	Description.	No. of guns.	No. of tons.
671	Total navy, December, 1864.....	4,610	510,396
588	Total navy, December, 1863.....	4,443	467,967
83	Actual increase for the year.....	167	42,429
26	Total losses by shipwreck, in battle, capture, &c., during the year.....	146	13,084
109	Actual addition to the navy from December, 1863, to December, 1864.....	313	55,513

Vessels constructed for the navy since March 4, 1861.

No.	Description.	Guns.	Tonnage
7	Screw sloops, Ammonoosuc class, 17 to 19 guns, 3,213 to 3,713 tons each	121	23,637
1	Screw sloop Idaho, 8 guns and 2,638 tons.....	8	2,638
8	Screw sloops, spar deck, Java class, 25 guns and 3,177 tons each...	200	25,416
2	Screw sloops, spar deck, Hassalo class, 25 guns and 3,365 tons each	50	6,730
10	Screw sloops, clippers, single deck, Contoocook class, 13 guns and 2,348 tons each	130	23,480
4	Screw sloops, Kearsarge class, 8 to 12 guns, and averaging 1,023 tons each	40	4,092
6	Screw sloops, Shenandoah class, 8 to 16 guns and 1,367 to 1,533 tons each.....	74	8,584
2	Screw sloops, Ossipee class, 10 to 13 guns and 1,240 tons each....	23	2,480
8	Screw sloops, Serapis class, 12 guns and 1,380 tons each.....	96	11,040
4	Screw sloops, Resaca class, 8 guns and 831 to 900 tons each.....	32	3,462
8	Screw sloops, Nipsic class, 7 to 12 guns and 592 tons each	71	4,744
23	Screw gunboats, Unadilla class, 4 to 7 guns and 507 tons each....	123	11,661
9	Screw tugs, Pinta class, 2 guns and 350 tons each.....	18	3,150

Vessels constructed for the navy since March 4, 1861—Continued.

No.	Description.	Guns.	Tonnage

2	Single turret vessels, Sandusky and Marietta, 2 guns each.....	4	953
3	Single turret vessels, Ozark, Neosho, and Osage, 2 to 7 guns each.	13	1, 624
2	Casemated vessels, Tuscumbia and Chillicothe, 5 and 3 guns respectively.....	8	768
62		189	73, 988
203	Total.....	1, 631	249, 974

The foregoing tabular statement exhibits the number and description of vessels that have been constructed, or put in the course of construction, for the navy since the institution of active measures for the suppression of the rebellion. Some of them have been built by contract; others by the government, in the several navy yards. If we add to the number those constructed under similar circumstances, and within the same period, that have been lost by shipwreck, in battle, &c., viz: the sloops Housatonic and Adirondack, and the iron-clads Monitor, Weehauken, Keokuk, Indianola, and Tecumseh, the aggregate would be 210 vessels, 1,675 guns, and 256,755 tons.

Picket-boats, and small craft built for especial purposes, are not embraced in this statement.

CONSTRUCTION OF NAVAL VESSELS.

At the commencement of the rebellion the navy consisted of sailing vessels, a few paddle-wheel steamers, and screw vessels with auxiliary steam-power. Among the latter, the principal and most important were the steam frigates,

which, on account of their great draught of water, were unsuitable for any other purpose than that of cruisers on foreign stations as flag-ships, for which indeed they were intended. These vessels had been built to meet the conditions of their day; some of them, the *Mississippi* for instance, had been in service more than twenty years. When constructed the principal object in view was armament, not speed, and they were equal, if not superior, to the vessels of other naval powers. For attacks on forts, when accessible to naval attacks, or to protect troops in landing, they can still render service. Time was required to repair and place in proper condition such of these vessels as were dismantled, and also those which were recalled from service abroad. The sailing men-of-war had become useless for fighting purposes. In the emergency that devolved upon it at the beginning of hostilities, the department resorted to the commercial marine, and purchased every available merchant steamer that could advantageously be converted into a naval vessel, and be used to enforce the blockade.

The want of a class of small, heavily armed, propeller vessels was felt, and the department immediately proceeded, on its own responsibility, and without any appropriation or authorization by Congress, to contract for the construction of twenty-three gunboats, of which the *Unadilla*, *Pinola*, and *Wissahickon*, may be taken as the type. Some of these vessels were afloat, armed, and manned within four months from the date of contract, and participated in the attack on Port Royal; others took part on the lower Mississippi in passing the forts and in capturing New Orleans. These gunboats continue to maintain a good reputation, and their steam machinery gives satisfaction. Well adapted as they are for guarding our coast, a larger description was needed for ocean service, and four vessels of the class of the *Ossipee*, mounting each two guns of eleven inches, were built. There were also four vessels of slightly less tonnage constructed, carrying the same armament, of which the *Kearsarge* is the type. The *Shenandoah* is the type of six vessels, mounting each three eleven-inch guns, all of which sustain a high reputation. The heavy guns mentioned constitute the principal armament of the several classes named, but they each have in addition from two to six guns of less calibre. All of these vessels are screw steamers, suitable for sea cruising; but for the shallow sounds and bays, the rivers and bayous, often narrow and tortuous, another and different class, drawing less water, was found to be necessary, and for them competition was invited. To turn in these frequently restricted channels is difficult, and sometimes impossible, and the necessities of the case suggested the principle of a fighting vessel with a double bow and rudder at each end. Twelve paddle-wheel steamers constructed on this principle were built, some in the navy yards and others by contract. The *Port Royal* and the *Sonoma* are types of this class. An additional number, amounting to twenty-seven, of these double-bowed paddle-wheel vessels have been built, almost all of them by contract. The *Sassacus*, which was distinguished in the attack on the rebel ram in Albemarle sound, the *Metacomet*, conspicuous in Mobile bay, and the *Eutaw*, are types of these ves-

Vessels constructed for the navy since March 4, 1861—Continued.

The foregoing tabular statement exhibits the number and description of vessels that have been constructed, or put in the course of construction, for the navy since the institution of active measures for the suppression of the rebellion. Some of them have been built by contract; others by the government, in the several navy yards. If we add to the number those constructed under similar circumstances, and within the same period, that have been lost by shipwreck, in battle, &c., viz: the sloops Housatonic and Adirondack, and the iron-clads Monitor, Weehauken, Keokuk, Indianola, and Tecumseh, the aggregate would be 210 vessels, 1,675 guns, and 256,755 tons.

Picket-boats, and small craft built for especial purposes, are not embraced in this statement.

CONSTRUCTION OF NAVAL VESSELS.

At the commencement of the rebellion the navy consisted of sailing vessels, a few paddle-wheel steamers, and screw vessels with auxiliary steam-power. Among the latter, the principal and most important were the steam frigates,

which, on account of their great draught of water, were unsuitable for any other purpose than that of cruisers on foreign stations as flag-ships, for which indeed they were intended. These vessels had been built to meet the conditions of their day; some of them, the Mississippi for instance, had been in service more than twenty years. When constructed the principal object in view was armament, not speed, and they were equal, if not superior, to the vessels of other naval powers. For attacks on forts, when accessible to attacks, or to protect troops in landing, they can still render service. Time was required to repair and place in proper condition such of these vessels as were dismantled, and also those which were recalled from service abroad. The sailing men-of-war had become useless for fighting purposes. In the emergency that devolved upon it at the beginning of hostilities, the department resorted to the commercial marine, and purchased every available merchant steamer that could advantageously be converted into a naval vessel, and be used to enforce the blockade.

The want of a class of small, heavily armed, propeller vessels was felt, and the department immediately proceeded, on its own responsibility, and without any appropriation or authorization by Congress, to contract for the construction of twenty-three gunboats, of which the Unadilla, Pinola, and Wissahickon, may be taken as the type. Some of these vessels were afloat, armed, and manned within four months from the date of contract, and participated in the attack on Port Royal; others took part on the lower Mississippi in passing the forts and in capturing New Orleans. These gunboats continue to maintain a good reputation, and their steam machinery gives satisfaction. Well adapted as they are for guarding our coast, a larger description was needed for ocean service, and four vessels of the class of the Ossipee, mounting each two guns of eleven inches, were built. There were also four vessels of slightly less tonnage constructed, carrying the same armament, of which the Kearsarge is the type. The Shenandoah is the type of six vessels, mounting each three eleven-inch guns, all of which sustain a high reputation. The heavy guns mentioned constitute the principal armament of the several classes named, but they each have in addition from two to six guns of less calibre. All of these vessels are screw steamers, suitable for sea cruising; but for the shallow sounds and bays, the rivers and bayous, often narrow and tortuous, another and different class, drawing less water, was found to be necessary, and for them competition was invited. To turn in these frequently restricted channels is difficult, and sometimes impossible, and the necessities of the case suggested the principle of a fighting vessel with a double bow and rudder at each end. Twelve paddle-wheel steamers constructed on this principle were built, some in the navy yards and others by contract. The Port Royal and the Sonoma are types of this class. An additional number, amounting to twenty-seven, of these double-bowed paddle-wheel vessels have been built, almost all of them by contract. The Sassacus, which was distinguished in the attack on the rebel ram in Albemarle sound, the Metacomet, conspicuous in Mobile bay, and the Eutaw, are types of these ves-

sels. Eight of this class are built or building of iron, and will have strength sufficient for sea service as well as for inland waters. One of them, the *Waterloo*, sent round Cape Horn, reached San Francisco in September last, and is on duty in the Pacific.

In order to have armed vessels suitable for naval operations on the Mississippi and its tributaries, the department invited plans and propositions from ship-builders and others acquainted with those waters, and the vessels built on those rivers have been chiefly from the plans submitted by parties thus invited. Two of these vessels, built at St. Louis, participated in the action with the rebel ram *Tennessee*, and have done good service in Mobile bay.

The entire class of monitor or turreted vessels has been brought into existence during this war, and the coast and harbor iron-clads have been serviceable in James river, at Charleston, and at Mobile. Modifications and improvements have been made in this class of armored vessels.

The pressure for iron-clads of light draught, which could ascend the rivers and penetrate the sounds and bays along our coast, was felt to be a necessity. The operations of our armies in the vicinity of the inland water and adjacent to the rivers required the constant presence of gunboats. But the men thus employed, as well as the magazines and machinery of the vessels are exposed, especially in the narrow streams with high and wooded banks. Some vessels, and not a few valuable lives, have been lost by these exposures, and in order to afford all possible protection to the gallant men who encounter these dangers, the department considered it a duty to provide armored vessels of light draught for their security. Contracts were entered into for the construction of twenty vessels on the monitor principle, each to carry two 11-inch guns, in order to be efficient, and to draw but seven feet of water.

It was ascertained, however, when the first two approached completion, that their draught of water was more than was intended. The heavy armor and the two 11-inch guns, with the machinery to give them proper speed, involved the necessity of enlarging the capacity of each of them. When making these necessary alterations, it was deemed advisable, under applications from some of the commanders of squadrons for boats that should present but a small rise above the surface of the water, to dispense with the turrets in five of these light draught vessels, with a view to special operations. The remaining fifteen were ordered to be enlarged by raising their decks, thereby giving them additional tonnage and greater draught and making them more efficient, but in other respects carrying out the original design. This work is now being performed, and most of the vessels are near completion.

The exigencies of the times and the necessities of the war have stimulated the inventive faculties of our countrymen to vast improvements in vessels, in engines, in ordnance, and projectiles. That in some instances they are not at first entirely successful is not surprising. Mistakes and even failures will occur. In nearly every class of vessels that have been built, and especially those that are armored, more or less alterations have been found necessary while they were being constructed. Only two of the monitor class of vessels—the

Dictator and Puritan—are proposed for sea-service.* Their success, of which the inventor and builder is sanguine, is among the experiments that the period and the exigencies of the country have imposed upon the department.

Four turreted vessels have been built in the navy yards of wood and cased with iron, differing therein from the original monitors, which are exclusively of iron. One of them, the *Monadnock*, now in commission, has performed her trips from Boston to Hampton Roads with entire satisfaction, giving assurance that this experiment, deviating in essential respects from others, is likely to be successful. The draught of water of the *Monadnock* is twelve feet, and with two independent screws she has a speed of ten knots. Four other similar vessels of a still more formidable and invulnerable character are building.

The only sea-going iron-clad ships, besides the two turreted vessels already mentioned, are the *New Ironsides*, built in 1862; the *Roanoke*, one of the old frigates which has been armored, and the *Dunderberg*, a casemate vessel. For this vessel the contractor has promised a speed of fifteen knots at sea.

The department has, on several occasions, invited propositions for iron, sea-going, armored ships, but Congress having declined to make the necessary appropriations, no measures have been taken for their construction.

The vessels recently built, and at present constructing in the navy yards, are of wood, the smaller class of them being gunboats, eight of which are of the class of the *Nipsic*, of 600 tons, mounting one heavy pivot and four broadside guns. There are four of the class of the *Nantucket*, of 900 tons, mounting one heavy pivot, with six broadside guns. In addition to these there are four vessels of the class of the *Algona*, with a tonnage of 1,350 tons, and proportionate armament. All of these vessels have very considerable steam-power, and will, as some of them have already proved, be efficient cruisers at sea.

The immediate wants of the blockade having been supplied by the vessels built and altered in the navy yards, and by purchase of the best merchant steamers capable of bearing heavy armament, the attention of the department has been bestowed on larger and more imposing ships, such as would be formidable not only for home defence but for foreign service. The position and influence of a nation among the great commercial and maritime powers of the world are to a great extent dependent on its naval ability. Limited appropriations have already been made by Congress for vessels of this character. Each succeeding year of this war has produced from foreign ship yards steamers of greater speed to run the blockade, and the reliable preventive of this illicit trade must be found in vessels of increased steam-power. By making them of sufficient size they will be formidable, not only to neutral violators of our laws, but to any enemy. Of the vessels on which some sacrifice of armament has been made to obtain speed there are seven building, three of which are already launched, and the others will soon be ready. Two of these vessels are being built by contract, and five in the navy yards. This class of vessels is represented by the *Ammonoosuc* and the *Chattanooga*. There are also in progress of construction twenty vessels with steam machinery of rather less power, but which are to be much more heavily armed. Ten of these, of the class of the *Illinois*, the *Guerriere*, and the *Java*,

have covered gun-decks, and will carry twenty heavy guns. Two will have a plating of thin iron as a protection from shells. The remaining ten, of the class of the Contoocook and Manitou, building in the navy yards, are of less size but with equal machinery and intended for greater speed. As all of them will be provided with masts and sails, they can be cruising vessels and used on foreign stations.

STEAM MACHINERY.

As our navy has become not only exclusively a steam navy, but a very large one, with an enormous consumption of coal and great expenditure for the construction and repair of machinery, it becomes a matter of the first consequence that only the best machinery be obtained for it. This problem is one of very difficult, costly, and slow solution. The great maritime countries of England and France have not yet solved it, either in the commercial or war marine, and at this hour the best authorities do not agree upon it. So many conditions enter into the problem that as prominence is given more or less to one or the other different conclusions are reached. It is evident that as the question is purely a practical one, it can only be answered by extensive experience and accurate observations. Mindful of the importance of this matter, the department, notwithstanding the great pressure upon its resources by the war, has kept it in view and promoted by every means the acquisition of the necessary information. The proportions of hulls have been varied with a view to determine the relative development of speed in proportion to given power; machinery has been constructed upon different types and systems, and the department has encouraged all offers from citizens, as well as from its own officers, to build new machinery that gave promise of improvement. The navy at this moment contains marine machinery on an extensive scale of every kind; their results are in its log-books, from which can be determined their various merits, both for general service and for particular applications.

In the new screw gunboats machinery has been used designed by Corless, of Providence, R. I.; J. Ericsson, of New York; William Wright, of Woodruff & Beach's establishment at Hartford; Merrick & Sons, of Philadelphia, and the Bureau of Steam Engineering of the department. This was competitive machinery to be of equal power propelling the same hull.

In the double-bowed paddle-wheel steamers machinery has been employed designed by Merrick & Sons, of Philadelphia; by E. N. Dickerson, and by the Bureau of Steam Engineering.

In the large sloops-of-war, of three-thousand tons and over, competitive machinery is being placed by the above parties, and by J. Ericsson.

In the frigates and sloops of the old navy, and in some of those built during the early part of the present administration, machinery was employed designed by most of the principal establishments in the country. The Fulton Iron Works and Morgan Iron Works, of New York; Messrs. Woodruff & Beach, of Hartford, Connecticut; Harrison Loring, and the Atlantic Works, of Boston; Merrick

& Sons, of Philadelphia; the Vulcan Works, of Baltimore, and the Bureau of Steam Engineering.

In these vessels nearly every variety and type of engine, of valve gear, of rate of expansion, of surface condenser, of screw propeller, and of boilers, have been thoroughly tested; but the results thus far show that the machinery designed by the Steam Engineering Bureau of the department has not been surpassed, perhaps not equalled, by any of its competitors, while in many cases their results have been greatly below it.

In its iron-clads the department has experimented by the construction of different classes and sizes, both in wood and iron, propelled by one screw, and by two screws, working independently of each other. In its most recent constructions, of the Miantonomah class, a wooden vessel designed by the naval constructors and built at the navy yards, with Ericsson turrets, and machinery designed by the Bureau of Steam Engineering, a high rate of speed, perfect ventilation, impregnability, and the enormous battery of four fifteen-inch guns, have been combined in a vessel of the moderate size of 1,564 tons, drawing only twelve feet of water. These vessels are free from the disadvantage of fouling, which so greatly reduces the speed of iron ones.

Others of this type, but of increased tonnage, are in process of construction, to have still higher speed and be adapted to coast service.

In the steamers bought from the commercial marine of the country, and in the captured blockade runners, now adapted for naval service, are to be found every variety of machinery, both screw and paddle-wheel, constructed either in this country or Great Britain. So far as the exigencies of the war would permit, the different types of machinery have been submitted to careful experiment to ascertain their relative merits. Nearly every variety of boiler and of expansive gear, of rate of expansion, and of saturated and superheated steam, has been made the subject of accurate experiment, and it is believed that the files of the department contain the latest and most reliable information on these subjects. A chief engineer of the navy has been sent to Europe to collect information on these topics in addition to the published accounts and official reports.

Nearly all the kinds of coals of the seaboard States have been the subject of careful experiment, with a view to ascertain their comparative value for naval purposes. A board of engineers has also experimented with petroleum as a substitute for coal in naval steamers.

As opinion appears to have settled upon the horizontal and the vertical tubular boilers as the only ones proper for naval service, the department has had one of each kind manufactured, according to designs furnished by a board of nine engineers, employed in the principal private steam-engine manufacturing establishments of the country, and by the Bureau of Steam Engineering, for the purpose of accurate experiments to determine their respective merits. These experiments will be of the most elaborate nature, and will, it is presumed, enable a choice to be made. They are now in progress.

A commission of nine, on practical engineering, has been appointed by the

department, consisting of three from the Academy of Science, three from the Franklin Institute, [and three on the part of the department—all eminent in physical science—to devise the proper apparatus, and make the necessary experiments therewith, to ascertain by practical results the economy of using steam with different degrees of expansion. These experiments, which are now in progress, will be as elaborate and as complete as it is possible to make them. And under the practical conditions of steam engineering, it is believed they will indisputably set at rest the amount of gain to be obtained from using steam with different measures of expansion, and also determine the relative merits of different kinds of valve gear, steam pressure, &c., besides settling many incidental questions of great importance.

Nothing has been left undone in the way of ascertaining and putting in use all valuable improvements in steam machinery, and no occasion neglected of experimentally determining the data necessary for correct opinion.

The competitive engines and boilers now under construction and trial will furnish information which will be of great public utility.

NAVY YARD FOR IRON VESSELS AND MACHINERY.

The introduction of steam as a motive power for naval vessels, is causing a revolution in maritime warfare which the ablest minds have long predicted would be the result of this agency, but which is not yet to its fullest extent appreciated. It changes the whole character of blockade, and in future wars it will be found that a few fast privateers by steam will harass or annihilate the commerce of the most powerful belligerent nations.

Our country has been compelled by this civil war to take the initiative in organizing a vast steam navy with which to establish and enforce the blockade of our whole coast from the Chesapeake bay to the Rio Grande; and also to suppress the depredations of semi-piratical privateers, built by skilled English mechanics in English ship-yards, and manned by Englishmen, which, under the rebel flag have roved the ocean, destroying our merchant shipping, and have found refuge and supplies in English and neutral ports.

When hostilities commenced, our government had provided no suitable navy yard with machine shops and foundries to manufacture the necessary machinery for our rapidly increasing and expanding navy; but the department was compelled to rely on the few private establishments, which it could divert from other engagements, for the immense work that was calling out the resources of the nation.

Great embarrassment was experienced in consequence of this neglect of the government at the very commencement of the war and although the naval service and the country are suffering constantly from this neglect, measures for the establishment of a suitable navy yard for the construction and repair of iron vessels, their armature and steam machinery are still delayed.

As early as March, 1862, and on several occasions since, I have had the honor to present my views to Congress on this subject. The earnestness and

frequency with which it has been brought forward must find an apology in its great importance.

It has never been the purpose of the department, in any of its suggestions or recommendations, to increase the number of our navy yards, nor to alter their local distribution. The yard which we now have at Philadelphia is altogether inadequate to our present or future wants. It was proposed, therefore, to substitute a new one on the Delaware, in the vicinity of Philadelphia. League island, within the limits of that city, if adopted as a site, must gradually absorb the works at the present yard, which would then be discontinued.

All of our present navy yards, it will be remembered, were established for the construction and repair of wooden sailing vessels. Steam and armored vessels have superseded these, and the inability of our present establishments for the work imposed by this war has been the source of inexpressible anxiety, and often of great disappointment and public injury. To relieve the navy yards from work which they have but limited means to execute, and to secure necessary repairs, the department has been compelled to establish stations for machinery, and means of refitment at Mound City, Memphis, New Orleans, Ship Island, Pensacola, Key West, Port Royal, Beaufort, Norfolk, and Baltimore. But these and all the private establishments of the country, besides other calls upon them, have been insufficient to keep the present navy in necessary order, so that, if to the duty of blockading there were added ocean conflicts with a naval power by which our ships would be often disabled, the sad spectacle would be presented of our naval vessels laid up in time of war for want of a proper establishment with the shops and means to repair them.

Our country, whose strength and power among nations must ever be identified with and maintained by its navy, and which possesses in such abundance the means of creating and sustaining one, has not, in all the navy yards combined, the appliances possessed by single establishments in England and France. Were there outside of our navy yards establishments to perform promptly the requisite work in time of war, I should not at this time again press the subject of a navy yard for iron work for the construction of vessels upon the consideration of our authorities. But although the department has generally been ably and zealously seconded in its efforts by private contractors, yet the fact that there is no customer but the government for much of this heavy class of iron work, forbids us to expect that individual enterprise will be prepared to execute it without full remuneration for all the outlay for shops, tools and machinery which may be required in preparation. Besides this, unlimited time is taken by them for the completion of the work. It may be proper to mention, as an instance of the delay to which the government is subjected, that in October, 1862, contracts were made with a manufacturer of reputation and ability for making and setting up the turrets of the *Tonawanda* and *Miantonomah*, which were to have been completed in February, 1863, but they will probably not be finished until February, 1865, two years after the expiration of the time specified in the contract. At the commencement of hostilities this department had equipped, and at its immediate disposal, three vessels of war. Those which were laid up, and those

which were recalled from abroad, had to undergo extensive repairs, for which no provision had been made. The government has not even at this time an establishment where a shaft can be made for our steamers or a plate for our iron-clads. The frontage or wharfage at all our navy yards, so important for repairs, is less than is required at each of them.

Our next contest may be with a naval power which will attempt to direct upon our shores a course of operations similar to those which we have applied to the southern coast for suppressing the rebellion. One yard, at least, where iron vessels, iron armor, and iron shafting can be manufactured, is now imperatively necessary. Among the considerations that should control the selection of a site for such a yard and establishment, which shall become the depot for the materials collected in years of peace with which to build and repair our naval vessels, and where will be aggregated machinery and tools such as at present are not to be found in this country, and which, when once procured, could not, if destroyed, be easily or readily replaced, will be its absolute safety from attack by sea or land. So far as is possible we should avail ourselves of natural advantages in obtaining the indispensable security for such an establishment, without depending entirely on fortifications and artificial means, which would be more costly than the navy yard itself.

The additional military defences of Portsmouth, England, rendered necessary by the proximity of that great naval station to the ocean, and its consequent assailability by modern ordnance, are now being constructed at an expense of \$50,000,000.

A navy yard, if we have one for naval iron work, should be established on fresh water, for this is essential to the preservation of iron vessels, which cannot be laid up in salt water during peace. Ready access to coal, iron, and timber is also important, for these essential articles should be always available on the inland waters without exposure to an enemy by coastwise transportation. The vicinity of a large city where skilled artisans can be obtained without difficulty, and the facilities of markets and tenements are abundant, should be considered. A foundation of gravel would, for the purposes of machinery, be preferable to stone. An extensive water frontage must also be secured. For such a depot and establishment, where costly machinery and material would accumulate during years of peace, the advantages of an interior location are most manifest. These favorable conditions are to be obtained nowhere else so completely as on the Delaware river; and the position of League island, within the limits of the city of Philadelphia, presents probably a stronger combination of the points that are necessary than any other location.

It is to be regretted that competition for supposed local benefits should interfere with, retard, and perhaps entirely defeat the government in its efforts to secure so important a national establishment. If in such a conflict for sectional favor the country should lose forever the best situation for such a navy yard and establishment, the result would be always deplored. The department has studiously avoided the controversy which has arisen in consequence of the efforts

to secure a navy yard at New London, which is foreign to the question of enlarging or substituting a more commodious establishment at Philadelphia. A multiplicity of small yards, similar in character, crowded into one section of the country, was not the object or purpose of the department in the suggestions and recommendations which it has from time to time urged upon Congress. There are already three navy yards east of the Hudson, and should Congress deem it advisable to add another to that section or elsewhere, it is to be hoped that such determination will not interfere with or prevent the government from having a proper establishment for the construction of iron vessels, iron armor, and iron work of every description for naval purposes in the immediate vicinity of the iron and coal region of the more central portions of the Union. Such an establishment as the department has advised on the Delaware would not add to the number of yards, but would be a mere substitution, without one dollar's expense to the government for land, of the more commodious and extensive grounds and water front of League island, in place of the present limited and restricted site at Philadelphia, which is wholly inadequate and insufficient for the purposes of a yard for even wooden ships.

Among the reasons which impel me again to introduce this subject and earnestly press it upon the immediate attention of Congress, is the fact that the great Pennsylvania Central railroad has moved with a view of obtaining a portion of the least valuable part of League island for a depot. The objections urged against that position for a navy yard, with its workshops, have no weight with this company, which requires shops and heavy work, and knows its own interest. Unless, therefore, this free gift of over six hundred acres of land, with a water front of twenty-three feet depth extending for more than two miles, within the limits of Philadelphia, should be accepted during the present session of Congress, it will probably pass into private hands, and the most desirable and available position in this country for such a yard will be diverted to other purposes, and lost forever to the government. As a measure of ordinary prudence it is most earnestly recommended that the offer of League island be without delay accepted. When plans for its improvement shall be submitted, and an appropriation asked, with a view of transferring the works at the present yard to the new location, Congress can then exercise its discretion in determining the amount of expenditure proper for this purpose.

NAVY YARD ON THE MISSISSIPPI.

By an act of Congress, approved June 30, 1864, the Secretary of the Navy was "authorized and empowered to appoint a commission, consisting of one naval officer, one officer of the engineer corps, and one civilian, to select the most approved site for a navy yard or naval station on the Mississippi river, or upon one of its tributaries, and to report to the next session of Congress." In pursuance of the authority conferred on me by this act, a commission has been constituted, and is now engaged in making the required examinations. Rear-Admiral Charles H. Davis, who has had experience as commanding officer of

the Mississippi squadron, was appointed senior member of the commission. The Secretary of War having been requested to name a suitable officer of the engineer corps to be associated on this commission, and having named and detailed Lieutenant Colonel A. H. Bowman for the purpose, that officer was appointed. George W. Blunt, a civilian of nautical reputation and ability, of the city of New York, is the third gentleman of the commission.

NAVAL RANK.

There is in the naval branch of the public service no rank corresponding with that of lieutenant general. Congress has established the grade of rear-admiral, which corresponds with that of major general, and it would be an act of recognition eminently deserved, and which would be fully appreciated by the gallant men of the navy, were Congress to authorize the appointment of a vice-admiral. Such honors and preferments stimulate heroes.

Among eminent commanders in our naval service, of whom the nation may well be proud, we have one who, all will acknowledge, merits by his achievements as high rank as that of any naval officer in any country.

On the occasion of the recent brilliant victory in the bay of Mobile, more glorious, perhaps, in some of its incidents, even, than the memorable conflict that gave us the possession and ultimately restored the free navigation of the Mississippi, it was, beyond question, the spontaneous sentiment of the country, that the veteran hero who had illustrated our naval annals by these grand successes was worthy of the highest honors, and should be promoted to the highest naval rank. In recommending, therefore, that the office of vice-admiral should be created, and the appointment conferred on Rear-Admiral David G. Farragut, I but respond, as I believe, to the voice and wishes of the naval service and of the whole country.

The attention of Congress, through the naval committee, has heretofore been called to the fact that the number of officers on the active list in the grades of commodore, captain, commander, and lieutenant commander, is not equal to the number of vessels of the different rates required by law to be commanded by officers of these grades. A small increase was recommened as well as an alteration in the law relative to filling vacancies in the grade of admiral in time of peace. My letter on this subject, with the accompanying draft of a bill, making provision also for the incorporation into the regular service of a few volunteer officers who, by zeal, ability, and service during the war, have merited this reward, will be found in the appendix to this report.

ENLISTMENT.

The enactments of the last session of Congress in regard to enlistments have been in their operation beneficial to the naval service, and in a great degree have corrected the unfortunate legislation of the preceding session. Not only the full complement of men required has entered the service, but a surplus of many thousands of landsmen have offered, who could not be received. But the want of seamen is still felt. Large numbers of that valuable class were induced to

enter the army when high bounties were given to the soldiers and withheld from the sailors. Many thousand trained seamen, under those extraordinary inducements, enlisted in the army before the legislation for the two branches of the public service was equalized. Although the law now authorizes their transfer to the navy, a very considerable portion of them still remain in the army, where landsmen would be of equal service. Seamen are experts, and cannot be procured by draft, or secured for an emergency like the present, any more than engineers or accomplished gunnery officers.

Stimulated by patriotic impulse, men may volunteer to serve their country in any capacity, but they cannot be made available as seamen without training and experience at sea.

The organization of a man-of-war is very different from that of a merchant vessel. A first-rate sailor will soon make himself at home on board of any ship, but the division of duties—the system of petty officers—the exercise at quarters and in boats—the discipline, the observances, and the thorough and complete system of a man-of-war, are unknown out of naval ships. There are no means by which to teach landsmen to become sailors except on shipboard, and there is difficulty in inducing native Americans to enter either the naval or merchant service. In other countries the field of adventure is restricted; here the avenues are many, besides ocean life. I am not aware that any State but Massachusetts has a nautical school. Encouragement is given to the young in every other calling; but the naval and merchant service, in time of peace, depend almost entirely upon the foreigners and the homeless for mariners to sail their ships. These men, who hardly touch the shores without finding themselves the victims of land-sharks, and who scarcely receive a thought in the vast and generous sanitary operations, put in motion by wealth and beneficent patriotism, have enriched our country by their labors in commercial employments; and in danger, privation, and hardship, have adhered with unwavering fidelity to the flag—never disappointing us, and never giving us defeat.

With a view of doing some measure of justice to this meritorious but too much neglected class, and as a preliminary step towards their elevation and usefulness, the *Sabine* has been fitted up for the purpose of a school-ship for boys. This is, in fact, a revival, with some modifications, of the apprentice system, which, while it was continued, worked beneficially for the sailor and the country. Some measures are requisite to elevate the condition and the character of this class now, when the sailor is neither flogged nor taught to become a drunkard—two important steps in the right direction towards making him a man to be trusted on shore as well as afloat.

Commencing as apprentices on the school-ship, it would be well to open to the sailor boy the way to promotion by giving him an opportunity, if he shall deserve it, of entering the Naval Academy. From among the apprentices on the school-ship, a selection of one-half of the midshipmen annually appointed might be made with great advantage to the service and the country. These apprentices, in their preliminary training on the school-ship will have developed their capabilities and aptitude for the profession, and in transferring them

to the academy, there will not be the manifold errors which attend so large a portion of those who are appointed under the present system. Were each congressional district authorized to place two or more apprentices on the schoolship, and the annual selection of midshipmen, or one-half of the midshipmen, directed to be made from these apprentices, its effect would be most beneficent on the sailor, as well as the schools and the service. It would popularize the navy, and open to those who may have enlisted the highest positions and honors of the service.

NAVAL ACADEMY.

Congress having by the act approved May 21, 1864, directed that "the United States Naval Academy shall be returned to, and established at, the Naval Academy grounds in Annapolis, in the State of Maryland, before the commencement of the academic year eighteen hundred and sixty-five," it will be necessary that preparations should be commenced for putting the buildings and grounds in order as early in the ensuing spring as the War Department can leave them. The school and the service will be benefited by having the institution permanently established, and when this is effected, it will be enabled to pursue its career under circumstances more favorable to the efficient training of the midshipmen.

The able superintendent, Commodore George S. Blake, has preserved his connexion with the school during its unsettled state, and its management, under many disadvantages, has been creditable to him and his associates.

CADET ENGINEERS.

Preliminary measures have been taken to carry into effect the law of the last session of Congress authorizing the education at the Naval Academy of cadet engineers, to be selected from youths not over eighteen years of age, who shall have been engaged at least two years in the fabrication of steam machinery. A circular has been issued and printed in the papers of the great manufacturing cities, inviting applications in conformity to the law.

Before this plan shall be put in operation, it is respectfully submitted, in view of the radical changes which have been wrought by steam as a motive power for naval vessels, whether steam-engineering should not be made to constitute hereafter a necessary part of the education of all midshipmen, so that in our future navy every line officer will be a steam-engineer, and qualified to have complete command and direction of his ship. Hereafter every vessel-of-war must be a steam vessel. Those designed for ocean service will be furnished with sails in order to economize fuel while cruising; the present and future navy will therefore combine sails and steam as motive power, and seamanship and steam-engine driving will each be necessary to make the finished professional officer. The officers to sail and navigate a ship and the officers to run the steam-engine are about equal in number.

The department is not aware that any line-officer, whatever attention may have been given by him to the theoretical study of steam, is yet capable of

taking charge of an engine, nor are steam-engine drivers capable of taking charge of a man-of-war, navigating her, fighting her guns, and preserving her discipline. When vessels were propelled exclusively by sails, there were but two officers, excepting in flag-ships, the surgeon and paymaster, who were not line-officers. But under the present naval system a new and additional corps is introduced, as many steam-engineers being required for a vessel as there are line-officers; and, while cruising under sail, or lying in port, or performing any duty when the engine is at rest, one-half of the officers are, by existing regulations, idle and incapable of participating in duties that are often laborious and oppressive on the officers of the line, comparatively speaking. The engineers would willingly share these duties were they acquainted with them. But half the officers of a steamship cannot keep watch, cannot navigate her, cannot exercise the great guns or small arms, nor, except as volunteers under a line-officer, take part in any expedition against the enemy. On the other hand, the other half of the officers are incapable of managing the steam motive power, or of taking charge of the engine-room in an emergency, nor can the commander of a vessel, though carefully taught every duty of a sailor and drill-officer, understand, of his own knowledge, whether the engineers and firemen are competent or not.

The remedy for all this is very simple, provided the principle were once recognized and adopted of making our officers engine drivers as well as sailors. It would not be expedient to interfere with the present status of line officers or engineers—the change would be too radical; but we should begin by teaching each midshipman to be able to discharge the duties of line-officers and steam-engineers. To combine the two in one profession, so that officers so educated can take their watch alternately in the engine-room and on deck.

Objection may be made that the duties are dissimilar, and that steam-engine driving is a specialty. The duties are not more dissimilar than seamanship and gunnery. When seamanship was the only education given to an officer, it was not believed he could ever learn to teach sailors to drill, and a sergeant of marines performed the duty which is now so admirably discharged by the graduates of the Naval Academy. When gunnery became a specialty, it was inconsiderately and unwisely proposed to have a corps of ordnance officers engrafted upon the naval service, a separate organization, which should draw to itself the knowledge so necessary to each, and therefore proper to be distributed amongst all the officers.

Fortunately our naval officers are taught seamanship, gunnery, and the infantry drill, and the service thereby saved from distinct organizations in these respects, which would inevitably have impaired its efficiency. It only remains to commence, at this time, and as preparatory to the future of the navy, to teach the midshipmen steam-engineering, as applied to running the engine. This would be independent of the art of designing and constructing, which is purely a specialty, and nowise necessary in the management and direction of the ship. And to this specialty, as a highly scientific body of officers, would the present corps of engineers be always required, as inspectors and constructors of machinery. With the adoption of the suggestions here made we shall in

due time have a homogeneous corps of officers, who will be masters of the motive power of their ships in the future, as they have been of seamanship in the past. By this arrangement there will be in each ship double the number of officers capable of fighting and running the vessel without additional appointments or expense. Innumerable other advantages commend the plan as worthy of trial, and it is presented for favorable consideration. The work can be commenced and carried forward at the Naval Academy without any additional appropriation, and the authority of Congress is invoked in behalf of the suggestions here submitted.

PRIZES AND PENSIONS.

The number of vessels captured by the squadrons since the last annual report, and reported to the department prior to November 1, is 324, classified as follows: schooners, 105; steamers, 88; sloops, 40; brigs, 3; barks, 3; small boats, 85. The total number of captures since the commencement of the rebellion is 1,379, viz: schooners, 652; steamers, 267; sloops, 171; brigs, 33; barks, 29; ships, 15; yachts and small boats, 117.

The gross proceeds arising from the sale of condemned prize property amounts to \$14,396,250 51; expenses, \$1,237,153 96; leaving for distribution, one-half to the captors, and one-half to the United States as a naval pension fund, \$13,190,841 46.

Annexed to this report is a table giving the names of vessels captured, date of capture, name of capturing vessel, &c. Also a list of cases already adjudicated, showing the gross proceeds of sale, the expense of condemnation, and the net amount for distribution.

A joint resolution of Congress, approved on the 1st of July last, authorized the Secretary of the Navy to invest so much of the naval pension fund as was not required for the immediate payment of pensions in the registered securities of the United States. Under the authority conferred upon me I have invested five million dollars, as provided in the resolution, and on the 1st of January next there will be the further sum of \$2,000,000, which can be invested without interfering with the prompt payment of pensions. This amount will yield an annual income of \$420,000, sufficient for the payment of the entire pension roll. It affords me no little gratification to be able to state, that our brave officers and seamen, besides realizing handsome sums for themselves, have created a fund, the income from which will, doubtless, be ample for the payment of the authorized pension to those who have been wounded, and to the widows and orphans of those who have been killed in the service, or died from disease contracted in the line of duty, without calling upon the national treasury.

The pension roll on the 1st of November, 1864, was as follows:

769 invalids with pensions amounting to.....	\$50,401 10
840 widows and orphans amounting to.....	139,258 00
1,609 persons receiving a total amount of.....	189,659 10

In this connexion I ask attention to the suggestions of the chief of the Bureau of Medicine and Surgery relative to naval pensions. The act of Congress approved July 11, 1862, regulating pensions, makes no provision for the new grades of the navy—rear-admiral, commodore, lieutenant commander, &c.—authorized by act of Congress on the 16th of July of the same year. The act should be so revised as to include these grades, and it is suggested that a better adaptation of the amount of pension to the responsibility of the officer might be advantageously made. The highest pay now authorized is thirty dollars per month, the family of a captain receiving no more than the family of a master commanding, and is a reduction of twenty dollars per month from the amount formerly paid. The act of Congress approved on the 4th of July last provides that a person in the “military service” who shall lose both feet shall receive a pension of \$20 per month, and those who shall lose both hands \$25 per month. As the law is construed not to include persons in the naval service, those who have suffered a similar loss in the navy continue to receive but eight or ten dollars per month—an inequality which it is believed was not intended. I suggest such changes in the law as will place the sailor upon the same footing as the soldier.

PRIZE LAW.

The seventh section of the act in relation to abandoned and captured property, approved July 2, 1864, reverses the law of prize as it stood prior to the present rebellion, and also as adjudged and applied since the commencement of the rebellion by the courts in their exercise of prize jurisdiction. It reverses also for the future the public policy of the country upon the subject, as manifested in the legislation of Congress both before the rebellion and since its commencement up to the date of this act.

This abrupt reversal of settled law and of public policy in regard to “property seized or taken upon any inland waters of the United States by the naval forces thereof,” was not, I apprehend, well considered, and does not appear to have undergone discussion in either branch of Congress. Whether the words “no property seized or taken upon any inland waters of the United States by the naval forces thereof” comprehend not only cargoes, but vessels, may be questioned; but it can hardly be supposed that Congress intended to deny that naval vessels captured in naval conflict, as at New Orleans, or Memphis, or in Mobile bay, are the legitimate subject of prize. The same is true also of transports, armed or unarmed, conveying the troops or munitions of an enemy, which may be captured. It seems improbable that to deprive such captures of the character of prize could have been deliberately intended.

Do the words “any inland waters of the United States” embrace the Chesapeake and Delaware bays, the bay of Mobile, and Lake Pontchartrain?

By the terms of this section the naval officer seizing or taking property has the option either to send it in to the courts or to turn it over under the act of March 12, 1863, to the Treasury agent. No one but the naval seizer has this option. All other persons must turn over their seizures to the treasury agent.

It is difficult to perceive the purpose for which this distinction is made. The property seized is either liable to capture and condemnation as prize, or it is not. If it be so liable, he is bound to send it to the prize court. Why, then, should he have authority to turn it over to the treasury agent? and if it be not so liable, why should the naval seizer alone be relieved from the obligation of sending it to the treasury agent?

If it be the object of the section to take away the character of prize of war from all property which may be captured by naval forces on the inland waters of the United States, it is respectfully submitted whether its repeal is not demanded by the highest considerations of public policy. The inland waters of the United States constitute cruising stations of vast extent, and so situated as to be of supreme importance in the prosecution of this, or, indeed, of any maritime war. These waters offer the readiest naval access to vast amounts of commercial property belonging to those who are now waging war against the government. The property, both public and private, found upon these waters and along their shores belonging to the enemy is, under the public law of war, liable to capture by naval belligerents, and when so captured, to condemnation as prize of war. By the exercise of this right, a naval force can reach and capture property which should be taken from an enemy, and which is yet left untouched by our statutes.

Upon the inland waters within the insurrectionary region, or affording access to or egress from it, our naval vessels are now in great numbers, and while the war lasts will continue to be engaged in belligerent operations. Why should the law intervene and deprive that part of the navy of one of its primary belligerent rights? It certainly could not have been intended to cripple the power of the navy to cripple the enemy, or by law to hedge round and protect from capture and condemnation an enemy's property. The service on inland waters is not less difficult, perilous, and harassing than that on the sea, that there should be this discrimination against it, nor has it been less useful to the country.

Under the operation of this act no more of the proceeds of any capture go into the treasury than under the law of war, because the sixth section authorizes the allowance of a moiety to "informers, collectors of the customs, and other persons," as an incentive to "vigilance in protecting the public interest." In taking this moiety from the officers and crews who make the captures, and conferring it on the informer or custom-house officer, the treasury and country are not benefited. The right to make capture or prize of war, in all places and upon all property, subject to the law of war, is one of the encouragements which maritime nations have extended to their navies in all time, and ours has been no exception until this enactment. The exercise of this right, in cutting off the resources of an enemy, is one of the chief methods by which nations seek to bring war to a close.

There is no reason why in this war against the rebellion an ancient and rightful proceeding should be abandoned, and a rule adopted that must operate to our national injury in all wars. I can see no reason upon which to conclude that in fighting down this rebellion we should reverse all previous usage and law,

either as against the rebels themselves, or their abettors, or the property upon which they rely for their resources, or why, indeed, we should relinquish any one belligerent right. On the contrary, it will be well to preserve to our navy upon all the waters where it can float or fight all its rights of war unimpaired.

With these views the expediency of a repeal of the 7th section of the act alluded to is recommended, and the substitution in its place of some provision of like effect to that which is found in the last section of the act upon the same subject approved March 12, 1863.

CONTRACTS.

The present contract system is open to many and serious objections. Whatever may have been its merits when originally established, the condition of the country and of trade has so changed as to render essential modifications necessary, if not the abrogation of the system itself. The instability of prices, and a rising market during the progress of the war, have made it difficult, and, in some instances, almost impossible to procure offers for contracts to furnish yearly supplies for the navy from honest and reliable contractors at a rate which does not contemplate the highest market price of gold, as well as long delay in the time of payment. Any change for the better in the condition of the country or the market will be a gain to the contractor who has an annual contract, and a corresponding loss to the government.

A proposal made the present year for the annual supply of flax canvas which is mostly imported, illustrates this point. The bids were received when exchange was at nearly the highest rate it has attained, and from an honorable and reliable contractor who has for years supplied the government faithfully. The aggregate of the offer was, for payment in currency, \$1,428,719 50, or for payment in gold, or its equivalent, at the time each bill was paid, \$536,923. There was no alternative under the law other than to accept the currency bid, and as the rate of exchange has fallen, there has been a corresponding increase of profits to the contractor.

In this case, and others of like character, the true interest of the government would undoubtedly be promoted were the department permitted to assume the risk, and omit making annual contracts, relying upon purchases as wanted, under the direction of the department, at the current market price. The government is seldom benefited by a rise in prices; for while the laws compel its agents to pursue a definite course of action, the contractor generally finds little difficulty in evading penalties, and a losing contract is therefore abandoned. It is worthy of serious consideration whether, for the present at least, it would not be for the true interest of the government to relinquish the system of annual contracts altogether, and authorize purchases to be made by agents of probity, whose fidelity and integrity have been tested through years of faithful service, and who have a life-long commission as well as a character to lose as a penalty for malfeasance.

Another source of embarrassment in procuring naval supplies has been the delay and uncertainty of payment. Unless a definite time for payment is fixed,

and bills are promptly met, or unless interest be allowed during the delay of payment, the government will inevitably become a large sufferer. Many of the best merchants in our principal cities, who have heretofore sought dealings with the government, now decline accepting an order on any terms.

It has never been the policy of this department to advance money to its agents, and they cannot for this reason make cash payments. Requisitions are drawn on the Secretary of the Treasury only for matured bills, and every day's delay in the payment of a fulfilled contract is a wrong and a loss to the holder, and of ultimate serious injury to the government. As a consequence, the government is driven to other, and often less honest dealers, and is compelled to pay for subsequent purchases higher rates. Government, instead of being shunned and distrusted for neglecting to make prompt payment for value received, should, for its prompt payments, be a favored purchaser in any market—enabled to deal with the manufacturer or producer at first prices, instead of with second and third hands.

If supplies are procured when wanted and as wanted, at the market price, either in open purchase, by an honest agent, or upon bids received for immediate delivery, with prompt payment, immense sums would be saved to the department and the government.

I have heretofore referred to the defects and abuses practiced under the existing laws of awarding annual contracts for naval supplies to the lowest bidder. Whatever may be the character or reputation of the bidder for fair and honest dealing, no discretion is given to any officer of the government in the premises, nor can any officer decline the contract, though it may be obvious the bidder cannot furnish good articles at the prices which he proposes.

Contracts are made under the operation of existing laws, which cannot be honestly fulfilled; and under the practice that has prevailed, the whole system has become tainted with demoralization and fraud, by which the honest and fair dealer is too often driven from the market. Articles inferior in quality and deficient in quantity are delivered and passed. Bribery and other improper practices are resorted to, to induce persons in the employment of the government to aid in these frauds.

Malfeasance on the part of officials in connexion with the purchase and delivery of supplies was alleged to exist, and with the purpose of investigating and bringing such fraudulent practices to light, application was made to the War Department, which detailed an officer to prosecute these inquiries. The result is that many and great frauds have been discovered. Proceedings have accordingly been instituted, and are now in progress against some of the parties implicated before military tribunals under the statute, and against others in the civil courts.

INCREASE OF SALARIES.

In consequence of the greatly increased prices that prevail, many who are in the clerical employment of the government, at a compensation established prior to the war, are receiving a remuneration wholly insufficient. The state of

the currency, with other causes, has so affected prices that these men are receiving relatively but about one-half the pay of former years, and the effect has been such as to compel many of the best clerks in this department to leave the government service. This is a public injury, especially in a crisis like the present. The place of an experienced and accomplished clerk is at no time easily supplied; but when such place is vacated for the reason that it is not remunerative, or that the pay is below corresponding positions in private establishments, the difficulty is increased. It is therefore suggested that the salaries of the clerical force, or a portion of the clerical force, be increased until the close of the war, or until the currency shall return to a specie standard.

This recommendation is made with some reluctance, and only under a sense of its absolute necessity at this time.

MASTER'S MATES.

When the rate of pay for master's mates was established it was thought to correspond with that of other grades—but the changes in currency and values which have since taken place render it difficult to retain in service a sufficient number of this highly serviceable and meritorious class of officers. I would therefore recommend that the pay of master's mates be increased from forty to sixty dollars per month.

EXPENSES AND ESTIMATES.

On the 1st of July, 1863, there was an unexpended balance standing to the credit of the department of.....	\$39, 101, 970 34
The appropriations for the fiscal year ending June 30, 1864, were	76, 663, 567 36
Total available means	115, 765, 537 70
The expenditures of the department during the same time were	85, 733, 292 77
Leaving a balance at the commencement of the present fiscal year of	30, 032, 244 93
The appropriations for the current year are	109, 256, 814 54
Making the total available resources for the fiscal year ending June 30, 1865	139, 289, 059 47

The estimates submitted for the fiscal year ending June 30, 1866, are as follows :

Pay of the navy	23, 327, 722 50
Construction and repair of steam machinery	17, 145, 000 00
Construction and repair of vessels	24, 530, 000 00
Ordnance and magazines	9, 187, 615 00
Fuel, hemp, and equipment of vessels	14, 050 000 00
Provisions and clothing	13, 923, 280 75
Navy yards and superintendents	4, 577, 313 00

Navigation and Naval Academy	562,626 00
Surgeons' necessities and hospitals	315,000 00
Marine corps	1,599,087 70
Contingent and miscellaneous	2,970,018 33
Total	<u>112,187 663 28</u>

The expenditures of the department since the 4th of March, 1861, have been as follows:

From 4th of March to close of fiscal year, June 30, 1861	6,244,357 63
For fiscal year ending June 30, 1862	42,200,529 06
For fiscal year ending June 30, 1863	63,211,105 27
For fiscal year ending June 30, 1864	85,733,292 77
From July 1, 1864, to November 1, 1864	41,257,976 72
Estimated expenditures from November 1, 1864, to March 4, 1865	42,000 000 00
Total for four years	<u><u>280,647,261 45</u></u>

This exhibits an average annual expenditure, through four years of expensive war, prosecuted under many and great disadvantages, of \$70,161,813. Could the transactions of the department have been conducted on the true standard of value, that of gold and silver, or of paper convertible into money at the will of the holder, our naval war expenses would scarcely exceed, perhaps not equal, the current expense of either of the great maritime powers during the same period. There is also this great difference: Those powers had a navy already constructed and in commission. We have had to create and pay for one, in addition to our annual current war expenses. Were the cost of our vessels deducted from the amount above stated, the expenses of this department would fall millions below those of other governments. As the vessels which were built and purchased have an intrinsic value, the money paid for them may be considered to be well invested.

The condition of the currency which has enhanced the cost of all materials and supplies has swelled the naval expenditures many millions, while the failure to pay promptly and when due the bills of contractors and others, has still further increased the aggregate of expenditures and augmented the difficulties in the work of creating and organizing the naval force.

THE BUREAUS.

The reports of the chiefs of the several bureaus present in detail the operations of their respective departments for the year. As they will be printed at the commencement of the session of Congress, it is unnecessary that I should do more than refer to the principal subjects embraced in them.

The chief of the Bureau of Yards and Docks calls attention to the great increase in the cost of materials and labor, and the consequent deficiency in some

of the appropriations. He urges a change in the present contract system, and gives it as his opinion that, in consequence of its operations, the bureau is compelled to pay twenty per cent. more than the market price for some of the smaller articles, which could better be procured by open purchase. The intelligence, judgment, and great experience of this officer entitle his suggestions to respectful consideration. The delay in passing the appropriation bill until near the close of the long session of Congress is considered another fruitful source of evil. The purchase of additional land at Boston and Philadelphia to enlarge the navy yards at those places is recommended. More water front is indispensably necessary.

The report of the chief of the Bureau of Construction and Repair explains in detail the kind of vessels it is proposed to build, and for which estimates are submitted. He recommends that provision be made for procuring and keeping on hand a supply of building timber and material, the accumulations of past years having been exhausted. He also recommends that measures be taken to increase the facilities in the several navy yards for the construction of vessels. In case of a foreign war, an additional number of dry docks would be required. Many important suggestions are made relative to the size of steam war vessels and the construction of armored vessels for sea-service.

The report of the chief of the Bureau of Steam Engineering contains a review of the operations of the bureau since the commencement of the war. Detailed statements are made of the size and power of the different classes of engines designed by the bureau and by other parties, and of the results attained in each case. Particular notice is given to the experiments which have been made to test the relative value of engines and boilers, the economy of using super-heated over saturated steam, as well as steam with different measures of expansion; the value of the different kinds of coal and of petroleum as a substitute, and of other less important combinations which enter into the construction and working of steam machinery. Drawings and specifications have been furnished for the machinery of one hundred and sixteen steamers, having an aggregate burden of 149,906 tons, besides supplying the necessary drawings and directions for the alteration and renewal, in whole or in part, of the machinery of a very large number of other vessels.

The chief of the Bureau of Equipment and Recruiting states the *personnel* of the navy at about 6,000 officers and 45,000 men. Under the operation of the acts of Congress, giving seamen the same bounties as soldiers, and crediting their enlistment upon the quotas of towns, the naval deficiencies have been filled. There are now about two hundred and fifty apprentice boys on the school-ship Sabine, and the system, as well as the proficiency of the pupils, is well spoken of. The consumption of coal this year will be about five hundred thousand tons. The ropewalk at the Charlestown navy yard furnishes all the larger sizes of rope required, but the facilities at the Washington navy yard are entirely inadequate to supply the needed quantity of cables and anchors, and additional establishments are recommended.

The report of the chief of the Bureau of Ordnance presents a resume of the

history and economy of our naval ordnance. The constant demands of the navy during the year for ordnance and ordnance stores have been promptly met, and at the same time full attention has been given to the many new and important ordnance questions of the day. Among other suggestions, is that of the removal of our large magazines from their present locations to more secluded situations. The importance of the permanent organization of a gunnery-ship, as a school for the instruction of officers and men, preparatory to being placed on board cruising vessels, is again presented. Owing to the great increase of ordnance work, and the accumulation of material at the New York navy yard, more room is needed. To meet this requirement, the bureau has commenced the filling up of the unoccupied marsh adjacent to the cob-dock, which, when completed, will afford ample accommodations, as well as furnish a park for two thousand cannon, with all appliances for fitting them for service.

The chief of the Bureau of Provisions and Clothing recommends a new arrangement of storehouses, and that they be entirely disconnected from the navy yards. Also the establishment of two government bakeries and the preparation by the government of the preserved meats and desiccated vegetables, which now form a part of the navy ration. He also recommends an increase in the number of paymasters and assistant paymasters in the regular service, and the establishment of the grade of passed assistant paymaster. The extraordinary rise in the price of provisions and clothing, and the increased number of men in the service, render additional appropriations necessary.

The chief of the Bureau of Navigation submits the usual reports of the naval observatory, Nautical Almanac office, and the general administration of his department. Nearly all the nautical instruments used in the navy, which, prior to the war, were procured abroad, are now of American manufacture, not excepting chronometers and comparing watches. The same gratifying advance cannot be stated with reference to material for flags, as we still sail under foreign bunting. Notwithstanding the large quantity used by the army, the navy, and the commercial marine, scarcely any progress has been had in inducing American establishments to undertake its manufacture.

The chief of the Bureau of Medicine and Surgery states the number of casualties reported during the year to be 171 killed and 351 wounded. Total number of cases of sickness under treatment, 61,229; of which number 1,048 died, 58,070 were returned to duty or discharged, leaving 2,111 under treatment at the close of the year. The total number of deaths is 1,560. He suggests a reorganization of the medical department so as to place it in better harmony with the growth and expansion of other branches of the service, and to adapt it more efficiently to present wants. With the existing organization and pay, it is found impossible to procure the requisite number of medical officers, the superior inducements held out to enter the land service attracting many in that direction who would otherwise prefer service in the navy. The statistics forming a part of the report show the large number of resignations, as well as the large proportion of those now in the volunteer service who decline positions in the per-

manent corps. Since January, fifty-two resignations have occurred, and quite a number are now before the department unaccepted, simply because of the impossibility of filling the vacancies. It is suggested that the only remedy is to make the medical commission more desirable in pay and position. The subject is commended to the attention of Congress. Additional appropriations are required for the completion of hospitals, and an alteration of the law of March 3, 1851, relating to the value of rations of sick transferred to hospitals, is suggested. Authority to purchase the balance of square No. 948, in the city of Washington, for a naval hospital, is also requested. The government already owning a portion of the land makes it desirable, on many accounts, that the remainder (some 14,000 feet) should also be under control of the department.

The colonel commandant of the marine corps reports his command in a good state of discipline. Although its number is now fully equal to the quota authorized by law, he is unable to comply with all the requisitions for guards for sea-going vessels. The reports from the several squadrons and vessels of the service show that, in the gallant deeds of the navy, the marines have borne an honorable part.

CONCLUSION.

In this my fourth annual report I have submitted somewhat in detail the condition of the department and the service. This report presents the distribution and employment of a maritime force which, including the additions to it now in progress and near completion, constitutes, for all the purposes of defence, if not of attack and conquest, the most powerful national navy in the world. In four preceding similar communications, including that submitted to you upon the assembling of Congress in the extra session of 1861, it has been my duty to exhibit the methods and measures of administration, by which, from a comparatively small beginning, and under the pressure of an unexampled exigency, this vast naval power has, since your accession to the Presidency, been brought into existence; to state the contributions which have been made to it from our commercial marine; to indicate the application of all the resources of our public naval establishments to its construction and preparation for service; to show how individual energy and skill and capital have come successfully in aid of insufficient governmental provision for the due prosecution of the work, and to trace in general outline the processes and results of inventive genius and scientific experiment which have changed, to a great extent, the materials and forms of naval structure and armor and armament, and have enabled our country, while in so brief a period assuming a foremost place among maritime nations, to create also a new era in the development and application of naval force.

In connexion with such account of the sudden creation of a new American naval power, it has been at the same time my privilege in these communications to make official record of a series of naval enterprises and achievements wholly without precedent or parallel. No previous conception of efficient blockade; no former endurance under the fire of fortified batteries; no audacity and suc-

cess heretofore known of naval attack upon such fortresses, through formidable submarine obstructions spread for their defence; no similar penetration by war vessels of internal waters through a reach of navigation almost continental; no other gigantic scale of co-operation of naval with army forces in expeditions and combats hundreds of miles from the sea board, and along the course of rivers precarious and dangerous of navigation, can anywhere be found of a character to compare with the triumphs in all these forms of naval effort which it has been the duty of this department during the past three years to organize and to report.

If in the prosecution of duties so arduous, complicated, and exacting, the trust confided to this department shall appear to have been faithfully and fitly discharged, then certainly my acknowledgments are still due, as they have been heretofore expressed, to the gentlemen associated with me in its management, to the whole clerical force, to the several chiefs of bureaus, and especially to the invaluable services of the Assistant Secretary and the chief clerk of the department.

But it is to the officers and men of our naval service that the great renown of what has thus been done, and is doing, justly belongs. The best administration of this department can do little more at any time than to give them the adequate means and the right opportunity of action. To them, therefore, first and always, be the honor, when their own country and the world shall recognize in this expansion and these exploits of our naval power a spectacle of patriotic and virtuous heroism worthy of the cause in which it is displayed, and of the national life which it illustrates and defends.

GIDEON WELLES,

Secretary of the Navy.

To the PRESIDENT.

APPENDIX.

REPORTS OF OFFICERS.

NORTH ATLANTIC SQUADRON.

OPERATIONS ON JAMES RIVER.

CO-OPERATION WITH ARMY EXPEDITION UNDER GENERAL GRAHAM.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 2, 1864.

SIR: Returning here Sunday afternoon, 31st ultimo, after an absence of a few hours at the navy yard, I was informed by Lieutenant Commander Upshur, of this ship, that General Graham had a few hours previously gone up the James river with the army gunboats on an expedition, the object of which was to capture some rebel troops, said to be about forty, (40,) and tobacco, and that on the application of General Graham, Captain Gansevoort had sent Lieutenant Commander Gillis with the Commodore Morris, in the Nansemond, to co-operate.

The Commodore Morris being very short of her complement, a detail of fifty (50) men from this ship was put on board of her to supply her deficiencies, and Lieutenant Commander Gillis was instructed by Lieutenant Commander Upshur not to allow them to land without it was absolutely necessary.

On my return I ordered the Shokokon and Commodore Barney to follow General Graham and co-operate.

At 7.30 next morning, in a dense fog, I received from General Graham a letter explaining his situation and asking for assistance. Immediately ordered the Minnesota's launches to be got out, armed, provided, and despatched to the assistance of the army expedition, and telegraphed to General Butler on the subject.

Soon afterwards Acting Ensign Harris, of the navy, who is on service with the army and was in this expedition, came off in the fog to our picket boat, Commodore Jones, and reported that the detachment of cavalry, infantry and a howitzer squad, in all about ninety (90) men, which General Graham had landed at Smithfield the previous afternoon, had on their march to Chuckatuck encountered a superior force of the enemy, and at 8 p. m. had been driven back to Smithfield, where they were surrounded and in great danger of being cut off. Unfortunately, none of the army gunboats or transports were then at Smithfield to protect or bring off the detachment.

The fog still prevailed. I sent Ensign Miller with Acting Ensign Harris, and General Graham's letter to me to General Butler, that General Butler might understand the situation, and if he thought proper, might send troops in the rear to relieve this beleaguered detachment. At the same time I despatched the Shokokon to tow our launches, as near as the water would allow her to go, in the direction of Smithfield, and I sent the Commodore Barney up the Nansemond with an order to Lieutenant Commander Gillis, providing for the assistance which General Graham desired there.

At 5 p. m. the launches returned, and reported the army gunboat Smith Briggs had, after the Shokokon had taken them up as far as her draught would allow, towed them several miles to within close proximity to Smithfield, where a hot engagement immediately commenced between the enemy and our forces on shore, supported by our launches and the Smith Briggs, which resulted in the capture and destruction of the Smith Briggs by the rebels, with the capture of nearly all the detachment landed at Smithfield by General Graham.

The reports of Acting Ensign Birtwistle and Acting Master's Mate Jarvis—who, after the wounding of Acting Master Pierson, had command of the launches sent from this ship—show that, after sustaining a heavy fire of musketry and artillery in these open boats, and the guns of the Smith Briggs being turned upon them by the rebels, the launches were compelled to retire without being able to render any further assistance.

Acting Master Pierson and three (3) men of this ship were, I regret to state, seriously wounded.

It appears from the report of Lieutenant Commander Gillis that the second detachment, composed of thirty-two (32) men from the Smith Briggs, and twelve (12) from the Commodore Morris, landed in the Nansemond with instructions to meet the first detachment from Chuckatuck, returned safely.

I enclose the following papers pertaining to this affair, among which is a request from me to General Butler that expeditions requiring naval co-operation, or passing the lines of the blockade, should be previously determined between him and myself.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

A. R. Admiral Com'd'g N. A. B. Squadron.

Hon. GIDEON WELLES, *Secretary of the Navy.*

Communication from General Graham to Admiral Lee.

HEADQUARTERS NAVAL BRIGADE, DEPARTMENT VIRGINIA AND

* NORTH CAROLINA, ON BOARD TRANSPORT LONG BRANCH,

Off Holloway's Point, 5 a. m., February 1, 1864.

ADMIRAL: I landed a party of ninety men, consisting of 20 cavalry, one howitzer squad, and the remainder infantry, at Smithfield at 1.25 p. m. yesterday, with orders to march to Chuckatuck, where I was informed there was a small force of the enemy.

At Chuckatuck they were to have been met by another detachment which left Holloway Point. This latter detachment marched as far as Chuckatuck; saw no enemy; heard distant firing, which the commanding officer supposed to be the first detachment endeavoring to make a landing at Smithfield. This last detachment returned to its place of landing about sundown.

At 3 o'clock p. m. yesterday I despatched the gunboat Flora Temple to Chuckatuck, but unfortunately she grounded and remained ashore until I came up with the General Jesup and transport Long Branch.

The Flora Temple had been despatched to Chuckatuck to occupy the atten-

tion of the enemy on shore, while the other parties were advancing from the points indicated.

I left Smithfield at 3.40 p. m., having remained there at the request of the officer commanding the first detachment, so that his detachment might return to the vessels, if it met with any serious opposition, before it had marched a distance beyond possibility of communication.

Up to the time I left, no firing was heard at all. After the vessels with me had succeeded in drawing off the *Flora Temple*, we steamed as rapidly as possible for the mouth of the Chuckatuck, but it was quite dark and very hazy when we reached there; consequently we kept on for the Nansemond and reached there at 8 o'clock p. m., when I was informed by Lieutenant Commander Gillis that the second detachment had reported as above.

Immediately thereupon I sent orders by the *Smith Briggs* to the *Flora Temple* and General Jesup to proceed at daylight to the Chuckatuck, make a reconnaissance, and report to me as early as practicable at the mouth of the Nansemond.

At daylight I intend landing with a detachment and feeling my way, cautiously, to Chuckatuck village.

As soon as I have definite tidings I will communicate with you again.

In the mean time please request your vessels to keep a look-out on the banks of the James river for any of our men that may have strayed from the main body, if it has been captured.

Please communicate the above facts to Major General Butler, and oblige.

Very respectfully, your obedient servant,

CHARLES K. GRAHAM,
Brigadier General, &c.

Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Please send a boat up the Nansemond to me, and the bearer, Captain Rowe, will proceed with his vessel to Smithfield.

Report of Captain Guert Gansevoort.

UNITED STATES IRON-CLAD ROANOKE,
Newport News, Va., February 4, 1864.

ADMIRAL: I have the honor to inform you of the facts (as far as I can recollect) relating to the expedition which went up the river on January 31, under the command of General Graham.

Sunday morning, January 31, about 10 a. m., three army steamers came up from Fortress Monroe and went near the Minnesota, and shortly after I saw a boat coming towards this vessel with an army lieutenant (whose name I do not remember) and Lieutenant Commander Gillis. On their arrival, the army lieutenant stated to me that General Graham was going on an expedition, and wanted Lieutenant Commander Gillis to go with him. I referred him to the admiral, and was informed that he was absent to Norfolk and would not be back until late in the afternoon. I replied that I did not consider that absence; to which they said that, to all intents and purposes, it was absence as far as the expedition was concerned; that the time that would be taken in sending to the admiral and the return would defeat the object of the expedition. I then asked him what was the object of this expedition. He replied that it was to capture about "fifty (50) men." I asked him how he expected to accomplish it. He said that they intended to go up the river a short distance, land the men, and then march down. I then asked what assistance Lieutenant Commander Gillis would be to them. He said that General Graham wanted him to take charge

of the boats. I asked him if he expected the sailors were to be landed. He told me no ; that they had a force large enough, and that it was not the intention to land the sailors.

He also stated that they were not going far from the ship, and would be back in 16 or 18 hours, as they were ordered to return in that time.

Under these conditions, I consented to let Lieutenant Commander Gillis accompany the expedition, believing that it would meet with your approbation.

Very respectfully, your obedient servant,

GUERT GANSEVOORT,

Captain United States Navy.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Newport News, Va.

Report of Lieutenant Commander James H. Gillis.

UNITED STATES GUNBOAT COMMODORE MORRIS,

Newport News, February 1, 1864.

SIR : I have the honor to make the following report of the part taken by this vessel in an expedition under Brigadier General Graham, having for its object the capture and breaking up of the camps of a body of rebels on the Chuckatuck creek, in Isle of Wight county. At the request of General Graham, and after communicating with the senior officer present, I took command yesterday of the forces on Nansemond river, both army and navy, which were to act in conjunction with the forces (under the immediate command of General Graham) from Smithfield, on Pagan creek. The force placed under my command by General Graham consisted of the army gunboat Smith Briggs and two launches, manned by thirty-four (34) men of the naval brigade, under command of Captain McLaughlin ; besides which, I had fifty men obtained from the Minnesota. The force under General Graham consisted of seventy (70) men of the naval brigade, and twenty (20) cavalry ; this latter force to land at Smithfield and march to the village of Chuckatuck, on Chuckatuck creek. It was supposed that at 2 o'clock they would have been two hours on the road, and therefore General Graham directed that the party he had placed under my command should land at that hour, and also march on Chuckatuck, where he expected they would form a junction. I did not arrive at Ferry Point, from which place they were to debark, until about five minutes before 2 o'clock, but at 2.15 all the men were landed, and at 2.20 they had taken up their line of march for Chuckatuck, with directions to proceed to that place and remain two hours, at the expiration of which time, if they neither saw nor received any intelligence of the other party from Smithfield, they were to return ; which instructions were carried out, they having remained the specified time and received no intelligence of the other party, but hearing heavy firing in the direction of Smithfield, which led them to suppose that the enemy had been met in considerable force, and that our men had been obliged to retire. Returning without having seen any of the enemy, they re-embarked at 6.30 p. m. I then got under way, the Smith Briggs in company, towing launches, and stood down to opposite Town Point, where I came to anchor, feeling certain that the expedition had most signally failed. At 7.30, General Graham arriving in the Long Branch with the information that the party which he had taken had landed and were on their way across the peninsula, I got under way, and in company with the Long Branch and Smith Briggs returned to Ferry Point, where we again came to anchor, hoping to receive some intelligence. Having received none during the night, at 7 o'clock this morning General Graham started for Chuckatuck with thirty (30) men of the naval brigade, and the fifty (50) men belonging to the Minnesota, hoping either to meet or receive some word from those about whom

he now began to feel great anxiety ; but being unsuccessful in his efforts, he returned to the vessels, determined to proceed again to Smithfield, to which place he had sent the Smith Briggs at an early hour in the morning. Before getting under way, however, the United States gunboat Commodore Barney brought your despatch of this date to me, and at the request of General Graham I immediately proceeded to the mouth of Pagan creek, where I communicated with the commanding officer of the United States steam gunboat Shokokon, who informed me that the launches sent to Pagan creek by yourself had been repulsed at Smithfield, with a loss of five wounded, one being Acting Master Pierson, of the Minnesota, and that the Smith Briggs and all on board had been captured ; and that the smoke which was seen in the direction of Smithfield was supposed to be from the burning of that vessel, which supposition was confirmed in a short time by the rapid explosion of her shells ; and soon thereafter, at 3.50 p. m., by the explosion of her magazine.

About this time a flag of truce was discovered on shore, on the lower side of Pagan creek near the mouth, and a launch belonging to the naval brigade, undercommand of Captain McLaughlin, was sent in to communicate. He brought off five of our men, including Captain Lee, (who had command of the force landed at Smithfield,) who had succeeded in making good their escape.

Captain Lee informed me that in the fight of Sunday he succeeded in driving the rebels ; but having received information that heavy re-enforcements were coming in from Ivor station to cut him off from his advance on Chuckatuck, and also that there was a company of cavalry at Cherry Grove, he deemed it advisable to fall back on Smithfield, where he hoped to be able to communicate with General Graham in time to receive assistance before the enemy could advance in sufficient numbers to render his capture or destruction certain ; but the Smith Briggs, which had been sent to his assistance, did not arrive until too late. The strength of the enemy, as reported by Captain Lee, was one regiment of infantry, one of cavalry, and one battery of artillery.

Deeming any further demonstration with the means at hand against so strong a force of the enemy impracticable, not being able to get up the river any further with my vessel, I directed the commanding officer of the Shokokon to return to the Minnesota with the launches and their crews, and the wounded men and officer, after which I returned and reported to you in person.

Very respectfully, your obedient servant,

J. H. GILLIS,

Lieutenant Commander United States Navy.

Acting Rear-Admiral S. P. LEE,

Com'g N. A. B. Squadron, U. S. Flag-Ship Minnesota, Newport News, Va.

Letter from Acting Rear-Admiral Lee to Lieutenant Commander J. H. Gillis.

FLAG-SHIP MINNESOTA, February 1, 1864.

SIR : I send this by the Barney. Ensign Harris has just come off on the Commodore Jones, and reports that the first detachment fell back upon Smithfield at 8 p. m. yesterday, where they are surrounded and short of howitzer ammunition. I have sent him to General Butler.

I am sending on launches to Pagan creek, with plenty of ammunition. The Morris or Barney can bring General Graham out and take him there if he wishes it. Leave a gunboat in the Nansemond to pick up stragglers.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Lieutenant Commander GILLIS,

Commanding Commodore Morris.

Report of Lieutenant Commanding John H. Upshur.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 1, 1864.

SIR: In your absence yesterday, at the Norfolk navy yard, Brigadier General Graham appeared here with three armed steamers and a detachment of men, and sent a request that a gunboat might go up the Nansemond river to assist in an expedition, the object of which, as stated to me by one of General Graham's lieutenants, was to capture a number of the enemy's troops, (about forty,) and a quantity of tobacco, supposed to be located on the peninsula formed by the Nansemond river and Pagan creek.

The matter was referred to the senior officer present, Captain Gansevoort, who gave his consent, and the Commodore Morris, Lieutenant Commander Gillis, commanding, was assigned the duty. A detail of fifty men was sent from this vessel to the Morris to supply the deficiencies in her crew.

This morning, in obedience to your order, the launches of this ship were armed and equipped, put under the command of Acting Master Pierson, and sent to aid in rescuing a party of General Graham's men at Smithfield, said to be in a critical position.

I herewith enclose the reports of Acting Ensign Birtwistle and Acting Master's Mate Jarvis, officers of the launches, of the part taken by them in an engagement with the enemy at Smithfield, Virginia, Acting Master Pierson having been seriously injured.

I also enclose the surgeon's report of the wounded belonging to this ship.

I am, very respectfully, your obedient servant,

J. H. UPSHUR,

Lieutenant Commander, Com'dg U. S. Steamer Minnesota.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Ensign James Birtwistle.

UNITED STATES STEAMER MINNESOTA,
Off Newport News, February 1, 1864.

SIR: In obedience to your orders I left the ship this morning, at 9.30, in charge of the second launch, heavy 12-pound howitzer, and crew of 23 men, subject to the orders of Acting Master Pierson, who had command of the first launch, rifled howitzer, and 23 men. We were taken in tow by the United States steamer Shokokon, and arrived off Smithfield creek at about 12 a. m. The army steamer Smith Briggs came to us; we cast off from the Shokokon, and were taken in tow by the Smith Briggs, up Smithfield creek, to within about 2,000 yards of the village of Smithfield, when we discovered our army detachments on shore, and the enemy engaged—the enemy having a battery to the southward of the village, on which the Smith Briggs and first launch opened fire, it being about 3,000 yards distant. We continued in line toward the village, when we discovered our army men on shore running from the direction of the battery. The Smith Briggs ran alongside a wharf, and our men commenced getting on board of her, when the rebel riflemen opened a murderous fire on her and the launches from behind houses, &c., on the hill, about 250 yards from the wharf, driving the men from their guns on the Smith Briggs, and capturing her by charging down the hill; the launches during this time kept up a fire with shrapnell. We could then no longer stand the fire of the riflemen, and Mr

Pierson headed the first launch down the creek, and, as he passed me, told me to follow him. We rounded the point near the village, rounded to, and fired a few more shots. Our flag was still flying on the steamer, and they appeared to be working her about. This I thought strange; but as soon as we were fairly under way down the creek again, they turned the guns of the Smith Briggs on us, and also artillery from the side of the hill. During the engagement George Anderson, (seaman,) while at the gun in the second launch, was wounded in the right hand, and when I overhauled the first launch at the mouth of the creek, I learned that Mr. Pierson was wounded in abdomen and right arm; George Cook, (seaman,) thigh and testicle; William B. Kelly, (seaman,) in bowels by sword thrust by Mr. Pierson.

In nearing the Shokokon, which was lying off the mouth of the creek, we met a boat from her in charge of her executive officer, with Shokokon's doctor and steward with necessaries for wounded; landed our wounded on the Shokokon. At about 2.45 p. m. she towed our launch to the Minnesota. During the attack on the Smith Briggs the first launch was about 200 yards from her, and the second launch was about 500. I think it was well that we retreated; could they have managed the steamer and outflanked us on the beach, we could not have returned.

I am, sir, very respectfully,

JAMES BIRTWISTLE,
Acting Ensign.

Lieutenant Commander J. H. UPSHUR,
Commanding U. S. Steamer Minnesota.

Report of Acting Master's Mate James Jarvis.

UNITED STATES FRIGATE MINNESOTA,
February 1, 1864.

SIR: The following is a true report of the boat expedition which left this vessel 10 a. m., in charge of Acting Master Pierson, in tow of the United States gun-boat Shokokon.

We proceeded to the mouth of Pagan creek, and finding we could not proceed any further, we then were taken in tow by the United States gunboat Smith Briggs and proceeded up the creek. Mr. Pierson and the pilot then went on board.

At 11.30 a. m. the enemy opened fire; it was immediately returned, and silenced the enemy's. Mr. Pierson gave orders to haul up alongside; he and the pilot returned to the launch. We cast off and proceeded nearer the town. Mr. Pierson then gave orders to Mr. Birtwistle to look out for his launch, for he should give him no more orders. Mr. Pierson said he would go above the town, but not to fire, for our men held the town. When abreast of the town the enemy commenced firing with muskets, (I should judge about 150,) which caused a confusion with the greater part of the launch's crew.

Mr. Pierson gave orders to turn the launch so the howitzer would come to bear on the enemy, using profane words to the crew. When the second volley was fired, wounding Mr. Pierson and three men, Mr. Pierson then said, "I am gone; you must get out the best way you can," giving the order to strike the flag. I then made answer, "that cannot be done." The coxswain, Thomas McCarty, and quartermaster, Julius Bartlet, repeated the answer, "No, no." By this time we were out of musket range, with the exception of those who ran down the bank and kept up a brisk fire until we were out of range.

The muskets in the boat were discharged at the enemy by those who did not

man the oars. We then proceeded down the creek to the United States gun-boat Shokokon, having our wounded put on board and cared for. At 5 p. m. reported on board.

I am, respectfully, your obedient servant,

JAMES JARVIS,
Acting Master's Mate.

Lieutenant Commander J. H. UPSHUR,
Commanding Minnesota, off Newport News, Va.

Report of Acting Master W. B. Sheldon.

UNITED STATES STEAMER SHOKOKON,
Off Newport News, Va., February 1, 1864.

SIR: I beg leave to submit the following report, so far as my knowledge extends, of the circumstances of the attack on the boats, and wounding one officer and three seamen (up Smithfield creek) belonging to the United States flag-ship Minnesota. About 10 o'clock a. m. this day I left the flag-ship with two launches belonging to the Minnesota, and proceeded with them in tow up the James river, arriving off Smithfield creek at 11.30 a. m. The army gun-boat Smith Briggs arriving, offered to take the launches alongside of her and tow them in, there not being water enough for this vessel to proceed further, it being very foggy at the time.

The Smith Briggs proceeded up the creek with the launches about four miles. I heard heavy and rapid firing; soon after it cleared away enough to see that the firing was from shore, and was returned by the Smith Briggs and launches; they then passed around a point of land, from sight. About a half hour after, saw the launches returning. I immediately sent a boat with the surgeon to assist the wounded, if any. At 3.30 p. m. the boats returned, having on board Acting Master Pierson and three seamen, wounded. I learned that the Smith Briggs had been captured and destroyed. I started with the wounded for the flag-ship, arriving at about 5.30 p. m. this day.

Yours, very respectfully,

W. B. SHELDON,
Acting Master, Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. Blockading Squadron.

Report of Pilot Henry Stevens.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 4, 1864.

SIR: According to your orders, I proceeded as pilot of the expedition in command of Acting Master A. B. Pierson, he having the two launches of this ship under his command. After leaving this ship, the United States steamer Shokokon took the launches in tow and proceeded to the mouth of Smithfield creek, where she anchored, the water being too shallow for her to proceed up the creek. The army boat Smith Briggs, on coming up, volunteered to take the launches in tow, which Mr. Pierson agreed to. After proceeding about two and a half miles up the creek, we perceived a man on the shore waving a white rag. The captain of the Briggs hove his vessel to, and sent a boat to get the man,

who proved to be a soldier belonging to our forces, and was taken the night previous by the rebels, but had escaped. When within half a mile of Smithfield wharf, the captain of the Briggs said, "I must let you go; I cannot tow you further." We cast off then from the Briggs and immediately opened fire on the rebel battery, they having opened fire on our forces about five minutes previous, and being about a mile and a half distant from us. After firing about five rounds we followed the Briggs toward the village. After getting to within about 250 yards of the dock, I observed that it was crowded with soldiers, the Briggs at that time lying close to the docks, and firing at right angles to it. We kept on our course toward the wharf for a couple of moments longer, when a body of rebels ran down a hill and charged on our soldiers on the wharf, driving many of them overboard, and at the same time opening fire on the launches from the left bank of the creek. At that time Mr. Pierson gave the order to turn round with her head down the creek, and at the same moment received a shot in the right arm, and ordered the flag to be hauled down. Mr. McCarty, coxswain of the launch, said, "I will kill the first man that touches the colors," or some words to that effect. Mr. Pierson said then, "If you will not haul it down, let it stay up." At this time the boats were going slowly down the creek, the enemy meanwhile keeping up a brisk fire at us. Mr. Pierson received another shot which struck him in the breast, and after a moment or so said, "I must lie down; I feel faint;" which he did accordingly. I think the rebels had possession of the Smith Briggs at that time, for while we were going down her guns were trained on us, and opened fire. We made the best of our way down the creek, and got alongside of the Shokokon at 2.30 p. m.

I ought to have stated that previous to the boats turning round, three of the men were wounded and fell to the bottom of the launch. I saw the Briggs on fire, and also saw her blow up at 3.50 p. m.

Very respectfully, your obedient servant,

HENRY STEVENS, *Pilot.*

Lieutenant Commander J. H. UPSHUR,

Commanding United States Steamer Minnesota.

Report of Assistant Surgeon A. Matthewson.

UNITED STATES STEAMER MINNESOTA,

Off Newport News, Va., February 1, 1864.

SIR: I respectfully report, that in the engagement of this date with the rebel force at Smithfield, Va., the following persons, attached to the United States steamer Minnesota, were wounded: A. B. Pierson, acting master, by a musket shot, producing severe flesh wounds of the right arm and chest; George Cook, ordinary seaman, by a musket shot, producing flesh wounds of left thigh and scrotum; John B. Kelly, seaman, by a sword thrust in the abdomen, producing a serious wound; George Anderson, seaman, by musket shot, producing flesh wound of left hand.

Very respectfully, your obedient servant,

ARTHUR MATTHEWSON,

Assistant Surgeon U. S. Navy.

Lieutenant Commander JOHN H. UPSHUR,

Commanding United States Steamer Minnesota.

Note from Acting Rear-Admiral Lee to General Butler.

FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 1, 1864.

GENERAL: I respectfully suggest that hereafter all expeditions requiring naval co-operation, or passing the lines of the blockade, should be arranged between you and myself, before they are undertaken.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral Com'g N. A. Blockading Squadron.

Major General BUTLER,

Commanding Department of Virginia and N. Carolina.

EXAMINATION OF FORT POWHATAN.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP N. A. B. SQUADRON,
Off Newport News, Va., March 29, 1864.

SIR: The department will recollect that an expedition under my command, sent by its direction up James river last July, took possession of Fort Powhatan, thoroughly destroyed its magazines, barracks, and all platforms for guns, and cut away all the sodding, of which there was a great deal and well done, leaving the fresh earthworks exposed to the effects of the weather.

On Sunday, the 27th inst., I received a confidential communication from General Butler, enclosing a copy of a statement he had received, representing that the enemy had removed all the guns and men from Drury's Bluff to Fort Powhatan, and still threatened to attack Norfolk, and that this information came "direct from Richmond from our friends."

Yesterday morning, 28th inst., I despatched the Commodore Morris, Lieutenant J. P. Fyffe, commanding, with the Commodore Barney, (Acting Master Williams,) and the Shokokon, (Acting Master W. B. Sheldon,) with orders to proceed to Fort Powhatan and ascertain if the enemy occupied it. These gunboats returned this morning, and Lieutenant Fyffe reports that he found Fort Powhatan in the condition I left it last fall, except that it was much wasted by the action of the frost and rains since.

I have communicated this information to General Butler, and enclose the report of Lieutenant Fyffe.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

A. R. Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant J. P. Fyffe.

U. S. STEAMER COMMODORE MORRIS,
Off Newport News, Va., March 29, 1864.

SIR: I have respectfully to report that yesterday, in obedience to your order, I proceeded with this vessel, the Shokokon, and Commodore Barney, to Fort Powhatan, to ascertain if it is armed. I found it unarmed and abandoned. It is

just as you left it in July, except from the effects of the weather. We arrived at Fort Powhatan at 5.30 p. m., remained there an hour, then steamed down the river again as far as Jamestown island, where, at 9.30, we anchored. This morning at 5.30 got under way again, and at 10 returned to this anchorage.

I am, very respectfully, your obedient servant,

J. P. FYFFE,
Lieutenant Commanding.

A. R. Admiral S. P. LEE,
Commanding N. A. B. Squadron.

ARMY REQUESTS CO-OPERATION OF THE NAVY UP JAMES RIVER.

Letter from Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,
Newport News, Va., April 4, 1864.

SIR : I called on Lieutenant General Grant at the fort, on Friday, the 1st inst. He informed me that he had instructed General Halleck to apply to the Navy Department to send iron-clads here. General Smith then informed me that he is to have a column to move on Richmond from this quarter, and desires a co-operating naval force.

I would be glad to know what additional force will be available for this most important service.

I have the honor to be, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Comd'g N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Telegram from General Grant to General Halleck.

[Telegram.]

CULPEPPER COURT HOUSE, VA.,
8.30 p. m., April 8, 1864.

Major General HALLECK : It is the intention to operate up the James river as far as City Point, and all the co-operation the navy can give us we want. Two of the iron-clads are wanted as soon as they can be got. You will know how to communicate our wants to the Secretary of the Navy.

U. S. GRANT,
Lieutenant General, Commanding.

HEAD QUARTERS OF THE ARMY,
Washington, April 9th, 1864.

Official :

ROBERT U. SCOTT,
Captain 4th U. S. Infantry, A. D. C.

Respectfully referred to the Secretary of the Navy.

H. W. HALLECK,
Major General and Chief of Staff.

APRIL 9, 1864.

COMBINED ARMY AND NAVY EXPEDITION UP THE JAMES AND NANSEMOND RIVERS.

*Report of Acting Rear-Admiral Lee.*FLAG-SHIP NORTH ATLANTIC SQUADRON,
Off Newport News, Va., April 16, 1864.

SIR: I have the honor to submit the following report in regard to the part taken by the navy in the recent combined army and navy expedition up the James and Nansemond rivers: On the 9th instant I wrote to General Butler suggesting that he send a sufficient force to clear the country in the vicinity of Smithfield and Chuckatuck of the guerilla parties known to be there, and to destroy the boats which it was supposed they had concealed. (Copy enclosed, No. 1.) In reply to this I received on the 10th a letter from General Butler, (copy No. 2,) which was brought by General Graham, who proposed going up the creeks with his light armed transports and landing some troops in the Nansemond. I saw General Butler the same evening and urged him to send at once a suitable force to come in from the rear and envelop the rebels so as to effectually capture them at Iron station, and between the Blackwater, James, and Nansemond rivers, and to advise me when he was ready to begin this movement, that I might send a naval force to watch Chuckatuck and Pagan creeks, and prevent the escape of the rebels by water. This he promised to do. I suggested to him that the plan of attack brought by General Graham, of approach in front instead of in the rear, would drive back the rebels, whereas they ought to be captured. This recommendation I hoped would be adopted, but the plan sent by General Graham was substantially carried out, and the force sent to the rear was cavalry, and was kept too far off for effect. On the afternoon of the 12th I received from General Smith and Colonel Shaffer (chief of staff to General Butler) a memorandum, of which a copy is enclosed. On the morning of the 13th I issued orders to the commanding officers of the gunboats I had assigned to take part in the expedition—the Commodore Morris, Commodore Perry, Commodore Barney, and Stepping Stones—of which copies are enclosed. Two (2) launches with howitzers from this ship, in charge of Acting Master Wilder and Acting Ensign J. Birtwistle, were ordered to accompany the Stepping Stones. The gunboats and launches accordingly started from this point as directed, and up to sunrise on the morning of the 14th all was carried out according to their orders given. At this time, however, the intended co-operations and the infantry force on Pagan creek failed of being fully carried out, owing to the grounding of the transports and delay in landing the troops, and that part of the expedition designed to explore Pagan creek did not begin to ascend it until 12.15 p. m. The launches, going ahead of the troops, were fired on from the shore by a concealed force, and Acting Master Wilder, of this ship, instantly killed, and H. Miller, landsman, severely wounded. Assistant Surgeon William Longshore's report of casualties is enclosed, and the report of Acting Master Campbell (12) gives full details of this part of the affair. The Commodore Morris, as will be seen by the report of her commanding officer, Lieutenant Fyffe, assisted the military force, and carried out my orders. The Commodore Perry and Commodore Barney also did their part in co-operating with the troops in the Nansemond and Western branch. The boats from these vessels explored Western branch to the extent that the troops afforded co-operation. The expedition returned yesterday afternoon. It failed in accomplishing the main objects, viz: the complete capture of the rebels in that region and the destruction of the torpedo-boat which attacked this ship on the morning of the 9th. This, it was ascertained, had gone from Pagan creek

to Richmond on the night of the 10th instant for repairs. This country is a very difficult one to operate in, and requires more time than was available for a complete overhauling. I give in a separate report information received in relation to this torpedo-boat. The results accomplished were four (4) prisoners, one (1) 12-pound howitzer, belonging to the navy, and probably captured by the rebels from the army boat Smith Briggs, and a few wagons taken and brought off; a valuable officer killed, and one man wounded on our side—the rebel loss unknown. The following enclosures accompany this report:

No. 1. Admiral Lee to General Butler, April 9, 1864.

No. 2. To Admiral Lee from General Butler, April 10, 1864.

No. 3. Memorandum received from General Butler and Colonel Shaffer, April 12, 1864.

No. 4. Orders to Acting Master D. A. Campbell, United States steamer *Stepping Stones*, April 13, 1864.

No. 5. Orders to Acting Volunteer Lieutenant A. P. Foster, United States steamer *Commodore Perry*, April 13, 1864.

No. 6. Orders to Acting Master James M. Williams, United States steamer *Commodore Barney*, April 13, 1864.

No. 7. Orders to Lieutenant J. P. Fyffe, United States steamer *Commodore Morris*, April 13, 1864.

No. 8. Report of Lieutenant Commander J. H. Upshur, commanding United States steamer *Minnesota*, (three enclosures,) April 16, 1864.

No. 9. Report of Acting Master J. M. Williams, United States steamer *Commodore Barney*, April 14, 1864.

No. 10. Report of Acting Volunteer Lieutenant A. P. Foster, United States steamer *Commodore Perry*, April 15, 1864.

No. 11. Report of Lieutenant Joseph P. Fyffe, United States steamer *Commodore Morris*, April 15, 1864.

No. 12. Report of Acting Master D. A. Campbell, United States steamer *Stepping Stones*, April 15, 1864.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

A. R. Admiral, Com'dg N. A. B. Squadron.

HON. GIDEON WELLES,

Secretary of the Navy.

Letter from Admiral Lee to General Butler.

FLAG-SHIP N. A. B. SQUADRON,

Off Newport News, Va., April 9, 1864.

GENERAL: The vicinity of Smithfield and Chuckatuck are known to be invested by guerillas, who are reported to have boats concealed up those creeks and their tributaries. You are aware that the rebels have an organized system of boat expeditions all along the coast, operating at one time from creeks in Morton and Gloucester counties against the Eastern Shore counties, Cape Charles light-house, &c.; at another time against the gunboat *Underwriter* at Newbern, and now against this ship here. In all these cases they harbor in the vicinity of their operations. This was explained by your prisoner, Acting Master Webb, of the rebel navy, captured while thus engaged in the Neck counties near Yorktown, where, as in the vicinity of Smithfield, &c., the small creeks are numerous and not accessible to our gunboats. It is believed that the little torpedo-boat which struck this vessel last night, happily without accomplishing its object, come out of Pagan and Chuckatuck creeks or their tributaries. I respectfully suggest that you send at once a sufficient force to capture these rebels and

destroy their boats on the upper creeks and to co-operate with a naval force to prevent their escape by the river, which I will send as soon as you are ready

I have the honor to be, general, very respectfully, yours,

S. P. LEE,

A. R. Admiral, Com'dg N. A. B. Squadron.

Major General B. F. BUTLER,

Commanding Dep't Va. and N. C.

Letter from General Butler to Admiral Lee.

HEADQUARTERS 18TH ARMY CORPS, DEP'T OF VA. AND N. C.,

Fortress Monroe, April 10, 1864.

ADMIRAL: I have your note in relation to the pirates of the creeks and inlets of the James river and the means of destroying them, and am desirous of co-operating with you in that object. I have, therefore, sent General Graham, who is charged with the duty of making all such dispositions as you may judge necessary, after conference with him for the purpose indicated.

Very respectfully, yours,

BENJAMIN F. BUTLER,

Major General Commanding.

Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Memorandum from General Butler.

FORT MONROE, April 12, 1864.

Admiral Lee will please have a gunboat at Halloway's Point, on the Nansemond, to-morrow evening, for the purpose of covering the crossing of an infantry force. The boat is to remain until advised to withdraw. Place one or more gunboats some distance above Day's Point when the army gunboat Brewster proceeds to that place with her convoy to land the infantry—the naval vessel to remain there after the Brewster and transports leave, and to continue there until information is communicated that the object of the expedition has been effected. Likewise to station a gunboat near the mouth of Pagan creek, whilst the army gunboats of light draught convoy troops in and out.

Orders to Acting Master D. A. Campbell.

FLAG-SHIP NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Virginia, April 13, 1864.

SIR: Proceed with the Stepping Stones, under your command, to the mouth of Pagan creek, taking in tow the two (2) launches of the Minnesota. You will there be joined by an army transport with troops, which are directed to land at or near Smithfield at sunrise in the morning. Render all the assistance in your power in effecting and covering this intended landing, and after it is effected, remain at that station until you are advised that your services are no longer needed.

Guard closely the water before and after the landing is effected. The object of this expedition is to co-operate with a detachment of our troops which will

be landed some distance above Day's Point for the purpose of scouring the waters about Pagan creek and capturing and destroying any rebel torpedo or other boats which may be there secreted.

In furtherance of this object, as well as covering the landing, the launches will be employed.

Respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, commanding N. A. B. Squadron.

Acting Master D. A. CAMPBELL,

United States Steamer Stepping Stones.

Orders to Acting Master A. P. Foster.

FLAG-SHIP MINNESOTA,

Newport News, Virginia, April 13, 1864.

SIR: Proceed with the Commodore Perry, under your command, to the landing opposite Halloway's Point, on the Nansemond river, timing your departure so as to pass through the obstructions in safety, and so as to arrive at Halloway's Point at 10 o'clock p. m. to-night. It is intended to cross in pontoon boats an infantry force to Halloway's Point at 11 o'clock p. m. Communicate with the officer in command of such troops as you may find upon the bank of the Nansemond, opposite Halloway's Point, and so dispose of the Commodore Perry as will best assist and cover the intended passage and landing of the troops on the other side of the river. You will remain in such position until you are advised that your presence there is no longer needed and you are directed to withdraw. The Commodore Perry is directed to proceed further up the Nansemond to Western branch, and you will send with her two armed boats from the Perry, under competent officers, who will be under the orders of Acting Master Williams, commanding the Barney.

Should the General Putnam still be in the Nansemond, you will deliver the accompanying despatch to her commanding officer.

Respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Acting Vol. Lt. AMOS P. FOSTER,

Commanding United States Steamer Commodore Perry.

Orders to Acting Master James Williams.

FLAG-SHIP NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, April 13, 1864.

SIR: Proceed with the Commodore Barney, under your command, up the Nansemond river, communicating with the Commodore Perry, and receiving from her two armed boats, with which you will proceed with the Barney to the mouth of Western branch. It is expected that a detachment from the army will be at Milnerstown or Red Ferry, situated on the West branch, at about 11 o'clock to-morrow, (Thursday morning,) who are to co-operate with you in exploring and scouting the Western branch for the purpose of capturing or destroying any rebel torpedo or other boats which may be there secreted. Upon your arrival at the mouth of the creek you will arm and equip two boats from the Barney, and, together with the two boats of the Perry assigned to you, you

will carefully and cautiously ascend the Western branch, having first endeavored to ascertain the strength of the enemy, if any there, and communicate, if practicable, with the army detachment expected at Milnerstown or Red Ferry at 11 o'clock. You will take command of this boat expedition in person, and be careful not unduly to expose your men. Upon the return of the boats to the Barney, join the Commodore Perry at Halloway's Point, and remain there until your services, in covering the army operations at that point, are no longer needed, when you will return and report to me here.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Acting Master JAMES M. WILLIAMS,

Commanding U. S. Steamer Commodore Barney.

Orders to Lieutenant Joseph. P. Fyffe.

FLAG-SHIP NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Va., April 13, 1864.

SIR: It is intended that a force of infantry will be landed at daylight, to-morrow morning, some distance above Day's Point, on the James river. For the purpose of assisting and covering this landing, you will hold yourself in readiness to proceed with the army transports, which will be collected at Newport News, at about midnight, this evening, under cover of the armed transport Brewster, and will accompany the expedition to the point of landing. You will direct that the United States steamer Shokokon, now on advance picket duty, be in readiness to join you as you proceed up the river, giving her commanding officer notice of the intended movement beforehand. Upon the arrival at the point of landing, you will so dispose of the Commodore Morris and Shokokon as to render every assistance in covering the landing, and after the landing has been effected, the naval vessels will remain in their positions until information is communicated that the objects of the expedition are effected. Guard closely the water during this movement. You are charged with the notification to the commanding officer of the vessels now lying in James river, between Newport News and the intended place of landing, of the intended movement, so that the vessels engaged in it may pass safely and quietly to their destination. It is intended that an infantry force shall land at or near Smithfield, passing into Pagan creek to assist in that movement; the Stepping Stones with two launches from the Minnesota, is detailed to assist and cover the landing, which will take place at sunrise to-morrow.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Lieutenant JOSEPH P. FYFFE,

Commanding U. S. Steamer Commodore Morris.

Report of Lieutenant Commander Upshur.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Va., April 16, 1864.

SIR: I enclose herewith the reports of Acting Ensign Birtwistle and O'Conner, of this vessel, of the part taken by them and the men under their command, composing the crews of the launches in the late expedition to Smithfield;

also Assistant Surgeon Longshaw's report of casualties. It is with feelings of deep regret and sorrow that I have to report the loss of Acting Volunteer Lieutenant Wilder. He was a brave, zealous, and subordinate officer. True to the reputation he had won among his shipmates for promptness and gallantry, he fell while in the act of firing a shot at the enemy.

I am, very respectfully, your obedient servant,

J. H. UPSHUR.

Lieut. Commander, Commanding U. S. Steamer Minnesota.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Ensign F. A. O'Connor.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Va., April 15, 1864.

SIR: I have the honor to report that on the 13th of April, at about 7 p. m., the first and second launches of this ship, with a crew of nineteen and twenty men respectively, the second launch being under the charge of Acting Ensign James Birtwistle, and both being under the command of Acting Master Charles B. Wilder, left this ship, and went alongside the United States steamer Stepping Stones and were fastened astern, while the Stepping Stones proceeded a short distance up the James river and anchored. At 2 a. m., on the 14th, the Stepping Stones proceeded up the James river to the mouth of Pagan creek with the boats in tow, where she anchored, it being yet dark and seeing no signs of the army transports. At about 5.30 a. m. two army boats came in view coming down the river, and soon others came from the same direction. We lay there, waiting for them to come in, which they seemed unable to do. At about 10 a. m. the boats cast off from the Stepping Stones and anchored, while she proceeded out and communicated with the transports and then piloted them into the creek, and was the pilot of the flotilla all of the way to Smithfield. When the Stepping Stones got back into the creek the launches proceeded up in tow of the army steamer Emma; she got aground after proceeding about three miles, when the boats cast off from her, and commenced to pull up. At about 12.15 noon we arrived off Smithfield, having up to this time seen no enemies. The first launch proceeded a short distance beyond the wharf to a jetty, where Mr. Wilder sent me with a guard of four men to bring down one of the inhabitants of the town, one of whom we saw sitting in front of a store. I brought him to Mr. Wilder, who examined him closely concerning the rebels and about the torpedo boat. He stated that there were no troops in the vicinity, nor had there been any since the Smith Briggs was destroyed, but occasionally some of the rebel picket, came into the town. He also stated that the torpedo boat had been there twice, and had come from Richmond. He told us that the David had left the village on last Sunday night, at 10 o'clock, and had returned to Richmond. We then went back to the wharf, and Mr. Wilder left the launch and communicated with Acting Master Campbell and the officer commanding the forces on shore. At 2 p. m. Mr. Wilder said to Mr. Birtwistle that he was going a short distance up the creek, and desired him to follow at a short distance, and cover us in the first launch, which he did accordingly. We then proceeded up the creek, and past the town, till we came to the ruins of a bridge, where we saw an old negro sitting; we went alongside the bank, and Mr. Wilder put various questions to him, and the answers he gave corroborated the statement of the man who was previously examined. Apprehending no danger, though we were prepared for it, we proceeded through the bridge and up the creek, and were followed at the proper distance by the second launch. When we were about

three hundred yards from the bridge the enemy opened fire on us from the right bank of the stream and from a thickly wooded bluff. Immediately we pointed the boat's head for the bluff and returned the fire from the howitzer and the rifles—Mr. Wilder going to the howitzer, and I attending to the boat and using small arms. We had fired two rounds at the rebels, and Mr. Wilder had the lock string in his hand ready to fire when, I regret very much to say, he was struck by a rifle ball in the left temple and instantly killed. H. H. Miller, one of my men, was also struck by a rifle ball and badly wounded. I discharged the gun, and got the launch with her head down stream, thinking it was useless to endanger the lives of my men any longer. Mr. Birtwistle got a good position and ably supported me, and I will now add that through the whole expedition my men behaved well, and especially while under fire. This morning my boat, in company with the second launch, covered the army steamer Emma while she ascended the creek. We gave the woods a vigorous shelling, and had the satisfaction of starting some of the enemy from the woods. The town of Smithfield has a deserted appearance, and I saw no one in the town but old men, women and children.

I am, very respectfully, your obedient servant,

FRED. A. O'CONNOR,
Acting Ensign United States Navy.

Lieut-Commander J. H. UPSHUR,
United States Navy, Commanding U. S. Steamer Minnesota.

Report of Acting Ensign Jas. Birtwistle.

UNITED STATES STEAM FRIGATE MINNESOTA,
Off Newport News, Va, April 25, 1864.

SIR: I have the honor to report that on the 13th instant, pursuant to your orders, I left the ship, in charge of the 2d launch, with Master's Mate J. M. Simms, (20) twenty men, and heavy 12-pounder howitzer, subject to the orders of Acting Master Charles B. Wilder, in command of the 1st launch, with Acting Ensign Fred. A. O'Connor, (19) nineteen men, and heavy 12-pounder howitzer, smooth bore. Both launches were taken in tow by the Stepping Stones. She anchored a short distance up the river until 2 o'clock next morning, the 14th, when she got under way and arrived off Smithfield creek, which we entered at daylight and came to anchor just inside, awaiting the arrival of the army steamer which steamed in towards us at about 9 a. m., but grounded outside. The Stepping Stones went out to pilot them in while the launches lay at anchor until they came up, when we were taken in tow by the army steamer Emma to within about (3) three miles of Smithfield, when we cast off and took stations to cover the advance and landing of the troops, and arrived at Smithfield at about 12.30. Troops landed, launches advanced, and Mr. Wilder stationed me to guard the main street and back entrance to the town, while he commanded the main approaches to the right of the town; and while in this position Mr. Wilder interrogated an aged colored man who was living in a toll-house to a destroyed bridge near him in reference to the Torpedo, the nature of the creek, force and vicinity of the rebels, and other necessary and important questions, while I, on the left, questioned an aged white man in a similar manner. Shortly afterwards we compared accounts, and found them to agree. Though they said the Torpedo had left there last Sunday evening, Mr. Wilder was not satisfied, nor any of us; we thought possibly their statements were not true, or she might have returned. Mr. Wilder having called me to him, placed me in command of the right of the town, while he went to consult Acting Master Campbell, commanding the Stepping Stones. He returned

and said he was going a little way up the creek, and ordered me to follow him and cover his advance. He proceeded through the bridge a few hundred yards, when he was fired on from an ambushed bluff by concealed riflemen. Fortunately the 2d launch was lying on their oars—waiting for the 1st launch to get about (100) one hundred yards ahead—with the gun manned and trained directly on the bluff. I primed and fired a percussion shell right in their midst, and the second volley they fired was quite scattering; backed the 2d launch and fired rapidly, each shell bursting beautifully. The 1st launch, on being fired on, promptly rounded to and fired three effective shots from their gun, and discharged all their small arms, pulled from under the bluff under cover of the 2d launch; and I most sincerely regret to have to say that while in close action Mr. Wilder received a shot in the left temple which killed him instantly, and in the very act of pulling the lock-string of the howitzer to fire the second shot. Mr. O'Connor then fought and managed the 1st launch gallantly, bringing her out manfully, and his men fought heroically. I ordered him to take position on the opposite side of the bridge, but he said he had wounded in his boat, so I allowed him to proceed to the Stepping Stones, and the shots then were very few. The Stepping Stones at this time chimed in beautifully, sending a number of well-directed shots in various places at the edge of the woods, which greatly cheered us, and we heard no more firing from the enemy.

I am very gratified to say that Mr. Simms, officer of the piece in the 2d launch, was remarkably cool, and directed the working of the gun in a most creditable and skilful manner. All the men, both at the gun and the oars, gave the strictest attention to every order, and I feel at a loss to commend any individual one. Therefore, sir, I commend to your notice both officers and men of both launches. Not a shot was dodged by any one, and when I headed the 2d launch toward the town, to get clear of some bushes on my starboard quarter, the crew murmured, and to hasten the move I had to tell them I was only getting clear of the bushes for a better position. I then lay awhile in easy range; and the army having possession of the town and its rear, I reported to Captain Campbell, and lay astern of the Stepping Stones until the next morning. At about 7 a. m. we covered the advance of the little army steamer Emma with troops up the creek, and had the satisfaction of driving a number of the enemy from the same place. She returned without the Torpedo.

I am, sir, very respectfully, your obedient servant,

JAS. BIRTWISTLE,
Acting Ensign.

Lieut. Commander J. H. UPSHUR,
Com'dg U. S. Steam Frigate Minnesota.

Report of Assistant Surgeon Wm. Longshaw, Jr.

UNITED STATES STEAM FRIGATE MINNESOTA,
Newport News, Va., April 15, 1864.

SIR: I have to report the following casualties to the detachment sent from this ship on the 13th instant, under command of Acting Master D. M. Campbell, to co-operate with the army in landing at Smithfield, Va., on the 14th instant. Killed, Acting Volunteer Lieutenant Chas. B. Wilder; wounded, Harmon H. Miller, landsman, severely in left shoulder.

Very respectfully, your obedient servant,

WILLIAM LONGSHAW, JR.,
Assistant Surgeon, U. S. N.

Lieut. Commander J. H. UPSHUR,
Com'dg U. S. Steam Frigate Minnesota.

Report of Acting Master Jas. M. Williams.

UNITED STATES STEAMER COMMODORE PERRY,
Nansemond River, Va., April 14, 1864.

SIR: In obedience to your orders of the 13th instant, I proceeded up the Nansemond river, and at 7.45 p. m. of that day (13th instant) reported to the commanding officer of the Commodore Perry, (lying at first obstructions in the river,) who furnished me with two boats (crews, armed) from his vessel. We then proceeded up the river, and at 10.55 p. m. anchored at Sleepy Hole. I then fitted out two armed boats from this vessel, and with the two from the Commodore Perry communicated with Colonel Keys, of the 118th New York volunteers, (at 11.30 p. m.,) who required our assistance in transporting his troops to the opposite side of the river. At 2.30 a. m. of this day (14th April) they commenced crossing in army launches and boats on the expedition from this vessel, and at 6 a. m. the last of them had crossed. I then returned to this vessel immediately, got under way, and, with two of the Commodore Perry's boats in tow, steamed to Western branch and anchored at the obstructions; then, with two boats' crews, armed, proceeded about three miles up the branch, where I communicated with the colonel of the 13th New Hampshire volunteers, who informed me that the pickets had seen rebel cavalry in the morning, (it was noon when I met the colonel.) He also informed me that they (the rebel cavalry and infantry) were reported to be about ten thousand strong, and in the neighborhood of Barber's Cross Roads. A little further up the branch I met a citizen (a farmer) whom I strictly questioned concerning torpedoes, boats, &c. He positively denied that any such things were in that neighborhood, but he acknowledged that they might be in Chuckatuck, as Lieutenant Roy had a force at his headquarters to replace the old one that we had captured on the 29th March. After receiving from him all the information that he appeared to know, I returned to my vessel, steamed to Sleepy Hole, where the Commodore Perry was anchored, returned her boats, and proceeded down river to flag-ship.

I am, very respectfully, your obedient servant,

JAMES M. WILLIAMS,
Acting Master Commanding.

Acting Rear Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Report of Acting Volunteer Lieutenant A. P. Foster.

UNITED STATES STEAMER COMMODORE PERRY,
April 15, 1864.

SIR: I have the honor to report that, in obedience to your orders of April 13, I proceeded up the Nansemond river to the landing opposite Halloway's Point, at which place I arrived at 9.50 p. m. I there found Colonel Keys, of the 118th New York volunteers, who told me that he intended to cross four hundred (400) troops as soon as his barges should arrive.

I offered to render him any assistance in my power with regard to crossing his troops. He told me that he would cross the troops himself, but desired me to take such a position as would cover the landing of his troops. This I immediately did.

At 11.45 p. m. the Delaware came up with four (4) launches, under the charge of a lieutenant of the naval brigade. I immediately sent the lieutenant with the barges on shore to report to Colonel Keys. I went on shore myself,

and again offered to assist in crossing the troops. The colonel, however, wished to cross them himself. It was five o'clock in the morning before all the troops were across the river. At 3 o'clock, on the afternoon of the 4th instant, seventy (70) men returned, under charge of the lieutenant colonel of the regiment, and recrossed.

At 2 o'clock this p. m. Acting Ensign Arnold Harris arrived here in the army gunboat Brewster, and reported to me that the remainder of the troops under Colonel Keys had been taken to Norfolk, and would not return to recross at Nansemond. I immediately got under way, and proceeded to Newport News.

I am, sir, very respectfully, your obedient servant,

AMOS P. FOSTER,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Newport News, Virginia.

Report of Lieutenant Joseph P. Fyffe.

UNITED STATES STEAMER MORRIS,

Newport News, April 15, 1864.

SIR: I have the honor to report that, in obedience to your orders of the 13th instant, I proceeded with this vessel, the Commodore Jones, and Shokokon, accompanied by the army transports Brewster and John D. W. Pentz, up James river to a point in Burrell's bay, about three miles north of Point of Shoals light-house, where, arriving at 3.30 a. m. of the 14th, the troops were disembarked from the transports by the boats of this vessel, the Commodore Jones, and two launches, the Shokokon being sent on picket about four miles further up the river. All the troops, nearly four hundred of the 23d Massachusetts regiment, were landed by 5 a. m., when the transports steamed down the river. About 7 a. m. some musket firing was heard, which I supposed to be a small party of skirmishers. At 8 a. m. an officer (quartermaster) came down to the beach at a point about one and a half mile below where the troops had landed and made signal to this vessel. He was accompanied by three soldiers. I went in a boat to communicate with him, but before I got to the beach he had sent two of his men off, who did not return, and are now supposed to be prisoners. On landing he told me that he had two wounded men; that they were in the rear guard of the regiment, which was but a short distance off. I took five men with me to help bring the wounded down, the officer acting as guide. We proceeded about three-quarters of a mile to where he said the rear guard ought to be, but saw nothing of them, nor could we find the wounded. We saw a cavalry picket or escort, composed of about eight men, riding in the direction of Day's Point. We fired upon them, at which they returned and galloped back, and we returned to our boats. I brought the officer and one man on board this vessel, and soon after I put them on board the Brewster. At 12.15 discovered some soldiers on shore, at a house just above Rock wharf, who were signaling to this vessel. I now discovered them to be the same ones we had landed in the morning. I manned two boats, and went on shore to see what assistance was required. On landing, the colonel told me he had four wounded men and four prisoners, and said he had no way of caring for the wounded, and no way of keeping his prisoners, and wished me to receive them on board this vessel until they could be properly cared for, which I did. They were all put on board the Mt. Washington last evening, and sent down. He had also a twelve-pound Dahlgren howitzer, which he had found in the house,

and which he said he should leave, as he had no way of taking it with him. I then took it and brought it on board, where I still have it. It is complete, with the exception of sights. At 10 p. m. last night the John D. W. Pentz came up after the troops, and requested of me some boats to help re-embark them, which I sent. They were all got off at 3.30 this morning, and immediately started down the river. I remained there until I received your orders to return to this station, which I reached at 7 o'clock p. m.

Very respectfully, your obedient servant,

JOSEPH P. FYFFE,

Lieutenant Commanding.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

P. S.—I omitted to mention that, at 2.30 this morning, this vessel was hailed from Rock wharf. I sent a boat, which brought off a soldier of the 23d Massachusetts, who said he had been left behind. I shall send him to his regiment.

JOSEPH P. FYFFE,

Lieutenant Commanding.

Report of Acting Master D. A. Campbell.

UNITED STATES STEAMER STEPPING STONES,

Off Newport News, Va., April 15, 1864.

SIR: I have the honor to report that, in obedience to your order of the 13th instant, I proceeded with this vessel and two launches from the Minnesota in tow, under command of Acting Master Charles B. Wilder, to the mouth of Pagan creek, at sunrise on the 14th, to co-operate with a detachment from the army, but as the transports did not arrive until 9 a. m., and then all got aground, it was late before we could proceed. As soon as the transports grounded I sent a boat to know if I could render them any assistance, to which the captain replied they had no pilot. When the boat returned, and reported this to me, I steamed down to them, told the captains to follow me as soon as they could get afloat, and I would show them the way, which they did, and I steamed up the creek to Smithfield, arriving at 12.15 p. m., followed by the steamers C. W. Thomas, John Tracey, and Emma, and landed the troops without opposition. The Stepping Stones taking position about one hundred (100) yards below, and the launches about fifty (50) yards above, the transports to cover the landing. After the troops were landed, I immediately reported to the senior army officer present, and was requested to remain until further orders, which I did. At 2 p. m. Acting Master Wilder told me he would like to go to the upper end of the town with the launches, if I had no objection; I replied that I had none, and (as I suppose) thinking there was no danger, we not having seen any rebels on the way up, went about two hundred (200) yards further up the creek, where about fifteen (15) of the rebel signal corps, which were concealed in the woods on the bank, opened on the launches with musketry. Sad to relate, Acting Master Wilder, of the Minnesota, was instantly killed, a musket ball passing through the head, and Harmon H. Miller, (seaman,) also from the Minnesota, was severely wounded. The boats returned the fire promptly, as did also this vessel, and we very soon heard no more from them. The boats, after giving the woods a pretty good shelling, returned to this vessel. I am satisfied, from the best information I could obtain, that the rebel torpedo boat, which has been hovering around these waters for a few days, left Smithfield on Sunday evening last, bound to Richmond. It is reported by the inhabitants,

with several of whom, both white and black, I conversed, and their statements all agree that the torpedo boat came to Smithfield on Saturday morning, the 9th instant, and left on Sunday evening for Richmond for repairs. As near as I could ascertain, she is a wooden boat, about thirty-five (35) feet long, and very narrow, has a propeller engine, low pressure, is covered with boiler iron, making her shot-proof against musketry, and is commanded by Lieutenant Davidson, of the rebel navy. This morning, at daylight, General Graham informed me that my services were no longer required at Smithfield, and requested me to cover the rear of his transports while going down the creek, which I did, and arrived at this place at 11.30 a. m. The officers and men of this vessel, as well as the officers and men of the Minnesota's launches, conducted themselves through this expedition in the most becoming manner, always ready and anxious to do their duty. Pilot Henry Stevens, of the Minnesota, deserves much credit in piloting this vessel, as well as the transports; were it not for him, we should not have been able to find the way to Smithfield without much difficulty.

I am, sir, very respectfully, your obedient servant,

D. A. CAMPBELL,
Acting Master, Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding North Atlantic Squadron.

THREATENED ATTACK ON GENERAL PALMER.

FLAG-SHIP NORTH ATLANTIC BLOCKADING SQUADRON,
Hampton Roads, Va., April 29, 1864.

SIR: Commander Davenport reports as follows, under date of 26th instant:

"General Palmer informed me this morning confidentially that he intended to withdraw most of the force from Washington, leaving only enough to make a show. I have directed Commander Renshaw to send all the stores belonging to the navy, including ammunition, to this place.

"From the best information the enemy is very active in his movements, and we expect an attack from all points at any moment."

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

SUCCESSFUL LANDING OF THE ARMY AT CITY POINT.

[Telegram.]

FLAG-SHIP MALVERN,
Off City Point, May 6, 1864—4.30 a. m.

A successful landing at City Point was accomplished by the army yesterday afternoon.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

MOVEMENT UP JAMES RIVER.—LANDING OF ARMY AT CITY POINT AND BERMUDA HUNDRED.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, N. A. B. SQUADRON,
James River, May 6, 1864—2.40 p. m.

SIR: I informed the department this morning of the successful landing of the army at City Point and Bermuda Hundred last night. The army movement was admirably planned and executed. Contrabands say that there are no rebel troops in this vicinity, and that within the last two days all the troops from Richmond have been sent to Lee.

I transmit enclosed a copy of my order of the 4th instant, under which the naval part of the movement was made.

I deeply regret to report that the Commodore Jones, Lieutenant Commanding Joseph Fyffe, has just been blown up by a torpedo and utterly destroyed near Four-Mile creek, opposite Jones's Neck.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

2.50 p. m.

P. S.—Later contraband intelligence represents that there are many troops near the left bank of this river.

S. P. LEE,
Acting Rear-Admiral.

Order for operations up James river.

FLAG-SHIP MALVERN,
Newport News, Wednesday, May 4, 1864.

The iron-clads will be under way without fail at three o'clock a. m. to-morrow; take their tows and be ready to start at the dawn of day (four o'clock) in the following order:

	Side tow, starboard quarter.	Head tow.
Tecumseh,	towed by Hydrangea	and Commodore Jones.
Canonicus,	" Poppy	" Mackinaw.
Saugus,	" Cohasset	" Hunchback.
Onondaga,	" Rose	" Eutaw.
Atlanta,	" Young America	" Dawn.

The gunboats will tow ahead, the pilots of the iron-clads going on board of them and remaining until the arrival of the vessels at Harrison's bar, when they will return to their respective vessels, and the head tow will cast off. The Atlanta, with the Dawn and Young America, upon their arrival at Fort Powhatan, will drop out of line, and take up a position to cover our troops, which it is expected will then be in possession of that point, as well as Wilson's wharf. The Dawn will proceed to Wilson's wharf for the same purpose. The Young America will act as guard boat to the Atlanta. The rest of the iron-clads will push forward with despatch to Harrison's bar, which it is expected they will reach between one and two o'clock p. m., in time to cross at high water. After crossing the bar they will be taken to designated positions just above Bermuda Hun-

dred, in line ahead, and make every preparation for immediate service in covering the landing of troops and repelling and destroying the enemy's vessels, should they appear. The main body of the army will move up the James river from Newport News at or soon after midnight to-night.

The following vessels will be under way by midnight, and take positions in the following order ahead of the army transports:

Osceola, Commodore Morris, Shokokon, Stepping Stones, Delaware, General Putnam, Shawsheen.

All of these vessels will be fully prepared to drag for torpedoes themselves and with their boats, and to send boats to fire-rafts with grapnels, with which to tow the rafts clear of the vessels and on shore.

Upon arriving at Harrison's bar, the General Putnam and Stepping Stones will go ahead and drag the bar carefully for torpedoes, taking care to keep one or two hundred yards apart, so that they do not explode the torpedoes under each other. As soon as a torpedo is discovered, the vessel making the discovery will at once signify it by hoisting the usual pennant, when every precaution will be taken by dragging with the boats and following slowly. After leaving Harrison's bar, the Stepping Stones, General Putnam, Delaware, and Shawsheen will together search the waters between that point and one mile above Bermuda Hundred for torpedoes, the Delaware on the port side of the channel, the Shawsheen on the starboard side, the General Putnam and Stepping Stones in mid-channel, in bow and quarter line as near as practicable. The iron-clads will not go up to their positions until this is done. The tugs attached to the iron-clads will act as tenders to them, under the squadron orders and instructions in regard to torpedo boats, &c. The Osceola and Mackinaw will take up positions from one-fourth to half a mile ahead of the iron-clads, in waters which they must previously drag for torpedoes. The Commodore Jones and Shokokon will take up a position off the mouth of Appomattox river, between City Point and Bermuda Hundred. The Eutaw, Hunchback, and Commodore Morris will take position below City Point to protect and cover the landing of troops, and be ready to render such assistance as may be necessary. The General Putnam and Stepping Stones will cover the boats of the Osceola and Mackinaw while dragging the river for torpedoes above Bermuda Hundred, which will be done as soon as those vessels have taken their position. The Delaware and Shawsheen will cover the boats of the Commodore Jones and Shokokon, which will, as soon as they have taken their position, proceed to drag the mouth of the Appomattox and examine the banks of that river for torpedoes. These directions are to cover the landing of the troops, which it is intended shall be made at City Point and Bermuda Hundred simultaneously. In case of opposition to the landing, such additional force will be applied to the point most needing it as will best protect and cover the operations of the army. A detachment of army gunboats, under General Graham, together with troops in transports, will pass up the river at or about seven o'clock this evening to operate against the enemy's signal station and to occupy Fort Powhatan and Wilson's wharf. The gunboats preceding the main body of the army will therefore be careful not to fire upon this division nor thus alarm the enemy. No guns will be fired while going up the river, except in case of necessity, for fear of firing on our parties operating on shore.

The vessels while in the river will wear their distinguishing pennants and observe the greatest vigilance.

No excuse will be received for not being ready to move at the appointed time, as it is of the utmost importance to reach Harrison's bar at high water at one p. m. to-morrow.

S. P. LEE,
Acting Rear Admiral, Com'g N. A. B. Squadron.

DESTRUCTION OF UNITED STATES STEAMER COMMODORE JONES AND SHAWSHEEN.

Report of Acting Rear-Admiral S. P. Lee.

[Telegram.]

FLAG-SHIP, CURL'S NECK,
May 7, 1864.

Yesterday, about 12 m., a large torpedo, which dragging had failed to discover, was exploded under the Commodore Jones, near Four-Mile creek, and utterly destroyed the vessel, and about half the crew were killed and wounded. One of the torpedo men was killed and the other two captured. Three coal vessels having afterwards come up, dropped down last evening under the bluff to Curl's Neck, where we now are coaling the monitors.

This morning the tug gunboat Shawsheen, while looking for a torpedo near Turkey Bend, of which a contraband had given information, was destroyed by a rebel battery, and most of the officers and men were captured. I hurried to her assistance, on hearing the firing, with the Commodore Morris, and shelled the enemy, who soon retreated.

S. P. LEE,
*Acting Rear-Admiral.*Hon. GIDEON WELLES,
*Secretary of the Navy.**Additional report of Acting Rear-Admiral Lee.*FLAG-SHIP MALVERN,
James River, May 13, 1864.

SIR: I transmit, enclosed, the following reports in relation to the torpedoes in James river:

1. From Fleet Captain J. S. Barnes, giving information received from two prisoners taken at Deep Bottom after the destruction of the Commodore Jones, on the 6th instant, in regard to the positions of torpedoes, &c.

2. From Commander J. C. Beaumont, United States steamer Mackinaw, with its enclosures, reporting the discovery of the galvanic batteries used to explode the torpedo that destroyed the Commodore Jones, with a trace showing relative positions and a plan of the battery, which the reports fully explain.

I send, in a separate parcel, specimens of the rope and insulated wire connected with this battery.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,
*Acting Rear-Admiral Com'dg N. A. B. Squadron.*Hon. GIDEON WELLES,
*Secretary of the Navy.**Report of Fleet Captain John S. Barnes*FLAG-SHIP N. A. B. SQUADRON,
James River, May 10, 1864.

SIR: Immediately after the United States steamer Commodore Jones was destroyed by the explosion of the torpedo at Jones's Point, on the 6th instant, a party of marines and sailors from the Mackinaw landed at the point and dis-

covered three galvanic batteries sunk in pits in the ground, to which wires were attached to one or more torpedoes which were not exploded, and were still lying in the channel.

The body of the man who had been shot by the cockswain of one of the boats employed in dragging was found lying near the first galvanic battery, shot through the head.

In the third battery were captured two men, who were ready to explode another torpedo should any pass over it. The names of these men are P. W. Smith, who represents himself as an acting master in the Confederate submarine battery service, under the command of Lieutenant Hunter Davidson, of the boat *Torpedo*, and Jeffries Johnson, a private in the same service. From Smith I learned that there were many more torpedoes in the river, but he would not communicate their location, or any facts connected with them. Johnson stated that he was forced into the rebel army as a conscript, and procured his exchange into this service as it would keep him near his home, which was at Deep Bottom, opposite Jones's Point. At first he was not communicative, and evaded, on the ground of ignorance, the questions put to him; but being placed in the forward gunboat employed in dragging for torpedoes, and given to understand that he would share the fate of the boat, he signified his willingness to tell all he knew about them. He stated that the torpedo which was exploded was put down last fall; that it contained two thousand (2,000) pounds of powder; that there are several more near a place called McGuire's, above Aiken's landing, and others at Osborn's; that there may be others of which he knows nothing; that these are all he has any knowledge of; that he has heard there were many in the river above Osborn's; he states that there are several kinds; but that the smallest of those exploded by means of a galvanic battery contains about four hundred (400) pounds of powder; the small ones are floating, and are exploded by contact, or a line from shore; the large torpedoes can be put down and arranged in a day by the boat *Torpedo*, which is prepared for that particular service, under the command of Lieutenant Commander Hunter Davidson, formerly of the United States navy, who, with twelve (12) men was on the opposite shore when the *Commodore Jones* was destroyed, having gone ashore from his vessel a few hours before our vessels came up. I enclose the enlisting articles of those employed in this service; a telegram from Mr. Mallory to Lieutenant Davidson, and various telegrams announcing the approach of our vessels from the signal stations above the river—all found upon the persons of those captured and the man who was killed.

Very respectfully, your obedient servant,

JOHN S. BARNES,
Fleet Captain N. A. B. Squadron.

Acting Rear-Admiral S. P. LEE,
Com'dg N. A. B. Squadron.

Rebel documents captured.

TURKEY ISLAND, May 5.

MR. SMITH: Mr. Bingley reports three (3) gunboats in sight of Presque Isle.
Respectfully,

T. H. FRIEND.

TURKEY ISLAND, May 6.

CAPTAIN DAVIDSON: We can see no movement of the enemy this morning, but suppose, from the sound of their drums, they are marching up the other side of the river.

RICHMOND, *May.*

CAPTAIN DAVIDSON: Four (4) monitors, the Atlanta, five (5) gunboats, two (2) iron-clads, fifty-nine (59) transports coming up the river, also three rafts, and have passed Fort Boyken.

S. R. MALLORY,
Secretary of the Navy.

Enlisting articles—C. S. naval submarine battery service.

We, the undersigned, for and in consideration of the sums set opposite our names, do individually agree—

Article 1st. To enter the C. S. naval submarine battery service.

Article 2d. To do our duty in said service loyally and faithfully.

Article 3d. To obey all lawful orders of those set over us in authority.

Article 4th. Under no circumstances, now or hereafter, to make known to any one not employed on this service anything regarding the methods used for arranging or exploding its submarine batteries, excepting only by permission of the Hon. Secretary of the Navy, or commanding officer of said service.

This agreement to remain in force whilst its articles are adhered to, or until the expiration of thirty days from the day on which we may give the commanding officer of this service, written notice of our desire to be discharged. The certificate of employment to be returned before the discharge is delivered.

To all of which we hereunto subscribe ourselves.

Report of Commander J. C. Beaumont.

UNITED STATES STEAMER MACKINAW,
James River, Va., May 12, 1864.

SIR: I have the honor to transmit the enclosed reports from 1st Assistant Engineer in charge, Jefferson Young, and Acting Master's mate, J. F. Blanchard, of this vessel, of their observations of the rebel torpedoes at Deep Bottom, opposite Sturgeon town, James river.

The sketch by Mr. Young shows the exact locality of the galvanic batteries and the position, and the position of the unexploded torpedo.

I deem it proper to state that the connecting wires from the battery to the water were found just beneath the surface of the earth.

I am, sir, very respectfully, your obedient servant,

J. C. BEAUMONT,
Commander, United States Navy.

Acting Rear-Admiral S. P. LEE,

U. S. Flag-Ship Malvern, Com'dg N. A. B. Squadron, James River, Va.

Additional report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, N. A. B. SQUADRON,
James River, May 10, 1864.

SIR: To-day the body of Acting Ensign Charles Ringot, late temporarily in command of the Shawsheen, was found in the river near Turkey Bend, and was buried by direction of Commander Parrott, commanding the Canonicus,

near Watkins's farm, in Curl's Neck. The body of William White, seaman, (late of the Commodore Jones,) of Lowell, Massachusetts, recently transferred from Company F, 7th Connecticut regiment of the United States volunteers, was also found in the river, and buried under the directions of Acting Master Eldridge, commanding United States steamer Delaware.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander E. G. Parrott.

UNITED STATES STEAMER CANONICUS,

Turkey Bend, James River, May 11, 1864.

SIR: To-day the body of Acting Ensign Charles Ringot, who was in temporary command of the Shawsheen when she was destroyed by the rebels, was found floating near us, and interred in the family burial-grounds of Mr. Watkins, at Watkins's landing, about a mile above. Acting Master H. A. Phelan, of this vessel, who was his late commander on board the Shawsheen, took charge, at his own request, of the funeral, and read the services. Acting Assistant Paymaster William J. Healy, another friend of the deceased officer, was also present. Owing to the lateness of the hour, and the necessity of remaining at our posts, the attendance from the vessel was small; but the army officers at Watkins's landing, with great-kindness, assisted on the occasion, and their men fired a volley over the grave. Mr. Phelan has in his possession the ring and other mementoes of the deceased.

It will be a consolation to his family to learn that friends attended his body to the grave, and I know it will hereafter be their pride to remember that he fell faithfully serving his country.

I am, respectfully, your obedient servant,

E. G. PARROTT, *Commander.*

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

List of officers and men of the Shawsheen captured, &c.

LIBBY PRISON,

Richmond, Virginia, May 8, 1864.

SIR: The following is a list of prisoners taken on board the United States steamer Shawsheen on James river:

Charles Hickey, acting third assistant engineer; H. C. Manow, acting third assistant engineer; William Rushmore, acting master's mate; Wm. Cromack, acting master's mate; E. D. Smith, paymaster's steward; William Boacher, gunner's mate; W. C. Parley, officers' steward; S. Larkin, ship's cook; Joseph P. Crowell, quartermaster; George Whittebourne, quartermaster; Jas. C. Pinckham, seaman; Richardson Brown, seaman; Maurice Kennedy, ordinary seaman; Thomas Coblert, ordinary seaman; Edward Fitzpatrick, landsman; Patrick Fitzgerald, landsman; John Jackson, seaman; William Hatchard, landsman; James Walsh, coal-heaver; Edward O'Donnel, second-class fireman; D. Murtland, landsman; George Granger, landsman; Charles Woods, ordinary

seaman; William Peele, first-class boy; John Green, first-class boy; Charles Thomas, first-class boy. Also Jeremiah Evans, pilot, who was slightly wounded in the leg, and sent to the hospital in an ambulance.

By having the above names published you will greatly oblige us.

The captain, Charles Ringot, acting ensign, was wounded in the water and drowned; John Harrington, killed on board; also Michael Murphy.

Most respectfully, your obedient servant,

E. D. SMITH, *Paymaster's Steward.*

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

NAVAL FORCE NOT REQUIRED AT NORTH REACH.

[Telegram.]

JAMES RIVER, *May 8, 1864—9 a. m.*

I have just seen General Butler, who informed me that there was no military necessity for the naval vessels to go up to North reach, as the height of the land there was such that they could render him no assistance, and that the occupation by the navy of Curl's Neck reach will afford the army all the protection that it requires, from which my communications can easily be kept open.

S. P. LEE,

Acting Rear-Admiral, Flag-Ship Malvern.

Hon. GIDEON WELLES,

Secretary of the Navy.

GENERAL BUTLER ASKS FOR MONITORS ABOVE TRENT'S REACH.

[Telegram.]

FLAG-SHIP MALVERN,

Bird Cage Reach, James River, May 13, 1864—6 p. m.

General Butler asks for monitors above Trent's reach. Torpedoes, commanded by rebels on the left bank, which commands our decks, and shoal water, by chart several feet less than the monitors draw, make difficult the advance, which I shall push to-morrow morning.

We have discovered another kind of torpedo of which the enemy is making use. No news from Richmond. General Butler had yesterday advanced near Drury's Bluff.

S. P. LEE,

Acting Rear-Admiral.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of First Assistant Engineer Jefferson Young.

UNITED STATES STEAMER MACKINAW,

James River, May 12, 1864.

SIR: I have the honor to submit a sketch of the galvanic batteries, (known as the Point submarine batteries,) showing their positions on the bank of the river, and the direction by which the wires connected to "torpedoes."

The galvanic batteries were formed of nine zinc cups, each one battery or set of cups being placed on shelves directly over the other. In each zinc cup was placed a porous clay cup. In the zinc cup, and outside the porous cup, was

placed the sulphuric acid and water, and inside the porous cup was placed the nitric acid. The zinc of one cup was connected to the cast iron of the other by a clamp and thumb screw. The negative wires led directly to the "torpedoes," (one to each.) The positive wires ran along near a foot-path parallel with the river for about two hundred feet, and terminated at a sub-battery. In this sub-battery were two large wooden plugs with a hole about one-half inch diameter in each; these holes being filled with mercury; the positive wires connecting from the torpedoes to the bottom of these plugs; the positive wires from the charged batteries being inserted in the mercury at the top of its respective plug to form the connexion and explode the "torpedoes." The wires from the river bank to the "torpedoes" were supported by a three-inch rope, being stopped to rope about every four feet. At a distance of every fifteen feet of the rope was some five or six feet of three-quarter link chain to assist in keeping it on the bottom. The wires were covered with gutta-percha about one-quarter inch thick. The battery used is generally known as the Bunsen battery.

Respectfully submitted.

JEFFERSON YOUNG,

First Ass't Engineer U. S. N., in charge.

Commander J. C. BEAUMONT, U. S. N.,

Commanding U. S. Steamer Mackinaw.

Report of Acting Master's Mate J. F. Blanchard.

UNITED STATES STEAMER MACKINAW,

James River, May 11, 1864.

SIR : I respectfully report that, in obedience to your order, I landed with an armed boat's crew on the right bank of the river, just above Four-Mile creek, to look for wire and galvanic batteries. I proceeded at once to search the buildings on shore. I had only searched two when the explosion took place.

I immediately returned to the boat in order to save the wounded and drowning. I had filled my boat just as a man was seen running on the opposite shore. Several shots were fired at him and he fell. I landed and found the battery. It was one of Bunson's simplified batteries. There were two distinct batteries arranged on shelves, and both fully charged. From each end of the box were two wires. I closed the box and reported to you on board. I then received an order from you to accompany Mr. Young on shore and trace the wires. I went immediately to the battery and disconnected the wires from the box containing the battery, and followed them down the river for about 75 yards, then turned directly to the river. I here captured the two prisoners; they were concealed in a small box inserted in the ground; it was about four feet square. On close examination I found in two corners of the box a plug with a wire in each of them; by these wires the torpedoes were exploded. The two wires running down the river bank were the charged wires; they ran into this pit. The torpedo was exploded by applying one of the wires leading through the plug to the charged wires, thereby emitting a spark. Mr. Young taking the prisoners on board, I proceeded to examine the wires directly underneath the river bank. I found the wires attached to a hawser. I traced the hawser to the water's edge. It here branched off, one leading to the exploded torpedoes, the other we traced in the boat about 150 yards. We found it too heavy to lift with the boat. We cut the wires and hawser, buoyed it, and returned on board.

Very respectfully,

J. F. BLANCHARD,

Acting Master's Mate.

Commander J. C. BEAUMONT,

Commanding U. S. Steamer Mackinaw, James River, Va.

EVACUATION OF WEST POINT.

FLAG-SHIP N. A. B. SQUADRON,
James River, May 9, 1864.

SIR: Lieutenant Commander Babcock, United States steamer Morse, reports, under date of May 5, that "our forces evacuated West Point at 5 a. m. this day. This vessel and Mystic covered the embarkation, which was effected without the slightest accident. Everything belonging to the government was safely removed. All the transports with troops, and the gunboats, arrived at this place (Yorktown) at noon."

The occupation of West Point, and the co-operation of some of the gunboats there, was a feint designed to mislead the enemy, and had the desired effect. On arriving here the enemy was found to have no force, and a contraband, named John Pryde, brought off from Mr. Hill Carter's estate, opposite Bermuda Hundred, reported that they were in force at the White House to oppose us there, and that two of Mr. Carter's sons, belonging to this portion of the rebel army, left on our approach.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

MONITORS ON BUTLER'S RIGHT FLANK—SEARCHING FOR TORPEDOES.

[Telegram.]

FLAG-SHIP AGAWAM,
Trent's Reach, May 17, 1864—6 p. m.

Nothing special in Richmond paper of yesterday. General Butler last night reoccupied his line from this reach to Appomattox. Monitors on his right flank.

Navy advance division searched for torpedoes until they came under fire of rebel earthworks about Chapin's Bluffs. The new tugs need efficient batteries. More vessels with effective batteries needed to keep open my communications, Sheridan's cavalry having withdrawn from left bank.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

REBELS FORTIFYING THE HEIGHTS AT HOWLETT'S HOUSE.

[Telegram.]

FLAG-SHIP AGAWAM,
Trent's Reach, May 18, 1864—4 p. m.

At daylight this morning the enemy were seen intrenching the heights at Howlett's house, commanding Trent's reach. They persevere vigorously under gunboats' fire, and will erect guns to-night. Monitors cannot reach them.

Beaumont, commanding Mackinaw, reports his pickets driven in at Dutch Gap

heights, lower side, and rebel artillery getting into position there. Eutaw, Blake commanding, from City Point, reports army pickets driven in there. My communications much threatened.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

ENGAGEMENT OF TWO MONITORS WITH HOWLETT'S BATTERY.

[Telegram.]

FLAG-SHIP AGAWAM,
Trent's Reach, May 19, 1864—4 p. m.

Two monitors practicing on rebel earthworks at Howlett's. Enemy intrenched before our army line here. A man from Richmond to-day reports no fighting beyond Richmond. Great scarcity of provisions there.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

MONITORS FIRING XV-INCH SHELL AT HOWLETT'S BATTERY.

[Telegram.]

FLAG-SHIP AGAWAM,
Farrar's Island, May 22, 1864.

Monitors practice at Howlett's battery, firing XV-inch shell with great accuracy, but no chance of stopping the progress of this commanding rebel work.

The XV-inch is a great gun, truly. Last night the enemy attacked the army; were handsomely repulsed. Navy was in position to fire if desired by signal from army, but no signal was made by army, as the direction of firing must be uncertain over high hills and woods.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

ENGAGEMENT OF MONITORS WITH HOWLETT'S BATTERY.

[Telegram.]

FLAG-SHIP AGAWAM,
James River, May 24, 1864—9 p. m.

Otsego arrived to-day. Monitors practice at Howlett's battery. Enemy seem to have stopped working on it. Monitors also practiced yesterday to get range to protect right flank of army. * * *

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

THE CONVOYING OF TRANSPORTS UP JAMES RIVER, VIRGINIA.

Report of Lieutenant Commander Charles A. Babcock.

UNITED STATES STEAMER MORSE,

Off Yorktown, Virginia, May 24, 1864.

SIR: I respectfully report that having telegraphed to you on the 20th instant that at the request of Colonel Biggs, quartermaster at Fortress Monroe, I was about to proceed up the river to West Point with this vessel and Mystic, for the purpose of convoying transports with supplies for Major General Sheridan's command, who were encamped at White House landing, and who were greatly in need of them, at 7.30 p. m. the same evening got under way with this vessel, three transports, a schooner and Mystic bringing up the rear, and proceeded up the river. Arrived at West Point at 10.30 p. m.; found the wharf entirely destroyed by fire since the recent expedition to that place. One of the transports having on board a cavalry guard of thirty men, ordered her close into the beach, and sent boats' crews from this vessel to assist in landing the cavalry; succeeded in doing so without any accident, swimming the horses on shore with a line attached to them. The cavalry guard immediately proceeded up the Peninsula for the purpose of communicating with Major General Sheridan, informing him that I had arrived at West Point with two gunboats and four transports, with forage and subsistence for his command. At 1 p. m. on the 21st instant the cavalry guard returned to West Point with a colonel from Major General Sheridan, urgently requesting me to proceed as far up the river as possible, as his command were suffering for want of forage and subsistence; and not being able to cross the bridge at White House landing without previously repairing it, I immediately determined to proceed to White House if possible. Got under way with the transports and Mystic, and proceeded up the Pamunkey river; found no impediment or obstructions in the river. When up to Cumberland bar, it being very low water, and the Mystic, on account of her draught, not being able to cross the bar, left her there and proceeded on with the transports, giving Acting Master Wright orders to follow when possible. When abreast of Indiantown had a great deal of trouble in passing up the river on account of the very low tide. At 9 30 p. m. succeeded in reaching the White House safely with the transports; immediately communicated with Major General Sheridan, informing him of my arrival.

On Sunday, the 22d instant, two transports arrived from Fortress Monroe with pontoons for the army, but by this time General Sheridan's command had succeeded in repairing the bridge and did not need them.

On the evening of the 22d instant Acting Master Wright came up the river in his boat and reported to me that in trying to come up the river he had ran hard aground on Indiantown bar; immediately sent the steamer Star to her assistance, giving orders to Acting Master Wright that when afloat he should remain there in deep water until further orders from me. On Sunday evening received on board this vessel for delivery to military authorities at Yorktown, by request of Major General Sheridan, seven prisoners of war (two officers and five privates) and two deserters from General Butler's army, all captured the day previous by General Sheridan's command.

At 11 a. m. on the morning of the 23d instant, the army being on the move, and transports being all discharged, gave them orders to get under way, and proceed to Yorktown. When within sight of the Mystic, ordered her to get under way and take the lead, bringing up the rear with this vessel.

All arrived safely at Yorktown at 10.30 p. m. last night, and delivered the prisoners to the military authorities on shore.

I am, sir, very respectfully, your obedient servant,

CHARLES A. BABCOCK,

Lieutenant Commander and Senior Officer present.

Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron,

U. S. Flag-Ship Minnesota, Hampton Roads, Va.

CAVALRY ATTACK ON OUTER WORKS OF FORT POWHATAN.

FLAG-SHIP AGAWAM,

James River, May 24, 1864.

SIR: Acting Volunteer Lieutenant Woodward, United States steamer *Atlanta*, reports, on the 21st instant, that a squad of rebel cavalry attacked the outer works of Fort Powhatan at about noon on that day, driving in the pickets.

The *Atlanta* and *Dawn* fired on the enemy, and they soon disappeared. I had already sent the *Pequot* to re-enforce this position, though her services could be hardly spared from her position further up the river.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES

Secretary of the Navy.

PICKING UP TORPEDOES, &c.

[Telegram.]

FLAG-SHIP AGAWAM,

Farrar's Island, May 28, 1864—1 p. m.

Picked up several torpedoes, each containing seventy pounds powder, floating around the monitors this morning. Two (2) deserters came in this morning and report that the three (3) rebel iron-clads have been below Drury's Bluff for several days.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

REPULSE OF ATTACK AT WILSON'S WHARF.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP AGAWAM,

Farrar's Island, James River, Virginia, May 28, 1864.

SIR: The copy of my order of May 23, to Lieutenant Commander Quackenbush, and the original reports of that officer and the commanding officers of the *Dawn* and *Young America*, will inform the department as to the good service rendered by the navy in co-operating with the troops under General Wild in

repulsing the attack made by the enemy in force at Wilson's wharf on the 24th instant.

Believing that the enemy had intrenched himself in front of the army position here, I judged that he would next attack our positions in the rear at Wilson's wharf and Fort Powhatan, especially as the colored troops stationed there offered the temptation of prize to him, and a late Richmond paper, captured by our navy pickets, commented with bitterness on the presence of such troops there. Thence I despatched the Pequot with a respectful warning to General Wild to strengthen our means of defence there.

Under other orders from me the Pequot was stationed about Fort Powhatan; the Dawn below Wilson's wharf; the Atlanta, iron-clad, and the tug Young America, between the two.

I respectfully congratulate the department upon the success of the naval dispositions which the force put at my disposal enabled me to make.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

No. 1. Lieutenant Commander Quackenbush, May 26, reporting action in obedience to orders of 23d.

No. 2. From same, May 25, reporting attack on Fort Powhatan and Wilson's wharf on 24th.

No. 3. Acting Volunteer Lieutenant Simmons, United States steamer Dawn, May 5; report of same.

No. 4. From same, May 25, report of ammunition expended.

No. 5. Report of Acting Ensign Chase, Pequot, May 25.

No. 6. Lieutenant Commander Quackenbush, May 25, enclosing report from engineer in charge of tug Young America, explaining not having steam up.

No. 7. Lieutenant Simmons, May 25, calling attention to gallant conduct of Acting Ensign Chase, Pequot.

No. 8. Copy of my orders of 23d instant to Lieutenant Commander Quackenbush.

Report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMSHIP PEQUOT,
Fort Powhatan, James River, Virginia, May 26, 1864.

SIR: In obedience to your order of 23d instant, I left my anchorage at Turkey Bend and proceeded to this place. I at once communicated with the commanding officer of the post, and admonished him from you of the probability of an attack on this post by the enemy.

After having ascertained the best position for the Pequot to take, I went to Wilson's wharf and communicated with General Wild, commanding that post. I also made an examination of the best position to be occupied by the gunboats in the event of an attack. In consequence of the information which I gave to General Wild, arrangements were immediately made which, I understand, tended in a great measure to the repulse of the enemy.

I was informed by General Wild that the Dawn and Young America did most excellent service during the attack. The gallant conduct of Acting Ensign W. F. Chase, in taking the wheel and command of the tug Mayflower when the captain and mate were shot down, and in taking her alongside the

wharf under a sweeping fire of the enemy's bullets, and his strict compliance with the orders given him by me, is deserving of your most favorable notice.

I am, respectfully, your obedient servant,

S. P. QUACKENBUSH.

Acting Rear-Admiral S. P. LEE,

Commanding North American Blockading Squadron,

U. S. Flag-Ship Agawam, James River, Virginia.

Additional report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMER PEQUOT,
Fort Powhatan, James River, Va., May 25, 1864.

SIR: I have to report that at 12.30 p. m., yesterday, while on shore at Fort Powhatan, a message was received by the colonel commanding from the general at Wilson's wharf, stating that the enemy were attacking the latter place.

It was supposed that the attack on Wilson's wharf was a feint to draw our forces from this place, while an attack should be made here in force, as communication by signal was interrupted.

The Young America had her blow-valve broken, and steam blown off, and consequently could not move.

I sent Acting Ensign W. F. Chase in the transport Mayflower down to Wilson's wharf to learn from the general if the attack was in force, and if the Dawn needed aid. I also sent the army tug Johnson to tow the Young America to the scene of action, in order that her guns might be used if needed.

The Mayflower was fired into by sharpshooters in the bushes on the banks just before reaching the Dawn, and her captain and pilot both severely wounded. Acting Ensign Chase then took charge of her, and hailing the Dawn, learned that she wanted assistance. He then went on shore, and was informed by the general that he had signalized repeatedly to Powhatan for the gunboats, and that he needed help at once. The Mayflower was taken possession of for the use of the wounded, and Mr. Chase could not return until 6 p. m., when I immediately got under way and proceeded to Wilson's wharf. The enemy had disappeared about an hour before my arrival. I learn that Acting Volunteer Lieutenant Simmons, of the Dawn, rendered most efficient help, his shells sweeping through the enemy's column with terrible effect.

I take especial pleasure in mentioning the gallant conduct of Acting Ensign W. F. Chase, of this vessel. When the captain and pilot of the Mayflower were struck down helpless with wounds at his side, he took the wheel, went in to the wharf, and went on shore, in obedience to orders, although a storm of bullets was rained on the vessel and wharf from the enemy's line near by.

I have returned to my anchorage, above Fort Powhatan.

I am, respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant Commander, U. S. N.

Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, U. S. St'r Agawam, James River, Va.

Report of Acting Volunteer Lieutenant J. W. Simmons.

UNITED STATES STEAMER DAWN,
Off Wilson's Wharf, May 25, 1864.

SIR: I have the honor to report that at 1.30 p. m. yesterday, the 24th, the United States forces under General Wild at this point were very suddenly attacked

by the enemy in heavy force, under General Fitzhugh Lee. On hearing the alarm I at once got under way, and commenced shelling the woods on our left flank. The enemy got possession of a small piece of woods above the fortification, and the transport steamer Mayflower coming by at the time, they opened a galling fire of musketry on the Mayflower and this vessel, badly wounding the captain and pilot of the transport. I at once opened on the woods, and succeeded in driving them out. The firing having almost ceased on our left, and increased on our right flank, I altered the position of this vessel, and commenced shelling the enemy just as they were making a charge, which drove them back, and, as General Wild tells me, thus ended a sharp action of five and a half hours. * *

The officers and crew behaved finely, Acting Ensigns William B. Owens, E. T. Sears, and P. W. Morgan serving their different guns with great coolness and energy, although the enemy's sharpshooters were throwing musket shot over and at us continually.

I take great pleasure in reporting to you the noble and gallant conduct of my executive officer, Acting Master J. A. Jackaway. In shifting my position to follow the enemy, this vessel got very near a shoal in the river, and was compelled to turn by backing, for the purpose of getting my guns to bear on the sharpshooters, who were completely showering us with musketry. Mr. Jackaway did the duties of pilot, thus getting the vessel in position, and eventually driving the enemy away, and saving the flank of our troops. I do think he deserves promotion, if noble and gallant conduct and strict attention to duty merit such a reward.

I am happy to report no casualties on board.

I am, sir, very respectfully, your obedient servant,

J. W. SIMMONS,

Acting Volunteer Lieutenant, Com'dg Dawn.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Ensign W. F. Chase.

UNITED STATES STEAMER PEQUOT,

Off Fort Powhatan, James River, Va., May 25, 1864.

SIR: In obedience to your order of yesterday, I proceeded down to Wilson's landing in the steam-tug Mayflower. Just before communicating with the United States steamer Dawn, at Wilson's landing, the Mayflower was fired into by rebel sharpshooters, severely wounding the captain and pilot. I then took command of the vessel, and communicated with the captain of the Dawn, and asked him if he needed assistance; he said he did. I also informed him that the captain and pilot of tug were wounded. I then ran the vessel in to the wharf, went ashore, and communicated with the commanding officer, and asked him if the attack was in force, and if he needed assistance; he replied he did, and that he had signalized to Fort Powhatan an hour and a half before, and that he was out of ammunition for his artillery. The tug was taken by the adjutant general of the post for the use of the wounded, making it impossible for me to obey Lieutenant Commander S. P. Quackenbush's order for immediate return; when I succeeded in obtaining a passage on the transport steamer J. Johnson, and reported to you.

I am, very respectfully, your obedient servant,

W. F. CHASE,

Acting Ensign, United States Navy.

Lieutenant Commander S. P. QUACKENBUSH,

Commanding United States Steamer Pequot.

Letter from Lieutenant Commander S. P. Quackenbush, transmitting engineer's report.

UNITED STATES STEAMER PEQUOT,
Fort Powhatan, James River, May 25, 1864.

SIR: Enclosed I hand you the report of the engineer of the United States steamer Young America, stating the reasons why the vessel was unable to move when ordered.

I have not yet received the report of Acting Volunteer Lieutenant Simmons, of the Dawn, but will forward it as soon as received.

I am respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,
Com'dg N. A. B. Squadron, U. S. S. Agawam, James River, Va.

Report of Acting Second Assistant Engineer Chas. R. Jones.

UNITED STATES SHIP YOUNG AMERICA,
Off Powhatan, James River, May 25, 1864.

SIR: I most respectfully submit the following report concerning this vessel being without steam on the 24th instant. About eleven o'clock a. m. the blow-cock on the boiler began to leak to such an extent that it was impossible to keep water in the boiler; and as we had to break some joints to get to the valve, it was impossible to repair it without hauling fires and blowing water out of the boiler.

Very respectfully, your obedient servant,

CHAS. R. JONES,
Acting Second Assistant Engineer.

Lieutenant Commander S. P. QUACKENBUSH,
U. S. Steamer Pequot, off Fort Powhatan, James River.

Gallant conduct of Acting Ensign W. F. Chase.

UNITED STATES STEAMER DAWN,
Off Wilson's Wharf, Va., May 25, 1864.

SIR: I take great pleasure in reporting to you the gallant conduct of Acting Ensign W. F. Chase, at present attached to the United States steamer Pequot. The first I saw of Mr. Chase was on the Mayflower steam transport, endeavoring to communicate with me on the Mayflower, passing the woods above me, where the enemy's sharpshooters had got possession; they poured a murderous volley of musketry on the Mayflower, badly wounding the captain and pilot of the boat, leaving her completely at their mercy; Mr. Chase at once jumped to the wheel, and brought the boat safe through the terrific fire poured at him. His conduct is also reported to me by General Wild. I do think he richly deserves promotion for gallant conduct.

I am, sir, very respectfully, your obedient servant,

J. W. SIMMONS,
A. V. Lieut. Commanding.

Lieutenant Commander S. P. QUACKENBUSH,
Commanding United States Steamer Pequot.

Instructions to Lieutenant Commander S. P. Quackenbush.

FLAG-SHIP AGAWAM,

Trent's Reach, James River, May 23, 1864—1 o'clock a. m.

SIR: At daylight this morning get under way, and proceed without delay to Fort Powhatan. So dispose of the naval forces at that point as to best guard the approaches to Fort Powhatan and Wilson's wharf by a cross-fire from the gunboats and Atlanta.

Communicate with the army officer in command, and respectfully admonish him for me of the probabilities of an attack upon these important points.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Lieutenant Commander S. P. QUACKENBUSH,

Pequot, Turkey Island, James River.

ATTACK ON GENERAL WILD AT WILSON'S WHARF.

[Telegram.]

HEADQUARTERS, ROANOKE ISLAND,

FLAG-SHIP AGAWAM,

James River, May 29—10 p. m.

Went to Fort Powhatan and Wilson's wharf to-day. The Pequot, Atlanta, Dawn, and Young America will effectually aid the troops; one colored regiment at each place to hold against great odds these important positions which the army is fortifying.

General Wild had 900 colored troops at Wilson's wharf, and two twenty-pounder Parrots, and no other artillery, when he was attacked. He says the enemy used no artillery, and were, he thinks, 2,000 strong. He stated to me that the gunboats were of great assistance to him in repelling their attack.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

REBEL IRON-CLADS AND GUNBOATS BELOW DRURY'S BLUFF.

[Telegram.]

FLAG-SHIP AGAWAM,

Farrar's Island, James River, May 30, 1864—4 p. m.

A deserter from the rebel vessel-of-war Hampton reports to-day that the enemy have now below Drury's Bluff three iron-clads, six small gunboats plated with boiler iron, each mounting two guns of six-inch and four-inch bore, all fitted with torpedoes, and nine fire-ships, fitted with combustible material, with which they propose to attack the fleet in James river at as early a moment as practicable by sending down their fire-ships first, closely followed by the iron-clads and other vessels. The deserter says that the vessels have been ready for one week, and that their crews were supplied by men from Lee's army.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

REBELS MOUNTING A 200-POUNDER AT HOWLETT'S.

[Telegram.]

FLAG-SHIP AGAWAM,
Farrar's Island, May 31, 1864.—1.45 p. m.

Heard considerable cannonading for one hour last evening and four hours this morning in the direction of Richmond. A deserter to the army says they are mounting one 200-pounder at Howlett's, and that the rams were to have come down last night.

These torpedoes and fire-rafts will probably be down soon.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

ATTACK BY REBEL BATTERY ON THE PERRY.

UNITED STATES STEAMER COMMODORE PERRY,
June 1, 1864.

SIR: I have the honor to report that at 9 o'clock a. m., May 31, the enemy opened on this vessel with four (4) guns. I immediately returned the fire, and at 11 o'clock a. m. succeeded in driving them away. Having expended all my ammunition, I dropped down the river and sent a steamer to City Point, which brought up the ammunition required. The vessel was struck six (6) times, and no one was injured.

A man on board the United States steamer General Putnam had his foot injured by the recoil of a gun. Acting Assistant Surgeon J. E. Gregory deemed it necessary to amputate the foot, and did so; and I sent him on board the United States steamer Osceola.

I am, sir, very respectfully, your obedient servant,

AMOS P. FOSTER,

Acting Volunteer Lieutenant.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, James River, Va.

NAVAL SITUATION, &c.

[Telegram.]

FLAG-SHIP AGAWAM,
Farrar's Island, June 2, 1864.

No change in the naval situation, except that I have received here, from General Buttler, the vessels he had provided at City Point, as part of his plan of campaign for obstructing James river.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

PREPARING TO SINK OBSTRUCTIONS IN TRENT'S REACH.

[Telegram.]

FLAG-SHIP AGAWAM,

Farrar's Island, June 4, 1864—10 p. m.

No enemy's armed vessel has been seen since we came up this river. A bark and four schooners, provided by, and at the expense of, the army, are here to-night, ready, with shingle ballast, for sinking in Trent's reach, at the locality designated by General Butler, who recommends the measure. * * * *

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

SINKING OF OBSTRUCTIONS IN JAMES RIVER.

Report of Rear-Admiral S. P. Lee.

FLAG-SHIP AGAWAM,

Farrar's Island, June 7, 1864.

SIR: I transmit enclosed a copy of the correspondence between General Butler and myself relative to sinking obstructions in the river, which the department will recollect was a part of his original plan of campaign.

The department will appreciate the reluctance I have felt to adopt this course. The iron-clad force at my command is better than was originally expected. General Grant asked for the co-operation of two iron-clads. There are four here now, and there will be three left when the *Tecumseh*, now under your orders for other service, shall leave. The navy is not accustomed to putting down obstructions before it, and the act might be construed as implying an admission of superiority of resources on the part of the enemy. The object of the operation would be to make the river more secure against the attempts of the enemy upon our vessels by fire and explosive rafts, followed by torpedoes and iron-clad vessels and boats.

General Grant seems to be expected by our military men and by the enemy (see Richmond paper of June 7) to cross the James river and operate against Richmond on the south side; and I understand that it would be of vital importance to the success of the campaign that the river should be held secure against the casualties of a novel naval engagement. Of course, myself and officers desire the opportunity of encountering the enemy, and feel reluctant to discourage his approach. But the point of embarrassment with me is the consequences that would follow a failure of the campaign, should the novel plans of the enemy succeed in crippling the monitor force.

I, therefore, lay the subject before the department, which, understanding the views of General Grant, will best comprehend the extent and the locality of the co-operation he may desire, and be able to instruct me on the subject, if thought necessary.

I am more disposed to the reference since the receipt of the department's despatch of the 4th instant. The water here is too shoal and narrow for manœuvring the monitors, and they occupy a position for supporting the flanks of the army, from which they must engage at anchor, and to keep their turrets up stream, are moored head and stern. Even our tugs cannot cross the middle ground in this reach at low water, and there is no room for the longer wooden

vessels which are stationed to keep open our communications, which, however, the enemy can interrupt at pleasure, especially at Deep Bottom, should General Grant leave the left side of the James.

I am inclined, in view of all the circumstances, to obstruct the shoaler parts of this reach, so as to prevent the convenient approach of the enemy's smaller torpedo vessels, and limit his approach to the channel way, which is narrow, and under the control of the monitor fire.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CORRESPONDENCE BETWEEN GENERAL BUTLER AND REAR-ADMIRAL LEE.

[Telegraph.]

GENERAL BUTLER'S HEADQUARTERS.

The bark Franklin and five (5) schooners are at your disposal to obstruct the channel of the river.

I have the honor to remain, very respectfully, your obedient servant,

B. F. BUTLER,

Major General, Commanding.

Real-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

FLAG-SHIP AGAWAM,

James River, June 1, 1864.

GENERAL: Will you please send to me here, at once, that they may be at hand for use, if necessary, the barque and schooners provided by you for obstructing the river?

I have the honor to be, general, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral N. A. B. Squadron.

Major General B. F. BUTLER,

Comm'dg Department Virginia and North Carolina.

FLAG-SHIP AGAWAM,

James River, June 1, 1864.

GENERAL: I thank you for sending the two contrabands to me; their information is useful. I desire that the bark and schooners may be sent me for immediate use.

I have the honor to be, general, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Major General B. F. BUTLER,

Comm'dg Department Virginia and North Carolina.

JUNE 1, 1864, 3.30 p. m.

Your envelope enclosing letter to French consul in Richmond, and request for the barque and schooners for obstructions, is received. Orders have gone out to Chief Quartermaster Fuller to send them up at once with a tow.

B. F. BUTLER,
Major General, Commanding.

Admiral LEE,
Commanding N. A. B. Squadron.

FLAG-SHIP AGAWAM,
Farrar's Island, June 2, 1864.

GENERAL: Can you ride over this morning with General Weitzel, and arrange for sinking the vessels which you have obtained and appropriated for obstructing the navigation of James river, in such places as will add to the security of the army communications? It must be your operation, not mine, as I have not consulted the Navy Department on the subject, and the Navy Department alone can find vessels for this purpose if it approves of so using them. I have no authority to employ or use vessels for this purpose, but can give such assistance to your engineers as may aid you in accomplishing the object proposed in your plan of campaign.

I have the honor to be, general, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Major General B. F. BUTLER,

Com'dg Department Virginia and North Carolina.

HEADQUARTERS IN FIELD,
June 2, 1864.

ADMIRAL: Your communication, dated June 2, in regard to the obstructions, is received. The five (5) vessels sent up were procured by my order for the purpose of being used as obstructions to the river, if, in the judgment of the naval commander, they would add to the security of his fleet. I have no difficulty as to the point at which we desire to secure the river. It is the right of my line near Curtis's house at the ravine, but whether the river should be secured by obstructions or by vessels, or a disposition of your obstructions or of the vessels of your navy, neither myself nor my engineers have any right to feel ourselves competent to give our opinion. The vessels are wholly at your service, but upon your judgment, not mine, must rest their use.

In accordance with your request, as I informed your officer, I will visit you this afternoon and designate the spot we desire to be held, but whether by means of obstructions or by your ships, or by both combined, must be solely for you to determine.

While I know you would not undertake to give directions to my engineers as to the situation of our earthworks on land, so we ought not to presume to advise you as to your means of defending the water.

I have not consulted the War Department upon the question whether I should procure these obstructions. I supposed that was fairly within my discretion, and I venture respectfully to add that the question whether you should use them is entirely within yours. The Navy Department cannot know the exigencies as you know them, and I am certain must leave that question to the good judgment of the rear-admiral commanding the fleet.

I am aware of the delicacy naval gentlemen feel in depending upon anything but their ships in a contest with the enemy, and if it was a contest with the

enemy's ships alone, I certainly would not advise the obstructions even at the great risk of losing the river. But in a contest against such unchristian modes of warfare as fire-rafts and torpedo-boats, I think all questions of delicacy should be waived by the paramount consideration of protection for the lives of the men and the safety of the very valuable vessels of the squadron.

Pardon me if I have overstepped any line of duty or courtesy in this latter suggestion.

I have the honor to be, very respectfully, your obedient servant,

BENJ. F. BUTLER,
Major General Commanding.

Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

FLAG-SHIP AGAWAM,
Farrar's Island, June 3, 1864.

GENERAL: The system of naval expenditures is so entirely different from the army system, being controlled and directed by the Navy Department alone, that, to prevent future misunderstanding, I desire now to be assured by you, in writing, whether the cost of the vessels placed by you at my disposal for obstructing the river can be made a charge or liability, present or contingent, upon the Navy Department, if, under my directions, they are used for the purpose indicated, or whether I am to understand that the entire cost and expenditure for the vessels is borne by the War Department.

Without explicit authority from the Secretary of the Navy, I should not feel justified in incurring any pecuniary liability in connexion with this matter.

In reply to that part of your communication of yesterday, which I have now the honor to acknowledge, which refers to the lives of the men and safety of the very valuable vessels under my command, as being the primary reason for obstructing the river, I would wish to be understood as regarding the loss of life and material as incidental to the contest which would occur should the enemy make an attack on us, whatever the result should be. The first consideration with me is, the necessity heretofore represented by you to me, of holding this river beyond a peradventure, for the great military purposes of General Grant and yourself. In consulting my own desires, I would do everything to induce and nothing to prevent the enemy from trying to assert their strength in a pure naval contest, which in my opinion would give us a naval victory. The only contingency of such a battle is the unknown effect of the novel instruments of war—torpedo vessels—which are to be employed by them, and which, as the attacking party, give them perhaps an advantage which might possibly balance our certain superiority in all other fighting material.

Please return to me the topographical sketch which you gave me and afterwards borrowed.

I have the honor to be, general, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
Major General B. F. BUTLER,
Com'dg Department Virginia and North Carolina.

HEADQUARTERS IN THE FIELD,
June 3, 1864—1.30 p. m.

SIR: I beg leave to assure you in writing, as I have heretofore verbally, that the obstructions furnished you by me will in no way be any charge or cost to the Navy Department, unless it chooses voluntarily to assume the expense.

Acting Rear-Admiral, Commanding N. A. B. Squadron.
Major General B. F. BUTLER,
Com'dg Department Virginia and North Carolina.

HEADQUARTERS IN THE FIELD,
June 3, 1864—1.30 p. m.

SIR: I beg leave to assure you in writing, as I have heretofore verbally, that the obstructions furnished you by me will in no way be any charge or cost to the Navy Department, unless it chooses voluntarily to assume the expense.

I have neither doubt nor hesitation upon the subject. If the expenditure of a few thousands for these vessels will save one monitor from torpedo or fire-raft, or the lives of ten of the men I have sent to the navy, I should make it at once. You will judge of the efficiency of the obstructions. The expense has already been assumed by the army, although I cannot appreciate the difference. *One treasury, one nation, one cause—all are served alike if one is served.*

Respectfully,

B. F. BUTLER,
Major General Commanding.

Rear-Admiral LEE,
Commanding, &c.

FLAG-SHIP, N. A. B. SQUADRON,
James River, June 7, 1864.

GENERAL: I desire to keep the schooners ready for sinking when I am advised that a controlling military necessity requires that it be done.

Judging from the tenor of a despatch received from the Navy Department last evening, no such precautionary measure seems to be contemplated.

I have the honor to be, general, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Major General B. F. BUTLER,
Com'dg Department Virginia and North Carolina.

[Received June 7, 6.30 p. m.]

IN THE FIELD, *June 7, 1864—2.45 p. m.*

Your note relative to the sinking of the obstructions is received by hand of Captain Clark. The necessity of holding our positions here is an "overwhelming" military one. But *how* you are to hold yours on the river is of course wholly for you to determine.

Respectfully yours,

B. F. BUTLER,
Major General Commanding.

Admiral LEE, *Commanding, &c.*

Additional Report of Acting Rear-Admiral Lee.

FLAG-SHIP AGAWAM,
Farrar's Island, June 16, 1864.

SIR: The department's despatch of June 11, replying to my No. 325, enclosing the correspondence between General Butler and myself on the subject of sinking the vessels he had provided wherewith to obstruct James river, and leaving action on the subject to my discretion, was received on the 13th instant.

I took no action on the subject. I enclose copies of two despatches received yesterday morning from General Butler, my reply to the last, and the instructions which I gave Commander Craven, (Nos. 1, 2, 3, 4.)

Last evening I saw General Grant at City Point, who informed me that several days before his arrival here he had ordered General Butler to sink these obstructions, and that finding his order had not been realized, he had renewed it.

I understand that the army considered it a military necessity to make the river secure by every available means as vital to the success of the campaign and the cause. * * * * *

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional correspondence between Acting Rear-Admiral Lee and Gen. Butler.

[From General Butler's Headquarters.]

SIGNAL STATION, June 15—4 a. m.

Can you temporarily spare a gunboat to aid in crossing of Grant's army near Fort Powhatan? If so, please send one. I will send to-morrow, and with your aid put down obstructions in such spot as you may designate.

GENERAL BUTLER.

Acting Rear-Admiral LEE.

SIGNAL STATION, June 15—9.30 a. m.

I have just received the following from General Butler:

General Grant left yesterday for Fort Powhatan. Tell the admiral that General Butler proposes to sink obstructions to-day, and will want his assistance.

COLONEL SHAFFER, *Chief of Staff.*

Acting Rear-Admiral LEE.

[By signal.]

FLAG-SHIP AGAWAM, June 15—10.30 a. m.

Commander Craven will in my absence give the engineer the assistance General Butler desires for sinking his obstructions.

S. P. LEE, *Acting Rear-Admiral.*

General TERRY.

Instructions from Acting Rear-Admiral Lee to Commander Craven.

FLAG-SHIP AGAWAM,
James River, June 15, 1864.

SIR: I enclose a message just received from General Butler's chief of staff through General Terry.

In General Butler's despatch of the 2d instant, he said that the point at which he desired to secure the river is the right of his line near Curtis's house, at the ravine.

I am going to Fort Powhatan. Give the army all the assistance it may ask in securing its flank and communications, with engineering devices in the river.

Should you have any notice of the approach of the enemy, (for which you will arrange a look-out,) send a tug to bring up the Mendota and Hunchback.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Commander T. A. CRAVEN,

United States Steamer Tecumseh.

Additional report of Acting Rear-Admiral S. P. Lee.

[Telegram.]

FLAG-SHIP AGAWAM,

Farrar's Island, June 15—11 p. m.

Early this morning General Butler signalled me that he would sink his obstructions to-day, ordering Commander Craven to assist the army engineers to sink their obstructions where and as they wished. I went to see General Grant, who informed me that he had several days ago ordered General Butler to do so. Five vessels were, according to the plan of campaign, sunk to-day under the direction of the army engineer, on Trent's Reach bar, which will to some extent add to the security of the military situation.

General Meade's army is crossing on pontoons at Wilcox's wharf. The operation will take two or three days. To-night Smith's and Hancock's corps are attacking Petersburg.

The enemy appear to be crossing on their pontoons above Drury's Bluff to-day.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report from Commander Craven and correspondence with army officers.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

James River, Virginia, June 22, 1864.

SIR: I transmit enclosed a copy of a letter with its enclosures from Commander Craven, of 20th instant, relating to the sinking of obstructions in James river by the army.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

UNITED STATES IRON-CLAD TECUMSEH,

James River, June 20, 1864.

SIR: During your absence (on 15th instant) I was called upon by General Weitzel, who gave me a note from General Butler, which is hereto appended and marked A.

In compliance with the request of General Weitzel, I have sunk in the main channel four hulks furnished by him; and have also stretched across the channel a heavy boom supporting a chain cable, well secured at each end. Across the flats I have extended a heavy boom, which is secured by six anchors; and in the channel along the right bank I have sunk a schooner, from which a short boom is to be extended to the flats.

The obstructions were all complete on the 18th. I enclose you, herewith, a note received from General Weitzel on the 16th, together with a copy of my reply.

Very respectfully, your obedient servant,

T. A. CRAVEN, *Commander.*

Acting Rear-Admiral S. P. LEE.

A.

JUNE 15, 1864.

I am directed by General Grant to sink the obstructing vessels in such place as I can protect them by my guns. I should be glad if you would aid in so doing upon a conference with my chief engineer, General Weitzel, designating the spot which will appear the best aid to your fleet. General Grant will this evening have his headquarters at City Point.

B. F. BUTLER,
Major General U. S. A.

Rear-Admiral S. P. LEE,
Commanding, &c.

JUNE 16—9.40 a. m.

MY DEAR SIR: General Butler approves of the plan adopted for obstructing the river, and has ordered up another schooner to fill up the eleven-foot channel. It will be up, I think, by evening.

He desires me to thank you for your zealous co-operation, and asks you, (as all our men are needed to-day to follow the enemy, who has left our front,) that you may complete the obstructions with men from the fleet.

In haste, truly yours,

G. WEITZEL,
Brigadier General and Chief Engineer.

Captain CRAVEN,
Commanding Iron-clad Tecumseh, James River.

General Smith carried two lines of rebel works, capturing seventeen (17) cannon and 300 prisoners. He, with Hancock, have now a position everlooking Petersburg. Another corps will join them at 10 o'clock. Everything looks well. The negro troops under General Hinks fought most gallantly; on two charges they captured 8 out of the 17 guns above mentioned.

G. W.

TECUMSEH, June 16, 1864—11 a. m.

MY DEAR SIR: Yours of 9.40 (this date) just received. It will improve your plan to sink two more hulks in addition to the one you propose to send. There may be some old colliers nearly empty; they can be had at low rates and will

do as well as more valuable vessels ; they should all be well ballasted with stone and will be sunk as soon as received. The sails of the bark were not taken away last evening as those of the schooners were, and are ready for you as soon as you send for them.

Thank you for the good news of the day.

Yours truly,

T. AUG. CRAVEN
Commander, for Admiral Lee.

Brig. Gen. G. WEITZEL,
Chief Engineer.

REBEL STEAMERS ABOVE CHAPIN'S BLUFF.

[Telegram.]

FLAG-SHIP AGAWAM,
Farrar's Island, June 10, 1864—10 p. m.

A flag of truce tug came this afternoon to deliver a letter from Mr. Ould to Major Mulford.

The army look-out on the hill near us has several times reported seeing the smoke-stacks of the rebel steamers above Chapin's Bluff.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

CO-OPERATION WITH THE ARMY—ENGAGEMENT WITH FORT CLIFTON.

Report of Acting Rear-Admiral S. P. Lee.

U. S. STEAMER COMMODORE PERRY,
June 10, 1864.

SIR : I have the honor to report that, in compliance with a request from Major General Butler, I co-operated with the land forces on the morning of the 9th inst. At 8½ a. m. I opened on Fort Clifton, and at 11¼ a. m. had dismounted one of the enemy's guns, and had struck another, scattering the pieces over the fort.

At 2 p. m. the enemy had left the fort.

The shots they fired at me all fell short, I having dropped down the river out of range early in the morning.

The enemy have been hard at work repairing the fort.

I am, sir, very respectfully, your obedient servant,

AMOS P. FOSTER,
Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,
Com'dg N. A. B. Squadron, James River, Va.

Report of Acting Volunteer Lieutenant Amos P. Foster.

UNITED STATES STEAMER COMMODORE PERRY,
June 16, 1864.

SIR : I have the honor to report that I was requested by Major General Butler to co-operate with his forces then near Petersburg, and was asked to direct my fire on Fort Clifton, which request I complied with. I fired forty-seven (47) shots from the 100-pound Parrott, which did good execution.

I am, sir, very respectfully, your obedient servant,

AMOS P. FOSTER,

Acting Volunteer Lieutenant Commanding.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, James River, Va.

Additional report of Acting Volunteer Lieutenant Amos P. Foster.

UNITED STATES STEAMER COMMODORE PERRY,
June 23, 1864.

SIR : In answer to your indorsement on my report of June 16, I would respectfully beg leave to report that Acting Ensign Arnold H. Harris, in command of army gunboat Chamberlain, came on board this vessel at 6.30 a. m. of the 16th instant, and said that General Butler requested me to open fire as soon as possible on Fort Clifton.

At 7 o'clock a. m. I moored the steamer across the stream, and at 9 a. m. opened fire upon the fort. At 5 p. m. I ceased firing, having expended forty-seven charges and forty-seven (47) percussion shells, all of which did good execution.

At 7 p. m. Acting Ensign Arnold H. Harris and Lieutenant Bullard, of Brigadier General Graham's staff, came on board of this steamer. Lieutenant Bullard had been ordered by General Butler to come on board and request me, early on the morning of the 17th instant, to open fire on the battery to the rear and left of Fort Clifton. This request I complied with. I commenced firing on the 17th instant, at 6 a. m. The first shot fired entered the battery; at the second shot the 100-pound Parrott burst, killing John Wilson (seaman) instantly and wounding Joseph Webb, Alfred N. Brown, Salvador Emanuel, Franklin W. Morgan, (seaman,) and Gilbert Young, (ordinary seaman.) John Wilson was buried in the hospital burying ground at the Point of Rocks. Four of the wounded men were transferred to the United States steamer Osceola, and two (2) were retained on board this vessel. One of those transferred to the Osceola (Joseph Webb) has since died. The two men remaining on board this vessel are improving rapidly.

I am, sir, very respectfully, your obedient servant,

AMOS P. FOSTER,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, James River, Va.

DESERTERS CONFIRM INFORMATION ABOUT REBEL IRON-CLADS.

[Telegram.]

FLAG-SHIP AGAWAM,
Farrar's Island, 10 p. m., June 13, 1864.

Deserters from rebel iron-clads confirm previous information. Rebel tug, from bend above, fired a shot or two in this direction this afternoon.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

THREE REBEL IRON-CLADS OFF CHAPIN'S BLUFF.

[Telegram.]

FLAG-SHIP MALVERN,
Farrar's Island, June 19, 1864—11 p. m.

General Grant was here to-day. Three (3) rebel iron-clads and three (3) gunboats appeared abreast of Chapin's farm to-day; returned, came down again, and were off Chapin's, as reported from army signal station, at sundown.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

REBEL IRON-CLADS TAKING ON BOARD SAND BAGS.

[Telegram.]

FLAG-SHIP MALVERN, FARRAR'S ISLAND,
June 20, 1864—10.30 p. m.

No change in the naval situation. Report from the army look-out that the rebel iron-clads are taking on board sand in bags.

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
 Hon. GIDEON WELLES,
Secretary of the Navy.

DEMONSTRATION OF REBEL IRON-CLADS AND GUNBOATS.

[Telegram.]

FLAG-SHIP MALVERN,
Farrar's Island, June 21, 1864—11 p. m.

About noon enemy opened fire from Howlett's battery, and from his iron-clads and gunboats, which were concealed from view above Dutch Gap. Saugus's deck, before turret, was injured by one ten-inch shot. The enemy seems determined to control this part of the river. Instead of withdrawing the Tecumseh, it is necessary to largely increase the iron-clad force here.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

ENGAGEMENTS WITH HOWLETT'S BATTERY AND REBEL RAMS.

*Report of Acting Rear-Admiral S. P. Lee.*FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
James River, Va., June 24, 1864.

SIR: I enclose reports of our engagement, on the 21st instant, with the battery which the enemy that day mounted at Howlett's. Their iron-clads and gun-boats, lying concealed in the reaches above the bar, participated in the action. The firing from the monitors was good. One of the enemy's guns was dismounted. We met with no casualties.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

[Enclosures.]

1. Report of Commander Craven, Tecumseh, June 23.
2. Report of Commander Colhoun, June 23.
3. Report of Lieutenant Commander Cushman, Onondaga.
4. Report of Commander Parrott, Canonicus, June 23.
5. Report of Commander Rhind, Agawam, June 23.

*Report of Commander T. A. Craven.*UNITED STATES IRON-CLAD TECUMSEH,
James River, June 23, 1864.

SIR: In compliance with your order, I have to report the part this vessel took in the engagement of the 21st instant.

Early in the morning of the 21st we discovered that the enemy had during the night felled some trees to the northward of Howlett's barn, and exposed a new line of works there. These works were covered with brush. At 10.30 a. m., observing a gang briskly occupied on the right of this new battery, I threw into it five ten-inch shells, two of which exploded in the right place, destroying a platform, throwing the plank and timber in every direction. At 11.30 the enemy commenced removing the brush and unmasked a battery of six embrasures, in four of which guns were mounted. I immediately renewed my fire on the battery, and ordered the Canonicus and Saugus also to open, on your previous instructions. The enemy opened his fire upon us at meridian with four guns, two of them of heavy calibre, and at 12.30 some iron-clads near Dutch Gap commenced a wild cross-fire, which we could not reply to, as they were concealed by the trees.

Our fire was delivered slowly and with great precision, most of our shells exploding within the works of the enemy. At 1.30 p. m. I ceased firing, and gave my crew a half hour to rest and eat their dinner. At two recommenced, and continued firing slowly until 4 p. m., our last shell silencing one gun, the shell having traversed through the embrasure and disabled it.

The estimated distance was two thousand yards. This ship expended forty-six fifteen-inch shells, and was not hit.

I am, very respectfully, your obedient servant,

T. AUGUSTUS CRAVEN,

Commander.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

Report of Commander E. R. Colhoun.

UNITED STATES IRON-CLAD STEAMER SAUGUS,
Trent's Reach, James River, June 23, 1864.

SIR: In the engagement with the enemy's battery, near Howlett's house, on the 21st instant, the Saugus was struck only once by a round shot near the centre of the deck, a few feet from the turret; thence glancing, it struck the turret, breaking six (6) bolts, and fell into the water. I think it was a ten-inch shot. In obedience to your order I have directed Acting Chief Engineer John L. Peake to make a report of the injury to the deck and turret. * *

We were engaged for three (3) hours. The rebel iron-clads gave us a cross-fire, their shot sometimes coming quite near. I paid no attention to them, as they were out of sight. We fired thirty-six shell with thirty-five-pound charges of powder and ten-second fuses. Estimated distance of the battery, 2,100 yards.

Very respectfully, your obedient servant,

EDMUND R. COLHOUN,
Commander.

Acting Rear-Admiral S. P. LEE,
Commanding North Atlantic Blockading Squadron.

Report of Lieutenant Commander C. H. Cushman.

UNITED STATES STEAMER ONONDAGA,
James River, Va., June 23, 1864.

SIR: In obedience to your order, I submit the following report of the part taken by this vessel in the exchange of fire between the rebel battery near Howlett's house and the iron-clads of this squadron.

At 12.45 p. m., June 21st, went to quarters in obedience to signal and opened fire on the battery with both rifle guns and forward 15-inch. At 1.30 ceased firing with after rifle and forward 15-inch. At 3.30 ceased firing with forward rifle and opened fire with after rifle. At 5 p. m. ceased firing altogether.

Expended— 2 15-inch charges, 45 pounds.

“ 2 15-inch shell, 10-second.

“ 39 16-pound charges, 8-inch rifles.

“ 39 percussion shell, 8-inch rifles.

The forty-five-pound charge in 15-inch was just able to reach over the battery, distance say 2,300 yards. Elevation of the battery, say ninety feet. The rifles reached with about seven degrees elevation, and all the projectiles fell near or at their mark, many with excellent effect. The battery appeared much cut up by the fire of the iron-clads.

The return fire from the battery, and also that from the direction of Cox's landing, supposed to be from the rebel iron-clads, came near, but was not of importance. Neither their vessel nor any of those on board were injured.

Some projectiles struck quite near, and one exploded near enough to throw pieces on deck, but beyond this the vessel was not struck. Everything worked to my entire satisfaction, and the vessel was comfortable.

I am, sir, very respectfully, your obedient servant,

C. H. CUSHMAN,
Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,
Com'dg N. A. B. Squadron, James River.

Report of Commander E. G. Parrott.

U. S. STEAMER CANONICUS,
James River, Va., June 24, 1864.

SIR: On the 21st instant, near noon, the rebels unmasked, near Howlett's, a battery of four guns, whose completion we had been for some time endeavoring to prevent or retard by occasional shots, and opened a fire upon us and the vessels in our vicinity, which was kept up until dark. They had a large smooth bore, a large rifle, and two smaller guns. As soon as they commenced unmasking we opened on them with our two 15-inch guns, firing rapidly at first, but afterwards only occasionally, to economize ammunition. One of their guns traverse an embrasure, but the distance, 2,200 yards, was large for firing at single guns. We were struck twice. The injury was slight. We fired forty shells with thirty-five-pound charges. Everything stood well about the guns and gun-carriages.

The rebel iron-clads came down the river, but not in sight, and opened upon us a random fire over the trees, which hit nothing, and which, I believe, was not noticed. The batteries have since continued silent, and their guns are again masked.

I am, respectfully, your obedient servant,
E. G. PARROTT, *Commander.*

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Report of Commander A. C. Rhind.

UNITED STATES STEAMER AGAWAM,
James River, June 23, 1864.

SIR: I respectfully present the following report of the participation by this vessel in the firing on the 21st instant, with the rebel battery at Howlett's Bluff and vessels stationed, as near as we could judge, in the reach at Cox's place. At 11.50 a. m. the enemy opened fire from Howlett's, and about the same time from their vessels. Signal being made from the flag-vessel to prepare for action, we went to quarters at 12.30 and commenced firing deliberately, using the forward guns on the battery at Howlett's, and the after towards the enemy's vessels, as the firing had to be directed from aloft, the object aimed at not being in sight from the deck. We discontinued it at 2.30 p. m. The fire of the enemy was kept up till near sunset. This vessel was not hit.

Respectfully, your obedient servant,
A. C. RHIND, *Commander.*

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

ENGAGEMENT WITH HOWLETT'S BATTERY.

[Telegram.]

FLAG-SHIP MALVERN,
James River, June 28, 1864—11 p. m.

Howlett's battery fired twice at a tug which went to the obstructions this afternoon. Monitors replied. No casualties. * * * *

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
Hon. GIDEON WELLES,
Secretary of the Navy.

EVACUATION OF WHITE HOUSE, PAMUNKEY RIVER.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

James River, June 29, 1864.

SIR: On the 29th May, Lieutenant Commander Babcock, U. S. steamer Morse, by General Smith's request, proceeded to White House with the Morse, Shokokon, and Cohasset, to cover the landing of supplies and protect the army communications. I subsequently sent the Cactus and Henry Brinker to his support. These vessels remained at the White House until its evacuation on the 23d instant, rendering most efficient service, and then returned to Yorktown, convoying the transports.

I enclose a report from Lieutenant Commander Babcock, of 25th instant, of an engagement on the 20th instant with three (3) rebel batteries near White House, which had been posted on the edge of the wood during a thick fog, and on its lifting opened fire on the wagon trains. The fire from the Morse and Cactus dislodged them in about three hours. Deserters afterwards reported that a force, estimated at 10,000, of Wade Hampton's and Fitzhugh Lee's cavalry, intended attacking our trains, but were deterred from the attempt by the fire of the gunboats. On the 21st instant a party of rebel cavalry fired on the transport Eliza Hancock, but were driven off by the Shokokon's fire.

Lieutenant Commander Babcock encloses the following reports, &c.:

(A.) June 20th, Acting Master Graham, commanding Cactus, reports engagement of 20th.

(B.) Copy of General Abercrombie's general order No. 10, of 20th instant, tendering his thanks to Lieutenant Commander Babcock and the officers of the navy for the efficient aid and support rendered in the engagement of the 20th instant.

(C.) June 21st, Acting Master Sheldon, commanding Shokokon, reporting engagement of 21st.

(D.) June 24th, Acting Master Sheldon's general report of his movements since arriving at White House.

I should not fail to call attention to the hearty, efficient, and successful service which Lieutenant Commander Babcock has rendered to the army in opening and protecting its communications and in repelling the assaults of the enemy. He is a modest and meritorious officer, and deserves the especial notice of the department.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

HON. GIDEON WELLES,

Secretary of the Navy.

Report of Lieutenant Commander Chas. A. Babcock.

UNITED STATES STEAMER MORSE,

Off Yorktown, Va., June 25, 1864.

SIR: I have the honor to report, that on the morning of the 20th instant, while lying off White House, Pamunkey river, during a thick fog at 6.30 a. m., some firing was occasionally heard on shore at some distance off from his vessel; but after a short time, ceased. At 9 a. m. the fog cleared up; three rebel batteries intrenched at the edge of the woods opened a brisk artillery fire on our wagon trains on shore, also on this vessel and Cactus. At once took posi-

tion with this vessel and Cactus, opening fire on them, and by noon succeeded in driving them entirely from their position out of range of our guns. The wagon trains retreated slowly across the river. Made excellent shots, both from this vessel and Cactus, and was informed afterwards, from accounts of prisoners who were taken, that Fitz Hugh Lee and Wade Hampton's legions, consisting of 10,000 rebel cavalry, were intending to make an attack on our wagon trains, and that had it not been for the gunboats, they would have certainly accomplished their purpose. At 5 p. m. General Sheridan's command arrived, and at once followed up the rebel cavalry. Expended from this vessel the following ammunition:

One 40", one 30" and thirty-five 20" shell from 100-pounders; thirty 20" shell from nine-inch Dahlgrens; thirty-seven 10-pound cartridges for 100-pounder Parrotts; thirty 10-pound cartridges for nine-inch Dahlgrens.

On the morning of the 21st instant, a party of these rebel cavalry fired on the transport steamer Eliza Hancock, off Cumberland Point, but the Shokokon succeeded in driving them handsomely.

On the morning of the 23d instant, at 10 a. m., White House being entirely evacuated by our forces, gave orders to get under way and proceed down the river, bringing up the rear with this vessel. When down to West Point, stopped there a short time, and found all our forces had left that place also; proceeded to Yorktown, and arrived safely at 1 a. m. yesterday morning. At 9 a. m., despatched the Shokokon, Cactus, Henry Brincker and Cohasset, to Hampton Roads, with orders to report to Captain Guert Gansevoort for further orders.

During the firing from this vessel on the morning of the 20th instant, at the second fire of my after 100-pounder Parrott, the socket of the elevating screw broke; afterwards worked the gun with bed and quoin. The breeching of the 100-pounder Parrott parted, but caused no accident whatever.

Too much praise cannot be given to the commanding officers of the Shokokon, Cactus, Henry Brincker and Cohasset, for the very efficient aid and support they afforded me at all times. Their officers and crews behaved well, also the officers and crew of this vessel.

I respectfully forward you the enclosed reports from the Shokokon and Cactus; also a copy of a letter received by me from General Abercrombie, who commanded the land forces at White House during the attack of the 20th instant, before the arrival of General Sheridan.

I am, sir, very respectfully, your obedient servant,

CHAS. A. BABCOCK,

Lieutenant Commander, and senior officer present.

Rear-Admiral S. P. LEE,

United States Flag-Ship Malvern, James River, Va.

A.

Report of Acting Master N. Graham.

UNITED STATES STEAMER CACTUS,

White House, June 20, 1864.

SIR: I have the honor to report that at 9 o'clock, by your order, I commenced firing my rifled 30-pounder upon the rebel batteries that were attacking our land forces at this place. I expended twenty-eight 30-pounder shell with 15" fuzes, and three 12-pounder percussion shell at an elevation of 10°. At 11 o'clock I proceeded down the river to Cumberland Heights, as directed, to give notice to the United States steamer Shokokon. At 12.30 o'clock started for the White House again. On my way up I expended three 30-pounder shell, 5", 10", and 15" fuzes, upon a body of cavalry. At 3 o'clock came to anchor at the White House. Amount of ammunition expended:

FLAG-SHIP AGAWAM,
Farrar's Island, 10 p. m., June 13, 1864.

Deserters from rebel iron-clads confirm previous information. Rebel tug, from bend above, fired a shot or two in this direction this afternoon.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

THREE REBEL IRON-CLADS OFF CHAPIN'S BLUFF.

[Telegram.]

FLAG-SHIP MALVERN,
Farrar's Island, June 19, 1864—11 p. m.

General Grant was here to-day. Three (3) rebel iron-clads and three (3) gunboats appeared abreast of Chapin's farm to-day; returned, came down again, and were off Chapin's, as reported from army signal station, at sundown.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

REBEL IRON-CLADS TAKING ON BOARD SAND BAGS.

[Telegram.]

FLAG-SHIP MALVERN, FARRAR'S ISLAND,
June 20, 1864—10.30 p. m.

No change in the naval situation. Report from the army look-out that the rebel iron-clads are taking on board sand in bags.

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
 Hon. GIDEON WELLES,
Secretary of the Navy.

DEMONSTRATION OF REBEL IRON-CLADS AND GUNBOATS.

[Telegram.]

FLAG-SHIP MALVERN,
Farrar's Island, June 21, 1864—11 p. m.

About noon enemy opened fire from Howlett's battery, and from his iron-clads and gunboats, which were concealed from view above Dutch Gap. Saugus's deck, before turret, was injured by one ten-inch shot. The enemy seems determined to control this part of the river. Instead of withdrawing the Tecumseh, it is necessary to largely increase the iron-clad force here.

S. P. LEE,
Acting Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

ENGAGEMENTS WITH HOWLETT'S BATTERY AND REBEL RAMS.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
James River, Va., June 24, 1864.

SIR: I enclose reports of our engagement, on the 21st instant, with the battery which the enemy that day mounted at Howlett's. Their iron-clads and gun-boats, lying concealed in the reaches above the bar, participated in the action. The firing from the monitors was good. One of the enemy's guns was dismounted. We met with no casualties.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

[Enclosures.]

1. Report of Commander Craven, Tecumseh, June 23.
2. Report of Commander Colhoun, June 23.
3. Report of Lieutenant Commander Cushman, Onondaga.

5. Report of Commander Rhind, Agawam, June 23.

Report of Commander T. A. Craven.

UNITED STATES IRON-CLAD TECUMSEH,
James River, June 23, 1864.

SIR: In compliance with your order, I have to report the part this vessel took in the engagement of the 21st instant.

Early in the morning of the 21st we discovered that the enemy had during the night felled some trees to the northward of Howlett's barn, and exposed a new line of works there. These works were covered with brush. At 10.30 a. m., observing a gang briskly occupied on the right of this new battery, I threw into it five ten-inch shells, two of which exploded in the right place, destroying a platform, throwing the plank and timber in every direction. At 11.30 the enemy commenced removing the brush and unmasked a battery of six embrasures, in four of which guns were mounted. I immediately renewed my fire on the battery, and ordered the Canonicus and Saugus also to open, on your previous instructions. The enemy opened his fire upon us at meridian with four guns, two of them of heavy calibre, and at 12.30 some iron-clads near Dutch Gap commenced a wild cross-fire, which we could not reply to, as they were concealed by the trees.

Our fire was delivered slowly and with great precision, most of our shells exploding within the works of the enemy. At 1.30 p. m. I ceased firing, and gave my crew a half hour to rest and eat their dinner. At two recommenced, and continued firing slowly until 4 p. m., our last shell silencing one gun, the shell having traversed through the embrasure and disabled it.

The estimated distance was two thousand yards. This ship expended forty-six fifteen-inch shells, and was not hit.

I am, very respectfully, your obedient servant,

T. AUGUSTUS CRAVEN,

Commander.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

Report of Commander E. R. Colhoun.

UNITED STATES IRON-CLAD STEAMER SAUGUS,
Trent's Reach, James River, June 23, 1864.

SIR: In the engagement with the enemy's battery, near Howlett's house, on the 21st instant, the Saugus was struck only once by a round shot near the centre of the deck, a few feet from the turret; thence glancing, it struck the turret, breaking six (6) bolts, and fell into the water. I think it was a ten-inch shot. In obedience to your order I have directed Acting Chief Engineer John L. Peake to make a report of the injury to the deck and turret. * *

We were engaged for three (3) hours. The rebel iron-clads gave us a cross-fire, their shot sometimes coming quite near. I paid no attention to them, as they were out of sight. We fired thirty-six shell with thirty-five-pound charges of powder and ten-second fuses. Estimated distance of the battery, 2,100 yards.

Very respectfully, your obedient servant,

EDMUND R. COLHOUN,
Commander.

Acting Rear-Admiral S. P. LEE,
Commanding North Atlantic Blockading Squadron.

Report of Lieutenant Commander C. H. Cushman.

UNITED STATES STEAMER ONONDAGA,
James River, Va., June 23, 1864.

SIR: In obedience to your order, I submit the following report of the part taken by this vessel in the exchange of fire between the rebel battery near Howlett's house and the iron-clads of this squadron.

At 12.45 p. m., June 21st, went to quarters in obedience to signal and opened fire on the battery with both rifle guns and forward 15-inch. At 1.30 ceased firing with after rifle and forward 15-inch. At 3.30 ceased firing with forward rifle and opened fire with after rifle. At 5 p. m. ceased firing altogether.

Expended— 2 15-inch charges, 45 pounds.

“ 2 15-inch shell, 10-second.

“ 39 16-pound charges, 8-inch rifles.

“ 39 percussion shell, 8-inch rifles.

The forty-five-pound charge in 15-inch was just able to reach over the battery, distance say 2,300 yards. Elevation of the battery, say ninety feet. The rifles reached with about seven degrees elevation, and all the projectiles fell near or at their mark, many with excellent effect. The battery appeared much cut up by the fire of the iron-clads.

The return fire from the battery, and also that from the direction of Cox's landing, supposed to be from the rebel iron-clads, came near, but was not of importance. Neither their vessel nor any of those on board were injured.

Some projectiles struck quite near, and one exploded near enough to throw pieces on deck, but beyond this the vessel was not struck. Everything worked to my entire satisfaction, and the vessel was comfortable.

I am, sir, very respectfully, your obedient servant,

C. H. CUSHMAN,
Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,
Com'dg N. A. B. Squadron, James River.

Report of Commander E. G. Parrott.

U. S. STEAMER CANONICUS,
James River, Va., June 24, 1864.

SIR: On the 21st instant, near noon, the rebels unmasked, near Howlett's, a battery of four guns, whose completion we had been for some time endeavoring to prevent or retard by occasional shots, and opened a fire upon us and the vessels in our vicinity, which was kept up until dark. They had a large smooth bore, a large rifle, and two smaller guns. As soon as they commenced unmasking we opened on them with our two 15-inch guns, firing rapidly at first, but afterwards only occasionally, to economize ammunition. One of their guns traverse an embrasure, but the distance, 2,200 yards, was large for firing at single guns. We were struck twice. The injury was slight. We fired forty shells with thirty-five-pound charges. Everything stood well about the guns and gun-carriages.

The rebel iron-clads came down the river, but not in sight, and opened upon us a random fire over the trees, which hit nothing, and which, I believe, was not noticed. The batteries have since continued silent, and their guns are again masked.

I am, respectfully, your obedient servant,

E. G. PARROTT, *Commander.*

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Report of Commander A. C. Rhind.

UNITED STATES STEAMER AGAWAM,
James River, June 23, 1864.

SIR: I respectfully present the following report of the participation by this vessel in the firing on the 21st instant, with the rebel battery at Howlett's Bluff and vessels stationed, as near as we could judge, in the reach at Cox's place. At 11.50 a. m. the enemy opened fire from Howlett's, and about the same time from their vessels. Signal being made from the flag-vessel to prepare for action, we went to quarters at 12.30 and commenced firing deliberately, using the forward guns on the battery at Howlett's, and the after towards the enemy's vessels, as the firing had to be directed from aloft, the object aimed at not being in sight from the deck. We discontinued it at 2.30 p. m. The fire of the enemy was kept up till near sunset. This vessel was not hit.

Respectfully, your obedient servant,

A. C. RHIND, *Commander.*

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

ENGAGEMENT WITH HOWLETT'S BATTERY.

[Telegram.]

FLAG-SHIP MALVERN,
James River, June 28, 1864—11 p. m.

Howlett's battery fired twice at a tug which went to the obstructions this afternoon. Monitors replied. No casualties. * * * *

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

EVACUATION OF WHITE HOUSE, PAMUNKEY RIVER.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

James River, June 29, 1864.

SIR: On the 29th May, Lieutenant Commander Babcock, U. S. steamer Morse, by General Smith's request, proceeded to White House with the Morse, Shokokon, and Cohasset, to cover the landing of supplies and protect the army communications. I subsequently sent the Cactus and Henry Brinker to his support. These vessels remained at the White House until its evacuation on the 23d instant, rendering most efficient service, and then returned to Yorktown, convoying the transports.

I enclose a report from Lieutenant Commander Babcock, of 25th instant, of an engagement on the 20th instant with three (3) rebel batteries near White House, which had been posted on the edge of the wood during a thick fog, and on its lifting opened fire on the wagon trains. The fire from the Morse and Cactus dislodged them in about three hours. Deserters afterwards reported that a force, estimated at 10,000, of Wade Hampton's and Fitzhugh Lee's cavalry, intended attacking our trains, but were deterred from the attempt by the fire of the gunboats. On the 21st instant a party of rebel cavalry fired on the transport Eliza Hancock, but were driven off by the Shokokon's fire.

Lieutenant Commander Babcock encloses the following reports, &c. :

(A.) June 20th, Acting Master Graham, commanding Cactus, reports engagement of 20th.

(B.) Copy of General Abercrombie's general order No. 10, of 20th instant, tendering his thanks to Lieutenant Commander Babcock and the officers of the navy for the efficient aid and support rendered in the engagement of the 20th instant.

(C.) June 21st, Acting Master Sheldon, commanding Shokokon, reporting engagement of 21st.

(D.) June 24th, Acting Master Sheldon's general report of his movements since arriving at White House.

I should not fail to call attention to the hearty, efficient, and successful service which Lieutenant Commander Babcock has rendered to the army in opening and protecting its communications and in repelling the assaults of the enemy. He is a modest and meritorious officer, and deserves the especial notice of the department.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Lieutenant Commander Chas. A. Babcock.

UNITED STATES STEAMER MORSE,

Off Yorktown, Va., June 25, 1864.

SIR: I have the honor to report, that on the morning of the 20th instant, while lying off White House, Pamunkey river, during a thick fog at 6.30 a. m., some firing was occasionally heard on shore at some distance off from his vessel; but after a short time, ceased. At 9 a. m. the fog cleared up; three rebel batteries intrenched at the edge of the woods opened a brisk artillery fire on our wagon trains on shore, also on this vessel and Cactus. At once took posi-

tion with this vessel and Cactus, opening fire on them, and by noon succeeded in driving them entirely from their position out of range of our guns. The wagon trains retreated slowly across the river. Made excellent shots, both from this vessel and Cactus, and was informed afterwards, from accounts of prisoners who were taken, that Fitz Hugh Lee and Wade Hampton's legions, consisting of 10,000 rebel cavalry, were intending to make an attack on our wagon trains, and that had it not been for the gunboats, they would have certainly accomplished their purpose. At 5 p. m. General Sheridan's command arrived, and at once followed up the rebel cavalry. Expended from this vessel the following ammunition:

One 40", one 30" and thirty-five 20" shell from 100-pounders; thirty 20" shell from nine-inch Dahlgrens; thirty-seven 10-pound cartridges for 100-pounder Parrotts; thirty 10-pound cartridges for nine-inch Dahlgrens.

On the morning of the 21st instant, a party of these rebel cavalry fired on the transport steamer Eliza Hancock, off Cumberland Point, but the Shokokon succeeded in driving them handsomely.

On the morning of the 23d instant, at 10 a. m., White House being entirely evacuated by our forces, gave orders to get under way and proceed down the river, bringing up the rear with this vessel. When down to West Point, stopped there a short time, and found all our forces had left that place also; proceeded to Yorktown, and arrived safely at 1 a. m. yesterday morning. At 9 a. m., despatched the Shokokon, Cactus, Henry Brincker and Cohasset, to Hampton Roads, with orders to report to Captain Guert Gansevoort for further orders.

During the firing from this vessel on the morning of the 20th instant, at the second fire of my after 100-pounder Parrott, the socket of the elevating screw broke; afterwards worked the gun with bed and quoin. The breeching of the 100-pounder Parrott parted, but caused no accident whatever.

Too much praise cannot be given to the commanding officers of the Shokokon, Cactus, Henry Brincker and Cohasset, for the very efficient aid and support they afforded me at all times. Their officers and crews behaved well, also the officers and crew of this vessel.

I respectfully forward you the enclosed reports from the Shokokon and Cactus; also a copy of a letter received by me from General Abercrombie, who commanded the land forces at White House during the attack of the 20th instant, before the arrival of General Sheridan.

I am, sir, very respectfully, your obedient servant,

CHAS. A. BABCOCK,

Lieutenant Commander, and senior officer present.

Rear-Admiral S. P. LEE,

United States Flag-Ship Malvern, James River, Va.

A.

Report of Acting Master N. Graham.

UNITED STATES STEAMER CACTUS,

White House, June 20, 1864.

SIR: I have the honor to report that at 9 o'clock, by your order, I commenced firing my rifled 30-pounder upon the rebel batteries that were attacking our land forces at this place. I expended twenty-eight 30-pounder shell with 15" fuzes, and three 12-pounder percussion shell at an elevation of 10°. At 11 o'clock I proceeded down the river to Cumberland Heights, as directed, to give notice to the United States steamer Shokokon. At 12.30 o'clock started for the White House again. On my way up I expended three 30-pounder shell, 5", 10", and 15" fuzes, upon a body of cavalry. At 3 o'clock came to anchor at the White House. Amount of ammunition expended:

thirty-one 30-pounder shell, thirty-one 3 $\frac{1}{4}$ -pound cartridges ; three 12-pounder percussion shell, three 1-pound cartridges ; twenty-nine 15," and five 5," and 10" fuzes.

I am, very respectfully, your obedient servant,

N. GRAHAM,

Acting Master, Commanding Cactus.

Lieutenant Commander C. H. BABCOCK,

Commanding U. S. Steamer Morse, senior officer present.

B.

General Orders of Brigadier General J. J. Abercrombie.

[General Orders No. 10.]

HEADQUARTERS UNITED STATES FORCES,

White House, Va., June 20, 1864.

The undersigned hereby relinquishes the command of the troops at this station to Brigadier General George W. Getty. In doing so he avails himself of this opportunity of expressing his high appreciation of the services of his staff in their respective positions, tendering his sincere thanks to Captain Charles A. Babcock and the officers of the navy for the very efficient aid and support to the land forces in the persistent attack on the post of to-day by the enemy.

J. J. ABERCROMBIE,

Brigadier General.

Captain CHARLES A. BABCOCK,

United States Navy.

C.

Report of Acting Master William B. Sheldon.

UNITED STATES STEAMER SHOKOKON,

Cumberland, Va., June 21, 1864.

SIR : I would respectfully submit the following report :

This morning, 8.30 a. m., just after a thick fog had cleared away, the transport steamer Eliza Hancox passed up. When abreast of Cumberland Point, one mile above where this vessel was lying, she was fired on by a party of rebels, who were concealed on the bank of the river. I immediately opened fire with our forward battery, and slipped the chain, steamed up to the point where the firing proceeded from, the most of our shell exploding near and among them. They soon fell back, under cover of the woods, out of sight ; shelled the woods, but could not get any reply. Kept in the position near the point until 12 o'clock m. I learned from a man whom I called down to the beach that the enemy were a party of dismounted cavalry, numbering about one hundred and fifty, (150 ;) that they had fallen back towards New Kent Court House ; he reported that they had some wounded, but could not tell whether there were any killed. I also learned from him that they had dismounted about a mile back and came down to the river during the fog. Nothing more has been seen or heard from them up to this, 6 p. m. Enclosed I will send report of ammunition expended.

Respectfully, your obedient servant,

W. B. SHELDON,

Acting Master, Commanding.

Lieutenant Commander CHARLES A. BABCOCK,

Senior Officer Com'dg U. S. Steamer Morse, White House, Va.

D.

Additional report of Acting Master Wm. B. Sheldon.

UNITED STATES STEAMER SHOKOKON,
Off Yorktown, June 24, 1864.

SIR: In obedience to orders from Acting Rear-Admiral S. P. Lee, May 28, 1864, to report to you at Yorktown, or wherever you might be, I reported to you at White House, May 31, 5 o'clock a. m.; was ordered by you to proceed down the Pamunkey and take position off Cumberland to protect the transports passing up and down. In compliance with your orders, I took position where I could command Cumberland Point and an old earthwork formerly held by the enemy on the right bank of the river. Nothing occurred of note until the 6th of June, when a small force of the 179th New York volunteers came down to occupy the heights. I gave all assistance they required in landing and getting their stores ashore. Everything remained quiet until the morning of the 21st instant, when a party of about one hundred and fifty (150) rebel cavalry, dismounted, came down to Cumberland Point, during a thick fog, and fired from the bank of the river at one of the transports passing that point—details as per report of that day. On the evening of the 22d the force occupying the heights evacuated and passed down the river; I rendered them all assistance possible in getting on board the transport.

On the 23d instant, 2.45 p. m., was ordered by you to proceed down the river, in company with the other gunboats, arriving off Yorktown at 11.15 p. m., 25th June, 1864.

Respectfully, your obedient servant,

W. B. SHELDON,
Acting Master, Commanding.

Lieutenant Commander CHAS. A. BABCOCK,
Senior Officer, Com'dg U. S. Steamer Morse, off Yorktown, Va.

ENGAGEMENT WITH REBEL BATTERY AT DEEP BOTTOM.

[Telegram]

FLAG-SHIP MALVERN,
Trent's Reach, June 29, 1864—11 p. m.

This morning the rebels opened a four-gun battery, situated two thousand yards up Four-Mile creek, at Deep Bottom, and commanding the river in open view between the army intrenchments there; an army tug was crippled; Saugus and Hunchback fired without silencing the battery. Two double-enders will attack it to-morrow. A deserter reports that the enemy are mounting many heavy guns at Howlett's.

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
Hon. GIDEON WELLES,
Secretary of the Navy.

ENGAGEMENT WITH REBEL BATTERY NEAR DEPP BOTTOM.

[Telegram.]

FLAG-SHIP MALVERN,
James River, June 30, 1864—11 p. m.

The enemy removed his battery from Deep Bottom last night, thus avoiding the heavy gunboat fire which opened on his position early this morning. This

evening he opened a battery lower down, which the Hunchback drove away. Am inquiring about the canal boats. Deserters report that the rebels are strengthening Howlett's battery.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

CAPTURE OF A REBEL SIGNAL STATION NEAR WILSON'S WHARF.

Report of Acting Volunteer Lieutenant J. W. Simmons.

UNITED STATES STEAMER DAWN,

Off Wilson's Landing, Virginia, June 30, 1864.

SIR: I have the honor to acknowledge the receipt of your letter dated June 27, 1864, ordering me to send you a circumstantial report of the capture of the principal signal station near Wilson's wharf, on May 6, 1864.

In obedience to that order, I respectfully report that on Friday, May 6, at the request of Brigadier General Wild, I took on board a small detachment of soldiers, and proceeded down the river and landed the soldiers about two miles above the signal station. I then proceeded with this vessel to Sandy Point, where the signal station was located, and anchored for the purpose of covering the landing of my boats. I then sent the second cutter with ten men armed, in charge of Acting Ensign E. T. Sears, accompanied by Acting Assistant Paymaster R. C. Peirce. Before landing the enemy was plainly seen by the officers in charge of the boat, but could not see anything of our soldiers who had not yet come up. The boat was pushed rapidly to the shore, the men landed, and at once started to capture the enemy and their property. The enemy retreated to a small piece of woods. Acting Ensign Sears left one of his men to guard the boat, and took the rest and pushed on towards the woods where the enemy had retreated. As Mr. Sears neared the woods he saw a body of men approaching; he supposed them to be a party of rebels, and wishing to finish his work before the advancing party could come up to their assistance, he made a bold push, and was just about commencing the attack when he heard a volley of musketry, and then learned that the advancing party were our own men. By this volley three men were killed and two wounded and captured; the other two were killed, as they were retreating, by another party of our soldiers who were advancing from another direction. Upon the landing of the second cutter, Acting Assistant Paymaster Peirce, who knew my great desire to capture the rebel signal flag and code, at once started for the house above. As he neared the house the rebel officer retreated on horseback. Mr. Peirce captured the signal flag and code, which I forwarded to you. At this time, leaving the ship in charge of Acting Master J. A. Jackaway, who had been shelling the woods in the rear of the signal station, I proceeded on shore and gave orders to have the dead buried, which was done by Mr. Sears and Mr. Peirce. I had the wounded and prisoners brought on board, and embarked the troops and returned to my station off Wilson's wharf. I take pleasure in reporting to you that Acting Master Jackaway performed his duty in his usual cheerful and cool manner, placing him very high in my estimation as an officer and seaman.

The conduct of Acting Ensign E. T. Sears was deserving of great credit, charging, as he did, in the face of what he supposed was a re-enforcing party of the enemy, for the purpose of carrying out the orders he received from me. The conduct of Acting Assistant Paymaster R. C. Peirce was truly brave and gallant in the extreme, charging, as he did, alone towards the house that he might

capture the signal officer with the flags and codes, thus accomplishing the object of the expedition. The signal flag and spyglass captured by me are on board this vessel at present in use. I should have sent them to you, but supposed I was to keep them on this vessel until the end of the cruise, and deliver them with my other nautical instruments. I cannot close this report without making mention of S. F. Patten, quartermaster, and Robert Braid, cockswain, and Patrick Melby, landsman, attached to this vessel, for very good conduct at the time Mr. Sears was about making the charge; they were all three close to him, and by their conduct set an example to the other men, which had a very good effect.

I am, sir, very respectfully,

J. W. SIMMONS,

Acting Volunteer Lieutenant, Com'dg U. S. Steamer Dawn.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Respectfully forwarded for information of Navy Department, with the expression of my approbation of the good conduct of the officers and men named herein.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

ENGAGEMENT WITH REBEL BATTERY ON FOUR-MILE CREEK.

UNITED STATES STEAMER MENDOTA,

James River, July 3, 1864.

ADMIRAL: I have the honor to make report of the following proceedings in and about Four-Mile creek within the past few days. At about seven o'clock a. m. on the 31st ultimo the enemy opened fire on the United States steamer Hunchback, Lieutenant Fyffe commanding, with a battery of five guns, located on Four-Mile creek, about two thousand yards from the river. Lieutenant Fyffe immediately returned the fire and kept it up for some time, when the battery was apparently silenced. During the engagement the Hunchback was struck once in port wheel-house, but no damage done. About noon the monitor Saugus, Commander Colhoun, came down and took position and opened fire. The battery fired only two or three shots at the Saugus, but opened rapidly and spitefully whenever any wooden vessels showed in front. A number of vessels were fired on in this manner in the course of the day, notwithstanding the presence of the Saugus, but only one was struck—an army tug, of which the chief engineer was severely wounded. On the morning of the 1st instant, in company with the Agawam, this vessel took position to bring a cross-fire on the position of the battery, and both vessels opened without eliciting any reply, neither could any one be seen in the neighborhood. After firing about twenty shell I ceased, and there has been no demonstration in this vicinity since. On the afternoon of the 1st information was received from a French resident that the enemy had moved some of their guns further down the river, with a view to annoying passing vessels and to shell the camp of General Foster, below Four-Mile creek. I therefore directed Lieutenant Fyffe to proceed down the river, below Tilghman's wharf, and if the enemy were about, to remain there. About seven o'clock p. m. Lieutenant Fyffe fired again, which was immediately responded to by the rebels, their shell bursting in the neighborhood of General Foster's camp. Their fire soon ceased, and it was ascertained by Lieutenant

Fyffe the next morning that one of his shells fell among the rebels, whereupon they abandoned one of their guns, and did not return for it until after ten p. m. Since then everything has been quiet about here.

Very respectfully, your obedient servant,

ED. T. NICHOLS,
Commander, United States Navy.

Acting Rear-Admiral S. P. LEE,
Com'dg N. A. B. Squadron, James River.

JULY 9, 1864.

The engagement and movements referred to in this report of Commander Nichols were in pursuance of immediate instructions from me.

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.

VARIOUS NAVAL OPERATIONS ON JAMES RIVER, VIRGINIA, &c.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP N. A. B. SQUADRON,
Hampton Roads, July 9, 1864.

SIR: I transmit, enclosed, three (3) reports from Captain Smith, of 4th, 5th, and 6th instant, as follows: (1) enclosing report from Lieutenant Commander Quackenbush of the capture by a boat's crew from the Pequot of three confederate prisoners. A large body of cavalry approaching after the capture, the Pequot and Commodore Morris opened fire and drove them off. The prisoners had little information. (2) 5th instant, enclosing copies of two telegrams, (A and B,) dated 4th and 5th instant from General Weitzel to General Foster, warning him of a probable attack by a rebel force of about five thousand, which the second despatch states is probably meant as a feint to cover a heavy attack on Meade's left; also a despatch (C) from General Butler, of 5th instant, requesting the assistance of the naval vessels in destroying the enemy's forage and grain in their vicinity; (3) of 6th instant, reports the destruction of a considerable amount of hay and grain on Aiken's farm, and an attempt to capture the rebel guard stationed to protect the reapers; they escaped, however, their arms, ammunition and clothing only being taken.

Acting Master Lee, commanding the Commodore Morris, reports to Captain Smith that while destroying a field of wheat near Turkey Bend, an escaped Union prisoner, John H. Bond, who had been sent from Richmond to aid in cutting the grain, claimed his protection, and stated that there were seven (7) other prisoners sent with him for the same purpose. Richard D. Lee, justice of the peace for Warwick county, Virginia, was taken prisoner at the same time, and turned over to General Butler. Captain Smith also reports that he is informed that the man Aiken, upon whose premises the grain was destroyed, had assisted a party of five (5) to escape to the rebel lines. This man gave a strict pledge of neutrality when our forces first went up the river. This report also encloses the statement of three (3) deserters from the rebel iron-clad Virginia, who came off on the 5th; they furnish no new information.

There has been no change in the naval situation, and all was quiet at the last date.

I have the honor to be, sir, very respectfully,

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
Hon. GIDEON WELLES,
Secretary of the Navy.

CAPTURE OF THREE REBEL PRISONERS BY THE PEQUOT.

Report of Captain M. Smith.

UNITED STATES IRON-CLAD ONONDAGA,

James River, July 4, 1864.

SIR: I enclose herewith a report just received from Lieutenant Commander S. P. Quackenbush, of the United States steamer Pequot, of the capture of three of the enemy.

The following is all the information obtained from the prisoners:

They state that they belong to Ewell's corps, and were cutting forage on the bank when they were captured by the Pequot's men, and that they had been cutting forage for the last fortnight. They say they do not know the number of troops with Ewell, but that there are two battalions of artillery, one with nineteen guns and the other with eight, and a brigade of cavalry. They are stationed near Malvern Hill, about two miles from the river. I have directed Lieutenant Commander Quackenbush to destroy the quantity cut, and burn the field if he can do so.

Very respectfully, your obedient servant,

MELANCTON SMITH,

Captain, and Senior Officer present.

Acting Rear-Admiral S. P. LEE,

*Commanding N. A. B. Squadron.**Report of Lieutenant Commander S. P. Quackenbush.*

UNITED STATES STEAMER PEQUOT,

James River, Va., July 4, 1864.

SIR: I have the honor to report the capture of three confederate prisoners taken by a boat's crew from this vessel, under the charge of Acting Ensign A. Smalley.

From the statement made by the prisoners, they belong to General Ewell's corps, and had been sent to obtain provender for their horses. After their capture had been effected, a large body of cavalry approached within range of our guns, which we drove off with some loss on their part, I think, as the shells of the Commodore Morris and this vessel fell directly in their midst.

I send you the prisoners, who give their names as Samuel B. Farmer, John R. Wood, and Martin V. Warburton, all privates belonging to the 1st Virginia artillery.

I am, respectfully, your obedient servant,

S. P. QUACKENBUSH,

Lieutenant, Commanding.

Acting Rear-Admiral LEE,

Commanding N. A. B. Squadron.

CONDITION OF AFFAIRS IN JAMES RIVER, VIRGINIA, &c.

Report of Captain M. Smith.

UNITED STATES IRON-CLAD ONONDAGA,

On Picket, below Barricade, July 5, 1864.

SIR: I have just received a communication from Commander Nichols, informing me that everything is quiet at Deep Bottom, and no unusual movements of the enemy has been discovered.

The Mackinaw has been sent to Commander Nichols, and the Agawam will take her station off Aiken's Landing. Nothing has occurred in this vicinity worthy of mention.

I send a copy of a telegraphic despatch, the substance of which was communicated to me last night about three o'clock, at which time the Mackinaw and Agawam were despatched. I send you a copy of two others, this moment received, and shall carry out the suggestions in relation to the destruction of forage and grain in the vicinity of our boats.

Very respectfully, your obedient servant,

MELANCTON SMITH,
Captain, and Senior Officer present.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Telegram from General Weitzel to General Foster.

A.

[By Telegraph.]

GENERAL BUTLER'S HEADQUARTERS,
July 4, 1864.

To Brigadier General FOSTER:

I think it beyond a doubt, from information received, that you will be attacked in the morning by about five thousand rebels. General Butler thinks so too; be prepared.

G. WEITZEL,
Brigadier General and Chief of Staff.

Telegram from General Weitzel to General Foster.

B.

[By Telegraph.]

GENERAL BUTLER'S HEADQUARTERS,
July 5, 1864.

To General R. S. FOSTER:

Despatch received. The general thinks that an attack is coming; he supposes they did not get ready by this morning. He believes that the attack on you will be a feint to cover a heavy attack on Meade's left.

G. WEITZEL,
Brigadier General and Chief of Staff.

Received at 9.45 a. m., and forwarded, by request, to General Foster.

Respectfully,

ED. T. NICHOLS, *Commander.*

Telegram from General Butler to Acting Rear-Admiral S. P. Lee.

[Telegram.]

GENERAL BUTLER'S HEADQUARTERS,

July 5, 1864.

To be forwarded to Admiral LEE:

The commanding general requests that you assist General Foster to destroy all forage and grain in the vicinity of your boats.

LUDLOW,
Major and A. D. C.

DESTRUCTION OF GRAIN, &c., ON AIKEN'S FARM.

Report of Captain M. Smith.

UNITED STATES STEAMER ONONDAGA,

On Picket, below Barricade, July 6, 1864.

SIR : The man Aiken, upon whose premises the grain was burned yesterday, is, from information received this morning, a great rascal. In a communication with John Williams, ordinary seaman, belonging to the Minnesota's launch, Aiken informed him that he had assisted a party of five in making their escape, and pointed out the road to the rebel lines and the situation of the pickets.

Lieutenant Chambers was sent last night to Aiken's premises with thirty-five men assigned to the navy, by General Graham, to capture a guard of rebels placed there to protect the reapers. The laborers and soldiers escaped, but their arms, ammunition and clothing were secured, all the forage destroyed, and about ten acres of grain burned.

Lieutenant Commander Quackenbush reports that he landed thirty men yesterday and destroyed ten stacks of hay and a quantity of wheat in the field. Walter W. Ingalls, landsman, one of the party, accidentally shot himself with his rifle, and the wound is considered fatal.

I am informed by Acting Master Lee that, in destroying a field of wheat at Turkey Bend, John H. Bond, an escaped Union prisoner, who was sent down from Richmond by the authorities of that place to cut grass for the rebel government, claimed protection of his men, and stated that there were seven other prisoners sent with him for the same purpose.

Richard D. Lee, justice of the peace for Warwick county, Virginia, was taken prisoner at that time, and has been sent to General Butler. Three deserters came off yesterday, two from the rebel ram Virginia, and one from Howlett's battery. The two first made the statement which is herewith enclosed, and the latter was sent to General Butler for examination, his information being all of a military character. Everything is quiet here, and no despatches have been received for you from Washington, except those marked "private," which have already been forwarded.

Very respectfully, your obedient servant,

MELANCTON SMITH,
Captain, and Senior Officer present.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Statement of a deserter from the rebel iron-clad Virginia.

JULY 5, 1864.

Came on board at 1 p. m.; name, George Layton; Englishman; came in blockade-runner to Charleston; joined the confederate service, January, 1863, to get released from imprisonment; has been on the Virginia two months; she is three feet from the water to the main deck, draws thirteen to fourteen feet, carries one 10-inch smooth-bore and three 7-inch Brooks rifles; has ten inches of armor on forward face of shield, six inches on sides, and eight on stern face; manned by conscripts from the army; has 180 officers and men. Commodore Mitchell, Captain Pegram, 1st Lieutenant Johnson. Obstruction at Fort Darling—sunken vessels with piles between; opening for rebel iron-clads to come through, next to north bank, with fourteen feet of water in it. There are also the iron-clads Richmond, four guns, and Fredericksburg, four guns. Other vessels—Hampton, Nansemond, Roanoke, and Beaufort. Loaders have to stand on port recess to load the guns, they come in such a short distance, and cannot fight both broadsides at once.

The statement of another deserter from same vessel is substantially the same

 THE OBSTRUCTION OF TURKEY CREEK.
Report of Captain Melancton Smith.

UNITED STATES STEAMER ONONDAGA,

James River, below Barricade, July 13, 1864.

SIR: Lieutenant Commander Quackenbush reports that he has partially obstructed Turkey creek, and will make it more secure to-day by sinking a large scow in the channel, and putting up another line of obstructions. He also states that his pickets were attacked on the 12th instant, but sustained no loss. His shells did fearful execution, falling, as he says, in the midst of a force of about one hundred men, and saw from aloft seven, either killed or wounded, borne off the field; one with his foot blown off was captured, and one other killed near him.

Very respectfully, your obedient servant,

MELANCTON SMITH,

Captain, and Senior Officer in James River.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMER PEQUOT,

Off Turkey Creek, James River, Virginia, July 12, 1864.

SIR: I have the honor to report that, in obedience to your orders, I have placed the first line of obstructions across the middle of Turkey creek. The line formed consists of two lines of stakes, with logs laid between them from the bottom to the surface. To-morrow morning I intend sinking a large scow and putting up another line of obstructions similar to the one mentioned, which I think will effectually block up the creek. A detachment of men from the Morris, in charge of two officers, assisted in the work. Our pickets were at-

tacked; no loss was sustained on our side, and one man killed on theirs. One of the officers of the Morris in the affair had his coat cut by one of the enemy's balls, but the rent can be covered by a *shoulder strap*.

I am, very respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant, Commanding.

Captain MELANCTON SMITH,
Senior Officer Commanding in James River, Virginia.

Additional report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMER PEQUOT,
July 12, 1864.

SIR: Since sending my note this p. m. I sent on shore and brought off a wounded man, whose foot had been nearly blown off by one of our shells. His foot has since been amputated. Will you please give directions to have him removed to some hospital as soon as possible, both for his sake as well as mine. We have observed from aloft seven additional men, either wounded or killed, borne off by their commander. Our shells must have done fearful execution, for every one of them, as also a shrapnell from the 150-pounder, fell directly in the midst of a party reported to be at least one hundred. I am of the opinion that in future no attempt will be made to gather grain within range of our guns. The young man, or rather boy, that was wounded in the foot, informed the surgeon that Ewell's corps were on the north side of the river in this vicinity. He could not give anything like an estimate of the number of men under his command, but represented the force to be a large one. I think his statement correct.

Very respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant, Commanding.

DESTRUCTION OF SIGNAL STATION AT COX'S FARM.

FLAG-SHIP N. A. B. SQUADRON,
Hampton Roads, July 16, 1864.

SIR: Captain M. Smith reports, under date of 12th instant, that he sent in the Stepping Stones, on the 11th instant, a detachment of seventy men from the 3d Pennsylvania artillery, and fifty from the 10th Connecticut volunteers, in charge of 1st Lieutenant D. W. Chambers, 3d Pennsylvania artillery, to a point on James river, below Dutch Gap, and thence to Cox's farm, and that they there burnt the signal station, two mills, two barns, a blacksmith's shop, and out-buildings, and a large quantity of grain and agricultural implements, capturing one lieutenant, one sergeant (wounded) and twelve men, with arms and accoutrements complete; also a large torpedo with clock-work attachment, the galvanic battery to which it was attached, and two hundred pounds of powder. The whole was accomplished without loss on our side.

I have directed Captain Smith to send me the torpedo, which, when received, will be forwarded to the Bureau of Ordnance, with an explanatory drawing.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral Commanding N. A. B. Squadron.

HON. GIDEON WELLES,

Secretary of the Navy.

ATTACK ON PEQUOT AND COMMODORE MORRIS BY BATTERY AT MALVERN HILL.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MALVERN,
 Hampton Roads, Va., July 17, 1864.

SIR: I enclose the report of Captain Smith, dated 15th instant: (1) of the attack on the Pequot and Commodore Morris by a rebel battery near Malvern Hill, with its enclosures; (2) report of Lieutenant Commander Quackenbush, Pequot; (3) of Acting Master Lee, Commodore Morris, both dated 15th instant. From the former it appears that at 1.10 p. m. on the 14th a battery of one gun opened on the Pequot from Malvern Hill, the first shot taking off a man's leg and doing some injury to the vessel, which was lying to the ebb tide, and could not return the fire until she had moved up and turned, several shots striking in close proximity while this was being done. When in position, a number of shots were fired by the Pequot without reply, when she returned to her anchorage.

Acting Master Lee reports that a battery of 20-pounder rifles opened on the Commodore Morris from the direction of Malvern Hill on the 14th. He steamed up to within one thousand yards of the enemy, and returned the fire with his 100-pounder Parrot. The shell from that failing to explode, he turned the vessel round, and used his IX-inch guns. The enemy retreated to Malvern Hill, and again opened fire, when the Morris moved further up the river and returned it.

The enemy ceased firing at 5 p. m. No damage was sustained by the Commodore Morris. Captain Smith also states that deserters from Howlett's report that a battery of eight guns is being mounted in the clearing to the left. Acting Volunteer Lieutenant French, commanding the Wilderness, reports (verbally) that the Mendota yesterday engaged a battery near Deep Bottom, which ranged upon the pontoon bridge, and lost two men killed and six wounded.

The Commodore Morris was also engaged at the same time with a battery near Malvern Hill, and received a shell in her magazine, which passed through three barrels of powder, lodging in the shot locker without exploding. The Wilderness was obliged to pass down in the night, the batteries being still in position. She brought two of the wounded to the Norfolk hospital.

I have the honor to be, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Captain Melancton Smith.

UNITED STATES STEAMER ONONDAGA,
 On Picket, below Barricade, James River, July 15, 1864.

SIR: I enclose the report of Lieutenant Commander Quackenbush of the attack by the enemy upon the Pequot from the vicinity of Malvern Hill, and also one from Acting Master R. G. Lee in relation to his operations against the enemy on the same day. It is believed that the enemy has been dislodged, and everything quiet on the river. Two deserters came off this evening from Howlett's battery, and they report that there is a battery of eight guns being mounted in the clearing to the left.

Very respectfully, your obedient servant,

MELANCTON SMITH,

Captain, and Senior Officer in James River.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMER PEQUOT,
Turkey Bend, James River, Va., July 15, 1864.

SIR: I have the honor to inform you that at 1.10 p. m. on the 14th instant a battery of one gun on Malvern Hill opened fire on this vessel, the first shot taking off a man's leg and doing some injury to the vessel. At the time I was unable to return the fire in consequence of our lying to the ebb tide. I was therefore obliged to get under way and move up where the channel was sufficiently wide for me to turn round. In the mean time several shots were fired at me, all of which struck in close proximity. After rounding to I at once proceeded down to a position where my guns could be used effectively. After firing a number of times, and eliciting no response, I returned to my anchorage.

I am, very respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant, Commanding.

Captain MELANCTON SMITH,
Senior Officer present, Commanding in James River, Va.

Report of Acting Master R. G. Lee.

UNITED STATES STEAMER COMMODORE MORRIS,
Off Haxall Landing, James River, Va., July 15, 1864.

SIR: I most respectfully submit the following report: At 1 o'clock p. m. yesterday the rebels opened fire on the Commodore Morris, from the direction of Malvern Hill, with a masked battery of twenty-pounder rifles. I immediately got under way, steamed up river a quarter of a mile to within one thousand yards of the enemy, and opened fire with the one hundred-pounder rifle Parrott. Finding the shell from the rifle did not explode, I turned the vessel around and opened on them with shell from the nine-inch Dahlgren, firing to where I saw the flash of the enemy's guns, and soon drove them from their hiding-place. They then retreated to Malvern Hill, from which place they opened fire on us. I then steamed higher up river, so I could use my hundred-pounder rifle, which I did, only one shell in six from the rifle exploding. I also used the thirty-pounder.

At 5 p. m. the enemy ceased firing; I then returned to my anchorage, off Haxall, sustaining no damage.

Very respectfully, your obedient servant,

R. G. LEE,
Acting Master, Commanding.

Captain MELANCTON SMITH,
Senior Officer, James River.

ENGAGEMENT BETWEEN GUNBOATS MENDOTA AND PEQUOT AND BATTERIES ON JAMES RIVER.

Report of Captain Melancton Smith.

UNITED STATES IRON-CLAD ONONDAGA,
On Picket, below Barricade, James River, Va., July 16, 1864.

SIR: I have the honor to enclose a report from Commander Nichols, of the Mendota, stationed off Four-Mile creek, in relation to the temporary interruption of the navigation on the river, with the accompanying list of casualties on board

that vessel. I have ordered the Agawam from Aikin's landing to assist in dislodging the enemy, and have restricted all communication about that point by unarmed vessels until nightfall.

The Pequot was fired upon yesterday from a one-gun battery—20-pounder Sawyer—near Malvern Hill, the shell striking her, mortally wounding one man and doing some slight damage to the vessel. I enclose herewith a communication from Lieutenant Commander Quackenbush, giving the particulars of an engagement with the enemy's battery at Malvern Hill to-day. * * *

I have the honor to be, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain, and Senior Officer in James River.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

[Enclosures.]

Report of Lieutenant Commander Quackenbush, Pequot, July 16.

Report of Commander Nichols, Mendota, July 16.

Casualties on Mendota.

Report of Commander E. T. Nichols.

UNITED STATES STEAMER MENDOTA,

James River, July 16, 1864.

SIR: I have to report that about seven o'clock this morning a rebel battery opened fire on this vessel and General Foster's camp. The ship moored head and stern. I could bring but one gun to bear. Shipped and dropped down, opening fire with all the guns, as they would bear. The rebels have not fired now for over an hour; whether driven off by our guns or not I cannot say. The battery is located in the edge of the woods below Four-Mile creek, in a very commanding position. I regret having to report the following casualties from the bursting of a rebel 20-pounder shell, which came through the bulwarks among the crew of No. 1 gun: Four men severely wounded (one since died) and two others doubtfully; two men and one officer slightly wounded. I have directed the captain of the Wilderness not to pass down until night, and I shall detain the Hydrangea below the bridge, sending anything she may have for you across the point to my tug.

Very respectfully, your obedient servant,

ED. T. NICHOLS,

Commander, United States Navy.

Captain MELANCTON SMITH,

Com'dg U. S. S. Onondaga, Senior Officer, James River.

List of casualties on board United States steamer Mendota by shell from rebel battery, July 16, 1864.

Thomas Kennedy, landsman, dangerously, (since died;) William S. Pattle, ordinary seaman, dangerously in leg and groin, (cannot recover;) Charles W. Taylor, quarter gunner, in head, (doubtful;) Hugh Walch, landsman, seriously in leg, (doing well;) Patrick Flaherty, landsman, slightly in finger and leg, (doing well;) Otto Eichberg, landsman, slightly in cheek, (doing well;) Acting Master's Mate McDonald, slightly in leg, (on duty.)

Very respectfully,

ED. T. NICHOLS, *Commander.*

Report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMER PEQUOT,
James River, Virginia, July 16, 1864.

SIR: I have the honor to inform you that at 9.25 a. m. to-day the battery of one gun on Malvern Hill opened fire on this vessel. I at once got under way and proceeded down the river to a position abreast of the battery, and fired at it with all the effective guns on port side. Although our firing, as well as that of the Commodore Morris, was remarkably good, our shells falling and exploding at and about the battery, yet the means which the enemy had of safely secreting themselves rendered our firing abortive. Two of their shots struck this vessel, one carrying away an iron stanchion on the forecastle, and the other splintering the main topmast. One shot or shell passed through the magazine of the Commodore Morris, in close proximity to two men therein engaged, splintering two barrels containing powder without causing further injury. At three p. m. I returned to a position some four hundred yards above my usual anchorage, finding it useless to expend more ammunition without obtaining a satisfactory result. I enclose herewith an account of the ammunition used during the time I was engaged in endeavoring to silence the battery previously mentioned.

Since writing the above, another gun has been placed in position on Malvern Hill, and I have also discovered another mark of the enemy's shot on the foregaff.

I am, very respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant Commander, United States Navy.

Captain MELANCTON SMITH,
Senior Officer present, Com'dg U. S. N. Fleet in James River, Va.

SHELLING THE ENEMY AT FOUR-MILE CREEK.

UNITED STATES STEAMER ONONDAGA,
On Picket, below Barricade, James River, Va., July 29, 1864.

SIR: I have the honor to report that the Mendota and Agawam were engaged all day on the 28th shelling the enemy across Four-Mile creek, where they had been very busy throwing up works and manœuvring large bodies of men, supposed to be nearly all of Longstreet's and Hill's corps.

The enemy made a demonstration on General Foster's front, and the Agawam opened fire, but with what effect it has not been ascertained.

Commander Nichols, of the Mendota, reports that he fired at intervals of seventeen minutes, and that General Hancock informed him that his shelling was very effective and of great assistance to his operations. He had the misfortune, however, to disable his after 100-pounder pivot, the rifles being the only guns that would reach the position occupied by the enemy. The gun was fractured from the forward edge of the reinforce band on the breech to a point forward of the centre of the trunnion, but from the report of Commander Nichols, forwarded this day to the Bureau of Ordnance, the gun was properly served and every ordnance requirement complied with.

A confidential communication from General Weitzel, received this afternoon, states that, in view of a military movement ordered by General Grant, all the troops, excepting General Foster's original command, will be moved to-night

from Deep Bottom, and requests all the assistance I can render him. All the naval force that can operate to advantage at that point has been sent.

I have the honor to be, &c.,

MELANCTON SMITH,
Captain and Divisional Officer, in James River.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

EXPEDITION TO COX'S MILL, NEAR JAMES RIVER.

Letter of Captain M. Smith to Acting Rear-Admiral S. P. Lee.

UNITED STATES STEAMER ONONDAGA,
On Picket, below the Barricades, James River, August 4, 1864.

SIR: I herewith enclose a report from Captain Sanderson, commanding naval picket force, of another expedition to Cox's Mill to destroy an engine which General Ewell proposed to send a detachment of men to remove, and inquires by telegraph "if Flag-Officer Mitchell sends picket boats below the wharf," which despatch was read by our operator and communicated to me by General Butler.

I have not considered it of sufficient importance to make any report of the matter to the department. Everything quiet in this vicinity.

Very respectfully, your obedient servant,

MELANCTON SMITH,
Captain and Divisional Officer, James River, Virginia.
Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Letter from Captain J. W. Sanderson to Captain M. Smith.

CAMP OF NAVAL PICKET DETACHMENT,
James River, Virginia, August 4, 1864.

SIR: I have the honor to submit the following report of operations last night:

I proceeded with forty of my own men on the United States steamer Stepping Stones (Acting Ensign Barrett) to the pontoon bridge at General Foster's command, where I received one hundred additional men under command of Captain Nichols, 11th Maine. Returning, we landed at a point near Aiken's landing, known as the Branch, and at about 2 o'clock this morning I advanced with the force to Cox's farm, for the purpose of destroying such machinery, &c., as might be in the mill and on the premises.

Upon nearing the point a small squad of the enemy fired on us, without, however, doing any harm. I immediately ordered my men to move forward in quick time, at the same time sending a firing party, under charge of Lieutenant Chambers, to the mill. No machinery could be found; the building is an utter wreck and its contents removed; the walls alone are standing.

Upon attempting to fire the torpedoes, the fuzes were discovered to be deficient, and the effort to destroy what was left of the walls therefore failed.

The object of the expedition having as far as possible thus been accomplished, I returned to the Stepping Stones and embarked the troops. I have to report

the loss of two men, Private Wratson, company G, 3d Pennsylvania artillery, and one private (name unknown) of the 11th Maine, who strayed away from the command.

I have the honor to be, very respectfully, your obedient servant,

J. W. SANDERSON,

Captain 3d Pennsylvania Artillery.

Captain MELANCTON SMITH,

Senior Officer, James River.

ENGAGEMENTS BETWEEN GUNBOATS AND REBEL BATTERIES.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MALVERN,

Beaufort, N. C., August 22, 1864.

SIR: Captain Smith, under date of 5th instant, reports operations in James river on the 3d, 4th, and 5th instant, of which the following is a summary:

At about 3 30 p. m. on the 3d a battery near Wilcox's wharf opened on some passing army transports; the firing being heard on the Miami, then passing up the river, she went ahead and engaged the battery, and after an hour's sharp firing dislodged the enemy, and then shelled the banks for some distance above and below.

Acting Volunteer Lieutenant Graves states that the battery consisted of six (6) rifled 12-pounders. The Miami had one man killed and one wounded, and received some damage, being struck by two shots which tore away some of the wood work and steering gear, and two outside planks for a distance of several feet, causing her to make some water during the action.

About 11 a. m. on the 4th a battery opened on army transports near Harrison's landing. The Osceola and Miami proceeded down the river and opened fire, when the enemy immediately abandoned the position. These vessels then shelled the banks, firing some at houses and other prominent points for two or three miles above and below the landing.

A contraband brought off by the Osceola (and who was injudiciously permitted to return ashore) stated that the battery consisted of from ten (10) to fifteen (15) guns, supported by an infantry force of two thousand (2,000) under Ewell.

The steamer Brooks, belonging to the Sanitary Commission, was fired on by sharpshooters above Turkey creek on the afternoon of the 4th, killing one man and mortally wounding two. The Pequot and Commodore Morris shelled the spot where the enemy were supposed to be concealed, but saw nothing of them.

About 6 p. m. on the 5th the battery at Howlett's opened on General Butler's works, the whole line soon becoming engaged, and keeping up a heavy fire until nearly 8 o'clock. The iron-clads were not engaged.

Captain Smith has stationed the Saugus so as to be shut in from the battery at Howlett's, and considers this the best position for the iron-clads, as they can move up in a few minutes and engage the rams if they appear, and at the same time need not be subjected to the mortification of dropping out of range when Howlett's battery opens.

He has stationed the Miami at Harrison's landing, and the Dawn at Wilcox's wharf, to protect and convoy passing transports, which dispositions I have approved.

I enclose (1) Captain Smith's report of August 5; (2) August 3, Acting Volunteer Lieutenant Graves, (commanding Miami,) reporting engagement on

3d; (3) same, reporting engagement on the 4th; (4) Commander Clitz, (commanding Osceola,) reporting same; (5) August 4, Lieutenant Quackenbush, (commanding Pequot,) reporting the firing on the steamer Brooks.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Captain Melancton Smith.

UNITED STATES STEAMER ONONDAGA,

On Picket, below the Barricade, James River, Va., August 5, 1864.

SIR: In obedience to your order of the 16th ultimo, I herewith enclose a report from Commander Clitz, of the Osceola, in relation to his shelling the enemy in the vicinity of Harrison's landing, and two reports from Acting Volunteer Lieutenant G. W. Graves, of the Miami, in relation to an engagement with the rebels at Wilcox's wharf, on the 3d instant, in which he lost one man killed and two slightly wounded, and of his shelling at Harrison's landing in company with the Osceola, on the following day. I also enclose a report from Lieutenant Commander S. P. Quackenbush, in relation to an attack by sharpshooters on the sanitary steamer Brooks, at Turkey creek, in which one man was killed and two mortally wounded.

I have directed Lieutenant Commander Quackenbush to clear the bank, as far as practicable, of all trees and underbrush calculated to conceal an enemy, and have sent him the Minnesota's launch and crew to assist in the performance of that duty.

I have directed the Miami to take her station at Harrison's landing, to afford protection to our transports passing up and down the river, and to make a reconnoissance with his marines at that place when he shall consider it prudent; and have ordered the Dawn to take her station at Wilcox's wharf, and convoy passing transports until they are protected by the guns of the Miami.

Howlett's battery opened about 6 o'clock this afternoon upon General Butler's works, which was returned, and a regular fire kept up from the Curtis House, Signal Tower, and Crow's Nest batteries until near eight o'clock, a large number of our shells grazing the crest of the enemy's works and exploding inside. The rebels fired at long intervals and without much accuracy. From the time of the discharge of the first gun, the whole line opened, and a heavy cannonading by both parties was kept up until near 8 o'clock.

The Saugus was on picket, but so stationed as to be shut in from the battery at Howlett's, which position I think it most advisable for the iron-clads to occupy as they can move up in a few moments to protect the obstructions should the rams desire to participate in any general attack on General Butler's lines, and would not be subjected to the mortification of dropping out of range if fired upon from Howlett's battery.

Very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Divisional Officer, in James River, Va.

Acting Rear-Admiral S. P. Lee,

Commanding N. A. B. Squadron.

Report of Commander J. M. B. Clitz.

UNITED STATES STEAMER, OSCEOLA,
Off City Point, James River, August 4, 1864.

SIR: I have to submit the following report:

This morning about 7.30 the United States steamer Miami returned to this anchorage and reported all quiet down the river.

At about 11 a. m. we discovered the enemy firing from a battery at or near Harrison's landing.

I immediately got under way with this vessel under my command, followed by the United States steamer Miami; when near Harrison's landing, the Miami and this vessel opened fire upon all the houses and prominent points until our arrival at Wilcox's wharf, where we remained until 5.30 p. m., when the Miami and this vessel got under way and proceeded to City Point.

While at anchor off Wilcox's wharf sent a boat ashore, in charge of Lieutenant and Executive Officer Weidman, to bring off to the vessel a contraband who was there signaling; information derived from the contraband leads us to believe that the battery consisted of from ten to fifteen guns, supported by an infantry force of 2,000, under the command of General Ewell.

Doubtful information was received from the residents of the neighborhood on shore that the battery and supporting infantry force returned to the camp.

The contraband, not wishing to remain, was again landed under charge of Lieutenant Weidman.

I shall detain the Miami at this point until she can fill up her deficiencies of ammunition, when she will proceed up the river, and report to you, as directed by his (Acting Volunteer Lieutenant Commanding Graves's) orders.

I saw nothing of the battery either going or returning. I think it important that a sufficient force should be kept in the immediate vicinity of Harrison's landing and Wilcox's wharf, with discretion to the different commanding officers to patrol the river, when required, to protect our transports from this battery, which, in my opinion, is a field one.

I have the honor to be your obedient servant,

J. M. B. CLITZ,
Commander, United States Navy.

MELANCTON SMITH,
*Captain and Divisional Officer,
Com'dg Iron-clad Onondaga, James River.*

Report of Acting Volunteer Lieutenant G. W. Graves.

UNITED STATES STEAMER MIAMI,
James River August 3, 1864.

SIR: I have the honor to submit the following report of my engagement with a rebel battery this p. m.:

At 3.30 p. m., while passing up the river, I heard firing above me on the starboard hand; upon turning the bend I discovered a battery, stationed at Wilcox's landing, firing upon some unarmed transports which were passing down. I immediately went to quarters, and proceeded to the place of action as fast as the disabled state of my machinery would permit, and engaged the battery at about 1,200 yards distance; after about an hour's sharp firing I succeeded in dislodging the enemy, and drove them off. I then shelled the banks above

and below the position for a short time, and proceeded up the river until I met the United States steamer Osceola, Commander Clitz, who ordered me to return and remain for the night.

The battery consisted of six (6) twelve-pounders, two of them Whitworth rifles, projectiles from which struck us several times, inflicting some damage, killing one man and wounding one.

I enclose reports of casualties.

Very respectfully, your obedient servant,

G. W. GRAVES,

Acting Volunteer Lieutenant, Commanding.

Captain M. SMITH, U. S. N.,

Divisional Commander, James River.

Additional report of Acting Volunteer Lieutenant G. W. Graves.

UNITED STATES STEAMER MIAMI,

Off City Point, August 4, 1864.

SIR: I have the honor to submit the following report:

At about 11 o'clock this a. m., while lying at this place taking in ammunition and burying my dead, the rebels opened fire upon our transports from a battery at or near Harrison's landing.

In obedience to orders from Commander Clitz, commanding Osceola, I got under way and followed him down the river. The rebels left at our approach; so I followed the example of Commander Clitz, and shelled the left bank of the river for a distance of two or three miles above and below the landing, dropping an occasional shell about the houses. I returned to my anchorage about dark.

I append a list of ammunition, &c., expended.

Very respectfully,

G. W. GRAVES,

Acting Volunteer Lieutenant, Commanding.

Captain M. SMITH, U. S. N.,

Divisional Commander, James River.

Casualties on board the Miami.

UNITED STATES STEAMER MIAMI,

James River, Va., August 3, 1864.

SIR: I have the honor to report the following casualties in the engagement with the rebel battery near Wilcox's landing:

Killed.—Matthew Callahan, marine.

Wounded.—Michael J. Donnelly, coal-heaver, sustaining slight injury, with loss of middle finger of right hand; William H. H. Davis, coal-heaver, slight splinter wound of hand.

I am, sir, very respectfully, your obedient servant,

G. H. MARVIN,

A. A. Surgeon, U. S. N., U. S. S. Miami.

G. W. GRAVES,

Acting Vol. Lieut. Com'dg, U. S. S. Miami.

Injuries sustained by the Miami.

UNITED STATES STEAMER MIAMI,
August 4, 1864.

SIR: I respectfully submit the following report of damage received by this vessel in hull, &c., during the engagement with a rebel battery posted on the bluff at Wilcox's landing, James river, on the afternoon of the 3d instant.

One shell passed through port bends just abaft paddle-wheel, tearing away waterways, engine-room, hatchway, and division arm-chest, and steering gear.

One shell passed through the starboard after covering board, bursting and tearing out two (2) outside planks for several feet.

The ship made considerable water during the action.

I have the honor to be your obedient servant,

HENRY S. BUCKLESS,
Carpenter's Mate.

Report of Lieutenant Commander S. P. Quackenbush.

UNITED STATES STEAMER PEQUOT,
James River, Va., August 4, 1864.

SIR: As the sanitary boat S. E. Brooks was passing a wooded bluff, a short distance above the mouth of Turkey creek, she was fired into by a party of the enemy, five or six in number, killing one and mortally wounding two others on board. The Commodore Morris and this vessel immediately got under way, and proceeded to the point at which the attack was made, firing a few shot in the spot the rascals were supposed to be ambushed. They evidently did not wait for our approach, leaving, no doubt, as soon as they had accomplished their purpose. The Brooks had up the sanitary flag, and there were ladies on board, in fact; the miscreants fired directly among them. The boat was on her way to your vessel, the party on board intending to visit Dr. Franklin.

I think with another boat and a strong picket guard of soldiers the banks in this vicinity could be kept entirely clear. Above General Picket's house, or Jones's landing, I have felled the trees, and the marines have cleared the bank for some distance below Turkey creek. The intermediate space consists of wooded bluffs. I intend to-morrow to send a gang on shore and clear it.

Very respectfully, your obedient servant,

S. P. QUACKENBUSH,
Lieutenant, Commanding.

M. SMITH,

Captain and Divisional Officer, James River.

ATTACK ON LABORERS AT DUTCH GAP BY REBEL FLEET AND BATTERIES.

Report of Captain M. Smith.

UNITED STATES STEAMER ONONDAGA,
Below the Barricade, James River, August 13, 1864.

SIR: I have the honor to inform the department that at 5 a. m. to-day two rebel rams opened fire on our land forces and laborers employed at Dutch Gap, and have maintained a moderate fire during the day.

In addition, one or more gunboats, or ram gunboats, dropped down to Cox's

reach, and, together with the battery at Signal Hill, on Cox's farm, and that on the hill at Howlett's house, took part in the attack.

A movement of some kind had been anticipated, and the steamers Mackinaw and Delaware were stationed to command Cox's reach and also sweep Cox's farm in the event of an attack by infantry, which was regarded as most probable, as two divisions of the enemy were known to be in the immediate vicinity. After one round from this vessel, operations upon the enemy's iron-clads were found to be impracticable, from their great distance from us, except for the possible annoyance to people on their decks; and this contingency was so remote, and the means of directing or observing the effect of our fire so limited, that it was not deemed advisable to strain the large guns with the high elevation and heavy charges necessary to reach.

The battery at Howlett's being readily silenced by the army battery, no attention was paid to it from the vessels. The Saugus was, therefore, later in the day, added to the Mackinaw and Delaware, making all the force able effectively to operate from that point, and had, with those two, maintained a regular fire until dark. Their fire also was dependent upon directions from the mast-head, and its effect uncertain, but, it is hoped, may have been to some extent effective.

From the position of this vessel and the Canonicus it was impossible to aid them without greatly endangering our own forces, and they have therefore remained without other action than preparation for any change that may enable them to operate effectively.

General Butler's loss, as far as ascertained, thirty killed and wounded.

Captain Rhind, of the Agawam, reports that his vessel and the Hunchback were attacked this afternoon at 2 p. m. by two rebel batteries, one at Four-Mile creek, and the other more to the northward—the first battery containing two twenty-pound rifles; the other a heavy gun, supposed from the fragments of shell to be a ten-inch, and a twenty-pound field-piece.

The casualties reported on board the Agawam are two killed, one mortally wounded, and three more or less severely.

I have sent the Saugus to assist in dislodging the battery at Four-Mile creek.

I have the honor to be, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Divisional Officer, in James River.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Complimentary letter of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MALVERN,

Beaufort, N. C., August 25, 1864.

SIR: I take great pleasure in calling the attention of the department to the gallantry and endurance displayed by Commander Rhind, of the Agawam, and the officers and men under his command, in the engagement with three rebel batteries on the 13th instant, reported to the department by Captain Smith, divisional commander on James River.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

NAVAL CO-OPERATION WITH MOVEMENT OF TROOPS AT DUTCH GAP
AND DEEP BOTTOM.*Report of Captain M. Smith.*UNITED STATES STEAMER ONONDAGA,
Below Barricade, James River, August 17, 1864.

SIR: I have the honor to report that at 3 p. m. yesterday I was requested by Major General Butler to co-operate in a movement of the troops then at Dutch Gap and a force from Deep Bottom, whose object was to reconnoitre northeastwardly from Aiken's house, divert the enemy in the front and on the left of our troops in the vicinity of New Market road, and take advantage of any opportunity that might offer for a further advance.

The operations of the vessels in this vicinity were more particularly connected with the force moving from Dutch Gap. The plan proposed was to move this force of some eight hundred available men to Aiken's landing, and there form in line for advance upon the crest of the hill directly in rear; then stretching out to the right, to form a junction with General Birney's forces at Deep Bottom, or to move towards the left beyond the rebel battery at Signal Hill. The Mount Washington was detained to transport the troops from Dutch Gap to Aiken's, and to lie off that point and use her thirty-two-pounder, holding herself in readiness to re-embark the troops if necessary. Just above her the Delaware, a little further above the Mackinaw, and at the bend of Dutch Gap the Canonicus, were stationed, to cover the advance by shelling the enemy's line; the Canonicus also devoting attention to Signal Hill battery.

This vessel was held ready for operations upon the rebel rams, if opportunity should offer by their descent within range.

I am pleased to say that the plan was successfully and handsomely carried out.

The Mount Washington took the troops, conveyed them to Aiken's, and disembarked them with a despatch and good order creditable to her commanding officer, and immediately took her position for shelling. At about 5 p. m. the troops advanced, and as soon as their movement was observed from the Mackinaw she opened fire, which was continued with marked effect from all the vessels until the movement, taking the direction to the left, advanced so far as to compel the gunboats to cease firing, to avoid injuring our own troops; this vessel meanwhile throwing an occasional shell in the direction of Cox's farm.

At 7 p. m. the action of the vessels ceased, by request of General Butler, which closed their share in the movement.

I am informed indirectly that the troops advanced so as to occupy Cox's farm, the Signal Hill battery, and the rebel lines thence toward the rear of Aiken's.

The officers of the land forces express themselves as most pleased at the assistance afforded by the vessels. I am informed at this moment that the movement having effected its object, the troops from Dutch Gap will fall back at that point this evening. This afternoon, at 5 o'clock, the rams came down in the second reach above, and opened fire on the picket lines established yesterday at Cox's farm. The battery at Howlett's house opened at the same time, and were replied to by General Butler's batteries, but the iron-clads and gunboats did not participate. The cannonading was kept up with spirit for some time, all firing ceasing at dark.

I have the honor to be, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Divisional Officer, in James River.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

NECESSITY OF RETAINING IRON-CLADS ON THE JAMES RIVER.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP NOTHERN BLOCKADE SQUADRON,
Beaufort, N. C., August 17, 1864.

SIR: The department's communication of July 22, instructing me to report whether any of the iron-clads within the limits of my command can be withdrawn from James river or other waters of Virginia with due regard to the exigencies of the public service, and desiring me to obtain the opinion of Lieutenant General Grant with reference to the ability of the army to maintain its position in Virginia, supported and protected by wooden vessels only, or by these and a part of the iron-clads, was received on the 24th ultimo. On that day I wrote to Lieutenant General Grant on this subject, (copy enclosed,) and enclosed to him a copy of the department's despatch above mentioned.

The original reply of the Lieutenant General, dated 9th instant, is herewith enclosed, in which he says: "Whilst I believe we shall never require the armored vessels to meet those of the enemy, I think it imprudent to withdraw them. At least two such vessels, in my judgment, should be kept in the upper James river; they stand a constant threat to the enemy, and prevent him taking the offensive. There is no disguising the fact, that if the enemy should take the offensive on the water—although we probably would destroy his whole James river navy—such damage would be done our shipping and stores, all accumulated on the waters where the conflict would begin, that our victory would be dearly bought."

However prudent and politic it may be, I must regret the indicated plan of the able lieutenant general, that our iron-clads will never be required to meet those of the enemy on James river, which I have always hoped that we would have the opportunity of doing when the army should get around or by Petersburg and take Howlett's battery at the head of Trent's reach, as then the bar in that reach might quickly be cleared of one of the sunken vessels, and easily be deepened with the dredging machine, for which I applied to the department, so as to admit of the passage and co-operation of the iron-clads against the enemy's defences on land, and the capture of their navy.

In the Mexican war, our government, having to land an army in Mexico, preferred to take Vera Cruz by land attack, rather than capture the castle of San Juan de Ulloa by a sea attack, as the French had done. In that case the enemy had no navy.

The iron-clads in my command are the two monitors *Canonicus* and *Saugus*, the *Quintard* two-turreted battery *Onondaga*, and the prize *Atlanta*, on the *Merrimack* pattern, now repairing at Gosport; the *Roanoke* has been detached and sent to Point Lookout.

The *Onondaga*, *Canonicus* and *Saugus* are on the east side of Farrar's island, above which are the enemy's three iron-clads, his gunboats and steam barges—all torpedo fitted; and between these, besides Farrar's island, is the bar in Trent's reach, on which the water at high tide is just the load draught of the monitors, though the published coast survey chart shows even less water there than the monitors draw. The army authorities have been understood to hold that the success of the campaign and the cause of the country depend on the security of the communications of the army on the James river; hence the barricade on the bar, begun by the army and perfected by the Navy Department, which protects the iron-clads from torpedo attacks, and the gunboats and army transports and pontoons from fire-rafts.

The application of a few torpedoes would clear a passage through the barricade, and then if the draught of the rebel iron-clads allow them to pass the bar in

Trent's reach, what would become of the communications of the army if our iron-clads were withdrawn? I always endeavored to impress upon the army authorities the policy of making their communications secure as far as practicable against interruptions by the rebel artillery, by a reasonable provision of artillery in position on the favoring banks on our side of the river; but General Butler's engineer, General Wietzel, resisted this method on the ground that in case of a retreat it would be difficult to take away heavy artillery, which he said should therefore be on shipboard. I never entertained the idea of retreating, and it is clear that guns in battery on shore are more economically and safely placed than on shipboard; whilst my suggestion provided for such contingencies of service as the department now seems to have in view, and to allow of the occasional and temporary withdrawal of some of the gunboats, &c., for other service, as, for instance, in the recent case of the rebel movement against the capital and threatened raid to release the prisoners at Point Lookout.

Besides this convenience, and the security afforded to the army communications by a few pieces of good artillery well placed, such protection of that part of the river admitted of moving the gunboats to co-operate in the advance which I expected up James river, when the line of communication to be covered would become larger and otherwise require more naval force than we then had.

In conclusion, I respectfully report to the department that, in my opinion, it would be unwise and hazardous to withdraw any part of the iron-clads permanently from James river, and thus expose the communications of the army and the campaign against Richmond to great peril if not certain reverses. Looking at the matter in a navy light, I would be glad to see the iron-clad force on James river so increased that when the time for an upward movement comes, it will, after allowing for losses from the enemy's torpedoes, secure a Union triumph in an iron-clad contest on the James river.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Rear-Admiral, Commander of Northern Blockade Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Letter from Acting Rear-Admiral Lee to Lieutenant-General Grant.

FLAG-SHIP MALVERN,

Hampton Roads, Va., July 24, 1864.

GENERAL: I enclose a copy of a communication received to-day from the Navy Department relative to the expediency of withdrawing the iron-clads from James river.

I request the favor of an early reply giving your views on the subject.

I have the honor to be, very respectfully, yours.

S. P. LEE,

Rear Admiral, Commander of Northern Blockade Squadron.

Lieutenant General U. S. GRANT,

Commander of United States Forces in the Field.

Letter from Lieutenant General Grant to Rear-Admiral Lee.

HEADQUARTERS ARMIES OF THE UNITED STATES,

City Point, Va., August 9, 1864.

DEAR SIR: Your letter of the 24th instant, enclosing communication relative to the withdrawal of iron-clads from the James river, was duly received. Owing

to my absence from here most of the time since the receipt of your letter, it has not been answered earlier.

Whilst I believe we will never require the armored vessels to meet those of the enemy, I think it would be imprudent to withdraw them. At least two such vessels, in my judgment, should be kept in the upper James. They stand a constant threat to the enemy, and prevent him taking the offensive. There is no disguising the fact, that if the enemy, should take the offensive on the water—although we probably would destroy his whole James river navy—such damage would be done our shipping and stores, all accumulated on the water near where the conflict would begin that our victory would be dearly bought.

I have the honor to be, very respectfully, yours,

U. S. GRANT,
Lieutenant General.

Admiral S. P. LEE.

SOUNDS OF NORTH CAROLINA.

EXPEDITION TO WINDSOR, NORTH CAROLINA.

FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 29, 1864.

SIR: Lieutenant Commander Flusser, under date of 20th instant, reports as follows:

* * * * *

I enclose you an extract from the Raleigh Weekly Standard of the 10th instant. The report is false from beginning to conclusion. I planned the affair, and we would have captured the entire party had we been ten (10) minutes earlier. I had forty (40) sailors and one twelve-pound howitzer, and there were about three hundred and fifty (350) infantry. We marched about sixteen (16) miles. There was no fight and nothing worth reporting. The rebels ran. I fired three (3) or four (4) times at them at long range.

We held the town of Windsor several hours, and marched back eight (8) miles to our boats without a single shot from the enemy.

I have the honor to be, sir, very respectfully, your obedient servant,

C. W. FLUSSER,
Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

*Com'dg N. A. B. Squadron, U. S. Flag-Ship Minnesota,
Hampton Roads, Va.*

I enclose the extract referred to:

WAR NEWS.—Colonel Griffin, commanding confederate forces, telegraphed to the war department from Jackson, on the 31st January, as follows:

“Yesterday morning engaged the enemy with a force of two hundred men and a mounted rifle piece. After a fight of two hours, in which we engaged twelve hundred of the enemy and three pieces of artillery, the Yankees were driven from Windsor, North Carolina, to their boats. We lost six men. The loss of the enemy is not known.”

I have the honor to be, sir, respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

EXPEDITION UP THE CHOWAN RIVER TO RESCUE ARMY GUNBOAT BOMBHELL.

Report of Acting Rear-Admiral S. P. Lee.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Newport News, Va., March 18, 1864.

SIR: I enclose an interesting report from Lieutenant Commander C. W. Flusser, dated March 8, (1) respecting an expedition of our gunboats up the Chowan to rescue the army gunboat Bombshell, and reporting the considerable amount of ammunition expended in doing so, and the misconduct of the person in charge of the Bombshell. I enclose also the accompanying reports of Acting Volunteer Lieutenant C. A. French, commanding Southfield, (2,) and Acting Ensign G. W. Barrett, commanding Whitehead, (3.)

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington City, D. C.

Report of Lieutenant Commander C. W. Flusser.

UNITED STATES STEAMER MIAMI,
Off Plymouth, N. C., March 8, 1864.

SIR: On the morning of the 1st instant I received a note from General Wessels, a copy of which I enclose. Half an hour after its reception I was under way in the Southfield, with the Whitehead in company, bound up the Chowan river.

In the mouth of the Chowan I met the steamer Massasoit, and was informed that the Bombshell was above Pettishore, and cut off by artillery and infantry stationed at that point.

The Massasoit had been prevented from running into the trap by receiving warning, when a mile below the battery, from one of the Bombshell's men, sent through the swamp to give notice of her situation.

I had received information some weeks previously from the man whom the rebels forced to show them the place—an old steamboat captain on the Chowan, and lately a master in the rebel navy—that ten torpedoes had been placed in the channel (which is there little more than one hundred yards wide) at Pettishore, so I dared not attempt, with boats of such great draught—the Whitehead was drawing $7\frac{1}{2}$ feet, the Southfield $9\frac{1}{2}$ —to run by.

Just before dark we came near the supposed position of the battery. I went on board the Whitehead, moved up slowly, and the wind being across the river, was about to anchor, so that the rifled 100-pounder might be brought to bear up stream, when the rebels opened fire on us with a field-piece, about six hundred yards off. The anchor was kept fast, the port guns brought to bear, and the fire of the enemy returned briskly. In a few minutes it became too dark to fire with any accuracy or to manœuvre the boat without danger of grounding, so we dropped back a mile and anchored between swamps for the night.

I intended sending a small boat up that night with an order to the Bombshell to run down next morning, but the enemy had possession of both sides of the narrow river, with fires on both banks, which so lit up the stream that no boat could pass unseen. At two o'clock next morning I sent two soldiers on shore to make their way through the swamp to the Bombshell, carrying

a letter to her captain, saying that if he would come down during the day I would silence the battery. He was to fire a gun when he was ready. At 11 a. m. the soldiers returned, saying the enemy were on all the paths through the swamp, and that they had been unable to reach the Bombshell. They further reported a large force on the north bank of the river—ten thousand men, with artillery; that more artillery had been sent for, and that on the Sunday preceding (this was Wednesday) an order had been sent to Murfreesboro' for a 32-pounder. As soon as the soldiers returned, we moved up and opened fire on the place from which we had received a fire the evening before. Shortly after we opened the Bombshell commenced firing, and from the sound of her guns I knew she was approaching. Receiving no return from the field-piece, we fired at the supposed position of the battery about one mile above us. The battery was so posted in the bend as to command the approach from above, while it could not bring a gun to bear down stream, consequently we had an enfilading fire on it. At three o'clock in the afternoon I dropped down the Southfield to give the men dinner, leaving the Whitehead to fire slowly with her rifled gun. The Bombshell had then been for an hour within sound of our steam-whistle, and I had repeatedly signalled her, by three long blasts, to come down. She answered the signal, but did not obey. The position of the battery was hidden from us at all times by an intervening point, over which we fired, while the Bombshell had it in plain view, so, although there was no response from it, as she kept firing, I supposed the rebels were still there and reserving their fire until she should pass immediately under their guns.

I learned from the Massasoit, when I met her at the mouth of the Chowan, that the Bombshell had been firing, at nine o'clock the previous evening so I feared she might have been carried by boarders. I therefore sent a note to General Wessels, saying that if he would send me a hundred soldiers in her, putting up some hay or bales of cotton to protect them from musketry, I would take charge of her, run the battery, and retake the Bombshell.

The Massasoit came up with ninety men, but with orders not to go under the guns of the battery; so if I had needed her, she would have been useless.

There was another bluff three miles below, which I thought the rebels might fortify and make it very difficult to pass. I determined, therefore, to fire briskly for half an hour after dinner, and if the Bombshell had not appeared at the expiration of that time, to convoy the Massasoit below the lower bluff with the Southfield, leaving the Whitehead to bring off such of the crew of the Bombshell as could reach her, provided the captain should determine to destroy her and take to the swamp. He had expressed an intention to do so, rather than run the battery.

As we got under way, after dinner, the Whitehead signalled a boat coming. The captain of the Bombshell, afraid to run the battery in the steamer, had risked four men, in an open boat, in broad daylight, where they must surely have been captured, if an enemy was there. He sent me word that he had a large number of people on board, in addition to his crew; that he was out of provisions and short of coal, and that he feared to come down, as he thought the enemy had masked batteries. I sent the boat immediately back with a message that the enemy had gone, or his boat would have been intercepted, but that if there were any batteries I would silence them; and, finally, if he were not down in an hour I would leave him. Shortly afterwards he rounded the point and came down unmolested. We then moved down together, firing briskly from the Southfield at the lower bluff till we ascertained there was nothing there.

I have been thus lengthy, in this report, as I desire you to understand the reason of the expenditure of so much ammunition, about which I feel somewhat mortified.

The enemy, no doubt, moved off at daylight of the 2d instant. All the

ammunition of the second day was wasted through the cowardice of the captain of the Bombshell. His boat was scarcely worth it.

I mentioned the report of the presence of a large rebel force on the north bank of the Chowan. To-day I learn from Edenton that Rickett's division is over there after provisions. Rumor says there are ten to fifteen thousand men—no doubt a great exaggeration.

If it is necessary to have those army gunboats, (and I have thought from the meagre shipments of seamen, and the large number of seafaring men enlisting in the army, it would be well to give the military control of the inner waters to them, and to put us on the deep,) they should at least be commanded by people holding commissions from the government of the United States, and not by irresponsible persons appointed by quartermasters.

I enclose reports of Captains French and Barrett, with a sketch by A. M. Newman, of the Southfield's 100-pounder, which burst, I regret to say, at the first fire, on the evening of the 1st instant.

I have the honor to be, sir, very respectfully, your obedient servant,

C. W. FLUSSER,

Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Hampton Roads, Va.

P. S.—I have just learned that the enemy had, at Pettishore, five hundred men and four pieces of artillery; that they left shortly after we opened fire on the morning of the 2d instant, stating, as a reason for moving, that our guns were of such long range that we could reach them while lying beyond their range. They were at Pettishore to cover the transportation of provisions across the river from the northern bank.

We have a rumor here of a great Union victory at Suffolk.

The draught of the Bombshell was $3\frac{1}{2}$ feet, and of the Massasoit $5\frac{1}{2}$, so they might have passed over obstructions on which our boats would strike.

C. W. F.

Respectfully submitted to the admiral:

I have thought for some time of calling your attention to the subject of army gunboats in the sounds, commanded by irresponsible persons.

H. K. DAVENPORT,

Comm'r U. S. N., and Sen'r Naval Officer in the sounds of N. Carolina.

[Despatch from Brigadier General Wessells to Lieut. Commander Flusser.

PLYMOUTH, March 1, 1864.

CAPTAIN: The Bombshell, and perhaps the Massasoit, are said to be cut off at Pettishore. I would suggest that you send one or two of your boats to relieve them, if possible.

In haste, yours,

H. W. WESSELLS,

Brigadier General Commanding.

Captain FLUSSER,

Commanding Naval Forces.

Report of Acting Volunteer Lieutenant Chas. A. French.

UNITED STATES STEAMER SOUTHFIELD,
Off Plymouth, March 5, 1864.

SIR: In obedience to your order, this vessel left her anchorage here at 11.50 a. m. on the 1st instant, with yourself on board, and the Whitehead in company, to endeavor to rescue the army gunboat Bombshell, cut off by rebel batteries on the Chowan river, where they were said to have six pieces light artillery, and about three hundred men. When about forty miles up the Chowan, it being about sunset, we opened fire on the point at which we supposed their batteries were placed, and succeeded in drawing the enemy's fire, which was kept up quite brisk until dark; most of their shots being directed to the Whitehead, she being in the advance with yourself then on board of her; we then by your order dropped below the banks and anchored for the night. The Bombshell commenced firing above the battery soon after we opened, but made no attempt to run by and join us. I regret to inform you that during the engagement, and on the first fire of the 100-pounder Parrott rifle No. 1, it burst, breaking the carriage and throwing a large piece of metal clear of the ship, into the river alongside. The burst extends from about two inches under the band to two feet forward of centre of trunnion, taking more than half the bore for a part of the way, and carrying with it one-half port trunnion. In order to give a more accurate idea, I have had a drawing made with top and side view, which you will find enclosed. I am happy to say no one was injured by the explosion.

On the next morning, March 2, we again opened on the point from which they fired the preceding day, but got no response. The Bombshell, however, commenced firing again, and answered our steam whistle, but made no attempt to join us until late in the day, when she came down unmolested, the enemy having evacuated; and by your order we returned to our station off Plymouth.

I beg to call your attention to the importance of having this gun immediately replaced with another, as we already have one nine-inch gun on this end of the vessel disabled more than a year ago, (a report of which has been forwarded,) leaving us now with only one perfect gun (nine-inch) in battery forward, rendering our ram almost useless in an engagement with a vessel, as we should be obliged to run her the other end forward, in order to use the three nine-inch guns that are in battery there.

Permit me also to suggest that the gun, when replaced, be fitted to work on centre pivot.

I am, sir, very respectfully, your obedient servant,

CHARLES A. FRENCH,

Acting Volunteer Lieutenant, Commanding.

Lieut. Com. CHARLES W. FLUSSER,

Senior Officer, Albermarle Sound.

Report of Acting Ensign G. W. Barrett.

UNITED STATES STEAMER WHITEHEAD,
Off Plymouth, N. C., March 4, 1864.

SIR: I have the honor to report that, in compliance with your order, I started from this place at 11.30 a. m. of the 1st instant, and proceeded in company with the United States steamer Southfield up the Chowan river, for the purpose of dislodging the enemy, who had cut off the retreat of the army steamer Bombshell by planting artillery on the bluffs at Pettishore. Nothing

of importance transpired until we arrived in the vicinity of the bluff, where we supposed the enemy to be posted. I proceeded cautiously up the river in advance to reconnoitre and ascertain, if possible, the enemy's position. At 6 p. m. the enemy opened fire on us with two field-pieces, at the distance of six hundred yards, their guns being masked behind the dense foliage on the slope and crest of the river bank. We promptly returned the fire with shell and shrapnell from our 100-pounder rifle and 24-pounder howitzers, silencing the enemy's guns in about fifteen minutes. As it was now getting quite dark, we dropped down the river about a mile and came to anchor near the steamer Southfield for the night, concealing lights and using every precaution to guard against surprise. At 11 a. m. of the 3d I weighed anchor and proceeded up the river, in obedience to your orders, in company with the United States steamer Southfield. At 12 o'clock opened fire with 100-pounder rifle, shelling the woods and bluffs, but the enemy did not reply. At 4 p. m. the army steamer Bombshell steamed down the river past the bluffs unmolested, and reported that the enemy had left. I started for this place at 5 p. m., and arrived here at 10 p. m. of the same day.

It gives me pleasure to state that the officers and crew under my command performed their duties in a cool and efficient manner. I have no casualties to report, with one exception—that of Thomas H. Johnston, who had his arm severely injured by the recoil of rifle gun, of which he was second captain.

The following is a correct account of the ammunition expended on board this vessel during the engagement, viz.: forty-two (42) 100-pounder rifle shell, percussion; two (2) 15-inch shell, 100-pounder rifle; thirty-three (33) shrapnell for 24-pounder howitzer, fixed ammunition; four hundred and twenty (420) pounds common powder, 10-pound charge.

Very respectfully, your obedient servant,

G. W. BARRETT,
Acting Ensign, Commanding.

Lieut. Com. C. W. FLUSSER,
Senior Naval Officer, Albemarle Sound.

EXPEDITION TO CAPTURE SLOOPS NEAR SWANSBORO', N. C., &c.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP N. A. B. SQUADRON,
Off Newport News, Va., April 2, 1864.

SIR: I transmit enclosed a report (with its enclosure) dated 29th ultimo, from Commander B. M. Dove, of the failure of an expedition arranged by Colonel Jourdan, of the army commanding at Beaufort, and himself, with the reasons of this failure.

The object of this expedition was the capture or destruction of two (2) schooners near Swansboro', and the capture of the force and supposed battery on the south end of Bogue island. The force employed consisted of about two hundred (200) soldiers and forty-five (45) sailors. They were embarked on the Britannia on the 24th ultimo, and two flats, a launch, (with a howitzer,) and two (2) small boats were taken in tow to land them. They arrived off Bogue inlet about 11 p. m., by which time the weather, which was fair at the time of starting, had changed. A strong SE. wind came up, with heavy swells. But two boats got inside; others grounded in the attempt, and got off and returned to the Britannia with difficulty. The two (2) that had succeeded, being unsupported, also returned. In the second attempt, one of the launches got into Bear inlet and proceeded up Bear creek; the party succeeded in burning a

schooner, and brought off about twenty (20) contrabands. They were not able to return to the Britannia, owing to the high wind and sea, and she was obliged to seek an offing. At daylight on the morning of the 26th she stood in toward the bar and fired guns to attract attention, but saw nothing of the flat, and returned to Beaufort about noon. The losses were one flat, two launches, and two small boats stove; a negro, who refused to leave the launch when ordered, was drowned. The howitzer was saved, but all the ammunition lost.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander B. M. Dove.

UNITED STATES NAVAL STATION,
Beaufort, North Carolina, March 27, 1864.

SIR: A well planned expedition, by Colonel Jourdan and myself, was frustrated by circumstances beyond our control.

The colonel's scouts reported two schooners near Swansboro'—one cotton loaded, the other from Bermuda. It was gotten up, therefore, for the capture or destruction of these, as also to capture the force and supposed battery on the south end of Bogue island.

The colonel, with his staff and about two hundred soldiers, also parties of fifteen sailors each from the Cambridge, Keystone State, and Florida, embarked on board the Britannia on the afternoon of the 24th instant. She took in tow for landing them two schooner-rigged flats, a launch with howitzer, and two small boats, and sailed about sunset; fine weather and bright prospects.

They arrived off Bogue inlet about 11 p. m., and disembarked the troops, the sailors managing the flats and launches. By this time the weather became overcast, wind raised from the southeast, and a heavy swell came on. Several of the boats grounded, not being able to find the channel. Gunner Hines, with his boat and another, got inside; but the others not being able to follow, he returned after landing. With much difficulty the boats were gotten off again, and the men safely on board the Britannia. The wind and sea became tremendous, and nothing else could be done except to give attention to the vessel.

In a second attempt one of the schooners, with Lieutenant King, of the army, with forty soldiers and twenty sailors, went into Bear inlet, and up Bear creek, where they burned one schooner, and brought off some twenty or more contrabands.

Not being able to return to the Britannia, she stood up Bogue sound, and arrived safely at Morehead city at 4 a. m. of the 26th.

The howitzer and carriage were gotten out of the launch, but the sea was too heavy for them, and they broke adrift and were driven high up on the beach, badly stove.

After weathering the gale, the Britannia returned about noon of the 26th. One flat, the launch, and the two boats were lost. One contraband was drowned in consequence of his not obeying orders to leave the flat. The ammunition of the howitzer was also lost.

Enclosed is Lieutenant Commanding Huse's report.

Very respectfully, your obedient servant,

BENJ. M. DOVE, *Commander.*

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Hampton Roads, Virginia.

Report of Acting Volunteer Lieutenant Samuel Huse.

UNITED STATES STEAMER BRITANNIA,
Beaufort, North Carolina, March 28, 1864.

SIR: In obedience to your orders, having received on board Colonel Jourdan, with a detachment of 200 of the 158th regiment New York State volunteers, also parties of twelve men from the United States steamer Cambridge, Keystone State and Florida, I started at 5 p. m., 24th instant, for Bogue inlet, having in tow two lighters, one launch, and one small boat. At 7 p. m. towed the outer buoy, weather fine, with light easterly wind. At 10.30 came to off Bogue inlet and commenced embarking troops and sailors. At 11.20 p. m. last boat left the ship, all the sailors in the boats being under the command of Acting Master Joseph S. Cony.

At 2 a. m. 25th a boat returned, reporting the launch and some other boats unable to cross, and aground among the breakers. At daylight all the boats returned to the ship, only three having succeeded in getting inside; weather looking threatening, and easterly swell making fast. At 7 a. m. one lighter, with a party of soldiers under Captain Cuff, and six sailors under Acting Ensign M. E. Wandell, crossed the bar and made an attempt to reach a schooner said to be loaded with cotton, lying about six miles from Swansboro'. At the same time another lighter, with a party of soldiers under Lieutenant King, and a party of sailors under Acting Ensign Small, of the Cambridge, left the ship on an expedition up Bear inlet.

At 10.20 the lighter in charge of Acting Ensign Wandell returned to the ship, having been fired upon by the enemy from the banks of the river near Swansboro, and being unable to effect a landing without considerable loss.

At 11 a. m. the lighter was sent, in charge of Acting Ensign Lovell, with a party of sailors and soldiers to support the other lighter.

Wind and sea rising fast, at 1.30 the lighter in charge of Acting Ensign Lovell returned to the ship; sea running high, with fresh gale from southeast. Took the men from the lighter in a small boat with line; got all on board safely except one negro, who refused to leave and remained to steer. Wind and sea still increasing, we stood out for an offing. Hauled launch alongside and succeeded in getting the 12-pound rifle howitzer out; was obliged to cut her adrift soon after, her tow-line becoming foul of our rudder. Run a line with buoy attached to try and save the negro, but he did not avail himself of it. The lighter now broke adrift, the foremast to which the hawser was made fast being carried away; he was drowned while attempting to come on board on the hawser which still remained fast to the wreck. The other lighter at this time (3 p. m.) lying at anchor inside the bar, unable to cross on account of the surf.

At 4.30 we came to with both anchors, sixty fathoms chain. Blowing a heavy gale from SE. and SSE., with very high sea.

26th, at daylight, wind having moderated, stood on for the bar to find the other lighter. Fired two guns to attract attention.

Laid to until 9 a. m., and seeing nothing of her, got under way for this harbor, where we arrived at 12 m.

Very respectfully, your obedient servant,

SAMUEL HUSE,
Acting Volunteer Lieutenant, Commanding.

Commander B. M. DOVE,

Commanding North Station, Beaufort, North Carolina.

THREATENED ATTACK ON PLYMOUTH, NORTH CAROLINA.

FLAG-SHIP, N. A. B. SQUADRON,
Off Newport News, Virginia, April 19, 1864.

SIR: Lieutenant Commander Flusser, United States steamer Miami, reports, under date of April 17, that the enemy are around Plymouth, and that the gunboats had been fired on twice on that day. One man was killed and several wounded on the Ceres. He expected an attack about daylight on the following morning (yesterday,) but feels confident of success, and says he does not need re-enforcements.

The enemy are supposed to be about ten thousand (10,000) strong.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

ATTACK UPON PLYMOUTH, NORTH CAROLINA.—DEATH OF LIEUTENANT COMMANDER FLUSSER.

FLAG-SHIP, N. A. B. SQUADRON,
Off Newport News, Virginia, April 23, 1864.

SIR: I herewith communicate to the department Lieutenant Commander Flusser's despatch of the 18th instant, received this evening. It is probably the last despatch penned by him, as it was written at half past nine (9½) o'clock on the evening of the 18th, and at half past three (3½) o'clock the next morning he was killed on the deck of the Miami, before Plymouth, in a night action with a ram. This brave officer was a native of Maryland, and a citizen of Kentucky. His patriotic and distinguished services had won for him the respect and esteem of the navy and the country. He was generous, good, and gallant, and his untimely death is a real and great loss to the public service.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

UNITED STATES STEAMER MIAMI,
Plymouth, N. C., April 18, 1864.

SIR: We have been fighting here all day. About sunset the enemy made a general advance along our whole line. They have been repulsed. There is no firing now, 9.35 p. m. I am fearful our upper fort may be gone, but do not know anything certain about it. The 80th redoubt repulsed three severe assaults, but the enemy still occupy a position near it. The ram will be down to-night or to-morrow. I fear for the protection of the town. I shall have to abandon my plan of fighting the ram, lashed to the Southfield. The army ought to be re-enforced at once. I think I have force enough to whip the ram, but not sufficient to assist in holding the town as I should like. I to-day gave to Fort Gray one hundred (100) projectiles for Parrott 100-pounder rifle. If the enemy should make frequent assaults, I shall need a large supply of powder and projectiles for 100-pounder Parrott, 9-inch Dahlgren, two 64-pounder howitzers, and for the Ceres for 20-pounder Parrott rifle. If we whip the ram, the land force may retire.

I have not heard of any casualties. In the action of yesterday the Ceres had two men killed and seven wounded; of the latter, four were officers, fortunately but one of them seriously hurt. Reports of killed and wounded will be forwarded at once, so soon as time is had to make them out. At present we are very busy, and the mail boat leaves in a few minutes.

I have the honor to be, sir, very respectfully, your obedient servant,

C. W. FLUSSER,

Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron,

U. S. Flag-Ship Minnesota, off Newport News, Virginia.

ATTACK OF THE REBEL RAM ALBEMARLE.

Report of Acting Rear-Admiral Lee.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Virginia, April 21, 1864.

SIR: I enclose copies of despatches just received from Colonel Shaffer chief of staff to General Butler, as follows: (1.) Lieutenant Colonel W. W. Clark, commanding post at Roanoke island, to Captain J. A. Judson, assistant adjutant general, April 19. (2.) From Major General Peck to Major General Butler, April 20 m. (3.) Same to same, 12.30 p. m. (4.) From Commander Davenport to myself, April 20, 12 m.

The draught of the ram is not known, and it may not be able to pass Croatan sound.

The Tacony, Lieutenant Commander Truxton, a good officer, was on her way to Plymouth from Newbern by last previous accounts from Commander Davenport.

The Miami has more metal than any gunboat that can be sent from here of suitable draught to enter the sounds. An iron-clad or torpedo-boats are required to destroy the ram.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Letter from Lieutenant Clark to Captain Judson.

HEADQUARTERS, ROANOKE ISLAND,

April 19, 1864.

SIR: The Ceres gunboat is just in with the dead body of Captain Flusser, of the Miami. The ram made its appearance at 3 this a. m., and has sunk the Southfield and disabled the Miami, and has full possession of the river.

The troops are hard pushed from the point. Help is needed at once, or our loss will be great.

The Ceres is on her way to Newbern. The ram is formidable, and many boats may be required to reduce her.

In great haste, your most obedient servant,

W. W. CLARK,

Lieutenant Commanding Post.

P. S.—The ram is below Plymouth.
Captain J. A. Judson, A. A. G.

Letter from Major General Peck to Major General Butler.

HEADQUARTERS OF ARMY OF DISTRICT OF NORTH CAROLINA,
Newbern, North Carolina, April 20, 1864—12 m.

GENERAL: I have the honor to enclose herewith a copy of a despatch just received. I have just sent the steamer General Berry with Captain White, 99th New York, bearing duplicate of this to you, and also a communication from Commander Davenport, United States navy, to Rear-Admiral Lee, conveying similar information. I send this also for the reason that the Berry may not get through the canal, or even by Roanoke island.

The enemy have appeared in force in front of Plymouth, and attacked the place. The ram has sunk the Southfield, disabled the Miami, and has passed below Plymouth. The sound is probably by this time in possession of the enemy, and Roanoke island will undoubtedly soon be attacked, if it has not been already. Washington is also threatened. Firing has been heard in that direction all night and this morning. Unless we are immediately and strongly re-enforced both by land and water, all of eastern North Carolina is lost to us. Immediate action is imperatively necessary. Captain Flusser, of the Miami, is killed.

Very respectfully, your obedient servant,

JOHN J. PECK,
Major General Commanding.

Major General B. F. BUTLER,
Comm'dg Department of Virginia and North Carolina, Fort Monroe.

Additional letter from Major General Peck to Major General Butler.

HEADQUARTERS ARMY AND DISTRICT OF NORTH CAROLINA,
Newbern, North Carolina, April 20, 1864.

GENERAL: I have this morning received this very bad news from Plymouth, and enclose a copy of the despatch for your information.

There is no doubt but that Plymouth is *lost* by this time, and the ram will probably come down to Roanoke island, Washington and Newbern. Unless we are *immediately* and *heavily re-enforced*, both by the army and navy, North Carolina is inevitably lost.

The ram is *heavy* and *very formidable*, and none of the gunboats here can stand against its power. The Southfield is sunk, and the rest disabled.

Very respectfully, your obedient servant,

JOHN J. PECK,
Major General.

Major General BUTLER,
Commanding, &c.

Report of Commander H. K. Davenport.

UNITED STATES STEAMER HETZEL,
Newbern, North Carolina, April 20, 1864—12 m.

ADMIRAL: I have just received intelligence from Plymouth that the Southfield has been sunk at that place by the ram, the Miami disabled, and Lieutenant Commander Flusser killed. The ram is below Plymouth, and has possession of

the river. Should she come down by the sounds you can readily appreciate the damage she can do to our cause. I write this at Major General Peck's headquarters, therefore not numbered. The news comes from the colonel commanding the post at Roanoke island. His despatch was dated yesterday. The affair occurred at 3 o'clock a. m. of the 19th instant.

Firing has been heard all night and this morning in the direction of Washington, North Carolina, and we have every reason to believe that place is attacked also.

Major General Peck informs me that doubtless we will be attacked in a short time. Hence you will see the necessity of both the army and navy being strongly and immediately re-enforced.

I intended to have sent the Lockwood to Plymouth this a. m. with ammunition, but at the request of General Peck I detained her until further intelligence from Plymouth.

I have the honor to be, your obedient servant,

H. K. DAVENPORT,

*Commander United States Navy,
and Senior Officer in Sounds of North Carolina.*

Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Flag-Ship Minnesota.

Report of Acting Master Wm. N. Wells.

UNITED STATES STEAM GUNBOAT MIAMI,
Off the mouth of the Roanoke River, April 23, 1864.

SIR: I beg leave to submit the following report of the attack on Plymouth, North Carolina, by the rebel forces; also the engagement on the morning of the 19th of April, between the hours of three and five, with the naval fleet and the rebel iron-clad ram:

The siege commenced Sabbath afternoon, April 17, by an artillery fire upon Fort Gray. Early in the morning of April 18, between the hours of three and five, the enemy tried to carry by storm Fort Gray, but were repulsed. In the afternoon of the 18th heavy artillery opened fire upon the town and breastworks. Then the fight became general. Up to this time the gunboats Southfield and Miami were chained together in preparation to encounter the ram. They were then separated. The Southfield, moving up the river, opened fire over the town. The Miami, moving down the river, opened a cross-fire upon the enemy, who were charging upon Fort Williams. The firing being very exact, caused the enemy to fall back. After three attempts to storm the fort, at nine o'clock the firing ceased from the enemy, they having withdrawn from range. Commander Flusser despatched a messenger to General Wessells to learn the result of the day's fight. The messenger returned at 10 p. m., having delivered the message, and bearing one from General Wessells to Commander Flusser, stating that the fire from the naval vessels was very satisfactory and effective—so much so that the advancing columns of the enemy broke and retreated; also desired that the Miami might be kept below the town to prevent a flank movement by the enemy. At 10.30 p. m., steamer Southfield came down and anchored near. At 12.20 a. m., April 19, the Southfield came alongside to rechain the two steamers as speedily as possible; the ram having been seen by Captain Barrett, of the Whitehead, and reported by him as coming down the river. At 3.45 a. m. the gunboat Ceres came down, passing near, giving the alarm that the ram was close upon her. I immediately hastened to acquaint Commander Flusser of the information. He immediately came on deck, and

ordered both vessels to steam ahead as far as possible and run the ram down. No sooner than given was the order obeyed. Our starboard chain was slipped and bells rung to go ahead fast. In obedience to the order, the steamers were in one minute moving up the river, the ram making for us. In less than two minutes from the time she was reported, she struck us upon our port bows near the water-line, gouging two planks nearly through for ten feet; at the same time striking the Southfield with her prow upon the starboard bows, causing the Southfield to sink rapidly. As soon as the battery could be brought to bear upon the ram, both steamers, the Southfield and Miami, commenced firing solid shot from the 100-pound Parrott rifles and 11-inch Dahlgren guns; they making no perceptible indentations in her armor. Commander Flusser fired the three first shots personally from the Miami, the third being a ten-second Dahlgren shell, 11-inch. It was directly after that fire that he was killed by pieces of shell; several of the gun's crew were wounded at the same time. Our bow hawser being stranded, the Miami swung round to starboard, giving the ram a chance to pierce us. Necessity required the engine to be reversed in motion to straighten the vessel in the river, to prevent going upon the bank of the river, and to bring the rifle gun to bear upon the ram. During the time of straightening the steamer the ram had also straightened, and was making for us. From the fatal effects of her prow upon the Southfield, and of our sustaining injury, I deemed it useless to sacrifice the Miami in the same way.

It becomes my painful duty to report to you the death of Lieutenant Commander Charles W. Flusser in the action with the rebel ram on the morning of April 19. The loss to the country of such a brave, gallant, zealous, and energetic officer is irreparable, and of him we mourn. To speak of him is but to praise him, for to the last his example was that of patriotism and of honor to the flag.

Assistant Surgeon William B. Mann's report of the killed and wounded has been previously forwarded by Acting Volunteer Lieutenant C. A. French, senior naval officer present.

I have the honor to be, very respectfully, your obedient servant,

WM. N. WELLS,

Acting Master and Executive Officer.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

Additional report of Acting Rear-Admiral Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Va., April 22, 1864.

SIR: I send enclosed Commander Davenport's despatch (1) to me of the 19th instant—received on the 21st instant, at 4 p. m.—enclosing a copy (2) of Lieutenant Commander Flusser's cheerful letter to him of the 17th instant; also a copy (3) of my reply of the 21st to Commander Davenport.

Doctor Pursell, the late medical officer of the Southfield, arrived at 11 o'clock last night. He makes the enclosed statement (4) relative to the attack of the rebel ram on the morning of the 19th instant, when the Southfield was rammed and sunk, and the gallant Lieutenant Commander Flusser was killed whilst discharging one of the Miami's guns.

I enclose also a copy (5) of a preliminary report from Acting Volunteer Lieutenant French, late of the Southfield, now temporarily commanding the Miami.

Last night I despatched the Commodore Barney (Acting Volunteer Lieu-

enant Williams, commanding) with a battery of *five* 9-inch Dahlgrens, and *one* 100-pounder Parrott rifle, and to-day the Sassacus, Lieutenant Commander Roe arrived with *four* 9-inch Dahlgrens and *two* 100-pound Parrott rifles, to report to Commander Davenport, and to deliver to him my instructions, of which I enclose a copy (6).

The Sassacus may be delayed crossing the Swash; and there is now frequent communication from this to Newbern.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Additional report of Commander H. K. Davenport.

UNITED STATES STEAMER HETZEL,
Off Newbern, N. C., April 19, 1864—11 p. m.

ADMIRAL: I have just received a letter from Lieutenant Commander Flusser, who informs me that he has written to you direct, giving you the same intelligence.

In view of the present threatening state of affairs, and the hope that I shall be re-enforced, I respectfully request that you will send a supply of ammunition for one hundred pounder 9-inch, and twenty-pounder Parrott. I write in haste, and will send the requisition in due form as soon as I have more leisure.

I shall send orders immediately to the Tacony to return to Plymouth.

I have the honor to be, respectfully, your obedient servant,

H. K. DAVENPORT,

Commander U. S. N., Senior Naval Officer in Sounds of N. C.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Lieutenant Commander C. W. Flusser.

UNITED STATES STEAMER MIAMI,
Plymouth, N. C., April 17, 1864.

SIR: The enemy are about the town. They have fired on us to-day pretty lively. The Ceres (with her usual bad luck) had one killed and several wounded.

I expect an attack about daylight to-morrow. I feel confident of success, as far as we (the navy) are concerned.

My plan of defence prevents me giving the army what aid I should wish before the ram is whipped.

You need not be uneasy about the result. I have written the admiral as I write you.

Very respectfully, your obedient servant,

C. W. FLUSSER,

Lieutenant Commander.

Commander H. K. DAVENPORT,

Senior Naval Officer, inner waters of North Carolina,

U. S. Steamer Hetzel, Newbern, N. C.

Letter from Acting Rear-Admiral S. P. Lee to Commander H. K. Davenport.

FLAG-SHIP MINNESOTA,
Off Newport News, Va., April 21, 1864—p. m.

SIR: I have your despatch of the 20th, stating that the rebel ram had sunk the Southfield and disabled the Miami, at Plymouth, and that the gallant Flusser is killed.

I hope you have been able to learn the exact state of things at Plymouth—the condition of the ram—whether it is injured seriously, or is fit for further service, and if its draught admits of its passing Croatan sounds.

You ask for re-enforcements. If the Miami and Southfield, heavily armed as they were, could do nothing with the ram, more wooden gunboats would not be effective. Nevertheless, I will give the Sassacus a crew and despatch her tomorrow.

If the ram is seriously disabled at Plymouth, the Sassacus and Tacony may be able to destroy her. The Perry's boiler is unfit for service, and she has to go back to Baltimore for repairs. I have informed Lieutenant Commander Roe that you will communicate with him at Hatteras inlet, informing him of the state of things, and where and how he can act to most advantage.

If the ram cannot pass Croatan sound she can do no further mischief, and the fall of the freshet in the Roanoke will leave her at our mercy. Endeavor to blow her up with torpedoes if you cannot attack her with success.

Respectfully yours,

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
Commander H. K. DAVENPORT,
Commanding U. S. Steamer Helzel.

P. S.—Commander Renshaw should assume command of the Miami if she is or can be put in condition to operate. When our campaign opens in Virginia the rebel pressure in North Carolina will be relieved. Understanding the situation, much is left to your judgment.

S. P. LEE,
Acting Rear-Admiral.

Instructions to Commander H. K. Davenport.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Newport News, Va., April 21, 1864—p. m.

SIR: Doctor Pursell has just arrived and given me an account of the situation at Plymouth. He represents that the first and close firing at the ram was with a few shell; that the ram is thought to draw eight feet water; is slow, making only about four knots, and is supposed to be covered with two thicknesses of railroad iron, with a three-fourth inch plating over it; is armed with small guns, and kept her ports closed until the Miami withdrew uninjured, and that the Miami was at the mouth of the river.

I send the Sassacus and Commodore Barney, with twelve (12) new 9-inch breechings, one hundred (100) rounds solid 9-inch shot and fifteen-pound charges therefor, and one hundred (100) rounds of 100-pounder shot.

Let Commander Renshaw assume command of the Miami. I propose that two of our vessels should attack the ram, one on each side, at close quarters, and drive her roof in; that railroad iron will not stand the concussion of our heavy guns, and it must soon get loose from the mechanical difficulty of

fastening it. Our vessels must manœuvre to avoid being rammed, and once close alongside, there will be no danger of firing into each other. The guns should be depressed so as to strike the plating as direct as possible. Our vessels should fire only against the side of the ram's house, and if they lay their wheels just abaft her house and fire their forward guns against it, they need not strike each other. Our gunboats should approach in double line, say the double-enders first, as they are sharpest and quickest, and can best ward or glance the ram. They must be ready to work both ways, and the boats following can take position alongside the ram should the leaders shoot ahead. I think the ram must be weak, and must fail if attacked on our side. This plan may be modified or substituted as may appear necessary or judicious.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Commander H. K. DAVENPORT,

U. S. Steamer Hetzel, Newbern, N. C.

P. S.—The great point is to get and hold position on each side the ram. Have stout lines with small heaving lines thereto to throw across the end of the ram, and so secure her between two of our vessels. She will then have no use of her ram, and must yield to our batteries. Her plating will loosen and bolts fly like canister, and the concussion will knock down and demoralize her crew if they keep their ports down, as in the late attack.

S. P. LEE,

Acting Rear-Admiral.

Report of Acting Volunteer Lieutenant Charles A. French.

UNITED STATES STEAMER MIAMI,

Off mouth Roanoke River, N. C., Tuesday, April 19, 1864—6½ a. m.

ADMIRAL: The iron-clad ram on the Roanoke river made its appearance this morning at 3½ o'clock. The Miami and Southfield, which had been separated to shell the enemy from different positions, had been just refastened, and they were driven by Captain Flusser straight on to the ram. She struck the Southfield slantwise, and sunk her immediately. A few of my officers and men and myself had time to reach the Miami's decks. Captain Flusser was killed in the early part of the engagement. We fired solid shot from both vessels, which glanced upwards from her slanting sides. The Miami steamed down the river, finding an attack by us would result in nothing else than the loss of another vessel. Mr. Hackett, the paymaster of the Miami, will give you further particulars on his arrival at Hampton Roads.

I have the honor to be, your obedient servant,

CHARLES A. FRENCH,

Acting Volunteer Lieutenant, Commanding.

Report of Acting Assistant Surgeon P. H. Pursell.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Va., April 21, 1864.

SIR: At about 5.30 p. m., April 17, Fort Gray, above Plymouth, was attacked by the rebels from a battery of six field-pieces on a sand-bank some 800 or 1,000 yards up the river. Lieutenant Commander Flusser despatched the Ceres to communicate with the Whitehead, which was doing picket duty up the

river. In passing up by the rebel battery she received a shot through her port gangway, killing two and wounding seven men. Firing upon the fort ceased at about 9 o'clock, the Ceres returning about this time. At early dawn on Monday, 18th, the enemy charged upon Fort Gray and were repulsed. The Bombshell, (army gunboat,) then in command of Acting Ensign Thomas B. Stokes, steamed up the river to communicate with the fort, receiving several shot and put in a sinking condition. After communicating with the fort she returned and sank at the wharf.

Later in the day the enemy appeared in force in rear of the town, and at sunset commenced a vigorous attack upon Fort Williams and Fort Wessell, at which time the Miami and Southfield, previously chained together, were cast loose. The Southfield steamed up the river to protect Fort Wessell, whilst the Miami dropped down the river and shelled the enemy in front of Fort William. During the evening the enemy assaulted Fort Wessell and were repulsed three times, the Southfield throwing shell among the enemy. At about 10.30 p. m. the Southfield dropped down the river and reported to Lieutenant Commander Flusser, who ordered the vessels to be lashed together with hawsers, the Southfield being on the port side of the Miami. At about midnight the Whitehead came down the Cachie and came up alongside the Miami, reporting the ram on the way down; the Ceres returning about the same time, having been sent around through the Cachie to communicate with the Whitehead.

About 3 a. m. on Tuesday, 19th, the ram dropped down along the left bank of the river, under cover of the shade of the trees, with the current, and when near ran obliquely across into the starboard bow of the Southfield.

We had been firing shell the previous evening at the enemy on shore, and the guns of both vessels were left loaded with shell, which there was not time to draw. Lieutenant Commander Flusser fired the first shell at her, and upon its bursting some fragments, either from this or from the Southfield's shells, rebounded and caused the death of Lieutenant Commander Flusser, also wounding the officers and men below mentioned, the fragments piercing his face, chest, and skull. Upon the approach of the ram the Southfield also fired at her. The prow of the ram running into the Southfield caused her to fill with water, and she sank inside of fifteen minutes.

The forward lashings were parted by the pressure of the ram between our vessels, and the after ones were then cut, and as many as could get on board of the Miami did so, when the Miami retired, and was followed a short distance by the ram, which was considered slow, making about 4 knots per hour; the Miami, however, throwing solid shot at her as she retired. Some of the men of the Southfield took the small boat, and were picked up by the Whitehead and Ceres.

The gunboats Miami, Whitehead, and Ceres returned to the mouth of the river, and came to anchor.

The Ceres was despatched to Newbern immediately with the body of Lieutenant Commander Flusser. The officers missing from the Southfield were Acting Master Wm. B. Newman, Acting Ensign Thomas B. Stokes, Acting Second Assistant Engineer William F. Goff, Acting Third Assistant Engineer John A. Streeby, Acting Master's Mate George W. Pratt, and Paymaster's Clerk George W. Brown. Some of the officers and men of the Southfield may have been captured, but most of them must have escaped; few or none were probably lost. Acting Ensign Thomas G. Hargous and Acting Third Assistant Engineer Harrington, and some six or eight men, were wounded, none mortally, of the Miami.

The Miami was uninjured. The ram is thought not to have used her guns whilst under our bows, nor could our guns then bear on her. The shell fired at her was when she approached, and her firing, which seemed to be from small

guns, was while the Miami retreated, when she was struck by a glancing shot from the ram.

Very respectfully, &c.,

P. H. PURSELL,

Acting Assistant Surgeon U. S. N., late of Southfield.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Additional report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,

Off Newport News, Va., April 24, 1864.

SIR: I transmit enclosed a report, (1,) dated the 19th instant, from Acting Volunteer Lieutenant French,* temporarily in command of the Miami, of the attack on Plymouth on that day, and a letter from Commander Davenport, (2,) dated the 20th instant, enclosing copy of a letter to him from Acting Assistant Paymaster Hackett, of the Miami.

I also enclose a copy (3) of my instructions to Captain Smith, of the 23d instant. He sailed last night with the Mattabesett and Wyalusing, the latter having been taken out of quarantine and provided with a crew.

I also despatched the Dawn, towing the ordnance schooner Carstairs, with ammunition, to Hatteras inlet.

The Sassacus and Commodore Barney left on the 22d instant.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Letter from Commander Davenport, transmitting report of Acting Assistant Paymaster Hackett.

UNITED STATES STEAMER HETZEL,

Off Newbern, North Carolina, April 20, 1864.

ADMIRAL: I enclose herewith a copy of a letter from Acting Assistant Paymaster F. W. Hackett, of the United States steamer Miami, giving an account of the late affair at Plymouth.

As soon as Captain French's report reaches me, I will forward it.

I have the honor to be, respectfully, your obedient servant,

H. K. DAVENPORT,

Com'dr U. S. N. and Senior Naval Officer in sounds of N. Carolina.

Acting Rear-Admiral S. P. LEE,

Com'g N. A. B. Squadron, U. S. Flag-Ship Minnesota.

Report of Acting Assistant Paymaster F. W. Hackett.

UNITED STATES STEAMER MIAMI,

Off mouth Roanoke River, Tuesday, April 19, 1864—6 a. m.

SIR: Last night, from about 6½ to 8, the Miami and Southfield were engaged in shelling the enemy. On the news that the ram was below the blockade at

* Published in connexion with a previous despatch.

Hymen's ferry, the Southfield was brought alongside the Miami, and the two vessels were fastened together. At half-past 3 a. m. the Ceres came down from picket duty at the town, the Miami and Southfield being at the lower picket station, and reported the ram coming down firing. The batteries on shore did not fire. By Captain Flusser's command the two boats were driven ahead direct upon the ram. She struck the Southfield slantwise, and tore a hole clear through to the boiler. Both vessels fired solid shot at her, but it had no effect upon her slanting sides. The Southfield sank almost immediately; nothing of her stores were saved. The Miami continued firing, but it was evident that the shot had no effect. Captain Flusser was killed in the early part of the action while pulling the lock-string of one of the guns forward. His body is being got ready now to be sent away on the Ceres.

Captain French and some of his officers reached the Miami; others were taken prisoners.

After the ram had sunk the Southfield, she followed the Miami, which steamed slowly down the river. The ram fired two shells at the Miami while going down the river, but they did us no damage,

Captain French has held a consultation of officers as to what had best be done under the circumstances. The garrison at Plymouth must be captured, as things now are. The opinions of all the officers who saw the ram, and the effect of solid shot upon her, agree that another attack would result only in the sinking of the Miami.

I have written the above in haste by Captain French's orders, as he has not time to write himself at present.

Very respectfully,

FRANK W. HACKETT,
Acting Assistant Paymaster.

Commander H. K. DAVENPORT,
Senior Officer in sounds of North Carolina.

P. S.—Captain French is going up to reconnoitre in the Whitehead. He will report officially as soon as possible. The ram was accompanied by the Cotton Planter steamer.

Instructions of Acting Rear-Admiral Lee to Captain M. Smith.

FLAG-SHIP, NORTH ATLANTIC BLOCKADE SQUADRON,
Off Newport News, Va., April 23, 1864—1 p. m.

SIR: The Navy Department, by telegraph despatch of this date, directs me to send you to assume command in the sounds of North Carolina, for the purpose of attacking, at all hazards, the rebel ram there, in the best manner to insure its destruction by running it down with the double-enders, or in any other manner which my judgment or yours may suggest.

The Miami (Commander Renshaw) and the Tacony (Lieutenant Commander Truxton,) are now in the sounds. The Sassacus (Lieutenant Commander Roe) was sent there last night. You will take the Mattabesett (Commander Febiger) and the Wyalusing (Lieutenant Commander Queen) with you, and leave with all practicable despatch, availing yourself of the present high tides to enter the sounds.

I send with you two (2) officers who have served in the sounds, and whose local knowledge will be useful to you.

I enclose a copy of my instructions of the 21st instant to Commander Davenport, for your information and guidance, unless you find occasion to vary them for a more promising plan of attack.

Attacking the ram will to some extent intimidate it, and by getting alongside of it, or near contact, and on side, holding position, and by firing at the centre of its ports, whether open or shut, and on its roof, you will disable and capture it. Your guns should have double breeching, and be loaded with heavy charges, (say from fifteen (15) to eighteen (18) pounds of powder for the nine-inch guns) and solid shot, and they should be so depressed as to fire as near a perpendicular line to the slope of the roof as practicable.

If all hands lie down when the guns are fired, they will escape the rebound of broken parts from the shot.

At the time of this attack, if some shell were thrown down the ram's smoke-stack, she might thus be disabled.

The advantage of getting alongside and on each side of her is, that you prevent her from ramming, and have a controlling fire upon her roof and ports. Her ports and stern are her weak points. Even if her ports are kept closed, as in her attack on the Miami and Southfield bows, you can, if alongside of her, fire through them and into her; and if her roof is, as described, of railroad iron, with a thin plating over it, the mechanical difficulty of securing this is such, that it will loosen and fly off under the concussion of your heavy fire, whilst the inside nuts and bolts will act like canister on her deck, and the concussion especially, if her ports are shut, will shock and demoralize her crew, giving you a complete victory. Besides, you may force her ashore, where the falling freshet in the Roanoke will leave her.

Be sure and not leave the neutral point of your wheel-houses opposite her ports. Your wheel-houses should be abaft or forward of her roof—better abaft.

The department seems to prefer ramming. This ram is reported to be of the usual Merrimac model; if so, heavy logging and a knuckle ironed over, make her sides strong. But ramming under high speed may drive it in, or you may drive her ashore, or mount her ends (especially if in the sounds, with some sea) and sink her.

I entrusted by the department with the performance of this signal service, I leave (with the expression of my views) to you the manner of executing it.

All assaults are exposed service, but this assault has, with much real risk, less than appears.

Wishing you success and promotion,

I have the honor to be, respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Captain M. SMITH,

United States Iron-clad Roanoke.

Report of Acting Master H. H. Foster.

UNITED STATES STEAMER CERES,

Off Newbern, N. C., April 20, 1864.

SIR: I have the honor to report, that while on picket duty at Plymouth, North Carolina, with the Ceres under my command, on the morning of the 19th instant, at 3.30 a. m., I discovered the rebel ram coming down the river. I ran down to the Miami and informed Lieutenant Commander C. W. Flusser that she was approaching. I then returned to the Ceres and proceeded to the Whitehead, (three-quarters of a mile down the river,) and informed her also of the approach of the ram, during which time the Miami and Southfield had engaged her. I then proceeded towards the vessels engaged, and shortly observed

the Miami coming down the river. I picked up a boat from the Southfield containing Acting Master W. F. Pratt, Acting Third Assistant Engineers J. B. Ferrana and Joseph Watts, George Hendricks, seaman, R. McGra, landsman, Carter Campbell, landsman, and R. Hill, landsman. I then followed the Miami, which had passed me, until ordered to go ahead. I communicated with the Miami again at the north side of Edenton bay and received from her the body of the late Lieutenant Commander C. W. Flusser, killed during the action. I also received on board Paymaster Hackett, of the Miami, the surgeon of the Southfield, wounded, Acting Ensign Hargous, of the Southfield, wounded, Acting Third Assistant Engineer Moran, of the Miami, wounded, Captain Flusser's clerk, and six refugees. I then received orders from Acting Volunteer Lieutenant C. H. French to proceed to Newbern and report to you, which I did, stopping at Roanoke island on my way to give Surgeon Purcell, of the Southfield, an opportunity to get to Norfolk, also to land the refugees. I then started for Newbern and reported to yourself.

Very respectfully, your obedient servant

H. H. FOSTER,

Acting Master, Commanding.

H. K. DAVENPORT,

Commander U. S. N., Senior Officer, sounds of North Carolina.

Additional Report of Acting Master H. H. Foster.

UNITED STATES STEAMER CERES,

Off Newbern, North Carolina, April 20, 1864.

SIR: I have the honor to submit the following report: that while at Plymouth, North Carolina, on the 17th instant, at 5.40 p. m., I was ordered by Lieutenant Commander C. W. Flusser to proceed with the Ceres under my command to Broad creek, Roanoke river, with despatches for United States steamer Whitehead. I immediately got under way; before reaching the lower obstructions near Fort Gray I observed a battery of light guns, apparently 20-pounders, on the port hand of the river, which opened fire upon us, striking the vessel several times, destroying one of the boats and damaging the machinery, killing William Rose, 1st class fireman, mortally wounding Samuel Pascall, ship's cook, dangerously wounding John Flynn, landsman, severely wounding George A. Dean, acting 3d assistant engineer, John Peterson, seaman, John Benson, landsman, slightly wounding James B. Hopkins, acting master's mate, John A. Frank, acting 3d assistant engineer, and J. R. Sherwood, acting 3d assistant engineer. I returned their fire from the two 20-pound Parrott guns of the Ceres, and at 6.30 p. m. communicated with the Whitehead and delivered the despatches, and got under way and proceeded down the river for Plymouth at 8.35 p. m. On getting in range of the battery above Fort Gray they again opened fire with artillery and musketry, doing no material damage. I returned the fire as we passed. I arrived alongside the Miami and reported to Acting Volunteer Lieutenant C. A. French. The surgeon of the Miami and Southfield came on board and attended the wounded. On the morning of the following day, by order of Lieutenant Commander C. W. Flusser, I sent the bodies of W. Rose and S. Pascall on shore for interment, which I was unable to effect, (leaving them in the basement of the quartermaster's building at Plymouth,) as the services of the vessel were required. I also sent Mr. Dean, John Peterson, John Benson, and John Flynn to the post hospital. I was well pleased

with the conduct of the officers and crew. The following amount of ordnance was expended, viz: 14 5-inch shells for 20-pound Parrott, and 14 cylinders, of two pounds of powder each, for the same.

Very respectfully, your obedient servant,

H. H. FOSTER,
Acting Master, Commanding.

H. K. DAVENPORT,
Commander U.S. N., Senior Naval Officer, sounds of North Carolina.

Report of Acting Ensign G. W. Barrett.

UNITED STATES STEAMER WHITEHEAD,
Off mouth of Roanoke River, April 21, 1864.

SIR: I have the honor to report to you the part taken by this vessel during the late attack on Plymouth by the rebels, which ended in its capture by them.

At two p. m. of the 19th instant I was ordered by Captain Flusser to proceed up the Roanoke river, and anchor a short distance below the blockade of sunken schooners, near Hyman's ferry, to guard the blockade and watch for, and give notice of, the approach of the rebel ram. The United States steamer Ceres, which we relieved, then proceeded down to Plymouth. At 5.30 p. m. a rapid fire of artillery was heard in the direction of the town, the cause of which was ascertained by the arrival of the United States steamer Ceres at 6.10, who reported having been fired on by a rebel battery of field-pieces above Fort Gray, and several of her crew killed and wounded. She brought a despatch from Captain Flusser, stating that the rebels were said to be approaching in force on the Jamesville road, and warning me to be in readiness for any emergency. The Ceres returned down the river shortly after eight o'clock.

At five a. m. of the 18th heavy firing was heard in the direction of Plymouth, which was kept up during the whole day. A boat from the steamer Ceres arrived from Plymouth with a despatch from Captain Flusser at 4.30.

At 8.10 p. m. the lights on two steamers were discovered coming round the bend of the river above us. We immediately slipped our cable, went to quarters, and dropped slowly down the river, waiting to see if the ram successfully passed the obstructions.

In compliance with my orders, I then sent up a rocket to warn our forces at Plymouth of the rebel ram's approach. A moment afterwards it was answered by a rocket from one of the rebel steamers, they evidently mistaking our signal for one from their forces near Plymouth. My retreat down the river being cut off by rebel batteries near Fort Gray, I was ordered by Captain Flusser to retreat, if closely pressed by the enemy, by way of the upper Thoroughfare. When the enemy answered my rocket I saw that they had passed the blockade of sunken vessels, and I steamed immediately for the Thoroughfare, which is a natural sluice connecting the Roanoke and Cashie rivers, and is very narrow and crooked. As I entered it the current swept me over against the bank, and the vessel grounded. A line was run to the opposite bank, and her bows swung out into the river, but her stern remained immovable. Our position at this moment was rather critical, for the rebel steamers were both close at hand, and in a few moments more they would open the entrance of the Thoroughfare, when our presence would be discovered. Fortunately at this time we started ahead, and ran for the pile blockade, which was about fifty yards further, and through which we intended to force our way. Here we stuck fast again between the piles. The engines were immediately stopped and perfect silence kept on board, and the rebel steamer passed on down the river in full view of us. The engines were then started ahead again, and we succeeded in forcing our way

through the piles, though in doing so we sustained serious damage, on account of the shoe, which kept the heel of the rudder and iron stern in place, being wrenched from its fastenings and lost. We then passed into the Cashie river, and proceeded with all possible despatch for Plymouth.

At 12.30 a. m. of the 19th I anchored off Plymouth, and reported to Captain Flusser that the ram was at War Neck. All was quiet until 3.15 a. m., when the steamer Ceres, which had been coaling alongside the wharf, came down and reported that the rebel ram was coming. A few moments afterwards the ram struck the steamer Southfield, and became wedged between her and the Miami.

My position was about fifty yards astern of the vessels engaged; but, owing to the darkness, I could not deliver my fire without endangering our own men.

The Southfield sunk in a few minutes, and the United States steamer Miami, becoming disengaged from them, dropped slowly down the river. I was then ordered to proceed down the river ahead of the Miami, keeping near her to render assistance if necessary. Arriving at Albemarle sound, we came to anchor near the mouth of Roanoke river. I have no casualties to report.

Very respectfully, your obedient servant,

G. W. BARRETT,
Acting Ensign, Commanding.

Commander H. K. DAVENPORT,
Senior Naval Officer, sounds of N. C.

Additional report of Acting Rear-Admiral S. P. Lee.

HAMPTON ROADS, VIRGINIA,
April 27, 1864.

SIR: I transmit enclosed the following reports in relation to the recent attack on Plymouth, North Carolina, and the sinking of the Southfield: (1,) informal report of Acting Volunteer Lieutenant French, commanding Southfield, (now in command of the Miami,) dated April 21; (2,) a subsequent report from the same officer and of the same date; (3 and 4,) reports of Acting Assistant Surgeon William B. Mann of the casualties on the Ceres and Miami; and (5) list of officer and men from the Southfield who have been accounted for; (6,) report of Acting Master W. N. Welles, executive officer of the Miami.

I have the honor to be, sir, very respectfully,

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy

Additional report of Acting Volunteer Lieutenant Charles A. French.

UNITED STATES STEAMER MIAMI,
Off Roanoke River, April 21, 1864.

ADMIRAL: On the morning of the 19th I sent a despatch by the paymaster of the vessel, informing you of the death of Lieutenant Commander Flusser and of the loss of the Southfield by the rebel ram Albemarle, commanded by Lieutenant Cook, formerly of the United States navy. For the want of time I could not go into details, but requested the paymaster to give you the particulars to the best of his knowledge.

Enclosed I send you a report of the action direct, (and a copy to Commander Davenport,) presuming you were anxious to learn the state of affairs at Plymouth as speedily as possible. I shall also explain to Commander Davenport my reason for so doing. In regard to my conduct in this affair I refer you more particularly to my report. Had I not been confident that this boat would have met the fate of the Southfield had I come in contact the second time, I should never have left her; but after having had so severe a test, I became satisfied that our shot had no effect, and it was worse than useless, in my opinion, to attempt to run on her prow. She has two propellers, and can be managed very expertly, and has a great advantage over a vessel of this kind. Under those disadvantages I deemed it my duty to withdraw and save these boats, for I am fully of the opinion that nothing but an iron ram can contend with her in the river, and I trust my course will meet your approval.

I am now keeping a close watch of her movements at the mouth of the river, with the Whitehead in company, and shall remain until further orders from Commander Davenport. I have received and am receiving many escaped soldiers and refugees who have taken to the swamp, and have detained the army transport Massasoit for the purpose of conveying them to Roanoke island.

The town of Plymouth surrendered to the rebels yesterday, after a desperate but brave defence. I learn it was unconditional. Our loss very small; that of the rebels extremely heavy. These particulars I get from a reliable citizen who left town after the surrender. I went up in the Whitehead yesterday in sight of the lower fort, not then knowing the result, and received many persons who had taken to the woods. The ram then lay abreast of the town. I hope to hear from Captain Davenport to-morrow.

Very respectfully, your obedient servant,

CHARLES A. FRENCH,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

P. S.—Since writing the above I received intelligence from a man just from town that the ram was to go to Roanoke as soon as arrangements could be made for her to leave.

Respectfully,

C. A. F.

Additional report of Acting Volunteer Lieutenant Chas. A. French.

UNITED STATES STEAMER MIAMI,
Off Roanoke River, N. C., April 21, 1864.

SIR: I have the honor to submit the following report of the engagement off Plymouth, N. C. Previous to the action, Lieutenant Commander Flusser having received information that we were to be attacked by a rebel ram, had lashed the Miami and Southfield together, with intention of engaging her in this manner. At 4½ p. m., on the evening of the 17th instant, the attack was commenced by land forces of the enemy, driving in our pickets. At 6 p. m. the enemy planted a battery up the river and opened upon Fort Gray, when Lieutenant Commander Flusser ordered the Ceres up the river to communicate with the Whitehead, which laid at the upper obstructions. She returned at 9 p. m., having lost two men and several wounded. The enemy ceased firing at 10 p. m. At daylight on the morning of the 18th instant heavy firing commenced up the river, and was kept up until 6 p. m., when the enemy made a general assault upon the town; at 6¼ p. m. the Miami and Southfield cast loose. The Southfield took position

above and the Miami below the town, and opened a cross fire on the enemy until 10 p. m., when the enemy were repulsed. At 11 p. m. the Whitehead returned from the blockade, and reported having seen the ram pass through the obstructions. The Southfield was ordered alongside this vessel to relash at once; but before the coupling was completed, the ram made her appearance, when Lieutenant Commander Flusser ordered both vessels to go ahead fast and meet the ram. She glanced along the Miami's port bow, and striking the Southfield on her starboard bow, and her prow cut through the forward store-room and into the fire-room. Almost at the moment of contact our two vessels opened a rapid fire, both of great guns and musketry, which was maintained by the Southfield until she sunk. About three minutes from the time of contact the ram opened fire with her bow pivot gun, and kept up a continuous hail of musketry. When I found the Southfield sinking, I ordered her crew to leave in the boats; at this moment the Miami's stern swung into us, and I then ordered such men as could do so to jump on to her decks, and did so myself. On inquiring for Captain Flusser, I found he had been mortally wounded at the commencement of the action; I then assumed command, and maintained the fire at close quarters until the ram backed off for the purpose of running into the Miami; I then ordered the three steamers, Miami, Whitehead, and Ceres, to drop slowly down the river, avoiding contact with the ram, to wait till daylight. As far as we discovered, our shots fell harmlessly on the iron-clad sides of the ram. The fatal effect of her prow had been but too fully demonstrated on the ill-fated Southfield, and under these circumstances I reluctantly concluded to withdraw from the river, being fully convinced that had we closed with this vessel, it would have resulted in her loss. I am now at its mouth, watching the movements of the ram, where I shall again engage her if she attempts to come out, as I shall have sufficient room to avoid her prow.

Annexed you will find Assistant Surgeon's (Miami's) report of killed and wounded.

Seven officers and thirty-eight men from the Southfield came on board this vessel. The greater portion of those missing are believed to be prisoners. I regret to report the death of that gallant officer, Lieutenant Commander Chas. W. Flusser, who perished instantly from the effects of a fragment of a shell while cheering on and inspiring his men.

Amount of ammunition expended on the Southfield during the afternoon and night was about two hundred rounds. Trusting my conduct will meet your approbation,

I am, very respectfully, &c., your obedient servant,

CHARLES A. FRENCH,

A. V. Lieutenant Commanding, late of Southfield.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Hampton Roads, Va.

Casualties on board the Ceres.

UNITED STATES STEAM GUNBOAT MIAMI,
Off Plymouth, N. C., April 18, 1864.

SIR: I have the honor to submit the following list of casualties on board the United States steamer Ceres during the action of the 17th instant:

Killed.—William Rose, first-class fireman.

Wounded.—Acting Third Assistant Engineer George A. Dean, Acting Third Assistant Engineer John A. Frank, slightly; Acting Third Assistant Engineer John R. Sherwood, Acting Master's Mate James B. Hopkins, Samuel

Pascall, ship's cook, mortally; John Peterson, seaman, John Flynn, land sman right arm amputated, and John Benson, landsman, severely.

Very respectfully, your obedient servant,

WM. B. MANN,
Assistant Surgeon.

Lieut. Com. C. W. FLUSSER,

Com'dg' U. S. Steamer Miami, and Senior Naval Officer present.

Casualties on the Miami.

UNITED STATES STEAM GUNBOAT MIAMI,
Off the mouth of Roanoke River, April 19, 1864.

SIR: I have the honor to submit the following list of casualties on board this vessel during the action this morning:

Killed.—Lieutenant Commander Charles W. Flusser, commanding.

Wounded.—Acting Ensign Thomas G. Hayes; Acting Third Assistant Engineer Dennis Harrington; Henry Scott, seaman; Isaac Anderson, seaman; Henry Johnson, seaman; John Ranking, seaman; Jeremiah Lyons, ordinary seaman; Joseph Eckert, private, master's clerk; Charles J. Cappas, landsman; John O'Hearn, landsman; and John Maddox, landsman.

Killed, 1; wounded, 11.

Very respectfully, your obedient servant,

WM. B. MANN,
Assistant Surgeon.

Acting Vol. Lieut. CHARLES A. FRENCH,

Senior Naval Officer present.

List of persons saved from the Southfield.

UNITED STATES STEAMER MIAMI,
Off Roanoke River, N. C., April 23, 1864.

SIR: The following officers and men, belonging to the Southfield, have been accounted for, and are now on board the Miami:

William F. Pratt, acting master; J. R. Peacock, acting ensign; J. S. Watts, acting third assistant engineer; Robert Craig, carpenter's mate; Peter McGreen, quartermaster; James McDonald, quartermaster; Thomas Lynch, ship's cook; Michael Ryan, captain of hold; Thomas Flinn, 1st class fireman; Caleb H. Perry, 2d class fireman; Michael Lumott, 2d class fireman; John Albern, 2d cabin boy; Albert Easton, 2d cabin boy; William Gaskin, 2d cabin boy; Robert H. Heild, seaman; Samuel B. Sharp, seaman; Andrew Walling, seaman; James Brown, seaman; George Russell, ordinary seaman; John Forman, ordinary seaman; James Cannon, ordinary seaman; H. M. Green, landsman; Sharper Brown, coal heaver; Dick Boster, coal-heaver; Andrew Shearer, 1st class fireman; Solomon Williams, landsman; Thomas Weaver, officer's steward; Joseph Gilmore, ordinary seaman; Samue lHarris, landsman; Lewis Archibald, 1st cabin boy; Lewis Latham, 2d cabin boy; Thomas Lynch, coal-heaver; Solam M. Kimball, landsman; Manassa White, landsman.

List of men on board the United States steamer Whitehead.

James Murphy, captain forecastle; Charles Frick, 2d class fireman; George Ellis, seaman; Charles Merrill, landsman; James E. Ward, landsman; Charles Pierce, landsman.

List of officers and men on the United States steamer Ceres.

J. B. Farrend, acting 3d assistant engineer ; George Herricks, seaman ; Carter Campbell, landsman ; Patrick McGraw, landsman ; Robert Hill, landsman ; Paymaster A. Pool, Newbern, North Carolina ; Surgeon P. H. Purcell, Newbern, North Carolina ; J. W. Jackson, surgeon's steward, Newbern, North Carolina ; John Allen, jr., acting master's mate, Tacony.

RECAPITULATION.

Officers, 7 ; petty officers and men, 42.

Mr. Allen, master's mate, was transferred to the Tacony as per order of Captain Truxtun. The officers and men to the Ceres and Whitehead I turned over temporarily, subject to your orders, as their services were much needed. The complement of this ship is also short. The officers and men saved nothing but what they stood in ; and will you please to inform me what disposition will be made of them.

I am, very respectfully, your obedient servant,

CHAS. A. FRENCH,

Acting Volunteer Lieutenant, Com'dg late Southfield.

Commander H. K. DAVENPORT,

Senior Officer, sounds of North Carolina.

Reply of the Secretary of the Navy to resolution of the House of Representatives.

NAVY DEPARTMENT,

May 9, 1864.

SIR : I have the honor to acknowledge the receipt of the resolution of the House of Representatives, passed on the 2d instant, directing the Secretary of the Navy to furnish the House "with all the information in his possession concerning the construction of the rebel ram which participated in the recent rebel attack on the United States forces and vessels at and near Plymouth ; also to inform the House why the construction of said ram was not prevented ; whether any steps were taken to prevent the same, or to guard against the action of said ram ; also what action was taken in relation to the subjects of this inquiry, and why the same was not effective."

In conformity with the requirements contained in the foregoing resolution, I transmit herewith copies of correspondence on the files of this department relative to the construction of the rebel ram referred to, and other matters connected therewith. I also subjoin a schedule of iron-clad gunboats of light draught in the process of construction, which, in anticipation of the state of things which now exists, were designed for service in the sounds and rivers of North Carolina, and the shallow interior waters elsewhere on the coast. These boats were contracted for as soon as it was possible to do so after the necessary appropriations for their construction were made by Congress, and it will be seen by the data given that most of them were to have been completed last year—some of them as early as September. Not one has yet been delivered, and it will be some weeks before one can be made available for service.

I have felt it my duty on repeated occasions to call the attention of Congress to the necessities for a yard and establishment where iron and armored vessels could be constructed for the government, but the preliminary steps for such an establishment have not yet been taken. In the mean time the department and the government are wholly dependent on contractors, who, if they have the will,

do not possess the ability, to furnish these vessels promptly. Conflicting local controversies in regard to the place which shall be selected and benefited by the proposed important national establishment for an iron navy, such as the present and future necessities of the government require, have contributed to delay action on this important subject. Having in view economy as well as the public necessities, I have at no time recommended that the number of our navy yards should be increased on the Atlantic coast, but it is my deliberate opinion that no time should be wasted in establishing at a proper place a suitable yard where iron ships can be made and repaired. We feel its necessity in the emergency which has called forth the present inquiry, and not a single contractor is able to meet his engagements, even for one of this class of small vessels. In the event of a foreign war with one or more of the principal maritime powers, our condition would be most unfortunate, with no government establishment for the construction or repair of armored vessels, such as modern science and skill are introducing.

The omission to make provision for such an establishment, on which the government can always rely, is to be regretted. Had we such an establishment at this time, I should not have been compelled to make this exhibit of a want of light-draught armored boats for such an exigency as that which now exists in the waters of North Carolina, nor is it probable that the exigency would have occurred.

Such incidental aid as the navy could render the army was cheerfully and earnestly given at Plymouth, as it has ever been given, always and at all times when its aid and co-operation could be useful. It has been less effective than it would have been, even with such boats as we have, in consequence of the unfortunate legislation of the last Congress, which, in its enrolment law, ignored the navy, subjected seamen to military draft, tendered large bounties to such as became soldiers, but allowed no bounty to those who entered the naval service, and would not even permit naval recruits to be credited on the quotas required to be drafted.

The remedial legislation of the present Congress has thus far effected comparatively few transfers. Some suggestions which I had the honor to submit to the Senate in March last, in answer to an inquiry as to what further legislation is necessary to supply any deficiencies of men for the naval service, have not, that I am aware, been reported upon, and many of our vessels, some of which would have been ordered to the sounds of North Carolina, are still without crews.

The correspondence of Acting Rear-Admiral Lee, and the naval officers, is evidence that there has been no neglect or inattention on their part at Plymouth, or elsewhere in that quarter.

I have the honor to be, your obedient servant,

GIDEON WELLES,
Secretary of the Navy.

Hon. SCHUYLER COLFAX,
Speaker of the House of Representatives.

CORRESPONDENCE ACCOMPANYING REPLY OF SECRETARY OF THE NAVY.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Newport News, Va., April 17, 1863.

GENERAL: Permit me to renew my previous suggestions in favor of abandoning the occupation of so many points in the sounds, and the razing of the enemy's abandoned defences.

Our present policy of occupying detached posts struck me last fall, and more so now than then, as being expensive, insecure, and subjecting us to attack in detail; whereas, if we occupied one good position, the concentration of our land and naval forces would better enable us to act our part of prosecuting the war. Naval movements necessarily follow army policy in this matter, as we cannot withdraw our assistance whilst you need it in the occupation of a place.

Matters are taking the same critical turn here as in the sounds. The enemy are trying to cut off our positions in detail, and to reoccupy their abandoned works. Our policy of scattered occupation is certainly bad, and cannot too soon be abandoned.

* * * * *

I have the honor to be, general, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Major General J. G. FOSTER,

Com'dg Department of North Carolina, Washington, N. C.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Va., June 15, 1863.

SIR: I enclose herewith a copy of a report dated June 8, Plymouth, North Carolina, from Lieutenant Commander C. W. Flusser, commanding United States steamer Miami, respecting a rebel iron-clad battery, now said to be nearly completed on the Roanoke river, above Plymouth.

He also sends a plan of the battery, a copy of which plan is enclosed, and gives a statement of its battery and of the steamer detailed to tow it, which is also plated.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

UNITED STATES STEAMER MIAMI,

Plymouth, N. C., June 8, 1863.

SIR: I enclose you a plan of the iron-clad battery above here, on the Roanoke. The man who furnishes the plan says the battery will not be finished this year. To-day I saw a man who says that two or three days ago he saw heavy guns on the way from Weldon to the battery, and he also says that they are now plating *both*, and that they are nearly completed.

Which tells the truth I am at a loss to say, but should rather trust the latter informant.

The battery is built of pine sills fourteen (14) inches square, and is to be plated with railroad iron. The steamer intended to tow her is one hundred and thirty-four (134) feet long, and twenty-four feet beam, with two screws. The boat has six ports, two on each side, and one on either end. She carries a pivot gun forward, and another aft. Each gun works out of three ports. The battery carries two guns on each of two opposite faces, and one on each of the two remaining sides.

The boat is built on the plan of the former Merrimack. The roof (slanting) of the battery and all parts exposed are to be covered with five inches of pine, five inches of oak, and then plated with railroad iron. So say the workmen.

We are driving piles in the river, and preparing to receive them. I do not doubt we shall whip them if they venture down.

I have the honor to be, sir, very respectfully, your obedient servant,

C. W. FLUSSER,

Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Hampton Roads, Va.

PLAN.

A, B, C, D, E, F, is to be plated.

Perpendicular line between C D denotes the entrance to the vessel.

UNITED STATES FLAG-STEAMER HETZEL,
Off Newbern, N. C., August 8, 1863.

SIR: I called on General Foster, when he came to Fortress Monroe as successor to General Dix, and was informed by him that he had adopted my suggestion contained in our correspondence on file in the department, to fortify the places he thought proper to hold, and that half the gunboats now in the sounds might be removed, as they were no longer necessary for the defence of the military positions at Newbern, Washington, and Plymouth.

I have just visited the places and their defences. As these towns are now strongly fortified, I propose to withdraw the Commodore Perry, Hunchback, Lockwood, Ceres, and Shawsheen, and to send them to Norfolk and Baltimore for thorough repairs, and, when repaired, to return them here, to constitute, with the Smithfield, Commodore Hull, and Whitehead, the permanent force in the sounds; then to withdraw the Delaware, Louisiana, Valley City, Hetzel, Brinker, and Miami, for repairs and for other duty. Some of these will probably be found to be worn out.

I propose, also, to keep one gunboat at a time at Newbern, Washington, and Plymouth; the others cruising and blockading, especially during the sick seasons, in the sounds as much as practicable, keeping them away from the towns, out of the rivers, in the sounds and in the salt air—a course which will promote the health, morals, and duties of the blockade, leaving a force for reliefs, and ready to concentrate at a given point when needed.

It has never been reported that the enemy are building gunboats on the Neuse. The vessel on the stocks at Tarborough, not plated, but probably designed for an iron-clad, together with two small light-draught river steamers, erroneously reported as gunboats, were recently destroyed in a military raid ordered by General Foster.

The iron-clad on the Roanoke, at Edwards's Ferry, forty miles above Rainbow Bluff, heretofore reported to the department, is considered by Lieutenant Commander Flusser as a formidable affair, though of light draught. The fortifications at Rainbow Bluff, and the low stage of the water in the river, make it impracticable for the navy to destroy her before completion, which is reported near. I have made written application to Major General Peck to send out an expedition to accomplish this desirable object, if practicable. If this is not done, we must have iron-clad defence in the sounds, though I do not see how any iron-clads we have now can be got over the Bulkhead at Hatteras, where the most water is about nine feet in the best tides.

I have the honor to be, respectfully, your obedient servant,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

UNITED STATES FLAG-SHIP MINNESOTA,
Hampton Roads, Va., September 10, 1863.

SIR: On the 22d of July last, in a confidential communication of that date, a copy of which is enclosed, I ordered Lieutenant Commander Flusser to co-operate with General Foster in a movement he was about to undertake up the Chowan river. Lieutenant Commander Flusser, in a report dated August 21, a copy of which I enclose, gives the particulars of that movement and the part taken by the naval force, and mentions therein his endeavor to have

this expedition of General Foster destroy the boats (iron-clads) building at Edwards's Ferry on the Roanoke river, which were inaccessible to our navy.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

[Confidential.]

JULY 22—at night.

SIR: General Foster has in view an expedition to come off immediately. He wishes great secrecy observed, so as not to reveal its destination. He will acquaint you with his object. I desire you to take such of the gunboats as you may think best adapted to the service, and to co-operate within the limits of your sound discretion. Report result to me without delay.

Very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral Commanding N. A. B. Squadron.

Lieut. Com. C. W. FLUSSER, U. S. N.,

Plymouth, N. C.

UNITED STATES STEAMER MIAMI,

Hatteras Inlet, August 21, 1863.

SIR: In obedience to your order directing me to co-operate with General Foster in a movement up the Chowan river, I left Plymouth on the 28th ultimo, and went to Winton with the Commodore Perry, Valley City, and Whitehead. I lay there to protect the transports and infantry, while the cavalry made an unsuccessful attempt to destroy the railroad bridge at Weldon. While the cavalry were absent I ran up to Murfreesboro' on the Meherrin, and burned the bridge at that place. This would prevent the enemy, were they so minded, from throwing troops from Franklin in the rear of our force. At Murfreesboro' I found a rebel soldier, and brought him off. I should have written you sooner, but expected every day to see you at Plymouth, and was afterwards sick with fever.

I have the honor to be, very respectfully, your obedient servant,

C. W. FLUSSER,

Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, U. S. Flag-Ship Minnesota,

Hampton Roads, Va.

P. S.—I requested General Foster to detach a small party from the main cavalry force to destroy the boat and battery building at Edwards's Ferry, but did not succeed in impressing him with the importance of the move, and it was not done.

Respectfully forwarded August 25, 1863.

H. K. DAVENPORT,

Commander and Senior Officer, Sounds, N. C.

NAVY DEPARTMENT, *September 17, 1863.*

SIR: I have the honor to present for your consideration a subject of great importance, connected with the maintaining possession of the sounds of North Carolina.

Information received from time to time places it beyond doubt that the rebels are constructing, and have nearly completed, at Edwards's Ferry, near Weldon, on the Roanoke river, a ram and an iron-clad floating battery. It is represented that these vessels will be completed in the course of four or six weeks. It is further represented that an attack by land and water on Plymouth is contemplated.

Our force of wooden vessels in the sounds, necessarily of light draught and lightly armed, will by no means be adequate to contend against the rebel ram and battery, should they succeed in getting down the Roanoke; and in that event, our possession of the sounds would be jeopardized.

It is impracticable for our vessels to ascend the Roanoke to any great distance, in consequence of the shallowness of the water, their exposed situation from the fire of sharpshooters, and the earthworks represented to be located at different points, particularly at Rainbow Bluff.

Were our iron-clads, now completed, available for service in the sounds, they could not be sent there, as they draw too much water to cross the Bulkhead at Hatteras. Our light-draught ones will not be completed for some time to come.

In view of all these facts, I deem it proper to suggest the importance of an effort on the part of the army to surprise and destroy the rebel ram and battery referred to, or of obstructing the river by torpedoes and piles or otherwise, so as to prevent their descent. Permit me to urge some measure of this sort. This department will be happy to co-operate, so far as it may be able, in adopting such steps as may seem practicable and adequate to secure us against threatening disaster.

I am, very respectfully, &c.,

GIDEON WELLES,
Secretary of the Navy.

Hon. E. M. STANTON,
Secretary of War.

WAR DEPARTMENT,
Washington City, September 19, 1863.

SIR: I have the honor to acknowledge the receipt of your letter of the 17th instant, in relation to the contemplated attempt of the rebels to take possession of the sounds of North Carolina, and to inform you that a copy of the same has been referred to Major General Foster, with directions to take such action as may, in his judgment, be best suited to meet the emergency thus presented.

Very respectfully, sir, your obedient servant,

EDWIN M. STANTON,
Secretary of War.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

HEADQUARTERS ARMY AND DISTRICT OF NORTH CAROLINA,
Newbern, N. C., November 13, 1863.

SIR: I recently visited Plymouth, &c., and found Captain Flusser somewhat disturbed by a report which had reached General Wessells, to the effect that Mr. Lynch had been examining the channel of the Roanoke with a view of bringing down the ram.

At frequent intervals since I assumed command in North Carolina, I have posted Major General Foster in relation to the boat at Edwards's Ferry, and proposed expeditions for the burning of the same; but he never attached great importance to it, and supposed that it was intended only as a defensive agent. He replied that the troops in the department would not warrant the undertaking.

The works at Plymouth have been pushed with all despatch possible, and I have added materially to the armament. A work is in progress for a 200-pounder Parrott, with a centre pintle, which will make everything very secure there. While waiting for the 200-pounder, I have ordered up a 100-pounder Parrott from Hatteras, which is the only available gun of the kind in North Carolina.

In regard to the report of an examination of the channel, I think it is accounted for by a number of deserters from Fort Branch, at Rainbow, who state that, week before last, it was examined, and torpedoes placed at various points below Rainbow Bluff. The difficulties of getting at the boat are greatly increased by the fact that an earthen battery, for four (4) guns, has been constructed at Edwards's Ferry, and is garrisoned by from 200 to 500 infantry. The 20th North Carolina and one 6-gun battery are at Hamilton. Fort Branch is an enclosed work of twelve (12) rifled guns, including one 64-pounder and three 24-pounders.

I am, very respectfully, your obedient servant,

JOHN J. PECK,
Major General.

Acting Rear-Admiral LEE,

Commanding N. A. B. Squadron, Newport News.

[Confidential.]

UNITED STATES FLAG-SHIP MINNESOTA,
Beaufort Harbor, N. C., November 24, 1863.

SIR: I returned here this evening after visiting Newbern, Washington, Plymouth, and Roanoke island, in company with General Butler, who left Hatteras inlet this morning to return to Fortress Monroe, abandoning, without explanation, his previous purpose to make, with me, a reconnoissance off Wilmington, whither I go to-morrow morning.

The general concluded that it would not be necessary to sink any vessels above Plymouth, but only to drive some piling across the Roanoke, including the island channel, and the two thoroughfares just above Plymouth.

He expressed his unconcern about the rebel ram, but promised me to obtain full information about the one up the Roanoke, and the rebel gunboat on the Neuse.

* * * * *

I have the honor to be, very respectfully,

S. P. LEE,
Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

FLAG-SHIP MINNESOTA,
Off Newport News, Virginia, March 4, 1864.

SIR: Commander Davenport, under date February 29, sends me the following information, which he says was communicated to him officially by General Peck,

viz: There are thirteen (13) pontoon bridges now ready for use at Goldsborough, and they are taking up the blockade between this and Kingston. Two regiments of cavalry are at Care creek, ten (10) or twelve (12) miles this side of Kingston.

Commander Davenport considers the position of affairs critical, and urges the sending of re-enforcements.

The force at present in the sounds consists of the following vessels: Hetzel, Miami, Seymour, Louisiana, Granite, Valley City, Southfield, Whitehead, Commodore Hull, Lockwood, Ceres, Tacony.

The Wyalusing will also be despatched in a few days, when her repairs are completed at the Norfolk navy yard. I have written to the commandant at Baltimore to hasten as much as possible the repairs on the double-enders Hunchback and Commodore Perry.

The most important positions in the sounds are strongly defended by earthworks. The number of wooden vessels already there will, perhaps, be as sufficient as a larger number of the same sort of vessels.

I have the honor to be, sir, respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Virginia, April 24, 1864.

SIR: General Butler read me this evening his despatch, making the surrender of Plymouth the result of want of naval defence of its flanks—meaning against the rebel ram and the riflemen in the steamboat Cotton Planter.

The navy had nothing to do with the planning, placing, or fighting the extensive and expensive fortifications which the army has erected for the defence of Plymouth, Washington, and Newbern, by land and water.

There are three (3) earthen works on the river side at Plymouth, one (1) in the lower part, and the other two (2) above this small town, and they should not need wooden gunboats to defend them.

General Butler told me at Plymouth last fall that he did not care for the ram, and that the fortifications ought to be sufficient to hold the place.

A few days since he informed me that he had ninety (90) days' supplies at Plymouth. The garrison there was about twenty-two hundred (2,200) strong.

Nothing can be more ungenerous and unjust than to make the navy responsible for the occupation or surrender of this fortified town.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

CAPTURE OF PLYMOUTH, NORTH CAROLINA, BY THE REBELS.

[Telegram.]

FLAG-SHIP MINNESOTA, *April 24, 1864—3 p. m.*

An army bearer of despatches from Newbern on night of 22d reports that the enemy carried the defences of Plymouth, after frequent bloody attacks, on 20th instant. General Wessels and command taken prisoners. The ram and rifle screened Cotton Planter were in Roanoke river, and Tacony, Miami, and other gunboats at mouth river waiting for her, confident of destroying her when she enters the sounds. There was a report at Newbern on Friday that iron-clad on the Neuse was in sight.

S. P. LEE, *Acting Rear-Admiral.*

Hon. GIDEON WELLES, *Secretary of the Navy.*

DISPERSION OF REBEL ARTILLERY NEAR MASONBORO' INLET.

UNITED STATES STEAMER NIPHON,
Off New Inlet, North Carolina, April 29, 1864.

SIR: I have the honor to report, that on the morning of April 27, while close in shore near Masonboro' inlet, discovered a boat; stood for her; found eight negro refugees in her, one of whom shipped on board this vessel for three years; the other seven were transferred on board the United States steamer Fahkee, at the request of Acting Master Webb, who shipped them for three years. While taking on board these refugees, six pieces of field artillery opened on us, but the shell fell short. We immediately went to quarters, threw shell among them and drove them away; two of our shells exploding in the steam saw-mill on shore, set it on fire. On the morning of the 29th the enemy opened fire on us with two Whitworth guns, the shot passing over us; stood in shore and shelled them, and also a company of cavalry, who were driven away into the woods. There appears to be a large body of the enemy located at Masonboro'. The refugees state that there is great excitement at Wilmington, and on Sunday last, when they left that place, all the citizens were under arms, expecting an attack.

Very respectfully, your obedient servant,

J. B. BRECK,

Commanding United States Steamer Nippon.

Commander WM. A. PARKER, *Senior Officer present.*

EVACUATION OF PLYMOUTH, NORTH CAROLINA, BY THE REBELS.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
Hampton Roads, April 29, 1864.

SIR: General Butler, under date of 28th instant, informs me as follows: Later information brought to me puts Beauregard's advance at Petersburg on their way to Richmond and Lee's army in Virginia.

Captain Clark, of my staff, has just come up, and reports the rebel troops are leaving North Carolina. Plymouth is evacuated, and Little Washington and Newbern are relieved from all threats of operations.

This information has just been received by me (2 p. m.) and communicated by telegram.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

[Telegram.]

NEWPORT NEWS, VIRGINIA,
April 29, 1864—2 p. m.

I am just informed by General Butler that he has information that Plymouth is evacuated, and rebels are leaving North Carolina.

S. P. LEE,

Acting Rear-Admiral.

Hon. GIDEON WELLES,

Secretary of the Navy.

THREATENING OF NEWBERN, NORTH CAROLINA.

Report of Commander H. K. Davenport.

UNITED STATES STEAMER HETZEL,
Off Newbern, North Carolina, May 6, 1864.

ADMIRAL: Newbern is besieged by the enemy, in force. Our pickets were driven in Wednesday evening; yesterday they took possession of the railroad between this place and Beaufort, and attempted to erect a battery on the Neuse river near the old blockade. I sent the Lockwood down to patrol the river, and on the enemy making his appearance, sent the Barney and Louisiana to drive him away from the river bank, which they succeeded in doing. This morning the rebel General Hoke sent a verbal message to General Palmer, informing him that he had possession of the railroad, and command of the river, and demanding the surrender of the place. The general, I understand, declined to receive a verbal message, and the flag of truce returned.

I have here the Tacony, Louisiana, Commodore Barney, Lockwood, and Hetzel, and shall do all in my power to defeat the enemy.

Captain Smith directed me to write directly to you, sending him copies of my letters.

I have the honor to be, very respectfully, your obedient servant,

H. K. DAVENPORT,

Commander U. S. Navy, and Senior Officer present.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

P. S.—6 p. m. I have just received a letter from Captain Smith, directing me to send the Barney to him.

I learn that there has been heavy firing heard in the direction of Plymouth, yesterday evening.

P. S.—7th May, 1 p. m. Everything is quiet here to-day, but I learn that the enemy is in force between this place and Kingston. I have just received a despatch from you for Captain Smith, marked immediate. I will forward it by first conveyance.

Additional report of Commander H. K. Davenport.

UNITED STATES STEAMER HETZEL,
Off Newbern, North Carolina, May 7, 1864.

ADMIRAL: I have just received intelligence that Captain Smith has had an engagement with the ram. The Sassacus ran into her and was seriously injured; stern carried away and shot through boiler. The Bombshell recaptured. Our loss two killed (Mattabesett,) two (Sassacus,) and eighteen wounded on board the latter vessel. The ram returned to Plymouth, apparently uninjured. This is not official; I get it from the captain of the steamer just thence. General Palmer has just shown me a despatch from Captain Smith, which in a measure corroborates this.

In haste, I am, sir, very respectfully, your obedient servant,

H. K. DAVENPORT,
Commander United States Navy.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Report of Acting Volunteer Lieutenant J. M. Williams.

UNITED STATES STEAMER COMMODORE BARNEY,
Newbern, North Carolina, May —, 1864.

SIR: In obedience to your order of the 4th instant, I got under way and steamed down the river to Fort Thompson and shelled the woods, as directed by General Palmer. After shelling for one hour, signal was made from the shore to cease firing.

The amount of ammunition expended as follows:

9-inch shell, 83, charge 10 pounds.....	830 pounds powder.
100-pounder rifle shell, 19, charge 10 pounds..	190 " "

Total amount of powder expended..... 1,020 pounds.

I am, very respectfully, your obedient servant,

JAMES M. WILLIAMS,
Acting Volunteer Lieutenant, Commanding.

Commander H. K. DAVENPORT,
Senior Officer present.

Report of Commander Dove.

UNITED STATES NAVAL STATION,
Beaufort, N. C., May 8, 1864.

SIR: The news brought up by the Fahkee was communicated to Colonel Jourdan, commanding this district, and to Colonel Frankel, commanding Fort Macon, and has put us on the look-out seaward.

As an offset to it, I have the pleasure of enclosing Colonel Jourdan's note, by which you will see that the enemy have retired from before Newbern, and that communication will be opened with it to-morrow.

We have been keeping a good look-out here, picketing the approaches with boats every night, in Cove and Bogue sounds and towards Newport river, carrying out your instructions of May 2d.

The vessels now in port are the Glaucus, Monticello, Vicksburg, Maratanza and Emma.

Necessary repairs detain the Glaucus, Monticello and Emma, but the Maratanza and Vicksburg will leave to-day or to-morrow.

Very respectfully,

B. M. DOVE,
Commander.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Letter from Colonel Jourdan to Commander Dove.

SUB-DISTRICT HEADQUARTERS,
May 8, 1864.

COMMANDER: Your despatch this moment came to hand. I regret to learn that the enemy have succeeded in completing two such formidable vessels. I am very thankful to you for your kindness in so promptly sending me the information, and your offer to send despatches by one of your vessels; which is rendered unnecessary from the fact that I am pleased to inform you that the enemy has retired from before Newbern. Communication is opened with that place and men at work repairing the *little* damage done to railroad and telegraph. I think a train will be down to-morrow.

Very respectfully, your obedient servant,

J. JOURDAN,
Colonel Commanding.

SECOND ENGAGEMENT BETWEEN THE REBEL RAM ALBEMARLE AND
UNITED STATES GUNBOATS.

Telegram of Acting Rear-Admiral S. P. Lee.

[Telegram.]

FORT MONROE, May 12, 1864.

May 11, midnight.—General Butler has kindly furnished me with the following from Captain Smith to General Palmer:

“UNITED STATES STEAMER MATTABESETT,
“At anchor off Roanoke River, May 6, 1864.

“GENERAL: I have to inform you that I engaged the ram Albemarle yesterday, from 4.40 to 7.30 p. m., with all my force, and regret that our efforts to

DIAGRAM showing the position of the SASSACUS and ram ALBEMARLE at the time of collision.

capture him were not attended with success. Our shot had no perceptible effect upon her, close alongside. I drove her, however, into the mouth of Roanoke river somewhat damaged, I think, but with machinery not disabled. I captured the Bombshell with thirty-seven prisoners, officers and men. Have not as yet had any official return from the Sassacus, which has her in charge, and is anchored several miles below. Our loss in the large vessels is five killed and twenty-six wounded. I shall be able to hold possession of the sound against any force the rebels can organize at this point.

"I am, very respectfully, your obedient servant,

"MELANCTON SMITH,

"*Captain and Senior Naval Officer.*

"Brigadier General J. N. PALMER,

"*Commanding Land Forces in North Carolina.*"

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Complimentary letter of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

James River, May 14, 1864.

SIR: I transmit enclosed the report received last night from Captain Melancton Smith, senior officer present, of the gallant fight on the afternoon of the 5th instant, in Albemarle sound, between our wooden gunboats and the rebel iron-clad ram Albemarle, in which the latter was repulsed and her tender captured. I ask the special attention of the department to the signal bravery displayed by Captain Smith and the officers and men engaged with him in this remarkable action, which adds a brilliant page to the exploits of the navy.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Acting Rear-Admiral Lee's instructions to Captain Smith.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Va., April 23, 1864—1 p. m.

SIR: The Navy Department, by telegraphic despatch of this date, directs me to send you to assume command in the sounds of North Carolina, for the purpose of attacking, at all hazards, the rebel ram there, in the best manner to insure its destruction, by running it down with the double-enders, or in any other manner which my judgment or yours may suggest.

The Miami (Commander Renshaw) and the Tacony (Lieutenant Commander Truxton) are now in the sounds. The Sassacus (Lieutenant Commander Roe) was sent there last night. You will take the Mattabesett (Commander Febiger) and the Wyalusing (Lieutenant Commander Queen) with you, and leave with all practicable despatch, availing yourself of the present high tides to enter the sounds. I send with you two (2) officers who have served in the sounds, and whose local knowledge will be useful to you.

Enclose a copy of my instructions of the 21st instant to Commander Davenport for your information and guidance, unless you find occasion to vary them for a more promising plan of attack.

Attacking the ram will, to some extent, intimidate it, and by getting alongside of it, in or near contact, and on each side, holding position, and by firing at the centre of its ports, whether open or shut, and on its roof, you will disable and capture it. Your guns should have double breeching, and be loaded with heavy charges (say from fifteen (15) to eighteen (18) pounds of powder for the nine-inch guns) and solid shot, and they should so be depressed as to fire as near a perpendicular line to the slope of the roof as practicable. If all hands lie down when the guns are fired, they will escape the rebound of broken parts from the shot.

At the time of this attack if some shell were thrown down the rams smoke-stack, she might thus be disabled.

The advantage of getting alongside and of each side of her is, that you prevent her from ramming and have a controlling fire upon her roof and ports.

The ports and stern are her weak points. Even if her ports are kept closed, as in her attack on the Miami and Southfields bows, you can, if alongside of her, fire through them and into her; and if her roof is, as described, of railroad iron, with a thin plating over it, the mechanical difficulty of securing this is such that it will loosen and fly off under the concussion of your heavy fire, whilst the inside nuts and bolts will act like canister on her deck, and the concussion, especially if her ports are shut, will shock and demoralize her crew, giving you a complete victory. Besides, you may force her ashore, where the falling freshet in the Roanoke river will leave her.

Be sure and not have the neutral point of your wheel-houses opposite her ports. Your wheel-houses should be abaft or forward of her roof—better abaft.

The department seems to prefer ramming. This ram is reported to be of the usual Merrimack model; if so, heavy logging, and a knuckle ironed over, make her sides strong. But ramming under high speed may drive it in, or you may drive her ashore, or mount her ends, and (especially if in the sounds with some sea) sink her. Intrusted by the department with the performance of this signal service, I leave (with the expression of my views) to you the manner of executing it.

All assaults are exposed service; but this assault has, with much real risk, less than appears.

Wishing you success and promotion,

I have the honor to be, respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Captain M. SMITH,

United States Iron-clad Onondaga.

Report of Captain Melancton Smith, senior officer.

UNITED STATES STEAMER MATTABESETT,

At anchor, Albermarle Sound, off Roanoke River, May 5, 1864.

SIR: I would respectfully report that the ram Albemarle, steamer Cotton Plant, with troops, and the armed steamer Bombshell, laden with provisions and coal, came out of Roanoke river to-day at two o'clock p. m., and after being tolled ten miles down the sound by the picket force left to guard the entrance of the river, the Mattabesett, Wyalusing, Sassacus, and Whitehead got under way and stood up to engage them; the smaller boats falling into position in accordance with the enclosed programme.

The engagement commenced at 4.40 by the ram firing the first gun, which destroyed the Mattabesett's launch and wounded several men. The second shot cut away some of the standing and running rigging. At 4.45 the Bombshell surrendered to the Mattabesett, and was ordered to fall in our wake; at 4.50

fired a broadside into the ram at a distance of 150 yards; at 5.50 the *Sassacus* delivered her fire on passing, and then rammed his stern, pouring in a broadside at the same time. The *Sassacus* was seen soon afterwards enveloped with steam, when she hauled off, evidently disabled. The colors of the ram at this moment came down, and it was some time before it was ascertained whether he had surrendered, or they had been shot away. During the contact it was, of course, impossible for the other vessels to fire; but when the *Sassacus* became disengaged and resumed her firing, the engagement became general; the smaller vessels firing so rapidly that it was dangerous for the larger ones to approach; and they appeared also to be ignorant of all signals, as they answered without obeying them. The engagement continued until about 7.30, when it becoming dark, the *Commodore Hull* and *Ceres* were then sent ahead to keep the ram in sight and to remain on picket duty off the mouth of the Roanoke river, if he succeeded in entering it; the *Mattabesett*, *Wyalusing*, *Miami*, and *Whitehead* coming to anchor in the sound two miles and a half below. Eight torpedoes have been furnished by the army, and an attempt was made last night to place them in the mouth of the river; the entrance being watched, it was found impracticable. Another effort was made to-day at two o'clock p. m., when the ram was discovered two miles above on his way out. During the engagement a seine was laid out across the ram's bow, in obedience to orders, to try and foul his propeller, but he passed over it without injury. A torpedo was rigged out from the bow of the *Miami*, and she was ordered to go ahead and attempt to explode it, but from some cause, yet unexplained, it was not done. She ran up, however, sheered off and delivered her broadside, and continued to fire at him rapidly. The injuries sustained by the ram are thought to be considerable, but his motive power is evidently uninjured. His boats were knocked off from the decks and his stack riddled, and it is also believed that one of his guns was disabled. The ram is certainly very formidable. He is fast for that class of vessel, making from six to seven knots, turns quickly, and is armed with heavy guns, as is proved by the 100-pounder Brooks projectile that entered and lodged in the *Mattabesett*, and 100-pounder Whitworth shot received by the *Wyalusing*, while the shot fired at him were seen to strike fire upon the casemates and hull, flying upwards and falling in the water without having had any preceptible effect upon the vessel. I had tried the effect of ramming (as suggested by the department) in the case of the *Sassacus*, and was deterred from repeating the experiment by the injury she had sustained, and a signal from the *Wyalusing* that she was sinking, which, if the latter had been correct, (and I was not informed to the contrary until after the vessels came to anchor,) would have left too small a force of efficient vessels to keep the control of the sound, which I now hold, and shall be able to maintain against any rebel force that they will be able to organize at this point when present damages are repaired. I am convinced that side-wheel steamers cannot be laid alongside of the *Albemarle* without totally disabling their wheels, which is the reason for not adopting the suggestion contained in your order to me of the 23d instant. It is reported that the rebel barges with troops were at the mouth of the Croatan river ready to come out, and a steamer was seen in that direction, but in regard to the first I have no positive information.

I herewith enclose a list of casualties on board the several vessels engaged, and will forward the detailed reports of the expenditure of ammunition and damages they sustained so soon as they are received from the commanding officer. I also forward you a hurried sketch of the appearance of the ram.

I am, sir, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Senior Officer in the Sound.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Additional report of Captain M. Smith.

UNITED STATES STEAMER MATTABESSETT,
Off Roanoke River, May 5, 1864.

SIR: I should have embodied in my report the number of prisoners, arms, &c., captured in the Bombshell, but the Sassacus, who took her in charge after being herself disabled, is anchored some distance below, and has not communicated with me, and I have no available steamer to communicate with him. I am trying again to place torpedoes in the bend of the Roanoke river two miles and a half from the mouth.

I am, very respectfully, your obedient servant,

MELANCTON SMITH, *Captain.*

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

General Order as to plan of attack.

GENERAL ORDER.

UNITED STATES STEAMER MATTABESSETT,
Albemarle Sound, May 2, 1864.

The steamers will advance in the third order of steaming, the Miami leading the second line of steamers.

Miami,

Ceres,

Commodore Hull,

Seymour,

Mattabesett,

Sassacus,

Wyalusing,

Whitehead.

The proposed plan of attack will be for the large vessels to pass as close as possible to the ram, without endangering their wheels, delivering their fire and rounding to immediately for a second discharge.

The steamer Miami will attack the ram and endeavor to explode her torpedo at any moment she may have the advantage, or a favorable opportunity. Specific orders cannot be given for the attack, as the manœuvring of the ram cannot be anticipated, and the only order considered necessary is to sink, destroy or capture by some or all methods here suggested. The stern of the ram is to be fired at by any of the vessels having a heavy gun, taking care not to fire when any of our own vessels are in range. The propeller is to be fouled if possible by lines from the stems of our vessels, or with the fish-net as heretofore proposed.

The stack of the ram is supposed to be capped, rendering it impossible to throw powder or shell down, but all vessels having hose should be prepared to lead them up under the cap in the event of getting alongside. The stern and ports are probably the most vulnerable points, and should be assailed by every vessel having an opportunity to fire into them. A blow from the ram must be received, if possible, on the bow, and as near the stem as our steering will permit; and if the prod should enter a vessel in that manner, open wide and go ahead to prevent her withdrawing it, when the other vessels will attack the propeller.

Should the thirty armed launches accompany the ram, the small steamers will run them down, using their howitzers with shrapnell on approaching, and hand-grenades when near. Small grapnels should be in readiness to throw at the stack and secure our vessels alongside when other experiments have failed. Ramming may be resorted to, but the peculiar construction of the stems of the

double-enders will render this a matter of serious consideration with their commanders, who will be at liberty to use their judgment as to the propriety of this course when a chance shall present itself.

M. SMITH,
Senior Officer.

Casualties on board the Sassacus.

UNITED STATES STEAMER SASSACUS,
May 6, 1864.

SIR: I have the honor to submit the following report of casualties arising on board this ship from the engagement of the 5th instant.

James M. Hobby, 1st assistant engineer, scalded severely; G. H. Doyle, 1st class fireman, ditto; Thomas Welch, 1st class fireman, scalded, perhaps fatally; James Tillot, 1st class fireman, William Sutherland, 1st class fireman, Edward Kelly, 2d class fireman, and Joseph Murray, 2d class fireman, scalded and wounded, perhaps fatally; O. H. Merrell, 2d class fireman, scalded very severely; Charles White, 2d class fireman, scalded very severely; Thomas Johnson, 2d coal-heaver, killed; John English, coal-heaver, M. Sullivan, coal-heaver, and E. Sullivan, coal-heaver, scalded; E. H. Mayer, ensign, and E. Sawyer, ensign, contusion, not severe; E. Clayton, ordinary seaman, and John Lang, captain after guard, wounded severely; Wm. McKay, carpenter's mate, and Geo. Simms, captain's steward, wounded, not seriously; and T. W. Smith, seaman, scalded.

Respectfully, your obedient servant,

EDGAR HOLDEN,
Assistant Surgeon U. S. N.

Lieut. Com. F. A. ROE,
Commanding.

Casualties on board the Mattabesett.

UNITED STATES STEAMER MATTABESETT,
Albemarle Sound, N. C., May 5, 1864.

SIR: I would most respectfully report the following casualties on board this ship during the action with the rebel ram to-day:

Killed.—Ralph E. Lake, 1st class fireman, and William H. Dewitt, 1st class boy.

Wounded.—James L. Plunkett, acting master, contusion of right thigh; Daniel Lamon, captain fore-castle, lacerated wound of scalp; James Mulvehill, ordinary seaman, contused wound of back and left elbow; Greenburg T. Smith, landsman, contused wound of left shoulder; Charles F. Moeller, 1st class boy, wound of right knee and ecchymosis of left eye-brow and lid; John B. Jewett, landsman, punctured wound of right fore-arm.

Very respectfully, &c.,

SAMUEL P. BOYER,
Acting Assistant Surgeon U. S. N.

Commander JOHN C. FEBIGER, U. S. N.

Casualties on board the Wyalusing.

UNITED STATES STEAMER WYALUSING,
Off Roanoke River, May 5, 1864.

SIR: I regret to report the death of John A. Oliver, landsman, by being struck on the right side of the head, on the temporal bone near the suture, by a fragment of iron shot away from off one of the starboard smoke-stack guys, forward, penetrating his skull into the brain. He was killed at the 9-inch gun forward.

Respectfully, your obedient servant,

CHARLES W. SARTORI, U. S. N.

Lieutenant Commander W. W. QUEEN,

Commanding U. S. Steamer Wyalusing, off Roanoke River, N. C.

Report of Commander John C. Febiger.

UNITED STATES STEAMER MATTABESSETT,
Albemarle Sound, N. C., May 6, 1864.

SIR: I have the honor to submit the following report of the part taken by this vessel yesterday in the engagement with the rebel ram Albemarle. At 3 p. m., discovering the picket boats stationed off the mouth of the Roanoke river to be falling back, as ordered when the ram appeared, we made general signal to get under way. At 3.10 got under way and stood up the sound, with the Sassacus, Wyalusing and Whitehead following in first order of steaming. At 3.45 made signal, "ram is out;" the Miami, Commodore Hull, and Ceres falling into position as we came up on port quarter, thus forming the third order, as directed. At 4.20 Miami made signal, "the enemy is retreating," the ram and gunboat being observed to have their heads pointing towards the entrance of Roanoke river, distance about ten (10) miles. At 4.40, when abaft the ram's beam, she fired two shots, one of which cut away both rails of launch and spar across davits, scattering splinters and wounding Acting Master Plunkett very slightly, two men severely and three slightly, all belonging to forward rifle gun. Noticing immediately after the firing an evident intention on the part of the ram to run into us, the helm was ordered to starboard, sheering to port, thus causing us to pass at a greater distance than was our intention. At 4.45, when a little abaft the ram's beam, at between one hundred (100) and one hundred and fifty (150) yards distance, fired our starboard rifles and (9) nine-inch guns with solid shot, passing ahead, and when nearly abeam of the Bombshell firing the starboard howitzers and forward rifles at her. She immediately hauling down her colors and showing a white flag, orders were at once given to stop firing on her, and the howitzer's crew were sent to assist the crews of the two rifle guns. Passing ahead, the helm was put to port with the intention of running close along the starboard side of the enemy; but the smaller vessel not keeping position or following our lead, we were soon compelled to stop the engine, being within their line of fire. Our vessels at this time were on both sides of the Albemarle, this vessel, the Wyalusing, and Sassacus being the only ones that had then rounded her bows, we being on her quarter, Sassacus abeam, and Wyalusing on starboard bow, all having stopped their engines. At 5.05 the Sassacus ran down bows on, striking the Albemarle on starboard quarter. After remaining in contact some few minutes she disengaged herself, and soon afterwards was seen to be enveloped in steam; at this time the colors of the Albemarle were either shot away or hauled down, and were not hoisted again during the action. As her fire had ceased, we were under the impression that she had surrendered, until, soon

after the *Sassacus* had got clear, she was observed to resume it; this vessel and others immediately doing the same. The squadron still remaining out of position and endangering each other by their fire, our attention was turned to getting them into line. At 5.20 we made signal to *Miami* "to pass within hail;" (she was soon after hailed and ordered to go ahead and try her torpedo.) At 5.30 made general signal to keep in line, and at 5.45 repeated the signal. At 5.55 made signal to *Wyalusing* "to cease firing," she being still on *ram's* starboard bow; the remainder of the vessels (with the exception of the *Sassacus*, which had hauled off) were taking position on port quarter of the enemy. At 6.05 made general signal to keep close order. At 6.45 made signal to *Wyalusing* to cease firing, she at the time coming round to take position. Soon after hailing her with an order to go ahead of the line and pass close to *Albemarle*, in reply she reported herself sinking, and at 6.55 made signal "sinking;" but still going ahead, finally took her position. Finding that the line was gradually edging off, we steamed ahead inside, delivering our fire as rapidly as possible when on the quarter and abeam of the enemy, and after having passed ahead attempted to lay our seine in her course for the purpose of fouling her propellers, but, unfortunately, it was torn and lost before getting into the desired position. We then rounded the vessel to port, working the port battery; when nearly abeam of the enemy we received a six-inch rifle shot, which entered on the port side below wheel-house guards and abaft wheel, passing through water-ways, combings of engine-room hatch, wounding a first-class fireman and boy so severely that they died soon afterwards, and bringing up in small arm locker. This shot is preserved on board, and is marked with the name of John M. Brooke. At 7.30, growing quite dark, ceased firing, and at 8 made private signal to anchor, coming into line abreast, heading to southward.

I am happy to state that the conduct of our crew, officers, and men was all and more than could be reasonably expected from the imperfect state of organization, having had but few opportunities for exercise and drill since our hurried departure from New York. The firing was remarkably good under the circumstances, but the shot seemed to have but little effect upon the enemy.

Our pilot, Mr. Tooker, deserves mention for coolness and attention to his duties during our constant manœuvrings.

Enclosed are returns of gunner's expenditures and report of injuries. The surgeon's report I have already had the honor to submit.

Very respectfully, your obedient servant,

JOHN C. FEBIGER,
Commander.

Captain MELANCTON SMITH,
Commanding Officer of Albemarle Sound, N. C.

Ammunition expended on board the Mattabesett.

IN GUNNER'S DEPARTMENT.

Nineteen 13 pound charges, IX-inch.

Four 10-pound charges, IX-inch.

Twenty-seven 10-pound charges, 100-pounder Parrott.

Sixty primers.

Nineteen grommet wads.

Four junk wads.

Three breechings.

Two lock strings.

One 2-pound charge, 24-pounder howitzer.

One 1-pound charge, 12 pounder rifle.
 Twenty-seven solid shot, 100-pounder Parrott.
 Twenty-three solid shot, 9-inch.
 One shrapnell, 24-pounder howitzer.
 One Dahlgren shell, 12-pounder howitzer.
 One thumb-screw.
 Eight muskets and eight sabre bayonets, with scabbards.
 Respectfully submitted.

A. N. MITCHELL,
Lieutenant and Executive Officer.

*Report of damages of the United States steamer Mattabesett in the action of
 May 5, 1864.*

CARPENTER'S DEPARTMENT.

Rail of launch stove in, and davit spar carried away; shot through waterways, just abaft port wheel; passed on through combing of engine-room hatch, carrying away the two after stanchions of hand-rail around crank-room, then through starboard combing, and carried away two sections of engine-room bulkheads and one section of gallery bulkhead; also carried away deck bell-pulls and second locker of armory on starboard side; forward stanchion of hurricane deck on port side carried away by No. 1 9-inch broadside.

BOATSWAIN'S DEPARTMENT.

Square-sail buntlines.
 Both vang of main gaff.
 Starboard main boom topping lift.
 Peak halyards stranded.
 Port main-topmast stay and main-topmast back stay.
 One seine.
 All shrouds starboard main lower rigging stranded, and forward shroud of starboard fore lower rigging ditto; also one ratline carried away by same shot.
 Respectfully submitted.

A. N. MITCHELL,
Lieutenant and Executive Officer.

Respectfully forwarded.

MELANCTON SMITH.

Respectfully referred to the consideration of the department. Commander Febiger seems to have handled his vessel well, and, with his officers and men, to deserve much credit for gallant conduct.

S. P. LEE,
Acting Rear-Admiral.

Report of Lieutenant Commander F. A. Roe.

UNITED STATES STEAMER SASSACUS,
Albemarle Sound, North Carolina, May 6, 1864.

SIR: I respectfully report on the action of this vessel with the rebel iron-clad Albemarle and gunboat Bombshell at the head of Albemarle sound, on the afternoon of the 5th instant, in company with the squadron under your command.

Steaming up the sound about 4 p. m. yesterday, the *Sassacus* occupied the station next astern the *Mattabesett*, and the *Wyalusing* following, when we made out the ram, accompanied by the *Bombshell* and another steamer, coming down, driving the *Miami* and picket boats before them. Following your lead in the *Mattabesett*, I headed up the pass on the starboard side of the ram, and when nearly abreast of her starboard beam the *Sassacus* delivered her broadside. In this time the ram sheered with her port helm for the purpose of ramming, but our superior speed foiled her in this attempt, and the *Sassacus* passed around her stern with a hard port helm. Off the port quarter of the ram lay the *Bombshell*, which had opened fire simultaneous with the ram, with rifle guns, which had annoyed me a good deal. I gave her the starboard battery, each shot hulling her, when she displayed white flags and signals of surrender. Passing up to close hail of her, I demanded of her if she had surrendered. They said they had, and the rebel flag was hauled down, and I ordered her to drop down out of the way and anchor; this was done.

As the *Mattabesett* had passed around the stern of the ram, and was heading down the sound again, the ram had turned partially round with a port helm, and now lay broadside to me. As the *Sassacus* had been drawn off some little distance by her operations and capture of the *Bombshell*, she had a good distance to get headway, and seeing the favorable moment before me, I ordered full steam and open throttle, and laid the ships fair for the broadside of the ram to run her down. The *Sassacus* struck her fairly just abaft her starboard beam in the position of the rear of the house or casemate, with a speed of nine to ten knots, making twenty-two revolutions with thirty pounds steam. As I struck, she sent a 100-pounder rifle shot through and through from starboard bow to port side, on the berth deck.

The collision was pretty heavy, and the ram careened a good deal—so much so, that the water washed over her deck forward and aft the casemate. At one time I thought she was going down; I kept the engine going, pushing, as I hoped, deeper and deeper into her, and also hoping it might be possible for some one of the boats to get up on the opposite side of me, and perhaps enable us to sink her, or at least to get well on to him on all sides; I retained this position full ten minutes, throwing grenades down her deck hatch, and trying in vain to get powder into her smoke-stack, and receiving volleys of musketry, when the stern of the ram began to go round, and her broadside port bearing on our starboard bow, when the ram fired and sent a 100-pounder Brooks rifle shot through the starboard side on the berth deck, passing through the empty bunkers into the starboard boiler, clean through it fore and aft, and finally lodging in the ward-room. In a moment the steam filled every portion of the ship, from the hurricane deck to the fire-rooms, killing some, stifling some, and rendering all movement for a time impossible. When the steam cleared away so I could look around me, I saw my antagonist was away from me, and steaming off. In the mean time the engine was going, as no one could do anything below; some sixteen men being scalded. I then put the helm hard a-port, headed up the sound, and around to the land, in order to clear the field for the other boats. Soon as the steam cleared up and the effect of the explosion over, the officers and men immediately went to the guns, and kept them going upon the enemy until we drifted out of range. I tried to ricochet several nine-inch shot, so that she might be struck on her bottom by the upward bound of the shot, but I had the mortification to see every shot strike the water inside of her, and rise on the opposite side of her. While alongside of her, and almost simultaneous with the fatal shot of the enemy, Acting Ensign Mayer sent a 100-pounder solid shot at her port, which broke into fragments, one of which rebounded and fell on our deck, as did also some fragments of grenades. While thus together, I fired three separate shots into one of her ports; we clearly observed the muzzles of two of his guns broken very badly. After the separation of the two vessels,

the *Sassacus* was headed finally down the sound, and continued to move very slowly, working on a vacuum, and finally stopped, when I dropped anchor. In the mean time the *Mattabesett* and *Wyalusing* gallantly went in, and the fight was nobly maintained by those vessels.

While I regret the unfortunate accident which drifted the *Sassacus* out of action, I cannot but hope and believe that her struggle with the iron-clad ram at such close quarters, and the act of running her down, were productive of great good. If we ever hear from the shots delivered when alongside of the ram, it will be consoling to us, as I am convinced they did some execution in the port. Yet I am forced to think that the *Albemarle* is more formidable than the *Merrimack* or *Atlantic*, for our solid 100-pounder rifle shot flew into splinters upon her iron plates. I have to report that the signal-books of this vessel were thrown overboard and sunk at the time the boiler was struck and the ship enveloped in suffocating steam. It was appalling for a few moments, and the devotion with which the officers and men of the *Sassacus* stuck to and worked the guns fills me with professional pride. After anchoring, I sent the army steam tug to bring the gunboat *Bombshell*, which had surrendered to us, before we struck the ram under our guns. I then put a prize crew aboard, pumped her out, started her fires, and got up steam on her. She is now ready to move. I took her prisoners from the *Ceres*, where they had been temporarily placed. The injuries to the *Sassacus* will be found in the report of officers of different departments, which I herewith enclose, as also the surgeon's report of scalded and wounded. I would respectfully report the *Sassacus* as disabled for active operations until she can be repaired, and would request a survey upon her when it is convenient to grant it. In this unequal conflict of the wooden gunboats against an iron-clad, it gives me special pleasure to speak of the gallant and devoted bearing of officers and men. The maintenance of the fight with their guns after the frightful disaster of the boiler, was worthy of the proudest day of our naval history. The divisional officers were cool, and I must note that Acting Ensign Mayer, at the forward rifle, 100-pounder, when loading and firing almost muzzle to muzzle with the enemy's gun, was beautiful in his cool courage. I take great pleasure in testifying to the fine conduct of Acting Masters A. W. Muldaur and C. A. Boutelle. These officers were as cool and fearless as if at a general exercise. I respectfully recommend each for promotion to the grade of lieutenant, deserved for good behavior and ability before the enemy in battle. I also respectfully recommend Acting Master's Mate O'Hara for examination for promotion to the grade of ensign. Acting Assistant Paymaster G. De F. Barton acted as aid and signal officer to me, and I take pleasure in acknowledging his coolness and attention to duty while under a hot fire, where he voluntarily placed himself.

To the heroism and devotion of First Assistant Engineer J. M. Hobby the government is probably indebted for the preservation of the *Sassacus* from a worse disaster. While every one who could was forced to seek safety by flight from the scalding clouds of steam, Mr. Hobby stood at his post by the machinery, and though fearfully scalded himself, he cared for his machinery until the engine finally stopped. If it were possible to promote this officer, I earnestly and devoutly beg it may be done, for I consider that it has been amply and professionally won.

I am, sir, very respectfully, your obedient servant,

F. A. ROE,

Lieutenant Commander.

Captain M. SMITH,

Com'dg Naval Forces in Sounds of North Carolina.

Report of First Assistant Engineer J. M. Hobby.

UNITED STATES STEAMER SASSACUS,
Albemarle Sound, North Carolina, May 5, 1864.

SIR: I respectfully report the following damage sustained by the machinery of this ship during the engagement with the rebel ram Roanoke on the fifth instant:

At 6 p. m. a six-inch rifled solid shot came through the starboard side of the ship about five feet above the berth deck; it passed through the forward bunker into the starboard boiler, seven feet from the front and fourteen inches from the top, cutting T-iron braces and dry pipe; thence through the after end of the boiler, cutting away Wordworth pump, steam and exhaust pipes, through engine-room; cutting a stanchion, thermometer, and exhaust unhooking gear between main cylinder and condenser; thence through bulkhead into the ward-room. The starboard wheel is badly knocked out of shape by coming in contact with the ram's stem as we passed her. The escape of steam was so great as to reduce the pressure in the boiler to nothing almost instantaneously. The steam so filled the engine and fire rooms that it was with the greatest exertions on the part of the engineers that the fires were hauled. The division of firemen were all scalded and one instantly killed.

We will be able to finish the repairs by to-morrow sufficiently well as to steam under one boiler.

I am, very respectfully, your obedient servant.

J. M. HOBBY,
First Assistant Engineer, in charge.

Lieutenant Commander F. A. ROE,
Com'dg U. S. Steamer Sassacus.

[Indorsement.]

AGAWAM, May 16, 1864.

The attention of the Navy Department is respectfully called to the gallant conduct of Lieutenant Commander Roe, and that of the officers whom he recommends for promotion.

S. P. LEE,
Acting Rear-Admiral.

Report of Lieutenant Commander W. W. Queen.

UNITED STATES STEAMER WYALUSING,
Albemarle Sound, off Roanoke River, May 6, 1864.

SIR: In obedience to your signal, at 3 o'clock p. m. of 5th we immediately got under way, taking our station in line astern of the Sassacus, the Mattabesett leading, and stood up the sound in close order.

Signals were made by you soon afterwards that the ram was out; we also discovered at the same time that our picket boats were falling back, pursued by the ram and two steamers in company. We immediately beat to quarters, (at 27 minutes past 4 o'clock;) being in close range, about 500 yards, we opened fire, simultaneously with the Mattabesett and Sassacus, passing the ram at the distance of 150 yards, firing rapidly. In rounding the ram we came in contact with one of her consorts. It was my intention to run her down, but discovered in time she had surrendered; we immediately backed clear of her, and again attacked the ram, which had been in contact with the Sassacus, who

had run into her. As she cleared from the *Sassacus*, in firing from our vessel we cut her signal halyards; she hauled down the flag, and I supposed she had surrendered, as she did not hoist it again during the action, but was soon convinced to the contrary.

At 5.30, flag-ship made general signal to keep close in line; at 5.45 repeated the signal; at 5.55 made signal to this ship to cease firing. At this time we were passing around the ram to form again into line, which had been interrupted by the second division, who were firing at long range and over this ship. At 6.05 resumed our position in close order, by signal from the flag-ship. At 6.45, having again passed around the ram, signals were made to cease firing. At this time a report was made to me by the executive officer and third assistant engineer, J. J. Donohoe, who was stationed at the bell, that the ship was sinking. I immediately signalized it, and sent an order to chief engineer to start all the pumps. He informed me that it was not necessary, as the ship was not making more water than usual.

I was hailed from the flag-ship, but could not understand what was said. I made again for the ram, and followed her up closely, passing around her and firing as often as possible at her, the distance varying from one hundred yards and upwards. Near the close of the action one of the pieces of the forward port-side plating of the ram was seen to fly off, from the effects of one of our shot. At 7.30 signal was made to cease firing, and by private signal we anchored at 8 o'clock.

We received the following damages: One shell exploded in the starboard wheel-house, cutting away two of the outer rims of the starboard wheel and blowing off a portion of the top part of the wheel-house; passing through the aft pilot-house, damaging the steering wheel, breaking the compass, tearing off a portion of the plating, and passing through and through the mainmast about thirty feet above deck; also through the hurricane deck into the starboard bath-room, and chipping a piece off of the top of the aft howitzer mounted on the hurricane deck. The second shot passed between the bottom of the gig and the rail, knocking off all her under planking, carrying away the starboard smokestack guy, killing one of the men at the IX-inch gun, tearing away the stanchion supporting the hurricane deck amidships, then through the engineer's storeroom on the port guard forehead. The third shot came in on the starboard side of the berth deck, near the dispensary, tearing away ladder, bulkhead; through the port coal-bunkers, passing out in the port side a few feet forward of the boiler. The fourth shot came in on the starboard quarter about three feet above the water line, passing through the cabin, destroying mirror, chairs, furniture, &c., &c., bulkhead, companion-way, pantries; striking against a knee in the aft room, on the port side of wardroom, glancing upwards, tearing up the deck plankings, starting the water-ways, and breaking away two of the starts for the breechings, landing on deck; this proved to be a 100-pound Whitworth solid rifle shot. The fifth passed over the quarter deck in a parallel line with the pivot gun, passing through one of the port shutters. Pieces of exploded shell cut away one of the shrouds of the main rigging; also the brails, passing through the mainsail.

The officers and crew fought bravely, and have merited my highest thanks for the manner in which they handled their several batteries. Too much praise cannot be bestowed upon them.

My executive officer, Acting Master William R. Hathway, who is one of the oldest appointments in this grade, I strongly recommend for promotion. The surgeon and paymaster rendered me very important aid in the supply of ammunition and in making themselves generally useful. The chief engineer, H. H. Stewart, handled the machinery in a most able manner. I am also indebted to my clerk, George H. White, jr., who acted as my aid, for the efficient manner in which he carried out my orders.

Expended the following ammunition :

75 10-pound charges, 100-pounder rifle.

47 solid shot, 100-pounder rifle.

20 5" shell, 100-pounder rifle.

8 percussion shell, 100-pounder rifle.

40 13-pound charges, IX-inch gun.

30 10-pound charges, IX-inch gun.

37 solid shot, IX-inch gun.

33 5" shell, IX-inch gun.

18 shell, 24-pounder howitzer.

27 shrapnell, 24-pounder howitzer.

210 primers.

I enclose you the surgeon and chief engineer's report.

I have the honor to be, very respectfully, your obedient servant,

W. W. QUEEN,

Lieutenant Commander, Commanding.

Captain M. SMITH, U. S. N.,

Commanding Officer in the Sounds of North Carolina.

[Indorsement.]

AGAWAM, May 16, 1864.

Lieutenant Commander Queen, his officers, and men appear to have done well their part in this gallant action.

S. P. LEE,

Acting Rear-Admiral.

Report of Chief Engineer H. H. Stewart.

UNITED STATES STEAMER WYALUSING,

Albemarle Sound, May 6, 1864.

SIR: I have carefully examined the engines, boilers, and dependencies of this vessel, and, agreeably to your request, have the honor to report that the following is the amount of damage sustained during the late action :

Two of the outer rims in the starboard wheel were fractured, and a portion of the top of the wheel-house blown off; one of the smoke-pipe guys was cut off; one of the bell-wires also gave way during the engagement, but has been repaired.

I am yours, respectfully,

H. H. STEWART,

Chief Engineer, United States Navy.

Lieutenant Commander W. W. QUEEN, U. S. N.,

Commanding.

Report of Acting Master Francis Josselyn.

UNITED STATES STEAMER COMMODORE HULL,

Off Roanoke River, N. C., May 6, 1864.

SIR: I have the honor to report the part taken by this vessel in the action of the 5th instant with the rebel ram.

I first sighted the ram at half past one o'clock p. m. coming out of the river in company with two steamers, distant about two miles. In accordance with previous instructions, I retreated slowly down the sound, keeping out of range of her guns until the flag-ship came up, when I fell into line astern of the Miami. About five o'clock I fired several shots from my pivot guns at the ram, striking it once or twice.

At half past six I engaged the ram at close quarters, firing shell from my pivot and broadside guns, many of which struck the vessel, effectually preventing the opening of her ports. As I steamed ahead, in passing the ram's bow I paid out a large seine for the purpose of fouling his propeller, but, though encompassing the ram, it did not have the desired effect.

I ceased firing when it became too dark to distinguish the enemy. I cannot speak too highly of the conduct of my officers and crew, many of the latter being for the first time under fire. This vessel was not struck, and I have no casualties to report.

Enclosed is a list of ammunition expended.

I am, respectfully, your obedient servant,

FRANCIS JOSSELYN,
Acting Master, Commanding.

Captain MELANCTON SMITH, U. S. N.,
Senior Officer, Sounds of North Carolina.

Additional report of Acting Master F. Josselyn.

UNITED STATES STEAMER COMMODORE HULL,
Off Roanoke River, N. C., May 6, 1864.

Report of ammunition expended during engagement of May 5:

30-pounder Parrott shell, sixty, (60.)

24-pounder howitzer shell, twenty-one, (21.)

Respectfully submitted.

F. JOSSELYN,
Acting Master, Commanding.

Captain MELANCTON SMITH, U. S. N.,
Senior Officer, Sounds of North Carolina.

Report of Acting Volunteer Lieutenant Charles A. French.

UNITED STATES STEAMER MIAMI,
Off Mouth of Roanoke River, N. C., May 6, 1864.

SIR: I have the honor to submit the following report of the engagement with the rebel iron-clad ram Albemarle and Bombshell. Yesterday at 1 p. m. I got under way, in company with the Commodore Hull, Ceres, and army transport Trumpeter, and proceeded from our picket station, off Edenton bay, across to the mouth of the Roanoke for the purpose of putting down torpedoes. When within a short distance of the buoy at the mouth of the river, the rebel ram Albemarle was discovered coming down the river, accompanied by the Cotton Plant and Bombshell, the last two steamers laden with troops. I immediately despatched the Trumpeter to give you the earliest notice of their appearance. The vessels under my command were ordered to steam in line slowly down the sound at such a distance that the enemy's movements could be watched. We dropped down to Bluff Point, the enemy following us determinedly. As soon as you came up, I steamed ahead, ready to follow your movements and engage the enemy. At twenty minutes to five I opened fire

with solid shot, and continued firing rapidly with good range. The ram was struck by us at almost our first fire, and I have to report, throughout the action, excellent firing by both divisions of this ship. I saw the *Sassacus* running into the ram, and immediately headed for them both, with the intention of exploding under the ram the torpedo rigged on my bow; before I could get to her, however, the *Sassacus* became disabled and dropped down from her. The ram had changed her course, and I could not work to advantage on account of the fire of our own vessels. I still kept up a fire when it could be done without exposing the other vessels of our fleet. After we had been firing about an hour you ordered me to run up to the ram and use the torpedo. I steamed ahead, still keeping up a rapid fire, until we got within the ship's length of her. I used every endeavor to get at her bows on, but the *Miami*, proving herself so unwieldy, and so very bad to steer, the enemy (who was probably well aware of our purpose) succeeded in keeping clear of us by going ahead and backing and turning. We did not cease our fire, however, all this time. The enemy struck us three or four times while within this chase range; one shot, which passed through the after part of the cabin, came very near disabling our rudder. I dropped down from her, and reported to you the reason why I could not get my torpedo to work. You then ordered me to follow the *Wyalusing* in order. I did so, keeping up a fire which I believe was more effective than at any previous time, as I am confident one of our shot struck the upper part of her port while open, if it did not pass into her interior. Owing to the danger of getting aground, and the fact of the ship handling so badly, I deemed my fire more effectual at close range to be on one side of her, than to attempt to pass clear around her. For more than ten minutes we poured solid shot upon her as rapidly as we could fire; I then dropped astern to give the vessels coming up an opportunity to pass and engage her. It was then growing dark; the ram steamed up to the Roanoke river, and the firing soon ceased on both sides.

The officers and men of this ship behaved with great coolness, and did their whole duty.

Enclosed you will please find carpenter's and gunner's reports. Casualties, none.

Very respectfully, your obedient servant,

CHARLES A. FRENCH,

Acting Volunteer Lieutenant, Commanding.

Captain M. SMITH, U. S. N.,

Senior Naval Officer, Sounds, North Carolina.

Report of Acting Master Wm. N. Welles.

UNITED STATES STEAMER GUNBOAT MIAMI, May 6, 1864.

SIR: I have the honor to submit the following report of ammunition expended on the 5th instant in the action with the iron-clad ram *Albemarle* in the *Albemarle* sound.

Seventy-six (76) 13-lb. IX-inch cartridges.

Seventy-six (76) solid IX-inch shot.

Forty-one (41) 10-lb. 6-inch cartridges; 100-pounder rifle.

Forty-one (41) solid 6-inch shot, (chilled ends,) 4 long and 37 short.

Seventy-six (76) selva wads.

One hundred and fifty (150) percussion primers.

I am, very respectfully, your obedient servant,

WM. N. WELLES,

Acting Master and Executive Officer.

Acting Vol. Lieut. CHARLES A. FRENCH,

Commanding U. S. Steamer Miami.

Report of Henry S. Buckley, carpenter's mate.

UNITED STATES STEAMER MIAMI,

May 6, 1864.

SIR: I respectfully submit the following report of damages received by this vessel in hull, &c., during the engagement with the rebel ram Roanoke, in Albemarle sound, on the afternoon of 5th instant:

One shot struck smokestack and passed through, scattering fragments over quarter deck; one struck starboard wheel-house, and carried away hand-rail, passing through port quarter boat, tearing away her planking; one shell struck under the starboard counter, passed through, cutting away hang knee under after beam, and bursting in tiller-room, cutting through solid work of after pivot boss, and carrying away two-thirds of second after beam and hang knee on port side, starting two outside planks, and started the decks up under pivot gun, and knocked down the cabin bulkhead, making a total wreck of the tiller-room. The ship is very much shaken from the effects of the rapid firing, making about five inches of water per hour. Several shot and shell passed over our top gear, but did little damage, save cutting away smokestack guys.

During the engagement off Plymouth with the same vessel, the ram ran under our port bow, and scarred the planking for several feet within fourteen inches of the water. A shell from gun No. 3 struck the ram, rebounded and exploded, cutting away port forward boat davit, and fragments passing through deck forward of boiler and starboard waist, and cutting away port smokestack guys, and passing through smokestack.

I have the honor to be your obedient servant,

HENRY S. BUCKLEY,

Carpenter's Mate.

Acting Vol. Lieut. C. A. FRENCH,

*Commanding U. S. Steamer Miami.**Report of Acting Master H. H. Foster.*

UNITED STATES STEAMER CERES,

Albemarle Sound, May 6, 1864.

SIR: I have the honor to report that during the engagement yesterday with the rebel ram, this vessel received no damage, neither were there any casualties.

Very respectfully, your obedient servant,

H. H. FOSTER,

Acting Master, Commanding.

Captain MELANCTON SMITH, U. S. N.,

*Senior Naval Officer, Sounds of North Carolina.**Report of Acting Ensign G. W. Barrett.*

UNITED STATES STEAMER WHITEHEAD,

Off Roanoke River, N. C., May 6, 1864.

SIR: I have the honor to report to you the part taken by this vessel during the engagement of yesterday (5th) with the rebel iron-clad ram Albemarle and gunboat Bombshell.

In obedience to a general signal made by the flag-ship Mattabesett, I weighed anchor at 3.30 and proceeded up the Albemarle sound, following the United States steamer Wyalusing. The rebel ram, accompanied by two steamers, was soon discovered apparently steaming towards us. Went to quarters immediately and prepared for action. At 4.30 the action became general between the leading vessels, Mattabesett, Sassacus, and Wyalusing, and the ram Albemarle.

Owing to the superior rate of speed of the above-named vessels, I was unable to bring my vessel into action until after the rebel steamer Bombshell had surrendered. The rebel steamer Cotton Plant, with a number of launches in tow, having succeeded in making her escape, my attention was then directed to the ram, upon which I opened fire with the 100-pounder rifle, using solid shot first at a distance of 1,000 yards, but it was soon lessened to 400 yards.

The ram, meanwhile, commenced to retreat towards Roanoke river.

Being ordered by you to take my position astern of the United States steamer Miami, and follow up the attack closely, I immediately took the position assigned, but finding that I could not use the 100-pounder rifle effectively, I steamed ahead of the Miami and on a course parallel to that which the rebel steamer was making, until I approached within two hundred yards of her. At this distance we succeeded in making some excellent shots, the projectiles used being solid chilled-end shot, which must have made a serious impression on the iron armor of the ram, as I judged from the appearance of the plating on her when viewed through a glass.

Keeping the ram on my starboard beam, I ran ahead of and across her bows, making a circuit about her.

Notwithstanding the heavy fire which was concentrated on the rebel iron-clad by our vessels, she succeeded, under the cover of approaching darkness, to make good her escape up the Roanoke river. Having ceased firing at 7.30 p. m. we came to anchor off the mouth of the river at 8 with the fleet. I have no casualties to report. Ammunition expended, 17 solid shot, rifle 100-pounder, and 170 pounds common powder.

Very respectfully, your obedient servant,

G. W. BARRETT,
Acting Ensign, Commanding.

Captain MELANCTON SMITH,
Senior Naval Officer, Sounds of N. C.

Additional report of Lieutenant Commander F. A. Roe.

UNITED STATES STEAMER SASSACUS,
James River, June 24, 1864.

SIR: I respectfully request that the enclosed communication may be appended to my report of May 6, on the engagement with the iron-clad Albemarle.

This paper is a duplicate of one sent to Captain Smith at the time of its date, and I furnish it under the apprehension that the original may not have reached you.

I am, sir, very respectfully, your obedient servant,

F. A. ROE,
Lieutenant Commander.

Admiral S. P. LEE,
Com'dg N. A. B. Squadron, James River, Va.

Additional report of Lieutenant Commander F. A. Roe.

UNITED STATES STEAMER SASSACUS,
Albemarle Sound, N. C., May 7, 1864.

SIR: My attention being called by you to that portion of my report of the *Sassacus*, in the engagement of the 5th instant., in relation to the capture of the *Bombshell*, it will be observed that the *Sassacus* was second in line astern of the *Mattabesett*, and was totally ignorant of what the latter vessel had done.

The *Sassacus*, seeing the *Bombshell* approach her as she was coming around to attack the ram, ordered her to surrender, and go below and anchor, which was done.

I merely narrated the facts which occurred in this vessel, and the *Mattabesett* may have done precisely what the *Sassacus* did, without the latter knowing it.

I trust this will explain any apparent contradictions that may seem to exist in the reports of the two vessels.

I was not aware that she had already surrendered to the *Mattabesett*, as you state she had. Upon questioning Captain Hudgins, who commanded the *Bombshell*, and who is now a prisoner of war on board this ship, he replied: He surrendered his vessel to the second vessel in line; that his flag had not been hauled down to the first; and that no surrender had been made of his vessel until ordered by the *second* vessel in the line to do so, when he struck.

He did not, nor does he, know the name of the vessel to whom he surrendered, but that it was to the second vessel in line.

I am, sir, very respectfully, your obedient servant,

F. A. ROE,
Lieutenant, Commanding.

Captain M. SMITH,
Com'dg Naval Forces, Sounds of North Carolina.

Additional report of Captain M. Smith.

UNITED STATES STEAMER MATTABESETT,
Albemarle Sound, N. C., June 4, 1864.

SIR: Your order of May 17, through Rear-Admiral Lee, directing a full report to be furnished of the collision of the *Sassacus* with the rebel ram *Albemarle*, together with a diagram showing the position of the two vessels, is received, and I have the honor to make the following report:

One report from Lieutenant Commander Roe has already been forwarded to Admiral Lee, and I retained two—one from himself, and the other from his executive officer—to avoid multiplying testimony that appeared to me to be much exaggerated; but both reports are now enclosed.

Lieutenant Commander Roe states that he "struck the ram *Albemarle* fairly just abaft his beam, at about nine or ten knots' speed. The blow jarred and careened her so much that the water flowed freely over her decks." His executive officer states that "we had a start of three or four hundred yards and were making about eleven knots when we struck her with our prow at right angles on the starboard quarter, at the junction of her after casemate with the hull, forcing her side under water two or three feet."

It is my impression that the *Sassacus*, when within five hundred yards of the ram, had stopped her engines, and when fairly pointed, commenced steaming towards him, making it apparent that she intended to try the effects of ramming. I remarked to Captain Febiger at that time, "How slow she moves;" and in a

few moments she struck, as represented, *fairly*, and nearly at right angles, causing the water to flow over the *deck* aft.

I subsequently called Lieutenant Commander Roe's attention to the statement made by him in reference to the rate of speed, which he evidently estimated by the number of revolutions, without considering the short distance he had to run, from a dead stand, to reach the ram; but as he was not disposed to make the correction, although I had taken the report on board for that purpose, as well as to examine his injuries, I forwarded it as it was.

I should judge, from the slight injury the vessel sustained, and the short distance that the *Sassacus* was from the ram when heading for him, that her speed did not exceed five knots. The *Albemarle*, as I have since learned, did not sustain the slightest injury from the collision.

Lieutenant Commander Roe also states: "I put three rifle shot into her port, and the muzzles of two of her guns were badly broken." This is evidently a mistake, as the *Albemarle* has but two guns, each one working in three ports, and not a man on board was injured. The muzzle of one gun was broken, and the four deserters from the ram report that it was damaged in the early part of the action on the port side, but they continued to use it throughout the engagement. The stems of the double-enders, as well as the rudder-guards, are nearly perpendicular, are very frail, and are not calculated to run up on the deck. Had they been armed, I am of opinion that the *Sassacus* would have brought sufficient weight upon the deck to have sunk him.

I herewith enclose a diagram of the position of the *Sassacus* and *Albemarle* at the time of collision, and after they had been separated by the ram's steaming ahead. I have sent also to Rear-Admiral Lee a fragment of a solid shot fired from the 100-pounder rifle of the *Sassacus* when close alongside, proving that the various reports heretofore made of the invulnerability of the ram have not been much exaggerated.

I have the honor to be, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Senior Officer, in Sounds of N. C.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Lieutenant Commander F. A. Roe.

UNITED STATES STEAMER SASSACUS,

Off Bluff Point, Albemarle Sound, (Midnight,) May 5, 1864.

SIR: I have not had opportunity to send you a written despatch earlier. I sent you verbal reports by the *Ceres*, which it appears you had not received.

I struck the ram *Albemarle* fairly, just abaft her beam, at about nine or ten knot speed. The blow jarred and careened her so much that the water flowed freely over her decks, and gave her so great a tilt, that I at one time hoped, I should sink her. I kept the engine going, and retained my position there, forcing her broadside to for some ten minutes, hoping some of our gunboats might get up alongside, opposite to me, as she was unable to harm them by ramming. Finding this could not be, and she starting ahead, the *Sassacus* slewed obliquely towards her starboard side, when she fired, raking us, putting a 100-pound rifle shot clean through our starboard boiler, fore and aft. We then fired the pivot rifle, striking her port side, and a fragment of this shot flew back upon my deck. This shot was broken into fragments. I fired again with similar results. I put three rifle shot into her port, and the muzzles of two of her guns were badly broken. The shock of the collision was heavy, but did me no damage that I yet know, except breaking and slewing aside the projection outside the

rudder. She does not leak. I received two severe shots from the ram while alongside of her, which were returned with interest.

After the boiler was burst, the escape of steam blinded everybody from the hurricane deck down to the fire-room. The steam was terrible. One man died instantly, and I shall probably lose four or five more. The chief engineer, Mr. Hobby, is badly scalded, but most nobly and heroically remained at his post, and saved us from a worse disaster, of explosion to the other boiler, and of being helpless. Soon as I drifted round clear of the ram, and amidst the suffocating steam, my men and officers jumped to the guns, and continued pouring out solid shot into the enemy, until we drifted down out of range. The engine was still working slowly on a vacuum, and I succeeded in getting her out of the way of the other gunboats, and was forced to withdraw finally from action only because the engine at last stopped.

In the mean time, before I rammed the ram, the enemy's gunboat Bombshell, with three rifle howitzers and one 20-pounder Parrott, which had been playing upon us, was hulled, and ordered to surrender, which she did, hauling down the rebel flag. I ordered her to drop down below the scene of action and anchor, which she did.

After I got the Sassacus out of the way, I sent the army steam-tug to bring her alongside of me and anchor. This was done. The Ceres came up, and I removed from her the officers and men captured from the Bombshell; they are now on board this vessel. I sent a prize crew to the Bombshell, started her fires, and I believe she is now ready to move under steam.

I was compelled to haul all fires on board of this vessel, but am now trying to get steam on the port boiler. Some pipes are knocked away, yet I hope to get able to move slowly to-morrow. The starboard boiler is, I fear, totally ruined. I have no wounded to speak of from the enemy's shot. We were hulled several times, and the injury to the boiler is, I believe, the most serious I have.

My people behaved most gallantly; the officers nobly. I believe the ram is damaged; but if solid shot split into fragments, and fly back upon my deck, it is a proof that she is more formidable than the Atlanta or Merrimack.

When alongside of her we threw grenades down her hawse hatch from aloft. I had charges of powder prepared ready to throw down her stack, but could not do it from aloft.

She played musketry upon me severely all the time. I was well prepared for my work, and so far as I can know, the efforts to run her down was fairly made. She is too strong for us.

I regret most profoundly that I was obliged to drift out of the fight just as it was becoming interesting, and when my services were still needed, but I fear I am now totally *hors de combat*. I shall await your orders here, as I learn the enemy has been driven out of the sound into his retreat. If we did not gain a victory, we have not suffered a defeat, and the enemy was driven before our wooden boats.

Be pleased to send me instructions about the Bombshell and my own ship. I will endeavor to send you a more specific report soon, and I pray you will excuse this hasty and imperfect one.

I am, sir, very respectfully, your obedient servant,

F. A. ROE,
Lieutenant Commander.

Captain M. SMITH,
Commanding Naval Forces, Sounds of North Carolina.

Report of Acting Master C. A. Boutelle.

UNITED STATES STEAMER SASSACUS,
Albemarle Sound, May 6, 1864.

SIR: I have the honor to submit the following report of damages received in the master's department of this ship during her engagement with the rebel iron-clad ram Albemarle and her consort, the rebel steamer Bombshell, on the 5th instant. In ramming the Albemarle, we had a start of three to four hundred yards, and were making about eleven knots when we struck her with our prow at right angles on her starboard quarter at the junction of her after casemate with the hull, forcing her side under water two or three feet, and pushing her broadside to before us; our bow then resting on her quarter, her engine working ahead, bringing a heavy strain across our bow, our outer or false stem with its ram, which had been started by the shock of collision, were forced off, the stem splintering from two and a half feet below the rail to the lower part of the rudder, and hanging by the lower portion across our bow on the starboard side, starting and splintering the outer wood ends, and tearing away all of the false bow forward of the rudder, which is apparently not materially injured on its inner portion, as it moves quite freely by the use of the wheel. The position in which we lay when first striking the ram rendered it impossible for him to train any of his guns upon us, but the headway of the two vessels, exerted at right angles, forced her gradually round on our starboard bow, when he fired two six-inch rifle shots into us in rapid succession. The first of these, fired from his after gun so near as to cover our bow with smoke and burned powder, entered ten feet abaft the stem and three feet above the copper on the starboard side, passing through the yeoman's storeroom, thence diagonally across the berth-deck, and striking between the skin and the back of the fifth hanging knee from forward on the port side, cut through the ship's side at an angle of about twenty degrees, and fell in the water astern. This shot was immediately followed by a similar one from his forward gun, which shot entering abreast of the foremast four feet above the water on the starboard side, crushed obliquely through the side, cutting through the back of hanging knee, and leaving the inside of the ceiling about seven and one-half feet abaft where it first struck on the outside. From thence it passed through the throat of the next hanging knee, through the dispensary and bulkhead, starboard coal-bunker, passing on through the starboard boiler, and keeping on through the engine-room, cut in two a three-inch iron stanchion, thence through steerage and wardroom bulkheads, smashing doors and sideboard, cutting through magazine screen, when striking an oak stanchion—which it splintered—it glanced at right angles and lodged in one of the starboard state-rooms. Many other shot passed over the ship, one of them cutting through the boarding netting two feet above the rail on port quarter, but most of them passing between the spars and rigging, which were not injured. In clearing the ram, our starboard wheel passed over her stern, crushing a launch which she was towing, and injuring the buckets and braces more or less on her hull. On examination I find that the shot holes are all well above the water-line, and as the ship makes no more water than usual, I think her actual injury to the hull much less than would seem a natural result from so tremendous a shock.

I have the honor to be, sir, very respectfully, your obedient servant,

C. A. BOUTELLE,
Acting Master, U. S. N.

Lieutenant Commander FRANCIS A. ROE,

U. S. Steamer Sassacus, Albemarle Sound, N. C.

Additional report of Captain M. Smith.

UNITED STATES STEAMER MATTABESETT,
Albemarle Sound, N. C., May 24, 1864.

SIR: I have to report that the ram made his appearance to-day for the first time since the engagement of the 5th instant. He came down in sight of the picket boats stationed off the mouth of the Roanoke river, with head up stream, and was accompanied by a row-boat that pulled several times diagonally across the river as if dragging for torpedoes. The Whitehead fired a shell which exploded near his stern, when the Albemarle immediately steamed up the river.

I have heard from contrabands and refugees direct from Plymouth that the plating of the ram was much injured; that four of our shots penetrated his outer armor, and that the concussion caused by our fire was so severe that it was found impossible to keep a light burning, and that one of the guns was rendered useless. What repairs have been made is not known.

I am of the opinion, from the intelligence received from Plymouth, that they are evacuating the place. Several guns have been sent up the river, and large loads of furniture are being towed up by every steamer. The guns of the Southfield have been raised; one has been sent away, and two are on the wharf ready for transportation. I have informed the commanding general at Newbern of the state of affairs at Plymouth, and signified my desire to co-operate with him in retaking the place if he could spare the necessary force, as I have heard from a reliable source that they have but two hundred men and the ram to guard it. * * * * *

I am, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Senior Officer, in Sounds of North Carolina.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron.

CAPTURE OF THE REBEL STEAMER BOMBSHELL.

UNITED STATES STEAMER MATTABESETT,
Albemarle Sound, N. C., May 24, 1864.

SIR: I have the honor to report the capture of the rebel steamer Bombshell, with thirty-three prisoners, on the 5th of May, 1864, by the vessels under my command, during the engagement with the rebel ram Albemarle. The Bombshell was originally an armed United States steamer, sunk by the rebel batteries at Plymouth on the 18th of April last, during the attack upon that place, and was subsequently raised, fitted out, and accompanied the ram as a consort. The vessels entitled to share in the capture are the Mattabesett, Wyalusing, Ceres, Sassacus, Miami, Commodore Hull, and Whitehead. Acting Master's Mate John Woodman, of the United States steamer Ceres, has been sent as prize master, with the necessary papers and witnesses, to the United States district judge for the southern district of New York.

Full reports from the commanders of the vessels, with a list of the prisoners, have been forwarded to Rear-Admiral Lee, with a duplicate of the survey and appraisal of the vessel.

I am, sir, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Senior Officer, in Sounds of North Carolina.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

ATTEMPT TO DESTROY THE REBEL RAM ALBEMARLE.

UNITED STATES STEAMER MATTABESSETT,
Albemarle Sound, N. C., May 30, 1864.

SIR: I have to report that an effort was made on the 25th instant, at 11 o'clock p. m., by five volunteers from the steamer Wyalusing, to destroy the iron-clad Albemarle.

The party left at 2 o'clock p. m. on the 25th instant, (having made a reconnaissance two days before,) and ascended the Middle river in the Mattabesett's dingey, with two torpedoes, (each containing one hundred pounds of powder,) and their appendages, which they transported on a stretcher across the island swamps. Charles Baldwin, coal-heaver, and John W. Loyd, cockswain, then swam the Roanoke river, with a line, and hauled the torpedoes over to the Plymouth shore, above the town. They were then connected by a bridle, floated down with the current, and guided by Charles Baldwin, who designed to place them across the bow of the ram—one on either side—and Allen Crawford, fireman, who was stationed on the opposite side of the river, in the swamp, was to explode them on a given signal.

Everything had worked favorably from the time of starting, until the torpedoes were within a few yards of the ram, when Baldwin was discovered, and hailed by a sentry on the wharf.

Two shots were then fired, and a volley of musketry, which induced John W. Loyd, who heard the challenge and reports of small arms, to cut the guiding line, throw away the coil, and swim the river again to join John Laverty, fireman, who was left in charge of his clothes and arms. These two men, with the boat-keeper, Benjamin Loyd, coal-heaver, returned to the ship the morning of the 27th, after an absence of thirty-eight hours in the swamps, encountering the additional discomfort of a rainy day and night.

Two days' unsuccessful search was made for Baldwin and Crawford, both of whom made their appearance on Sunday, the 29th instant, much fatigued by travel, and somewhat exhausted from the loss of food. No traces of their intended designs were left behind them. I cannot too highly commend this party for their courage, zeal, and unwearied exertion in carrying out a project that had for some time been under consideration. The plan of executing it was their own, except in some minor details, and although defeated in their purpose, (by accidentally fouling a schooner,) I deem it my imperative duty to recommend John W. Loyd and Charles Baldwin to be promoted to a higher grade, and that all receive the "medal of honor" and pecuniary reward awarded by act of Congress for distinguished services.

Four deserters from the rebel ram Albemarle were brought on board by the picket boat yesterday, but I cannot, without delaying the army boat, communicate the intelligence they bring. They state, however, that the ram Neuse is afloat, and ready in all respects for service.

I am, very respectfully, your obedient servant,

MELANCTON SMITH,

Captain and Senior Officer, in Sounds of N. Carolina.

Acting Rear-Admiral S. P. LEE,

Com'dg North Atlantic Blockading Squadron.

CAPTURE OF THE SCHOONER ANN C. DAVENPORT.

UNITED STATES STEAMER CERES,
Albemarle Sound, May 14, 1864.

SIR: In obedience to your order, I proceeded on the 12th instant, with the United States steamer Ceres under my command, to the mouth of the Alligator

river, where I anchored at 6.30 p. m. On the 13th instant, at 4.45 a. m., I was joined by the steamer Rockland, with one hundred soldiers on board. We proceeded in company to Simmonds's mill, on the Little Alligator, five miles from from its mouth; I there found the schooner Ann C. Davenport, of forty-five tons, of Plymouth, North Carolina, said by the persons living at the mill to belong to Samuel S. Simmonds, of Columbia, North Carolina, whom I understand to be a notorious rebel, having taken the oath of loyalty to the United States government and violated the same. There were about seven thousand feet of yellow pine lumber in the vessel. We could find no papers belonging to her. I landed with a party of men, accompanied by forty soldiers, for the purpose of disabling the mill, as I learned from the miller that they had lately been engaged in grinding corn for the rebels. I removed portions of the engine to the steamer Rockland, to be taken to Roanoke island. I caused about one hundred bushels of corn to be taken from the mill and put on board the schooner. I destroyed one large flat, used for transporting grain. I sent the Rockland, with the schooner in tow, to the mouth of the river, and followed down shortly after; anchored the schooner at the mouth of Little Alligator, in charge of ten soldiers, and started for Gum Neck, in company with the Rockland, where we arrived at 6 p. m.; found Gum Neck landing and warehouse destroyed by the rebels. The captain in charge of the soldiers desired to return. As we could hear nothing of the barges mentioned by you in your order, I came to the conclusion that they were in the canal, (leading to Fairfield from the Alligator,) which is too narrow to admit this vessel. I returned to the mouth of the Alligator, found the weather too hazy to cross the shoal, and came to anchor there. At 4.30 this morning got under way, joined the fleet and reported to you.

Very respectfully, your obedient servant,

H. H. FOSTER,
Acting Master, Commanding.

Captain MELANCTON SMITH,
Senior Naval Officer, Sounds of North Carolina.

DESTRUCTION OF A DISTILLERY NEAR EDENTON, NORTH CAROLINA.

FLAG-SHIP NORTH ATLANTIC BLOCKADING SQUADRON,
James River, June 20, 1864.

SIR: Captain Smith reports, under date of June 11, that he ordered a boat to be sent on the afternoon of the 8th from the Mattabesett, with an officer and ten (10) men to destroy a distillery on the creek near Edenton, a resort for the guerillas who infest that neighborhood to the great discomfiture of many good Union citizens residing there.

The boilers were cut, brick foundations destroyed, mash-tubs broken up, five (5) barrels of whiskey stove in, and still more removed.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

REMOVAL OF TORPEDOES AT THE MOUTH OF THE ROANOKE RIVER.

FLAG-SHIP NORTH ATLANTIC BLOCKADING SQUADRON,
Hampton Roads, Va., July 18, 1864.

SIR: I enclose a communication, dated 12th instant, from Commander Macomb, United States steamer Shamrock, reporting that he sent Lieutenant Commander

English, United States steamer Wyalusing, on the 10th instant, to take up the torpedoes at the mouth of Roanoke river to prevent their falling into the enemy's hands; the party in charge of them having been captured, as reported in my No. 399 of July 10, and several unsuccessful searches having been made for them, Lieutenant Commander English sent an armed launch and two (2) cutters for this purpose. The torpedoes could not be raised; the lines by which they were attached to the shore having rotted, parted under the strain; dragging was also unsuccessful, and it was therefore necessary to explode them. But one of the three (3) exploded; of the other two (2) one trigger wire pulled out with the primer, and the other broke. The other line of torpedoes at the mouth of the river, arranged to explode on contact, was left undisturbed.

Lieutenant Commander English learned at Edenton that the rebels were constructing another ram, to be completed by September first, proximo, the engines and plating being sent from Wilmington, taken from the ram wrecked there.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander Macomb.

UNITED STATES STEAMER SHAMROCK,

July 12, 1864.

SIR: After the capture of the party in charge of torpedoes at the mouth of Roanoke river, on the 6th instant, and when several unsuccessful searches had been made for them, I thought it best, to prevent the torpedoes from falling into the hands of the enemy, to have them removed, as the parties attending them are so liable to capture. Accordingly, on the 10th instant, I sent Lieutenant Commander English to have them taken up, or, in case this could not be done, to explode them. He therefore detailed an armed party, with a launch mounting a howitzer, in command of Acting Ensign Fossett, and the cutters of the Whitehead and Hull, in charge of Acting Ensign Barrett, who were to perform the duty. They proceeded up the river, and attempted to raise the torpedoes by the line attaching them to the shore, but this had lain so long under water as to become rotten, and parted under the strain. After repeated dragging it was found impossible to raise them in that way, and they were therefore obliged to explode them. Of the two first attempted, one trigger wire pulled out with the primer attached, and the other broke off. The third one exploded properly. This was all of that line of torpedoes; the other lines (which explode by the contact of passing vessels) were left in their places, they requiring no attendance. Captain English says that while at Edenton he learned that the rebels were constructing another ram, to be ready by the first of September, 1864. Engines and plating being sent from Wilmington, taken from the ram that was wrecked there. The concussion torpedoes referred to above are those at the mouth of the river.

I am, sir, very respectfully,

W. H. MACOMB,

Commander and Senior Officer, Sounds, N. C.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Hampton Roads, Va.

EXPEDITION UP THE SCUPPERNONG RIVER, N. C.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MALVERN,
Hampton Roads, Va., July 18, 1864.

SIR: I enclose a communication from Commander Macomb, of the Shamrock, dated, 18th instant, reporting that on the 12th he sent Lieutenant Commander English, in command of the Ceres and Whitehead, to ascend the Scuppernong river, in co-operation with a detachment of eighty (80) men, under command of Lieutenant Colonel Clarke, to burn the bridge at Columbia, to prevent the rebels from transporting supplies to their army at Plymouth. The expedition was entirely successful, effectually destroying the bridge, and disabled a large grist-mill. No opposition was encountered.

I enclose also (2) copy of Commander Macomb's orders to Lieutenant Commander English, and his report, (3,) both enclosed in No. 1.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander William H. Macomb.

UNITED STATES STEAMER SHAMROCK,
Albemarle Sound, July 18, 1864.

SIR: On the 12th instant I sent an expedition, consisting of the Ceres and Whitehead, under the command of Lieutenant Commander Earl English, for the purpose of co-operating with a force of about 80 men, under command of Lieutenant Colonel Clarke, from Roanoke island, who was under orders from General Palmer to ascend the Scuppernong river as far as Columbia, and burn the bridge at that place, in order to prevent the rebels from transporting supplies to their army at Plymouth. The expedition was successful.

Much credit is due to Lieutenant Commander English and the commanders of the Ceres and Whitehead for their prompt and efficient manner of performing their duty.

I am, sir, very respectfully, your obedient servant,

W. H. MACOMB,

Commander and Senior Officer, Sounds of North Carolina.

P. S.—I enclose for your information a copy of my orders to Lieutenant Commander English, and his report to me of the result of the expedition.

W. H. MACOMB,

Instructions to Lieutenant Commander Earl English.

UNITED STATES STEAMER SHAMROCK,
July 12, 1864.

SIR: You will take command of the expedition which is to proceed to Columbia, on the Scuppernong river, for the purpose of destroying the bridge at that place, and capturing grain which is being transported across that river.

You will co-operate with Lieutenant Colonel William W. Clarke, who goes up with the expedition, on the Ella May, in command of the troops, protecting his landing and embarkation, and otherwise forwarding the objects of the expedition.

Very respectfully, your obedient servant,

WILLIAM H. MACOMB,

Commander and Senior Officer, Sounds of North Carolina.

Lieutenant Commander EARL ENGLISH,

Commanding United States Steamer Wyalusing.

Report of Lieutenant Commander Earl English.

UNITED STATES STEAMER SHAMROCK,

Albemarle Sound, July 13, 1864.

SIR: In obedience to your order of the 12th, I took command of the naval part of the expedition, consisting of the Whitehead and Ceres, and accompanied the steamer Ella May, under command of Lieutenant Colonel William W. Clarke, up the Scuppernong river, as far as Columbia, when they landed and effectually destroyed, by burning, the bridge which crosses the river. They likewise disabled the large grist mill at that place.

We did not meet with any resistance.

I am, very respectfully, your obedient servant,

EARL ENGLISH,

Lieutenant Commander.

Commander W. H. MACOMB,

Commander U. S. Naval Squadron, Sounds of North Carolina.

JOINT ARMY AND NAVAL EXPEDITION UP THE CHOWAN RIVER.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, N. A. B. SQUADRON,

Beaufort, North Carolina, August 18, 1864.

SIR: Commander Macomb reports, under date of the 31st ultimo, received on the 3d instant, that he sent the Whitehead on the 28th ultimo on an expedition up the Chowan river, to co-operate with a military force sent up on the steamers Thomas Collyer and Massasoit. The expedition proved successful, capturing the steamer Arrow, at Gatesville, and ninety (90) bales of cotton and eighty (80) boxes of tobacco at that place and at Hinton. When the Whitehead was ready to return, John Kenny, boatswain's mate, was missing; after waiting half an hour, the vessel proceeded down the river. Commander Macomb encloses Acting Ensign Barrett's report, and recommends him strongly for promotion; which recommendation I approve.

Commander Macomb also reports that a body of United States cavalry and some pieces of artillery have arrived at Edenton, probably from a raid through southern Virginia; and that they have captured the rebels who have been reported as carrying on a contraband trade through the Dismal Swamp canal. I enclose Commander Macomb's report, with its enclosures.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander W. H. Macomb.

UNITED STATES STEAMER SHAMROCK,

July 31, 1864.

SIR: I have the honor to report that on the 28th instant, in compliance with a request from General Palmer, I sent the United States steamer Whitehead to convoy and co-operate with an expedition sent by the general up the Chowan river, consisting of the Thomas Collyer and Massasoit, with a detachment of troops, under command of Lieutenant Ward, of his staff.

The expedition was entirely successful, bringing away ninety bales of cotton and eighty boxes of tobacco. I enclose a copy of Acting Ensign Barrett's report to me on the subject.

I take great pleasure in recommending Acting Ensign Barrett for promotion; he has been in these sounds ever since we have had a squadron in there. I have sent him with every expedition since my arrival here, and to judge by the efficient manner in which he performs his duty, he must have been sent frequently on such service by other commanding officers of the squadron.

The Whitehead has just arrived at this station on her way to Newbern for repairs, and reports that a body of cavalry and some pieces of artillery (United States) have arrived at Edenton. He thinks they have been on a raid through southern Virginia. I shall go up to Edenton to-day to communicate with them.

Captain Barrett also says that these troops have captured the rebels whom I mentioned as carrying on a contraband trade through the Dismal Swamp canal in a previous communication, (No. 6.)

Very respectfully, your obedient servant,

W. H. MACOMB,

Commander and Senior Officer, Sounds of North Carolina.

Acting Rear-Admiral S. P. LEE,

*Commanding North Atlantic Blockading Squadron.**Report of Acting Ensign G. W. Barrett.*

UNITED STATES STEAMER WHITEHEAD,

Albemarle Sound, N. C., July 29, 1864.

SIR: I have the honor to report that, in obedience to your orders, I weighed anchor on the morning of the 28th, and proceeded up the Chowan river, in company with the army steamers Thomas Collyer and Massasoit.

We arrived off Hinton at 11.30 a. m., when a company of soldiers was landed and captured three bales of cotton, one hundred boxes of tobacco, — pounds of bacon, and also destroyed a quantity of salt. We then proceeded up the river, with the Thomas Collyer and Massasoit, as far as Barton's mill, where a search was made for contraband goods, but without success. At 2.30 p. m. we started down the river, and arrived off Gatesville ferry at 4.30, where we stopped, and a detachment of soldiers was landed from the Massasoit. The troops marched to Gatesville and captured the steamer Arrow and ten bales of cotton. I sent an officer from this vessel with the pilot and a quartermaster to bring her down the creek, which they succeeded in doing. The following morning (29th) I took the Arrow in tow and proceeded down the Colerain, where I arrived at 8.30 a. m., and landed a working party of twenty-five men from this vessel to load the steamer Thomas Collyer with cotton. We succeeded in getting all the cotton, consisting of ninety (90) bales, and also eighty boxes of tobacco, safely on board by 7 p. m. When ready to leave, one of the crew of this vessel, John Kenny, (boatswain's mate,) was missing, and after a fruitless

search for him of half an hour, we proceeded down the river and arrived and anchored near the United States steamer Mattabesett, off the mouth of the Chowan river, at 11.10 p. m. During the expedition the rudder of this vessel became disabled, owing to the shoe breaking or becoming detached from the iron stern-post, thus leaving no support to the heel of the rudder. It is now in a very unsafe condition, and not to be depended on in an emergency.

I remain, very respectfully, your obedient servant,

G. W. BARRETT,
Acting Ensign, Commanding.

Commander W. H. MACOMB,

Senior Naval Officer, Sounds of North Carolina.

DESTRUCTION OF THE REBEL RAM ALBEMARLE.

Letter of Rear-Admiral D. D. Porter, transmitting reports of Commander Macomb and Lieutenant Cushing.

NORTH ATLANTIC SQUADRON, U. S. FLAG-SHIP MALVERN,
Hampton Roads, November 1, 1864.

SIR: I have the honor to enclose herewith copies of the reports of Commander Macomb, dated October 29, 1864, and of Lieutenant Cushing, dated October 30, 1864, of the destruction of the rebel ram Albemarle, at Plymouth, North Carolina, on the night of October 27th ultimo, by the steam torpedo launch, under command of Lieutenant Cushing.

I have the honor to be, &c.,

DAVID D. PORTER,
Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

Report of Commander W. H. Macomb.

U. S. STEAMSHIP SHAMROCK,
Albemarle Sound, North Carolina, October 29, 1864.

ADMIRAL: I have the honor to report that, on the night of the 27th instant, Lieutenant W. B. Cushing ascended the Roanoke river in his torpedo boat, having the second cutter of this vessel in tow, for the purpose of blowing up the ram Albemarle, at Plymouth. He passed the Southfield without being noticed, and arrived within short distance of the ram before he was discovered, when he cast loose the cutter, ordering it to board the Southfield and capture the picket stationed there, while he attacked the ram with his torpedo.

Although the enemy kept up a severe fire of musketry, and with howitzers mounted on the wharf, Lieutenant Cushing succeeded in exploding his torpedo under the Albemarle at the same instant that the gun of that vessel (to which they were directly opposite) was fired on the torpedo boat, which immediately filled, and the lieutenant ordered his officers and men to save themselves, and jumped overboard. He was picked up by the Valley City on the night of 28th.

From circumstances which have since occurred, and which I will explain in a detailed report by the first opportunity, I am able to inform you that the ram was sunk.

Very respectfully,

W. H. MACOMB, *Commander, &c.*

Rear-Admiral D. D. PORTER,
Commanding N. A. Squadron.

Report of Lieutenant W. B. Cushing.

ALBEMARLE SOUND, N. C., October 30, 1864.

SIR: I have the honor to report that the rebel iron-clad Albemarle is at the bottom of the Roanoke river.

On the night of the 27th, having prepared my steam launch, I proceeded up toward Plymouth, with thirteen officers and men, partly volunteers from the squadron. The distance from the mouth of the river to the ram is about eight miles, the stream averaging in width some two hundred yards, and lined with the enemy's pickets. A mile below the town was the wreck of the Southfield, surrounded by some schooners, and it was understood that a gun was mounted there to command the bend. I therefore took one of the Shamrock's cutters in tow, with orders to cast off and board at that point if we were hailed.

Our boat succeeded in passing the picket, and even the Southfield, within twenty yards, without discovery, and we were not hailed until by the look-outs on the ram. The cutter was then cast off and ordered below, while we made for our enemy under a full head of steam.

The rebels sprung their rattles, rang the bell, and commenced firing, at the same time repeating their hail, and seeming much confused.

The light of a fire ashore showed me the iron-clad, made fast to the wharf, with a pen of logs around her about thirty feet from her side.

Passing her closely, we made a complete circle, so as to strike her fairly, and went into her bows on. By this time the enemy's fire was very severe, but a dose of canister, at short range, served to moderate their zeal and disturb their aim. Paymaster Swan, of the Otsego, was wounded near me, but how many more I know not. Three bullets struck my clothing, and the air seemed full of them.

In a moment we had struck the logs, just abreast of the quarter-port, breasting them in some feet, and our bows resting on them. The torpedo-boom was then lowered, and, by a vigorous pull, I succeeded in diving the torpedo under the overhang, and exploded it at the same time that the Albemarle's gun was fired. A shot seemed to go crashing through my boat, and a dense mass of water rushed in from the torpedo, filling the launch and completely disabling her.

The enemy then continued his fire at fifteen feet range, and demanded our surrender, which I twice refused, ordering the men to save themselves, and removing my own coat and shoes. Springing into the river, I swam, with others, into the middle of the stream, the rebels failing to hit us.

The most of our party were captured, some drowned, and only one escaped besides myself, and he in a different direction. Acting Master's Mate Woodman, of the Commodore Hull, I met in the water half a mile below the town, and assisted him as best I could, but failed to get him ashore.

Completely exhausted, I managed to reach the shore, but was too weak to crawl out of the water until just at daylight, when I managed to creep into the swamp, close to the fort. While hiding a few feet from the path, two of the Albemarle's officers passed, and I judged from their conversation that the ship was destroyed.

Some hours' travelling in the swamp served to bring me out well below the town, when I sent a negro in to gain information, and found that the ram was truly sunk.

Proceeding through another swamp, I came to a creek and captured a skiff belonging to a picket of the enemy, and with this, by eleven o'clock the next night, had made my way out to the Valley City.

Acting Master's Mate William L. Howorth, of the Monticello, showed, as usual, conspicuous bravery. He is the same officer who has been with me twice in Wilmington harbor. I trust he may be promoted when exchanged, as well

as Acting Third Assistant Engineer Stolesbury, who, being for the first time under fire, handled his engine promptly and with coolness. All the officers and men behaved in the most gallant manner. I will furnish their names to the department as soon as they can be procured.

The cutter of the Shamrock boarded the Southfield, but found no gun. Four prisoners were taken there.

The ram is now completely submerged, and the enemy have sunk three schooners in the river to obstruct the passage of our ships.

I desire to call the attention of the admiral and department to the spirit manifested by the sailors on the ships in these sounds. But few men were wanted, but all hands were eager to go into the action, many offering their chosen shipmates a month's pay to resign in their favor.

I am, sir, very respectfully, your obedient servant,

W. B. CUSHING,
Lieutenant United States Navy.

The name of the man who escaped is William Hoftman, seaman, on the Chickopee. He did his duty well, and deserves a medal of honor.

Respectfully,

W. B. CUSHING, U. S. N.

Rear-Admiral D. D. PORTER,

Commanding N. A. Blockading Squadron.

Complimentary letter to Lieutenant W. B. Cushing.

NAVY DEPARTMENT,
November 9, 1864.

SIR: Your report of October 30 has been received, announcing the destruction of the rebel iron-clad steamer Albemarle, on the night of the 27th ultimo, at Plymouth, North Carolina.

When last summer the department selected you for this important and perilous undertaking, and sent you to Rear-Admiral Gregory at New York to make the necessary preparations, it left the details to yourself to perfect. To you and your brave comrades, therefore, belongs the exclusive credit which attaches to this daring achievement. The destruction of so formidable a vessel, which had resisted the combined attack of a number of our steamers, is an important event touching our future naval and military operations. The judgment, as well as the daring courage displayed, would do honor to any officer, and redounds to the credit of one of twenty-one years of age.

On four previous occasions the department has had the gratification of expressing its approbation of your conduct in the face of the enemy, and in each instance there was manifested by you the same heroic daring and innate love of perilous adventure; a mind determined to succeed, and not to be deterred by any apprehensions of defeat.

The department has presented your name to the President for a vote of thanks, that you may be promoted one grade, and your comrades also shall receive recognition.

It gives me pleasure to recall the assurance you gave me at the commencement of your active professional career, that you would prove yourself worthy of the confidence reposed in you, and of the service to which you were appointed. I trust you may be preserved through further trials; and it is for

yourself to determine whether, after entering upon so auspicious a career, you shall, by careful study and self-discipline, be prepared for a wider sphere of usefulness on the call of your country.

Very respectfully, &c.,

GIDEON WELLES,
Secretary of the Navy.

Lieutenant W. B. CUSHING, U. S. N.,
Washington.

MISCELLANEOUS.

DESTRUCTION OF THE STEAMER BENDIGO, BLOCKADE RUNNER.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP FAH-KEE,
Off Wilmington, North Carolina, January 4, 1864.

SIR: I have the honor to report that yesterday, the 3d instant, at about 11 o'clock a. m., while standing up the coast from Little River inlet towards Wilmington bar in this vessel, a steamer was discovered lying at the entrance of Lockwood's Folly inlet, apparently ashore; smoke issuing from her, and her appearance and position indicated that the steamer was a blockade runner, and that she had been fired and abandoned by her crew, who were seen leaving her hastily in boats. Going in to within 800 yards of the steamer, as near as the depth of the water would allow, I despatched three boats to board the steamer, and if possible get her afloat, protecting them with the guns of this vessel.

The boats were fired upon by sharpshooters of the enemy as they boarded the steamer; but then, and at other times during the day, their fire was silenced by the battery of this vessel.

The steamer proved to be the blockade runner Bendigo, mentioned in consular despatches as plying between Nassau and Wilmington; is an iron paddle-wheel steamer of about 178 tons. She had been set on fire, and the wood work in her after part was burning still, although almost entirely consumed. She was aground close to the beach along her entire length, and had no cargo or freight of any description on board. Her centre compartment was filled with water to the depth of seven feet.

After great efforts with kedges and hawsers to get her afloat at high tide, during which time the officers and men were occasionally annoyed by the enemy's fire from the shore, and the enemy were placing in a position inaccessible to this ship some field-pieces, which would command the Bendigo, I was compelled to order the withdrawal of the boats, and her further destruction by directing upon her the fire of this vessel's guns. The Fort Jackson, Iron Age, Montgomery and Daylight, were sent by me yesterday to complete the destruction of the Bendigo, and by the reports of the officers commanding the Iron Age and Daylight, made this morning, such destruction is complete. They report her hull and boilers riddled by shot and shell, several feet of water in her hold, and firmly bedded in the sand. The wood-work in her former part as well as her after was entirely consumed by fire.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,
Acting Rear-Admiral, Commanding N. A. B. Squadron.
HON. GIDEON WELLES,
Secretary of the Navy.

DESTRUCTION OF THE BLOCKADE-RUNNING STEAMERS RANGER AND VESTA.

Report of Acting Rear-Admiral S. P. Lee.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Lockwood's Folly Inlet, January 11, 1864.

SIR: At daylight this morning a steamer was seen beached and burning one mile west of this inlet. Mr. O'Conner from this ship boarded her, with the loss of one man, shot under the fire from the enemy's sharpshooters occupying rifle-pits on the sand hills, which were high and near, and got her log-book, from which it appears that she is the *Ranger*; that she left Newcastle November 11, 1863, for Bermuda, where, after touching at Teneriffe, she arrived on the 8th December; that she sailed from Bermuda January 6, 1864, made our coast January 10, about five miles NE. of Murrill's inlet, and landed her passengers. The next morning at daylight, intercepted by this ship, the *Daylight*, *Governor Buckingham*, and *Aries*, in her approach to Western bar, she was beached and fired by her crew as above mentioned. The attempts of the *Governor Buckingham*, aided by the *Daylight* and *Aries*, to extinguish the fire and haul the *Ranger* off, were frustrated by the enemy's sharpshooters, whose fire completely commanded her decks. This ship, drawing about twenty-four (24) feet, was taken in four and one-half ($4\frac{1}{2}$) fathoms of water in front of the wreck, and the other vessels stationed to cross-fire on the riflemen on the sand-hills opened a deliberate fire with a view to dislodge the enemy, and allow an attempt to haul off the *Ranger* at high water at night. Meanwhile the *Ranger* was burning freely forward, and the commanding officers of the *Governor Buckingham* and *Daylight*, who had a good view of her situation, thinking that it was not practicable to get her off, she was also fired into, which, as her hatches were closed, had the effect of letting the air in, when the fire burnt freely aft, and doubtless burnt the *Ranger* out completely. Meanwhile black smoke was rising in the direction of Shallot inlet, and the *Aries*, withdrawn last night from her station there, was ordered to chase; she soon returned, and Acting Volunteer Lieutenant Devens reported a fine looking, double propeller blockade runner, resembling the *Ceres*, beached and on fire between Tubb's and Little River inlets, and that the enemy's sharpshooters prevented the boats from boarding her. This was probably the same steamer that was chased the previous evening by the *Quaker City*, *Tuscarora*, and *Keystone State*, and escaping from them, made the western shore, where communicating and learning of the presence of the blockaders in force, and perhaps being short of coal, she was beached by her crew and fired rather than be captured. The department will perceive that this is the twenty-second (22d) steamer lost by the rebels and the blockade-runners attempting to violate the blockade of Wilmington within the last six months, an average of nearly one steamer every eight (8) days. These losses must greatly lessen the means of the rebel authorities to export cotton, obtain supplies, and sustain their credit, and thus dispirit and weaken them very much.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant Edward F. Devens.

UNITED STATES STEAMER ARIES,
Off Little River, January 12, 1864.

SIR: I would most respectfully report that the steamer stranded between Tubb's inlet and Little river is the blockade runner Vesta. Boarded her this a. m. made a hawser fast to her, but on examining her found her whole star-board side opened and several of the plates split; took two anchors from her, which was all we could save. The Vesta was exactly like the Ceres. I left her a complete wreck, with five feet of water in her; her boats lay on the beach badly stove.

Very respectfully, your obedient servant,

EDWARD F. DEVENS.

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. Lee,

Commanding N. A. B. Squadron.

DESTRUCTION OF SALT WORKS NEAR BEAR INLET, NORTH CAROLINA.

Report of Rear-Admiral S. P. Lee.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Wilmington, North Carolina, January 14, 1864.

SIR: I have the honor to report the result of a joint army and navy expedition from Beaufort, North Carolina, for the purpose of capturing the salt landed by the Bigelow (the abandoned prize of the army transport Fulton) at Bear inlet, and the cargo of naval stores reported to have been collected there for shipment in her, previous to her destruction by the Mount Vernon, of this squadron, as reported by me.

I arrived at Beaufort on December 24, and found preparations for the expedition being made under Commodore Dove's directions. I directed that the Daylight and Howquah should offer their services to Colonel Jourdan, 158th New York State volunteers, (commanding the military force,) to transport troops. This offer was thankfully accepted. The vessels accordingly left Beaufort on the morning of the 24th, having an armed launch from the Iron Age, and some lighters, and carrying the troops, portions of the 158th New York State volunteers and the 9th Vermont volunteers, arriving off Bear inlet about 4 p. m. The troops were sent into the inlet in boats, eight (8) in number; only two landed that night, the tide being too low. Early on the following morning they proceeded up the inlet, found no naval stores, (as I learned when at Bear inlet the next day in the Fah-kee,) but destroyed without loss or serious opposition three salt works, one hundred and fifty (150) sacks of salt, and a large number of empty barrels for spirits of turpentine. The boats returned to the vessels about 1 p. m., and they immediately returned to Beaufort, arriving at 5.30 p. m. The commanding officers of both vessels and Colonel Jordon commend the good conduct of the officers and men of the navy concerned in this expedition. This inlet was found to have eight (8) feet water on the bar at high tide.

I have the honor to be, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

DESTRUCTION OF THE BLOCKADE-RUNNER DARE.

Report of Acting Rear-Admiral S. P. Lee.

UNITED STATES FLAG-SHIP MINNESOTA,
At sea, January 20, 1864.

SIR: I have to report that on the occasion of the destruction of the blockade runner steamer Dare by the Montgomery and Aries, on the 7th instant, a boat from each vessel was swamped in the surf, and the officers and men of each fell into the hands of the enemy. Enclosed are original lists of those so lost. I have directed Acting Volunteer Lieutenants Fancon and Devens to transfer the accounts of these officers and men to the Fourth Auditor, and to send their effects, properly put up, with full lists, to the commanding officer of the United States store-ship Brandywine, at Hampton Roads.

Acting Volunteer Lieutenant Devens mentions thus favorably in his report Acting Master J. W. Balch, of the Aries:

"Allow me to mention the gallant conduct of Acting Master J. W. Balch, executive officer of this ship. When the boat was capsized he swam ashore with two men and brought me off again to the Montgomery's launch on his back. He has suffered four months' imprisonment in Richmond, having been captured at the loss of the Columbia, in January, 1863. He is a good seaman, and true and loyal, and would do his duty well as a commanding officer."

I have ordered Acting Master Balch to temporary duty on the Howquah, to relieve Acting Volunteer Lieutenant J. McDiarmid, to whom I have given permission to apply in person to the department for the command of the Ella.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Volunteer Lieutenant E. F. Devens.

UNITED STATES STEAMER ARIES,
Off Little River, January 9, 1864.

SIR: I have the honor to report that at 6.45 a. m., while lying with the entrance of Little river bearing west, two and a half miles distant, discovered a strange steamer standing to the east-southeast, with the United States steamer Montgomery in chase of her; weather very thick, squally and foggy at the time. Gave chase immediately, keeping stranger in sight—gaining on him; Montgomery still astern, still chasing. At 8.30 a. m. thick fog set in and continued until 9.30 a. m., when the fog lifted. Discovered the chase in sight, bearing about south, and standing to the southward and westward—still gaining on her. At this time commenced firing at him with the rifled guns, the shot apparently falling close to and over him. Land in sight. At 12.30 p. m. she hauled to the westward, and at 1 p. m. ran on the beach close to North inlet, South Carolina. At 1 p. m. came to anchor in four fathoms water—Georgetown light bearing south-southwest, distance ten miles. Immediately sent two armed boats to board the steamer and get her off, if possible; if not,

to destroy her. At 4.30 p. m. boats returned and reported her to be the confederate steamer Dare. Surf running so high, could do nothing to get her off; set her on fire in three places.

It becomes my sad duty to report that the second cutter was swamped while coming through the surf; two officers and seven men belonging to this ship are now prisoners in the hands of the enemy. At 8 a. m. of the 8th instant, hove up and proceeded close into the wreck, in company with the United States schooner George Mangham. At 9 a. m. came to anchor, with the Dare about 500 yards distance. Sent a boat to her; found that she had bilged and was full of water. Fired several shot through the machinery and left her a complete wreck. At 1 p. m. got under way and proceeded to station. Left the George Mangham in charge of wreck. The boats lost were both stove. * * *

Very respectfully, your obedient servant,

EDWARD F. DEVENS,

Acting Volunteer Lieutenant, Commanding.

Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

List of officers and men of the Aries captured.

List of officers and men captured by the rebels at the destruction of the rebel steamer, the Dare, on the 7th instant:

George M. Smith, acting ensign.
J. E. Parkman, captain's clerk.
Charles E. Homey, carpenter's mate.
William Watts, ship's cook.
Charles Williams, coxswain.
William A. Young, master-at-arms.
Joseph Ahern, seaman.
A. J. Hendricks, seaman.
Henry McVay, quartermaster.

List of officers and men of the Montgomery captured.

UNITED STATES STEAMER MONTGOMERY,

Off Lockwood's Folly, January 8, 1864.

SIR: I beg leave to make the following return of officers and men from this ship after the destruction of the confederate steamer Dare:

George H. Pendleton, acting master and ex. officer.
George M. Smith, acting third assistant engineer.
Moses J. Murphy, seaman.
John Kelly, seaman.
William Carnes, seaman.
James McTier, seaman.
Edward Linderschmidt, seaman.
Richard McDonald, seaman.

William Quade, seaman.

Peter Alexander, seaman.

John Hayes, ordinary seaman.

Nathaniel Carter, ordinary seaman.

Peter E. Mallely, landsman,

William Broderick, landsman.

Joseph Ladue, first-class fireman.

Patrick McDermott, second-class fireman.

Very respectfully, your obedient servant,

E. H. FANCON,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

LOSS OF THE UNITED STATES STEAMER IRON AGE.

Report of Acting Rear-Admiral S. P. Lee.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Va., January 29, 1864.

SIR: The Iron Age and Daylight were sent on the 8th instant to recover the Fah-Kee's heavy kedge and hawser, which had been carried out on the 3d to keep the Bendigo from working upon the shoal.

On the return of these vessels I was informed by Lieutenant Commander Stone, the fleet engineer, and Mr. Simpson, carpenter of this ship, that the Bendigo's engines were uninjured and that she could easily be got off if a few shot-holes were stopped; this Mr. Stinson that night made arrangements for doing. Next morning I went off to Lockwood's Folly inlet with this ship, the Daylight and Iron Age, when I directed Lieutenant Commander Stone, of the Iron Age, and Acting Volunteer Lieutenant Wells, commanding the Daylight, (both of whom had recently been there with their vessels,) to try and get the Bendigo off; the Daylight to protect the Iron Age, and also to assist her to sound in their boats and take up safe positions, if necessary, by backing in the Iron Age to anchor with both of her anchors down, so that the Bendigo, by means of large hawsers, (which all the vessels of this blockade are required to have for such service,) might be hove off against the Iron Age's anchors with a good scope of cable to them. After these officers had left this ship, I sent Lieutenant Commander Stone the enclosed order, (No. 1,) and which was not subsequently qualified, in order to make the work perfectly safe. In reply I received from Lieutenant Commander Stone No. 2. To my No. 3 to stop work for the night, &c., the Bendigo not having been got off by the evening's tide, he replied by No. 4, showing that he was pretty sure of getting the Bendigo off at the next high water, about 8.45 a. m. of the 10th. But at 9 a. m. of the 10th, with the wind light off shore, weather good, and water smooth, the Iron Age made signal that she was aground, and asked to throw her guns overboard. After making arrangements for her relief, by ordering the Governor Buckingham (Acting Volunteer Lieutenant Saltonstall) and the boats of this ship to assist her, I went to the Iron Age. She had but five feet water along her starboard side, and four feet on her port side, with her rudder free. She went on, drawing nine (9) feet six (6) inches aft, and eight (8) feet forward. I directed Captain Stone to get ready to haul off with the next high water; to lighten the Iron Age, removing her guns last; to get out an anchor on her starboard quarter to prevent her being set further up on the shore,

as the tide made, (she had already a heavy kedge and hawser out on the star-board bow ;) and I acquainted him with the arrangements made to assist him, and afterwards sent him the enclosed memorandum, (No. 5.) showing that the boats of the Minnesota would assist, and the position which the Daylight would take up with her anchors down for him to heave off by, whilst the Governor Buckingham (with anchor ahead to steady her) would pull her off with the evening tide, which it seemed quite practicable to do.

The boats, owing to the falling of the tide, could only partially discharge the Iron Age of her coal, provisions, &c.

In the afternoon I again went to the Iron Age, and vessels preparing to assist her, to see that the arrangements were complete. At p. m. high water Lieutenant Commander Stone found that he had only seven (7) feet of water alongside ; and sent me, by Mr. Pearson, a request to throw his guns overboard. Having been unable to remove them, I authorized him to throw his guns overboard on the port side, and sent him the enclosed order, (No. 6,) which, as the wind had got to the southward and westward, and the weather looking threatening, contemplated his removing his officers, crew and supplies, so that in the event of a gale they would not fall into the hands of the enemy, and would also lighten the Iron Age, and authorizing him, in consultation with Captains Welles and Saltonstall, to take such further steps as might be necessary, and providing for changing the berth of the Daylight, &c., if it could be advantageously done.

During the night the weather, though threatening, did not blow, and the wind, which was moderate, hauled to the northward and westward and from the land.

At 4 p. m. the Iron Age was reported to be on fire, and at 5.40 a. m. the magazine blew up. Lieutenant Commander Stone, of the Iron Age, assigns in his report (some mistakes in which I have herein corrected) his motives for doing this.

I take all the responsibility of sending the Iron Age on this duty, which I assigned to her with suitable instructions. Success and no casualty was the general expectation, and it is highly probable, I think, that she could not have been got off, as the enemy had got a battery down ; but another trial would have determined this. Considering her feeble steam power and constant liability to loss on the blockade in a gale of wind, it is a satisfaction to know that her officers and crew were not lost with her.

This service is one of great hardship and exposure ; it has been conducted with slight loss to us, and much loss to the rebels and their allies, who have lost twenty-two (22) vessels in six (6) months, while our loss has been only two (2) vessels on the Wilmington blockade during the war.

In this and the accompanying papers, including the report (No. 5) of Acting Volunteer Lieutenant Wells, commanding Daylight, the report (No. 6) of Acting Volunteer Lieutenant Fancon, commanding the Montgomery, received to day, to which the report of Acting Volunteer Lieutenant Saltonstall, commanding the Buckingham, will be added when received, all the essential facts of the case are given.

I have the honor to be, sir, very respectfully, yours,

P. S. LEE,

Acting Rear-Admiral, commanding N. A. B. Squadron

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

No. 1.

Letter from Acting Rear-Admiral S. P. Lee to Lieut. Commander E. E. Stone.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Lockwood's Folly Inlet, January 9, 1864.

SIR: The safest and best plan to get the Bendigo off is to plant both your bow anchors with a good and sufficient scope of cable, and to heave her off with a 10 or 11 inch hawser, using her purchase, if practicable, in preference to yours. Have your preparations complete for high water this evening.

The Daylight must return in time to take her station off the bar.

Send word when the Minnesota's launch is wanted to weigh Bendigo's anchor.

The Coquette and Ranger report having made a fruitless attempt to run into Wilmington.

Respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Lieut. Com. E. E. STONE,

Commanding United States steamer Iron Age.

No. 2.

Letter from Lieutenant Commander E. E. Stone to Acting Rear-Admiral Lee.

UNITED STATES STEAMER IRON AGE,
January 9, 1864.

SIR: In reply to yours of to-day's date, I have to state that I am already fast to the Bendigo by your ten-inch hawser. My executive officer sends me word that her windlass cannot be used, as some small but important parts are wanting. I will do the best I can with my own windlass.

Mr. O'Conner will inform you if the Minnesota's launch will be required or not. If it should be required, when the time arrives I will hoist my distinguishing pennant at the fore, ("R.")

Respectfully, your obedient servant,

EDWARD E. STONE,

Lieutenant Commander United States Navy.

Admiral S. P. LEE,

Commanding N. A. B. Squadron, on U. S. Steamer Minnesota.

No. 3.

Letter from Acting Rear-Admiral Lee to Lieutenant Commander Stone.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Lockwood's Folly Inlet, January 9, 1864.

SIR: You need not work on the wreck any longer this evening unless you have a good prospect of getting her afloat. The Montgomery need not go in to you this evening unless she can be of assistance without risk to herself.

You can remain where you are, or come out, as you please, to resume operations with the morning's tide with the aid of the Montgomery.

Show this to Captain Fancon, who can come out and take up his station to-night. I wish to have his written report, with a diagram of the chase, &c., of the Dare.

Respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Lieut. Com. E. E. STONE,

Commanding U. S. Steamer Iron Age.

No. 4.

Letter from Lieutenant Commander Stone to Acting Rear-Admiral Lee.

IRON AGE,

January 9, 1864—8.08 p. m.

ADMIRAL: The Montgomery is about to make fast to us.

Mr. Garvin left here twenty minutes ago to get steam on the Bendigo, the water being below the grate bars. I feel very confident of success.

There is no danger to be apprehended for the Montgomery.

Yours, respectfully,

EDWARD E. STONE,

Lieutenant Commander.

Acting Rear-Admiral LEE,

Commanding N. A. Blockading Squadron.

No 5.

Memorandum of orders.

FLAG-SHIP,

January 10, 1864—1 p. m.

Captain Wells was to sound, and then let go Daylight's two bow anchors, so that with seventy-five or one hundred fathoms of cable to each he can swing clear of all shoals, and haul near enough to the Iron Age to send the 10-inch hawser to her bow by messenger; then heave taut on 10-inch hawser, and be ready with deck tackles, &c., to heave her off at high water, and to keep her from going further on, as the tide rises.

Captain Saltonstall was to sound, and then with Buckingham, (outside of Daylight,) let go her port bower with long scope to it, so that with Minnesota's launch and a messenger line she can send Minnesota's 14-inch manilla to Iron Age's bow, or through latter's hawse-hole, and heave taut on it.

Iron Age has kedge and hawser out on her starboard bow; was ordered to get an anchor out on her starboard quarter to keep her from working up on the bar, by setting it taut carefully as tide rises, but not at low water, for fear of heaving her over.

The Iron Age will have a 9 or 10-inch hawser from her capstan or deck from forward to the Daylight, on which she will heave while Daylight heaves on the other of the two 10-inch hawsers sent to Daylight from this ship, while Buckingham pulls off under steam with the 11-inch, taking care not to snap it.

S. P. LEE.

Additional.—The tide being too low and the surf rising, Minnesota's boats cannot now return to Iron Age, but latter will make signal for Minnesota's boats, if, as tide rises, she can discharge into boats on either side of her. She will also shift the hawser now on the starboard bow to the starboard quarter, when the Daylight has set taut on the hawser from her to Iron Age's bow.

The foregoing was ordered when the vessels were riding to the southward; now that they have swung, the plan may be altered to suit.

S. P. LEE, *Acting Rear-Admiral.*

Lieutenant Commander STONE.

Captains WELLS and SALTONSTALL.

No. 6.

FLAG-SHIP,

January 10, 1864.—10 p. m.

Having failed to get the Iron Age afloat with this high water, and the weather looking threatening, you will, with the aid of Captains Wells and Saltonstall and their boats, and Master Pierson and boats from this vessel—all that you can work advantageously—push on to further lighten the Iron Age and prepare for abandoning her. Move the paymaster, his funds, accounts, and supplies, and the powder, shell, ship's stores, &c., which you were unable to move to-day, on board the Buckingham and Daylight. Try and get your howitzers out, and their ammunition also. Move the men and their effects to the B. and D. whenever you judge it expedient, and be sure to get on board these vessels with all hands and effects, so as to allow them to get out, and not be caught in there in a blow.

Consult with Captains Wells and Saltonstall, and carry out your and their best judgments. Show this to them.

S. P. LEE.

Lieutenant Commander STONE,

P. S.—The bottom is probably quicksand, and you must be careful not to get your vessels ashore. In the morning, if the weather is favorable, you, may if you can do so to advantage safely, shift your berths.

You can move your vessels out to-night, whenever you think it necessary to do so.

The Daylight had better get up one anchor now.

S. P. LEE.

Lieutenant Commander STONE.

Captains WELLS and SALTONSTALL.

No. 7.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Wilmington, North Carolina, January 11, 1864.

SIR: You will please prepare and forward immediately an official report of the circumstances attending the attempt to get off the beached blockade runner Bendigo, and the subsequent grounding and destruction of the Iron Age.

You will take receipts in duplicate for all articles other than paymaster's, deliverable from the Iron Age, and forward them to me with your report.

Respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Lieut. Com. E. E. STONE,

Captain Commanding United States Steamer Iron Age.

Report of Lieutenant Commander E. E. Stone.

UNITED STATES STEAMER FAHKEE,

At sea, January 14, 1864.

SIR: I regret to be obliged to report, that on the morning of the 11th instant at 4 o'clock, circumstances rendered it incumbent on me, to destroy by fire, the United States steamer Iron Age, lately intrusted to my charge by the department.

Accompanying, please find statement of facts of the unfortunate affair.

Respectfully, your obedient servant,

EDWARD E. STONE,

Lieutenant Commander U. S. Navy.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Lieutenant Commander E. E. Stone.

UNITED STATES STEAMER FAHKEE,

At sea, January 14, 1864.

SIR: On the morning of the 9th instant, in obedience to a signal from the flag-ship, we stood for Lockwood's Folly inlet. At 9 a. m. I received a ten-inch hawser from the United States steamer Minnesota, which I was ordered to make fast as a tow-line to the blockade runner Bendigo, which was on shore about half a mile to the westward of the inlet.

In my conversation with the admiral about the appliances for getting her off, he particularly mentioned the planting of the anchors of the Iron Age, and then backing in near enough to attach the hawser; but at the same time remarking, however, "Exercise your own judgment." At 11 a. m. I let go the kedge in three fathoms of water, run a line to the wreck, warped the ship in and secured the ten-inch hawser around my mainmast. In the mean time officers and men from the Minnesota and Iron Age were busily at work plugging up shot-holes and freeing the wreck from water and lightening her by throwing overboard coal and other things that could be gotten at; this work continuing until 4 o'clock a. m. of the 10th instant. At 8 p. m. of the 9th, received a ten-inch hawser from the Montgomery, and both vessels went ahead full speed, but to no purpose. At 9 p. m., in obedience to orders from the admiral, I ordered the Montgomery to proceed to her right station, and to return early in the morning in time for high water, which was 8.45. I then cast off, anchored, and brought the hawser from the wreck, and stood out into four and a half fathoms, where I remained during the night. At 4 o'clock on the morning of the 10th, executive officer of the Iron Age returned from the wreck for a fresh set of men, stating that the working party from the Minnesota had been recalled at a time when a little more work would have freed the engine-room from water and ena-

bled the engineer to trace the pipes, and find the necessary cocks for freeing the vessel of water and feeding the boiler, as they had steam up on the forward boiler. As the men had been hard at work all day and up to a late hour of the night, I refused his request, particularly as all the buckets belonging to the Minnesota had been taken away by her men. Shortly after, Chief Engineer McGinnis came on board with the remainder of our men. After hearing his report, I felt sanguine of getting her off on the morning tide. At early daylight I got under way, stood in, picked up the hawser, and again made fast to the wreck. Received a ten-inch hawser from the Montgomery, who also had the Daylight ahead of her. At 8 a. m. all three steamers pulling away at the wreck. Prior to the Montgomery's going ahead, I sent an officer in a boat with orders to the Montgomery to get her head well around to starboard before starting, as I was fearful that the slight current that there was would drift me to the eastward, so that if the wreck should start off she would be in danger of grounding again before we got her into deep water. My orders were not complied with as I wished them, and I made repeated signals with my hand to the Montgomery to pull more to starboard. I will here state that the wreck was again full of water, and as soon as it was known to me I gave up all hopes of saving her, but thought it possible that she might be hauled into deep water. I sent an officer with a boat's crew to cut the hawser so soon as we should have succeeded in effecting our object. At 8.40, finding the vessel in two and a quarter fathoms of water, I debated with myself as to the propriety of cutting adrift everything for fear of the very event which happened; but before I had fully made up my mind to forego all of the advantage of being attached to the wreck, with a strong hope of her starting every moment, I discovered the Montgomery to be aground, and the Iron Age struck almost immediately afterwards. At 8.45 a. m. (it then being high water) I immediately cut off both hawsers and ran out the kedge, with which I usually anchor, with a seven-inch hawser, and hove it taut to prevent her bows going on any further. In the mean time the Daylight making two or three unsuccessful attempts to get into a position to take a hawser from us, and it was not until 10.30 that she at length made fast to us with a ten-inch hawser, which she parted at the second or third jerk. I believe the delay in getting her into position was caused by her propeller being fouled by a hawser. Even up to this time I felt no apprehension as to eventually getting the vessel off. I had made signal for permission to throw overboard battery and otherwise lighten the vessel, so that I might be at liberty to do so when, in my judgment, the proper moment had arrived. At 11 o'clock Admiral Lee came on board and took charge. An anchor was planted off the starboard quarter, with two parts of a five-inch hawser, which was set taut by a dock tackle. Boats from the different vessels were alongside, and all hands were at work lightening ship. At 12 m. water was so low that we were obliged to knock off lightening ship, as the boats could not approach near enough. The Daylight and Governor Buckingham had received orders to anchor off our starboard bow. Between 4 and 6 p. m. the boats again came alongside and took in a few shot and shell; the sea being too rough, discontinued. At 5.25 made fast to the Daylight by a ten-inch hawser. At 6.30 received hawser from the Governor Buckingham; the former was led through the bridle port and made fast to the foremast on gun deck; the latter was led between the bit-head and made fast to the foremast on the spar deck. At 6.40, both vessels towing full speed, I sent word to the admiral that if the ship did not come off by 7.30 that I should throw overboard the main-deck battery. His reply was to wait until 8.30. I waited until 8.15, and then gave the order to commence throwing overboard the gun-deck battery; intending, however, to retain two for defence. At 8.22 No. 1 went over the side, at 9.3 No. 4 was launched. Finding the ship did not move, and knowing that the water had commenced to fall, I gave up all hopes of getting the vessel off on this tide, and sent word to the Governor

Buckingham and Daylight; accordingly their hawsers were let go. I then made preparations for resisting any attack that might be made during the night. At 11.30 p. m. boats from flag-ship Aries, Daylight, and Governor Buckingham came alongside, and I received orders to prepare to abandon the ship. The water was too shoal at this time to take out any but light articles on the port side, and on the starboard side it was too rough for boats to lay. The wind was freshening, the weather threatening, with an increasing sea from the southward. It became now necessary for me to decide whether to run the risk of a gale of wind and the probable capture of the whole ship's company by the enemy, or abandon and destroy the vessel. After consulting the opinion of my officers, as well as Acting Master Pearson, of the Minnesota, I came to the conclusion that it was my duty to immediately abandon and fire the ship. At 12 o'clock I gave orders to the officers and men to put their bags, hammocks, and effects into the boats which were alongside for that purpose. Afterwards the officers and men themselves were ordered into the boats. By 2 o'clock the sea was so heavy that I was obliged to keep the boats outside of the surf, and send the remaining officers and men into them by a bowline around the hawser from the starboard bow, one boat having been capsized in the attempt to come in through the surf. At 3.45 all hands were out of the ship except myself and gig's crew. I then made the necessary preparations, at 4 o'clock applied the torch, and at 5.40 the United States steamer Iron Age blew up.

I did not keep my anchor down on the 10th instant, because I considered it unnecessary, as being the inner vessel and having two heavy steamers outside of me. Again, had my anchors been down and the tow started off before I could have got them with the slow purchase that I had, she would, more than probable, have grounded again. Furthermore, the purchase for getting anchors was of the lightest kind, being a small-sized gipsy windlass. Owing to the peculiar construction forward, and the height of the hatches on the main deck, I could not have worked a deck tackle to any advantage. I do not think that after a vessel has laid on the sands over one tide, that it is possible to get her off, particularly if lying broadside on. At low water there was but four inches on the port and one foot on the starboard side. I believe that if the propeller of the Daylight had not fouled, that the Iron Age would be now afloat and in service, for it was two hours after I struck before she was fast to me. Most sincerely do I regret the unfortunate termination to this my first cruise in command. I blame myself but for one thing, that is for hesitating to give the order to cut adrift when I struck two and one-fourth fathoms of water, and I can only urge my aforementioned reasons for not doing so. As an offset to the loss of the United States steamer Iron Age, if I might be allowed, I would place the capture or destruction of twenty-two blockade runners within the last six months by this squadron. The risk that is nightly run by these blockade runners, it is a matter of wonder that more are not stranded.

I submit the above statement to the department with the consciousness of having done what I conceived to have been the best under the circumstances. Hoping the department will take the same view of the case,

I remain, respectfully, your obedient servant,

EDWARD E. STONE,

Lieutenant Commander, United States Navy.

HON. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant F. S. Wells.

UNITED STATES STEAMER DAYLIGHT,
Off Wilmington, N. C., January 19, 1864.

SIR: I respectfully submit herein a report of the part taken by this vessel, under my command, in the attempt to get the blockade runner Bendigo off the beach, at the entrance of Lockwood's Folly inlet, during the 9th and 10th instant; also of the grounding and subsequent destruction of the United States steamer Iron Age on the morning of the 10th instant.

At 11.30 a. m. of the 9th instant, in obedience to your orders, took on board a party of mechanics from the United States ship Minnesota, with implements to stop leaks and pump out the Bendigo, and stood in sufficiently near to cover the working party, also the Iron Age, from the enemy's sharpshooters while engaged in getting the stranded vessel afloat. No annoyance was experienced from the enemy, however. The wind was blowing a gentle breeze from the northward, with the sea as smooth as a mill-pond; all the holes were plugged up, and the vessel nearly freed from water; at 5 p. m. everything being in readiness and circumstances favorable to get her off at the ensuing high tide. At dusk, in obedience to signal from flag-ship, returned to my night station on western edge of Old Inlet bar, near Fort Caswell.

At 7.30 a. m. of the 10th instant I ran past the flag-ship, and received orders to assist the United States steamers Iron Age and Montgomery, which vessels had hawsers to the Bendigo, and were formed in line ahead, endeavoring to tow her off the beach.

The weather still as favorable, and the sea as smooth as the day previous, I immediately took my vessel close into the Montgomery, as she was the leading vessel; sent her the end of a hawser; let go an anchor for the purpose of keeping the head of my vessel in a proper direction while the hawser was being made fast. All being in readiness, I started ahead slowly until my tow-line became taut, and then went ahead strong, at the same time taking my anchor; had been towing in this manner several minutes when the bow-chocks of the Iron Age gave way, thereby bringing a sudden strain on my hawser, which immediately parted on board the Montgomery, which vessel also became detached from the Iron Age, and moved further off shore. I then, for the first time, discovered the latter vessel to be aground, and dismissing all thought of the Bendigo, turned my attention to the Iron Age, and as soon as practicable anchored my vessel with a kedge and line in a position to back in with safety; made fast a new ten-inch hawser, which Lieutenant Commander Stone sent on board, and tried to tow her off, but without avail, as by this time, 9.30 a. m., the tide had fallen several inches and the hawser had again parted.

At 10.30 a. m. received your instructions to sound about the mouth of the inlet, find the best water and the most suitable position, anchor my vessel accordingly with both bower anchors, and a long scope of cable on each one to assist in heaving the stranded vessel off the beach; to get out the two twelve-inch hawsers (which were sent from the Minnesota for the purpose) to the Iron Age, and to have everything ready to go ahead by the time of the next high water.

These arrangements were completed with the aid of a launch and crew from the Minnesota by 6 p. m. At this time I renewed my exertions to get the Iron Age afloat, all hands assisting the steam power by heaving in on the anchors laid out seaward. It was high water between 7 and 8 o'clock p. m., and we continued our exertions, assisted by steamer Governor Buckingham, until about ten o'clock, when a possibility of saving the Iron Age no longer existed, even in the opinion of the most hopeful, as the quicksands on which she had grounded had formed a bank outside of her on which our small boats struck at half tide. The weather had also assumed a threatening look, and a fresh breeze had sprung

up from W.S.W., bringing with it a rapidly increasing southern sea. Her men, with their effects, were removed to this vessel, and the Iron Age was set on fire and abandoned at about 5 a. m., and blew up at 5.45 a. m., on the 11th instant.

The windlass of this vessel was entirely disabled in our efforts to get the Iron Age off the beach, in consequence of which I was obliged to slip the best bower anchor with thirty fathoms chain cable, as it could not be hove up with the facilities at hand in sufficient time to allow the vessel to get out of danger. I shall recover it the first convenient opportunity.

In preparing this hasty report, I have entirely omitted to mention the indefatigable exertions of others, confining my statement to the performance of the principal duties assigned this vessel. But I beg leave to add, that, in my humble opinion, the arrangements made with a view to getting the Iron Age afloat, were all that experience could suggest, the means at hand supply, or that the time allowed would permit of being done.

Permit me further to state that I had neither hand nor voice in the destruction of the Iron Age, and was much surprised when I learned that she had been set on fire.

I have the honor to be, sir, very respectfully, your obedient servant,

F. S. WELLS,

A. V. Lieut., Com'dg United States Steamer Daylight.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Volunteer Lieutenant E. H. Fancon.

UNITED STATES STEAMER MONTGOMERY,
Off Western Bar, Wilmington, N. C., January 15, 1864.

SIR: Your order, dated flag-ship Minnesota, January 11, 1864, to prepare and forward immediately a report of the part taken by me in the attempt to get off the beached blockade runner Bendigo, also the Iron Age, was not received until the 14th instant. In compliance with that order, it is my duty to report that on the evening of the 9th of January, being at the time aboard the Minnesota, I had verbal instructions from you to move the Montgomery in carefully towards the beach, and to give a 10-inch hawser to the Iron Age for the purpose of aiding that vessel to get afloat the Bendigo.

I returned on board the Montgomery and repeated the order to Mr. Putnam, executive officer, and Mr. Tilby, the pilot of the ship. The Montgomery was at the time under way, having just returned from the windward. The 10-inch hawser was gotten on deck, lines ready to run to the Iron Age, a man placed on each side of the chains with a lead, and the vessel slowly moved towards the Iron Age. On nearing that vessel the anchor was let go, and the hawser hauled to the Iron Age. At 8 p. m. the anchor was taken up, and we began to steam ahead slowly, increasing to full power, governed by signals from the Iron Age. At 9.15 stopped the engine, a boat came from the Iron Age with orders for us to haul in our hawser, proceed to our station, and be ready at 8.45 next morning to try again. On the 10th, at 7.30 a. m., dropped an anchor as before near the Iron Age. The same hawser was again run to her, and at 8.10 lifting our anchor, and with our helm hard to port, we steamed ahead slowly, gradually increasing the number of revolutions. During this time the Daylight was on our starboard bow, and her commander hailed to know if we needed assistance, or should give us a hawser; not being in chief command, and thinking that the united power of the Iron Age and Montgomery would be as much as anything

connecting the Iron Age and Bendigo would bear, I answered at first in the negative, but seeing that the Daylight could assist in keeping our head to the windward, I hailed that vessel and took a hawser from her, at 8.20 a. m. making it fast to our bits on the starboard bow. The Daylight steamed ahead. In about fifteen minutes she stopped her engine for some purpose then and now unknown to me. The hawser was slacked up, and I saw men busily at work with it over her stern. Seeing that the Montgomery was being set near the shoal water east of us, I repeatedly hailed the Daylight to steam ahead or we should be on shore. It was some time—to me it seemed a long time—before she moved her engine, and just before she did so, the Montgomery took the ground heading over to the starboard. We then had two fathoms under the port main chains, and three fathoms on the starboard, the ship drawing 14 feet aft. The Daylight at length steamed ahead, and almost immediately parted her hawser. At that instant I ordered the engine to be stopped, and then back hard, sent an officer to the engine-room to say to the engineer the ship is aground; the tide is fast falling; the ship must come off within the next three minutes; strain the engine to the utmost. The order was immediately executed; the ship soon started astern; the hawser fast to the Iron Age was cast off from on board that vessel; and when about half of it had been hauled in, we found it to be foul of the screw. It took some twenty minutes—possibly more—to clear it, and when clear, we found that 50 fathoms had been cut off by the propeller. The moment the ship was in moving order we steamed to the Daylight, then very near the Iron Age, and sent a boat to know if the Montgomery could in any way be useful. The answer was, no. We then steamed to the Newbern, lying near us, and got our supplies. Remained near the Minnesota with an anchor up until 3.30 p. m., when we anchored. At 4 p. m. was ordered two or three miles to the eastward to watch the beach; got under way at once and executed that order. No orders whatever were received in relation to the Iron Age.

Very respectfully, your obedient servant,

E. H. FANCON,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Master A. B. Pierson.

UNITED STATES SHIP MINNESOTA,
Off Wilmington, N. C., January 15, 1864.

SIR: On the 10th instant, between the hours of 6 and 9 p. m., I was sent on board the United States steamer Iron Age, by Acting Rear-Admiral S. P. Lee, with orders to remain there until high water, or bring any message Captain Stone wished to send; the United States steamer Iron Age being ashore at that time.

On my arrival on board the Iron Age, Captain Stone sent me to this ship to inform the admiral that he thought it would be necessary to throw the main-deck battery overboard to save the vessel.

After my reporting the condition of the Iron Age to the admiral, he sent me back to that vessel to inform Captain Stone if he and Captain Wells, of the United States steamer Daylight, and Captain Saltonstall, of the United States steamer Governor Buckingham, thought it would be necessary for saving the vessel (or words to that effect,) to throw them overboard on the port side without buoying them.

Finding there was no prospect of getting her off, Captain Stone threw four

guns overboard, keeping two on the port side for the protection of the vessel in case of an attack from shore batteries.

When finding the tide was falling, and we had not succeeded in moving her, I returned to this ship and informed the admiral the condition of the Iron Age.

He then sent me back with two boats from this ship to assist in getting everything out of her; also sending written orders to Captain Stone.

On my arrival there we immediately commenced getting out everything that we could boat off, there being a heavy surf on at the time. Captain Stone requested me to attend to getting the crew and their things out first.

At 2 a. m. of the 11th instant I reported to Captain Stone all the men's things out and most of the men.

Captain Stone then sent for me to come into his cabin. He then told me that he was going to give the quarter gunner the keys to the magazine to get ready for firing the ship. He asked me if I would do the same if I was in his place, or if there was anything more I thought could be done. I told him there was not; and under the circumstances I would leave the ship. He then gave the keys to the quarter gunner, and ordered him to open the powder tanks and have everything ready for firing the ship.

Captain Stone told me that he would keep his gig there for the last boat, and he wanted me to keep one of the Minnesota's boats there until he was ready to leave.

At 3 a. m., or near that hour, he told me he was ready to leave the ship, and asked me to leave with what officers my boat could carry. I then returned to this ship.

I am, very respectfully, your obedient servant,

A. B. PIERSON,
Acting Master, U. S. Navy.

P. S.—I neglected to mention in my report, regarding the loss of the United States steamer Iron Age, the depth of water alongside at high tide, which occurred about 8.45 p. m. The greatest depth being about 7 feet—the vessel drawing 9 feet. When I left the Iron Age there were two (2) feet of water alongside. My report to the admiral in regard to the condition of the ship was, that she was thumping heavily, with a head off shore, and that I thought she was bilged. It was reported to me by one of the engineers that there were two (2) feet of water in her fire-room.

I am, sir, very respectfully, your obedient servant,

A. B. PIERSON,
Acting Master, U. S. Navy.

Report of Acting Volunteer Lieutenant W. G. Saltonstall.

UNITED STATES STEAMER GOVERNOR BUCKINGHAM,
Off Western Bar, Wilmington, N. C., February 2, 1864.

SIR: Arriving from Beaufort on the 10th of January last with this vessel too late to take part in the attempt to tow the prize steamer Bendigo off the shoal at Lockwood's Folly inlet, I know nothing of that affair.

In regard to the case of the Iron Age, I would state that I was ordered by you, between 10 and 11 a. m. of that day, to send my boats to take soundings, and proceed with this vessel as near as practicable to the Iron Age, to assist the United States steamer Daylight in attempting to tow her off the shoal where she had grounded shortly after my arrival in the morning. The tide was high that night about 8.30 p. m., and the Daylight and this vessel, side by side,

each with a separate hawser from the starboard bow of the Iron Age, tugged at her from 8 till 10 p. m. Lieutenant Commander Stone then sent word to us to stop, further towing being useless, as the tide was receding, and the vessel unmoved.

I then went on board the Iron Age, and found that Lieutenant Commander Stone had begun to make his preparations to abandon the vessel, feeling confident he could not save her. I then proceeded to the flag-ship Minnesota; had an interview; no very immediate action would be taken in regard to the destruction of the steamer. Acting Volunteer Lieutenant Wells and myself returned to our commands to get our hawsers in and our vessels under way, to move out into deeper water, as the weather looked too threatening to remain so near the shoal. Anchored in five-fathom water at about 2 a. m. After moving this ship, boats continued to pass between the Iron Age and here, with small-arms, baggage, &c., until 4.30 a. m., when, to my surprise, the Iron Age was reported to me as being on fire, and at 4.45 a. m. the captain and officers came on board.

I was obliged to use great haste to get this vessel under way again and out of danger from the burning ship, but succeeded in doing so, and anchoring a short distance to windward of the Minnesota at 5.30 a. m. of January 11. At 5.45 a. m. the Iron Age blew up.

These are all the circumstances connected with the affair so far as my action in this vessel was concerned.

I am, sir, very respectfully, your obedient servant,

W. G. SALTONSTALL,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE, U. S. N.,

Commanding N. A. B. Squadron.

CAPTURE AND DESTRUCTION OF UNITED STATES STEAMER UNDERWRITER.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,

Off Newport News, Virginia, February 10, 1864.

SIR: I enclose herewith the reports (1) of G. Edgar Allen, acting 3d assistant engineer, lately attached to the United States steamer Underwriter, captured and destroyed by the rebels during their recent raid upon Newbern. Also the report of Acting Volunteer Lieutenant Graves, (2,) commanding the United States steamer Lockwood, detailing the naval operations during the time Newbern was threatened by the enemy.

From the report of Mr. Allen it seems that the Underwriter was surprised by three (3) boats filled with men while lying at anchor in the Neuse river, above the line of our fortifications. After a short resistance the Underwriter was surrounded by the enemy, who proceeded to place the officers and crew in their boats, and after plundering the vessel, set her on fire, and commenced to retreat with their prisoners under a fire from the battery on shore.

Mr. Allen, on discovering that the guard which had been placed in the boat he was in numbered but two men, easily took possession of the boat, and making prisoners of one of the guard, made his way to the shore within our lines.

I enclose list (3) of the officers and men who thus made their escape from the enemy, and who are now on board the Lockwood.

I have directed Commander Davenport to distribute them among the vessels in the sounds according to their necessities.

I will cause a thorough investigation of the matter to be instituted.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Volunteer Lieutenant G. W. Graves.

UNITED STATES STEAMER LOCKWOOD,
Off Newbern, N. C., February 2, 1864.

SIR: I have the honor to submit the following report :

At 3.30 a. m. on the 1st instant the officer of the deck reported heavy firing in the direction of Neuse road.

At 5 a. m. I communicated with Acting Master Westervelt, commanding the Underwriter, and Acting Master Josselyn, commanding the Hull, ordering them to be in readiness for a move. At 6.30 a. m. I received an official despatch from General Palmer, informing me that the enemy were advancing in force, and requesting me to make such disposal of the boats under my command as I should deem proper.

I immediately ordered the Underwriter to get under way and take up position on the Neuse river so as to command the plain outside our line of works, and the Hull to take a station above her.

At 9 a. m. the Underwriter had reached the position assigned her, but the Hull, soon after getting under way, got aground, and could not be got off during the day.

Soon after this (hearing from the commanding general that the enemy were planting a battery near Brice's creek) I proceeded with the Lockwood as far up the Trent river as I could get, and lay there at anchor for the night.

At three o'clock on the morning of the second I received a despatch from General Palmer, informing me that the Underwriter had been taken by surprise. Immediately after receiving this I perceived her to be on fire; but as it was very thick, and the channel very intricate, I was obliged to wait until daylight before I could move. As soon as it grew light I got under way and ran down the river to Newbern, where I found the Underwriter burned to the water's edge. From all that I can learn, it was a complete surprise. They had very little steam on, and no boarding netting up. The officers and crew fought desperately until, overpowered by numbers, they were obliged to surrender.

I enclose the report of Acting Third Assistant Engineer Allen, late of the Underwriter; also a list of the men who have reported.

The attacking party was composed of sailors, armed with rifles, revolvers, and cutlasses, about three hundred in all, regularly organized and stationed, engineers, firemen, pilot, and all complete.

Acting Masters Lear and Newman being here, (not having had time to report to their respective vessels,) I, at the suggestion of the commanding general, fitted up the army steamer Allison with two field-pieces, and placed her under command of Acting Master Rogers, assisted by the above-named officers. Later in the day the general placed the steamer Eagle at my disposal to arm with such guns as could be obtained.

At 6 p. m. the Hull was gotten afloat, and I immediately ordered her to proceed down the river as far as Johnson's Point to reconnoitre and prevent the enemy from erecting batteries upon the banks.

This evening, at the request of the commanding general, I supplied Colonel Mixon with all the available boats for an expedition up the Neuse river.

Very respectfully, your obedient servant,

G. W. GRAVES,

Acting Volunteer Lieutenant, Commanding.

H. K. DAVENPORT,

Commander, and Senior Officer Com'dg Sounds of N. C.

Report of Acting Third Assistant Engineer G. Edgar Allen.

UNITED STATES STEAMER LOCKWOOD,

Off Newbern, N. C., February 2, 1864.

SIR: I have the honor to report that about half past two o'clock this morning, while the United States steamer Underwriter was lying at anchor in the Neuse river, above our line of works, several boats filled with men were seen coming down the river. The night was very dark, and they were not seen until they had approached within one hundred yards of the vessel. They were hailed as soon as seen, but, instead of answering, cried out, "Give away; give away strong." We then found out that they were filled with the enemy.

The rattles were immediately sprung for all hands to get to quarters; but before the guns, which were trained on the port bow, so as to command the bridge crossing the river, could be brought to bear upon them, they had approached so near our starboard bow and quarter that we attacked them with small-arms.

They appeared to number one hundred and fifty, while there were not over forty men, all told, upon the vessel. We repelled them successfully for fifteen minutes, when they overpowered us, and captured all the men and part of the officers on deck, driving the remainder down into the wardroom, where they followed, with cutlasses and revolvers, demanding us to surrender, which, as nothing could be gained by resistance, we did.

We were immediately ordered into the boats under guard, I, together with eighteen or twenty of the crew, being put into the whale-boat belonging to the Underwriter. After we were all in the boats, they stripped the vessel of everything they could carry off, and then set fire to her fore and aft. While they were doing this, Fort Stevenson opened on the vessel, the first shell going through the port wheel-house and signal-box, and, bursting, wounded several of the enemy.

We then shoved off and were proceeding up the stream, the boat I was in being astern the rest, when I discovered that, in their hurry to get off, they had put only two men as guard in the boat. This fact I discovered by the one in the stern steering (by whom I was sitting) hailing the other boats, which were some fifty yards ahead of us, and asked them to take off some of us, as the boat was so overloaded it could make no headway, and also saying they wanted a stronger guard, as all but two were prisoners. One of the other boats was turning to come back, when I snatched the cutlass from the belt of the guard and told the men to pull for their lives. Some of the men, the other guard among them, jumped overboard, and swam for the land. I headed the boat for the shore, and landed at the foot of the line of breastworks, delivered my prisoner to the commanding officer, and, procuring an ambulance, took one of

our disabled men to the hospital. At daylight I reported on board the Lockwood.

At 5 a. m. the magazine of the Underwriter blew up, and at this time she lies burned to the water's edge.

I am, sir, very respectfully, your obedient servant,

G. EDGAR ALLEN,

Acting Third Assistant Engineer, U. S. N.

G. W. GRAVES,

Acting Volunteer Lieutenant, and Senior Officer present.

List of officers and men that escaped from the Underwriter.

List of officers and men lately belonging to the United States steamer Underwriter, who have reported on board the United States steamer Lockwood :

George E. Allen, acting third assistant engineer; Stephen Canus, boatswain's mate; Hugh McDougal, carpenter's mate; Robert Davis, cockswain; William H. Williamson, captain after guards; Terrence Riley, ship's cook; Albert A. Allard, first-class fireman; John Griffin, second-class fireman; Robert Hubbard, seaman; Thomas R. Hopkins, quartermaster; Charles McDonald, Joseph E. Gillmore, Daniel Borden, William E. Wenn, and James Crosby, ordinary seamen; Thomas Livermore, James Smith, John Roney, Michael Hill, John Simons, William Ransom, and Henry Edwards, landsmen; Andrew Sharks, first-class boy.

Very respectfully, your obedient servant,

G. W. GRAVES,

Acting Volunteer Lieutenant, Commanding.

List of casualties on the Underwriter.

UNITED STATES STEAMER HETZEL,
Off Newbern, North Carolina, March 1, 1864.

List of officers and men of the Underwriter known to have been killed in the attack of that vessel :

Jacob Westervelt, acting master, commanding, body recovered February 28, 1864; John Fealy, first-class fireman, body recovered February 16, 1864; Alfred Banks, (colored,) captain's boy, body recovered March 1, 1864.

H. K. DAVENPORT,

Com'der U. S. N., and Senior Naval Officer in Sounds of N. Carolina.

UNITED STATES NAVAL HOSPITAL,
Newbern, N. C., March 9, 1864.

SIR: I have to report the finding and burial of another body, late of the Underwriter. It has been recognized as that of Lewis Liverman, (colored.) It was in a very advanced stage of decomposition.

Very respectfully, your obedient servant,

L. H. KENDALL,

Acting Assistant Surgeon, in charge.

H. K. DAVENPORT, U. S. N.,

Com'dr and Senior Officer Com'dg in Sounds of N. Carolina.

UNITED STATES NAVAL HOSPITAL,
Newbern, N. C., March 8, 1864.

SIR: I have to report the death of James Ryan, landsman, aged 26 years, born in Ireland, and late of the United States steamer Underwriter. He was wounded in the attack on that vessel in the right knee joint, and died from exhaustion and gangrene.

Very respectfully, your obedient servant,

L. H. KENDALL,
Acting Assistant Surgeon, in charge.

H. K. DAVENPORT, U. S. N.,
Com'dr and Senior Officer Com'dg in Sounds of N. Carolina.

Additional report of Acting Rear-Admiral Lee.

UNITED STATES FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 25, 1864.

SIR: I transmit enclosed, in connection with reports forwarded on the 9th instant, from Acting Volunteer Lieutenant Graves and Acting Third Assistant Engineer Allen, a report from Commander H. K. Davenport, dated 17th instant, in relation to the capture and destruction by the enemy of the United States steamer Underwriter on the 2d instant.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

HON. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Communication from Commander H. K. Davenport to Acting Rear-Admiral S. P. Lee.

UNITED STATES STEAMER HETZEL,
Off Newbern, N. C., February 17, 1864.

ADMIRAL: The reports of Acting Volunteer Lieutenant Graves and Third Assistant Engineer Allen will give you the particulars of the capture of the Underwriter. General Palmer informs me that the enemy evidently intended making a simultaneous, combined attack; but the weather prevented the naval forces arriving at the proper time.

When the first attack (on shore) was made the Underwriter was at anchor below the town, on the eve of starting for Hatteras, to assume her duties there. She was ordered up the Neuse, the Lockwood up the Trent, while the Commodore Hull was aground and could not be gotten off, even with the assistance of tugs, &c., the water being very low. The enemy came down with fifteen armed boats, three of them barges which had been transported from Richmond, carrying in all about three hundred men, and boarded the Underwriter on all quarters. At this time the gig of the Underwriter was absent with one of General Palmer's staff, up Bachelor's creek, in an attempt to communicate with one of the outposts. The Underwriter, as you are aware, is very low in the water, her guards scarcely clearing it. From the official report of the enemy their loss proves that the officers and crew of the Underwriter fought well until overpowered.

The enemy were commanded by Commander John Taylor Wood and the following named officers: Lieutenant Gardner, Lieutenant Hogue, Lieutenant Carr, and Lieutenant Wilkinson. The only one of the crew *known* to be killed is John Fealy, first-class fireman. His body floated ashore last night, and I had it interred this morning.

I have the honor to be, respectfully, your obedient servant,

H. K. DAVENPORT,

Commander and Senior Naval Officer in Sounds of N. C.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Additional despatch of Acting Rear-Admiral Lee.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Va., February 29, 1864.

SIR: Commander Davenport, senior officer in sounds of North Carolina, under date of the 25th instant, informs me that he had learned on that day that Acting Master Jacob Westervelt, late commanding United States steamer Underwriter, was killed at the time of the capture of that vessel. It was previously supposed that he had been taken prisoner. I have directed Commander Davenport to prepare a complete list of the missing officers and men, late attached to the Underwriter, distinguishing between killed and captured, as far as known. This shall be forwarded to the department when received.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Additional despatch of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,

Off Newport News, Va., March 2, 1864.

SIR: Commander Davenport, United States steamer Hetzel, informs me, under date of February 28, that he had that day recovered the body of Acting Master J. Westervelt, late commanding the United States steamer Underwriter, and would have it interred on the following day with all the honors of war.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

DESTRUCTION OF THE BLOCKADE RUNNERS WILD DAYRELL, NUTFIELD,
DEE, EMILY, FANNIE AND JENNIE.*Report of Acting Rear-Admiral S. P. Lee.*FLAG-SHIP MINNESOTA,
Off Newport News, Va., February 15, 1864.

SIR: I have the honor to report to the department the circumstances attending the capture and destruction by the blockading forces off Wilmington of the following blockade runners, of which I have previously informed you by telegraph, the Wild Dayrell, Nutfield, Dee, Emily, and the Fannie and Jennie.

Upon the reporting of the Sassacus, Lieutenant Commander Roe, she was assigned by me to duty as an outside cruiser—to cruise upon the line of bearing between New inlet and Bermuda—not further to the eastward than the meridian of 75° west longitude, a station where her reputation for speed would be severely tested, and one in which a very fast cruiser would prove a great stumbling-block to the blockade runners. The result has equalled my expectations, and the destruction of the steamers Wild Dayrell and Nutfield by the Sassacus, both new and fast steamers, the latter on her first voyage, are added to the long list of disasters to the blockade runners.

Upon the morning of the 1st instant Lieutenant Commander Roe discovered black smoke in shore of him, and pursuing it, discovered the Wild Dayrell on shore near Stump inlet. He boarded and found her to be partially filled with an assorted cargo. Her crew had abandoned her and fled to the shore. After great exertions to get her afloat, in which he was assisted by the Florida, it was found impracticable, and she was completely destroyed. Lieutenant Commander Roe estimates her value, with her cargo, at about \$200,000. After completing the destruction of the Wild Dayrell, the Sassacus proceeded to take up her assigned station, and at seven o'clock on the morning of the 4th instant a blockade runner was discovered to the northward and westward of him, distant twelve miles. Chase was immediately given, and after a five hours' chase the steamer was brought under fire, and finding escape impossible, she ran on shore, at one o'clock p. m., near New River inlet. Her officers and crew escaped to the land in their boats; one boat load, however, was capsized and the crew drowned, with the exception of a Mr. Mell, the purser of the steamer, who was rescued from drowning by the boats of the Sassacus, which were immediately sent in to take possession of the prize. She proved to be the English steamer Nutfield, from Bermuda, bound to Wilmington, previously mentioned in consular despatches. From Mr. Mell, who was rescued, I learn that her cargo was munitions of war, arms, a battery of eight Whitworth guns, and pig lead; the guns and lead were thrown overboard during the chase. Finding it impossible to get the Nutfield afloat, after great exertions to that end, she was fired and destroyed. Some 700 rifles and a quantity of cavalry sabres, together with other articles, were rescued from her, and will be sent in for adjudication at an early date.

Lieutenant Commander Roe reports that the Sassacus attained a speed of thirteen and a half knots, and gained rapidly upon his chase—reported one of the fastest steamers yet sent to run the blockade.

Upon the 6th instant the Cambridge discovered a steamer ashore and on fire about one mile south of Masonboro' inlet, which proved to be the blockade running steamer Dee, from Bermuda to Wilmington. Finding it impossible to extinguish the flames or to get her off, Commander Spicer, of the Cambridge, abandoned the attempt, and still further destroyed her by firing into her. Seven of her crew were captured, and are now held as prisoners on the Cambridge. From these prisoners I learn that the Dee was commanded by G. H. Bier,

formerly a lieutenant in the United States naval service. She was loaded with lead, coffee, and bacon, all of which, with the vessel, was completely destroyed.

At 5.50 a m., on the 10th instant, a steamer was discovered from the Florida standing along the shore towards New inlet. After pursuing and firing at her, she ran on shore near Masonboro' inlet. Commander Crosby sent his boats and took possession of her; she proved to be the side-wheel steamer Fannie and Jennie, commanded by the notorious Captain Coxetter, who, with the purser, was drowned in endeavoring to reach the shore. The remainder of her crew, twenty-five in number, were captured, and are now prisoners on board the Florida. The steamer was loaded with merchandise and coal. The enemy opened fire upon the wreck and upon the Florida with musketry and Whitworth guns, by which fire Acting Assistant Paymaster J. F. Keeler received a severe but not dangerous wound. Finding it impossible to get the steamer afloat, after great exertions, Commander Crosby ordered the steamer to be fired, which was done under a severe fire of the enemy. The Florida received some damage from the fire of the enemy, which can readily be repaired. At the same time that the Fannie and Jennie ran on shore another steamer was seen from the Florida ashore, about one-half mile to the northward of the Fannie and Jennie, which was also boarded by the Florida's boats. This proved to be the Emily, from Nassau, with a cargo of merchandise and salt. She was also fired and destroyed, as it was impossible to get her afloat.

The Fannie and Jennie, Emily, and Nutfield are new vessels, and this is supposed to be the first attempt to run the blockade.

The Wild Dayrell has made one successful voyage, and the Dee is an old offender.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander Pierce Crosby.

UNITED STATES STEAMER FLORIDA,

Off New Inlet, February 10, 1864.

SIR: At 5.50 a. m. discovered a steamer in shore and to the northward of us; fired the twelve-pounder howitzer at her, and stood in shore to head her off; drove her ashore above Masonboro' inlet. Discovered about the same time another ashore, about half a mile to the northward of him. Sent boats and took possession of them; they proved to be the side-wheel steamers Fannie and Jennie (from Nassau, five days out, Captain Coxetter commanded her;) he and the paymaster were drowned while trying to land on the beach. The remainder of the crew, twenty-five in number, were captured, and are now on board this vessel. She was loaded with a few small articles of merchandise; had a good deal of coal. The other was the screw steamer Emily; left Bermuda February 4; cargo of salt and a few barrels. Her crew and captain escaped. Anchored and sent a hawser to the Fannie and Jennie, but before we got our heavy hawser to her the enemy opened on us with a Whitworth battery at long range, the first four shots striking the hull, doing some damage to the wheel, which can be easily repaired. As the enemy had our exact range, and hitting us each time, I slipped the cable and pulled on the hawser and parted it. The enemy continued firing at us, but shot fell short about from two to four hundred yards; fired our Dahlgren fifty-pounder at them, but could not reach them. As

their fire from the guns and musketry increased, I ordered the steamers to be set on fire and destroyed, which was done. My men being on the wrecks prevented me firing nearer them. Our paymaster received a severe flesh wound, but not dangerous.

We were in four and a half fathoms when these vessels were discovered, and anchored in three fathoms water to send our hawsers. We left them both in flames, aground. I send the log-books taken from the Emily, which give all the information we have of them. I have a confederate flag taken from the Fannie and Jennie, a spy-glass, the chronometer, one sextant, and her charts. As the opportunity offers, I send the flags taken from the Emily, Wild Dayrell, and Fannie and Jennie.

Very respectfully, your obedient servant,

PIERCE CROSBY,
Commander.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

The boats destroyed the steamers while under the fire of the enemy. The officers and men in them performed their duty well.

PIERCE CROSBY,
Commander.

Additional report of Commander Pierce Crosby.

UNITED STATES STEAMER FLORIDA,
Off Masonboro' Inlet, February 11, 1864.

SIR: Enclosed I send a list of prisoners taken from the steamer Fannie and Jennie. The engineers of that vessel, when she was boarded by our boats, offered every assistance in their power in their department.

The steamers which we set on fire yesterday burned all last night and this morning. I found them completely destroyed by fire, and the sea washing over them. The Emily had two lower masts, and had apparently been dismantled to run the blockade. I saw by the papers taken from her that she had been brig-rigged; she was perfectly new, and a very handsome steamer, expensively fitted out. After she had burned some time an explosion took place on board of her, and her stern has settled, apparently blown open. I am informed by the second engineer of the Fannie and Jennie that ten vessels sailed for Wilmington during the dark of the moon. Three have been destroyed, and one put back broken down, leaving six others to be heard from. The City of Petersburg was one of the six, and she I think ran in safe. She started in company with the Fanny and Jennie from Nassau, but soon left her, being a faster vessel. I send a list and description of some of the vessels running from Nassau to Wilmington, given me by the second engineer of the Fanny and Jennie. The pilot of the Fanny and Jennie was named Burrows, and from the description I imagined him the same man we took on a previous occasion, was appointed a pilot and deserted from the Shokokon. He escaped and got on shore safe. Captain Coxetter was drowned, with a number of others. He is said to be a nephew of the Coxetter who has been so successful in running the blockade.

The Emily had a cargo of salt, possibly something under it. All, however, was destroyed. The shot which struck this vessel yesterday cut off one paddle-wheel arm, and broke a second, and cut one rim of the wheel in two. A shell exploded under the guard, but did little damage. Fortunately, our boilers and steam drum were not touched; they are much exposed, and were evidently the

point aimed at. The precision of the enemy's fire with those guns is very remarkable.

At the time we discovered the Fanny and Jennie, the Florida was lying in a quarter less four fathoms; and in endeavoring to keep close in shore, the Fanny and Jennie accidentally ran aground, when a shot from our howitzer passed over them, causing the captain to leave precipitately, followed by a portion of his crew. The second engineer tells me there was a handsome sword, gold-mounted, for General R. E. Lee, on board; it was destroyed with the vessel. It was a presentation sword. The engineers and crew tell me that the steamer stopped two or three times during the night of the capture, when running down the coast, and sent a boat ashore to ascertain their position, and during the time anchored; and that they were not aware of their position when they ran aground. It was the captain's intention to make the land about two miles north of Fort Fisher. They were running thirteen knots at the time, and passed over one shoal to another. Had we been unmolested two hours longer, I think both vessels might have been gotten off, but under the circumstances I considered it the safest plan to destroy them effectually, which was done in one hour and a half after they were discovered. Sharpshooters were collecting rapidly behind the sand-hills, and in positions not easily to be dislodged by our fire, except by endangering our own men.

After the vessels were on fire, the Cambridge came in sight and sent her boats in to look at the vessels; some of her men were severely wounded by the rebel sharpshooters.

The City of Petersburg has two masts and telescopic funnels.

From all I can learn from the engineers of the Fanny and Jennie, a thirteen-knot vessel would outrun the greater part of the blockade runners.

In my hasty letter of yesterday, reporting the destruction of these steamers, I mentioned the good conduct of the officers and crew on the occasion. I would now particularly mention the zealous and efficient conduct of Acting Master John McGowan, jr.; also of our pilot, J. A. Taylor, whose services were on this occasion, as well as heretofore, invaluable to me on the blockade. I would respectfully recommend him for promotion to be master pilot.

Very respectfully, your obedient servant,

PIERCE CROSBY,
Commander.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. Blockade Squadron.

Additional report of Commander Pierce Crosby.

UNITED STATES STEAMER FLORIDA,
Off New Topsail Inlet, February 3, 1864.

SIR: Yesterday I came to this place, as we saw a steamer here and apparently on shore. On arriving I found that the Sassacus had discovered the steamer Wild Dayrell, of Liverpool, on shore, and had been trying since Sunday to get her off. I immediately offered every assistance, and to-day I had all hands at work discharging coal, running hawsers, and pulling on her, but could not succeed in getting her off; and to-day we set her on fire, and she is now burning well, and both vessels are firing at her to destroy her hull as much as possible. We have not been troubled by the enemy except for a short time with musketry, when they were soon silenced after a few shells were fired at them.

I have been so occupied that I have not had time to make more than a hasty report of the matter. The Newbern is in sight, (I think it is her,) and I wish to have this ready for her.

The eight (last) refugees I send by the Newbern, as Captain Sands gave me directions to send the first two by her to Hampton Roads.

The cargo of the Wild Dayrell had been nearly discharged; the rest was destroyed by us, and it was not practicable, or rather worth the trouble and time, to save it. I allowed the crews to take such things as would have been burned up. Shoes, blankets, and provisions appear to have been her general cargo.

Captain Roe, of the Sassacus, has a portion of her papers, and will make out his report of the matter to you. I think the Dayrell got ashore by accident.

I have the honor to be, very respectfully, your obedient servant,

PIERCE CROSBY.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Hampton Roads, Va.

P. S.—Owing to shallowness of the water near the wreck when the Florida anchored, she struck the bottom twice, but without any injury. The thumps were moderate.

Respectfully,

PIERCE CROSBY,

Commander.

Report of Lieutenant Commander F. A. Roe.

UNITED STATES STEAMER SASSACUS,

Off Stump Inlet, N. C., February 3, 1864.

SIR: I have to report that about 11 o'clock a. m. on the morning of the 1st instant, in about the parallel of Topsail inlet, N. C., I discovered a steamer close in shore, showing heavy columns of smoke. I headed for her at once, and upon approaching found her ashore at the mouth of Stump inlet. Her crew were busy throwing overboard her cargo, a portion of which was scattered along the beach. When within reach of my guns her crew and people fled in their boats, when I fired a few guns to disperse any enemies that might be hovering near. I boarded and took possession of the steamer, which proved to be the blockade runner Wild Dayrell. All the papers which I could find I herewith transmit. She was inward bound, two days from Nassau. I found her furnaces filled with fuel and burning, with the intention of destroying her boilers. I hauled her fires, and found her machinery and the vessel in perfect order, with a portion of her cargo, consisting of assorted merchandise, still on board. I immediately got out hawsers and attempted to pull her off, but failed, owing to the falling of the tide. I again made another attempt at 1 o'clock a. m. on the morning of the 2d, but parted the hawser. The weather looking bad, I put to sea until daylight, when I returned and assumed a new position to endeavor to get her off.

In the mean time I commenced to lighten the vessel by throwing overboard about twenty tons of coal. At high water, about 2 p. m. of the 2d, I commenced tugging at her again, when after some time, the current sweeping me close to the shoal to leeward, the Sassacus struck twice lightly. I cut the hawser and steamed up to a new position and anchored. During this trial the United States steamer Florida, Commander Crosby, came in and anchored, with offers of assistance to us. During this trial the wind blew fresh from the southward and westward in heavy flaws, which was the principal cause of my failure to get her off. I then steamed up to a new position to try her again. On the 3d, while getting on board our hawsers to the prize, with the assistance of the boats of the Florida, my cable suddenly parted, and I was forced to steam out to keep from fouling the Florida, which was anchored near, and in so doing parted the hauling lines of the hawsers, which were being hauled in by the Florida's men on board the prize.

During this last operation the enemy appeared and opened fire with musketry upon the *Sassacus* and the boat coming from the prize. Both vessels promptly opened fire, and the enemy were driven off. * * *

Upon consultation with Commander Crosby, we decided that it was impossible to get the steamer off, and that we must destroy her. Accordingly I gave the signal to the men on board of her to set fire to her thoroughly and return aboard, which was done. Both vessels then opened fire upon the steamer, and she was riddled at about the water-line with raking shots from the *Sassacus*. No attempt was made to save her cargo, as I deemed it impracticable to do so. Not one half of her cargo had been thrown overboard, and the rest, which I deemed very valuable merchandise, was consumed with the vessel. Valuable time would have been lost in the effort, and to have pillaged her would have demoralized my men for healthy action in some future similar service. Having effected this duty, I put to sea about 8 o'clock of the evening of the 3d.

I transmit herewith an appraisement of value of the steamer and cargo* made by a board ordered upon that service.

I have the honor to be, sir, very respectfully, your obedient servant,

F. A. ROE,

Lieutenant Commander.

Admiral S. P. LEE,

Commanding N. A. B. Squadron, Hampton Roads, Va.

Additional report of Lieutenant Commander F. A. Roe.

UNITED STATES STEAMER *SASSACUS*,
Off New River Inlet, N. C., February 4, 1864.

SIR: Having destroyed the steam paddle-wheel blockade runner *Wild Dayrell*, of about 440 tons, I stood out to sea last night and regained my position on the Bermuda line at daylight this morning. About 7 o'clock a. m. I discovered a blockade runner to the northward and westward, when I fired up, and at about 8 o'clock was in full pursuit. The chase was about 12 miles distant. She changed course and headed in for the land. I steadily gained upon her, logging about $12\frac{1}{2}$ to 13 knots per hour, when I perceived she was throwing overboard her cargo.

A little after 12 o'clock I got her within long range of my 100-pounder rifle, and opened fire, planting my shell all around her.

Being to the southward of her, I cut her off, when about $\frac{1}{4}$ before 1 o'clock she headed in for this inlet and ran ashore. Her crew fired her, left her engine running, and fled precipitately in their boats. I boarded her about 1 o'clock p. m., and found her to be the paddle-wheel steamer *Nutfield*, of 750 tons, from Bermuda, inward bound. One of her boats had capsized, and I rescued from drowning her purser. The rest of her boat's crew were supposed to be drowned. We commenced putting out the fire in her holds, and made arrangements for hauling her off if possible.

From the purser, whom we rescued from drowning, I learn that she is a perfectly new iron steamer, having an assorted cargo of merchandise, munitions of war, Enfield rifles, and a battery of eight Whitfield rifled guns and a quantity of pig-lead. This battery and lead she threw overboard during the chase.

She had been among the blockading fleet below last night, but made her escape and fell into our hands to-day. The chase of the *Sassacus* was very beautiful, for the *Nutfield* is one of the last and best steamers out of the Thames, and we overhauled her handsomely.

* Appraisement omitted.

February 5, 1864.—I continue the above report. During the preceding night I found the Nutfield so far thrown up by the action of the sea, that it was utterly impossible to get her off. I therefore removed from her the Enfield rifles, a quantity of quinine, and several compasses, and set her on fire. About this time the United States steamer Florida came up, and both vessels riddled her with shot. I saw the vessel thoroughly destroyed, and put to sea about 7 this p. m.

I transmit herewith the appraisement of the value of the Nutfield, and also a list of arms, &c., (omitted,) taken from her, and await your orders as to the disposition to be made of them. I allowed the officers and crew to take some provisions, blankets, and some small articles for their own use. While I profoundly regret my inability to preserve these valuable prizes, I am consoled by the thought that the enemy is deprived of resources of immense value.

Very respectfully, your obedient servant,

F. A. ROE,
Lieutenant Commander.

Admiral S. P. LEE,
Commanding N. A. B. Squadron, Hampton Roads, Va.

Report of Commander Wm. F. Spicer.

UNITED STATES STEAMER CAMBRIDGE,
Off Wilmington, North Carolina, February 6, 1864.

SIR: I would respectfully inform you that at 8 a. m. this day I discovered a steamer ashore and on fire about one mile to the southward of Masonboro', which proved to be the blockade runner steamer Dee, from Hamilton, Bermuda, for Wilmington, North Carolina. Having boarded and found it impossible either to extinguish the flames or to get her off, I opened fire upon and completely destroyed her. We succeeded in capturing seven of her crew, a list of whose names I herewith enclose, and await further orders with regard to the disposition of the prisoners. We also secured a life-boat which was found beached near the steamer, and have it with us, also three log-books of a previous trip belonging to the engineer's department of the vessel, a small telegraph flag of Maryatt's code, and a package containing a number of copies of a work entitled "The Cotton Trade," by McHenry. Several of these books are addressed to the leading members of the so-called southern confederacy, Jefferson Davis and others. In this package, which is directed to R. M. Maury, Richmond, are also files of English newspapers, and other reading matter.

Soon after the boats landed, several shots were fired at the men from the woods, but without effect. By information received from the prisoners, it seems that the Dee was commanded by Captain George H. Bier, formerly a lieutenant in the United States navy, and that she had already made three successful trips. Her cargo consisted of bacon, a proportion of lead, and a small quantity of coffee. She ran ashore at 3.30 a. m., either by design or through the ignorance of the pilot, was then fired, her captain and others escaping by means of boats up the inlet.

Very respectfully, your obedient servant,

WM. F. SPICER,
Commander.

Captain B. F. SANDS,
Senior officer present.

BOAT EXPEDITION TO SMITHVILLE, N. C.

*Report of Lieutenant Wm. B. Cushing.*UNITED STATES STEAMER MONTICELLO,
Off Wilmington, N. C., March 5, 1864.

SIR: I have the honor to report that I passed the forts at the entrance to this harbor, with two boats and twenty men, on the night of the 29th of February, and proceeded up the river to Smithville. My object was to land at that town and capture the commanding general, and to board any vessels that might be found at anchor. I succeeded in landing directly in front of the hotel, hid my men under the bank, captured some negroes at work in a salt work, and thus gained such information as desired.

Then leaving most of the men to guard the boats, I proceeded with Acting Ensign J. E. Jones and Acting Master's Mate Howorth, and one seaman, to General Herbert's headquarters, (situated across the street from the barracks, containing about 1,000 men.) I effected an entry, and captured the chief engineer of these defences, but found that the general had gone to Wilmington the same day. The adjutant general escaped from the door after severely wounding his hand; but thinking that a mutiny was in progress, took to the woods with a great scarcity of clothing, and neglected to turn out the garrison.

My boat was about fifty yards from the Smithville fort, and *not so far* from the sentinel on the wharf; but I succeeded in bringing my prisoners off so quietly that they did not discover me. The signal-light was made so tardily that I was abreast of Fort Caswell before they knew that boats were in the harbor, and they did not get a shot at us.

The papers captured were unimportant. The Scotia ran out just before I reached the anchorage, so I did not have the pleasure of calling on the captain.

I send Captain Kelly, Confederate States army, to you, deeply regretting that the general was not in when I called.

I brought off the negroes captured.

I am, sir, very respectfully, your obedient servant,

W. B. CUSHING,
Lieutenant Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron, Hampton Roads, Va.

JOINT ARMY AND NAVY EXPEDITION UP THE PAMUNKEY AND AGAINST
NEIGHBORING COUNTIES.*Report of Acting Rear-Admiral S. P. Lee.*FLAG-SHIP MINNESOTA,
Off Newport News, Va., March 19, 1864.

SIR: On the 8th instant I accompanied Generals Butler and Meigs to Yorktown to arrange a joint army and navy expedition to operate first up the Pamunkey against the rebel forces in the neighborhood of King and Queen Court House, which had attacked Colonel Dahlgren's party, and then against a party of the enemy who were reported to be fitting out an expedition from Middlesex county, in the Peninsula formed by the Rappahannock and the Piankattank. I enclose a copy of my instructions of March 8 to Lieutenant Commander Babcock, (1,) and his original report dated March 13, (2.)

The department will perceive that the naval part of the expedition was well arranged and executed.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Instructions to Lieutenant Commander Chas. A. Babcock.

UNITED STATES STEAMER MORSE,

Yorktown, Tuesday, March 8, 1864—4 p. m.

SIR: General Kilpatrick will leave here at daylight to-morrow, 9th instant, with say two thousand (2,000) cavalry to attack the rebels at King and Queen Court House, who captured Colonel Dahlgren's party and killed him. General Butler will despatch two thousand (2,000) infantry from Norfolk at 9 a. m. to-morrow, to be here by 2 p. m., when, joined by one thousand (1,000) infantry, and commanded by General Wistar, they will proceed and land at Shepard's landing, near the mouth of the Mattaponi. You will accompany these troops from Yorktown to Shepard's landing with the gunboats named in the margin, protect them, and give them all the aid in your power. When the movement against King and Queen Court House is over, or when the above landing is made, General Wistar will inform you how long he shall need the presence of the gunboats at Shepard's landing. General Wistar does not expect to re-embark there, but to march back, and he does expect to march across to Middlesex county, to the point of the peninsula between the Piankatank and the Rappahannock where the rebels are said to be fitting out a boat expedition.

General Wistar desires that you should be with the gunboats between the mouth of the Rappahannock and a point ten (10) miles below Urbana, from Friday evening next to Saturday evening, to prevent the rebels from escaping across the river. General Wistar does not expect to communicate with you there. General Butler will notify Commander Parker of this expedition, and if the latter should be there, you will be subject to his orders whilst operating with him. Make your report to me, however, as soon as practicable. Put yourself in communication with General Wistar, and strive, as you have always done, to advance the public interests.

Respectfully yours,

S. P. LEE,

Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Lieutenant Commander C. A. BABCOCK,

United States Steamer Morse.

Gunboats—"Morse," Lieutenant Commander Babcock, commanding.

"Shokokon," Acting Master Sheldon,

"Shawsheen," Acting Master Phelon,

or "General Putnam," in place of the latter.

Report of Lieutenant Commander Charles A. Babcock.

UNITED STATES STEAMER MORSE,

Off Yorktown, Va., March 13, 1864.

SIR: I respectfully report that, according to your orders of the 8th instant, I have acted in conjunction with the expedition of General Wistar as far as

possible. On the morning of the 9th instant, at 11 a. m., General Kilpatrick and staff arrived on board this vessel; four transports arrived off Yorktown at noon with troops. At 1 p. m. General Wistar arrived on board this vessel with his staff. At 1.30 p. m. got under way; signalled United States gunboats Shokokon and General Putnam to get under way and follow with the transports. Proceeded up the river with this vessel, fleet following in our wake. At 7.20 p. m. entered the Mattapony river, and at 7.45 being abreast of Shepherd's landing, and the night being very dark, placed men with lanterns on the deck as a guide to the transports; ordering the Shokokon to anchor below the transports, and the Putnam again below her, while I remained above them with this vessel. The transports went at once alongside the dock and began disembarking the troops. At 10.30 the General Putnam came alongside with two army gunboats and some launches which had come up the river with orders for General Wistar, but after communicating with him, returned again down the river about midnight. There arrived two more transports with troops; General Kilpatrick and staff then went ashore from this vessel. At 8 a. m. on the morning of the 10th instant, General Wistar and staff went on shore from this vessel; all troops being disembarked and the transports at anchor in the stream. Troops marched away, leaving a picket guard around the wharf. General Wistar, on leaving this vessel, requested me to wait until the evening, and if possible he would communicate with me; but if he did not, that I should return to Yorktown that evening with the fleet. At 10.50 a. m. got under way and went alongside the wharf at Shepherd's landing, leaving the General Putnam above the transports, and the Shokokon below them. At 12.30 army tug Seth Low arrived with a despatch for General Wistar or Kilpatrick, but having no means of communicating with them, I took charge of it, and when I returned to-day delivered it to General Wistar. At 5 p. m. ordered the General Putnam to get under way and proceed down the river with two transports. At 5.30 received on board from the Shokokon a refugee from Richmond, whom I turned over to the military authorities on my arrival at Yorktown. At 6 ordered the Shokokon to proceed down the river with three transports in company. Took on board the picket guard, and having received no communication from General Wistar, at 7.30 proceeded down the river with one transport in company. At 9.30 p. m., weather setting in very thick, and not being able to see the land on either side of the river, came to anchor and burnt a blue light as a signal to the other vessels which were close to me. At 5.30 a. m. on the morning of the 11th instant, got under way and proceeded for Yorktown, where we came to anchor at 8.30. Fog again set in very thick, but at 12.30 p. m. partially cleared up. At 1.30 p. m. got under way and proceeded down the river, but the fog again setting in very thick, came to anchor at 2.40. Weather again clearing up, at 3.30 p. m. signalled the Shokokon and General Putnam to get under way and follow this vessel. After dark the weather again set in very thick on the horizon, but clear overhead; burnt two rockets as a signal to the General Putnam, which she answered; came to anchor at 9 p. m. At 5.30 a. m. on the morning of the 12th instant again got under way, and when off the mouth of Piankatank river exchanged signals with the United States steamer Currituck, of the Potomac flotilla, and when off the mouth of the Rappanannock river saw the gunboats Yankee, Freeborn, Tulip and Fuchsia; communicated with the senior officer present, Acting Volunteer Lieutenant Edward Hooker, commanding United States steamer Yankee, and was informed by him that on Wednesday morning, at 9 a. m., (five hours before the expedition left Yorktown with the transports,) he had heard from people at Urbana that a body of our cavalry had started from West Point for the purpose of cutting off the rebels who were around the Peninsula, and the consequence of which was that the bulk of the rebel soldiers had left the Peninsula directly. Made arrangements with Acting Volunteer Lieutenant Hooker that the gunboats of the Po-

tomac flotilla would keep a vigilant look-out for our forces, and also prevent any rebels from crossing from the mouth of Piankatank river to Mosquito Point, on the Rappanannock. Stationed the General Putnam off Lockley's Point, and the Shokokon off Parrott's islands, with strict orders to look out for any rebels crossing the river, or report to me if General Wistar's forces came in sight. Steamed up the river slowly with this vessel as far as Urbana, then came down again eight miles, and at 12.40 p. m. came to anchor off Grey's Point. At 5 p. m. got under way and ordered the Shokokon and General Putman to keep under way during the night, to prevent surprise of any kind, and stay as near as possible to their stations, and report to me if anything came in sight. Saw nothing of General Wistar's command or the rebels. At 6 a. m. this morning proceeded down the river, the Shokokon and General Putnam in company, communicated with Acting Volunteer Lieutenant Edward Hooker, senior officer present of the Potomac flotilla, then proceeded for Yorktown, where we came to anchor at 2.30 p. m., and after making proper arrangements with the fleet for the night, came on shore and telegraphed to you, at 4 p. m., my arrival with the gunboats.

I am, sir, very respectfully, your obedient servant,

CHARLES A. BABCOCK,

Lieutenant Commander and Senior Officer present.

Rear-Admiral S. P. LEE,

*Commanding N. A. B. Squadron, U. S. Flag-Ship Minnesota,
Off Newport News, Va.*

EXPEDITION UP CHUCKATUCK CREEK.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Va., March 31, 1864.

SIR: I have the honor to inform the department that on the night of the 29th instant, during the prevalence of a violent storm, an expedition, consisting of two boats and twenty-three (23) seamen from the United States steamer Commodore Barney, under the command of Acting Master Williams, commanding that vessel, with two boats and thirty-two (32) seamen of this ship, commanded by Acting Master Wilder, of the Minnesota, ascended the Chuckatuck creek and effected a landing at a place called Cherry Grove. It was known that in that vicinity was stationed a company of rebel soldiers, whose capture was the object of the expedition. Procuring a guide, the party made their way to the house in which the objects of their search were sheltered, and by a careful disposition of the force succeeded in surprising and capturing twenty (20) soldiers of the rebel army, with their arms and equipments. With their prisoners the party returned to their boats and brought them safely to the Commodore Barney, lying in the Nansemond.

I have transferred the prisoners to General Butler, and the arms captured with them have been transferred to the naval ordnance depot.

Acting Masters Williams and Wilder speak in commendable terms of the conduct of the officers and men engaged in this exploit, and it gives me pleasure to commend the energy and zeal displayed by these officers in planning and carrying out to a successful termination an expedition of no little difficulty.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Master James M. Williams.

UNITED STATES STEAMER COMMODORE BARNEY,
Nansemond River, Va., March 30, 1864.

SIR : I have the honor to report, that on the arrival of United States steamer Shokokon, on the evening of 29th instant, an expedition under my charge, consisting of thirty-two men with two boats from the United States steamer Minnesota, and twenty-three men with two boats from this vessel, proceeded to Blenkhorn's creek, on the west side of the river. After landing we proceeded to a distance of about two miles and met with a citizen and a negro, whom we took as guides. We then returned to boats and proceeded to Chuckatuck creek. We landed at the head of the creek, and at the distance of about half a mile met with a citizen and his son, whom we also took to guide us to the headquarters of Lieutenant Roy, where we arrived at about 4 a. m. on the 30th instant. We immediately surrounded the houses (the headquarters) and demanded instant surrender, a demand with which they complied, the result of which was the capture of two sergeants and eighteen privates (confederate,) with small arms, &c., without firing a shot. Acting Masters Wilder and Pearson had charge of Minnesota's boat's crew, and both behaved with the utmost coolness and bravery ; I must give them the whole credit of the capture. Mr. Rodgers (pilot of this vessel) piloted the boats up and down the river, and deserve great praise. Acting Master's Mate Auld, of this vessel, had charge of the boats, and displayed the utmost coolness and courage. Acting Third Assistant Engineers Leffler and Shannon also acted with great courage and bravery. I would also respectfully call your attention to John Cross (yeoman,) who had charge of the flag, and did his whole duty to my entire satisfaction.

The petty officers and crew of both vessels did their duty nobly. Should I again have the honor of an expedition under my charge, I will feel confident with such another set of men with me. I am very sorry that we did not take more boats, as we could have captured the whole signal corps of seventeen men if we had accommodation to bring them off to the vessel. The following are the names and rates of prisoners captured at Chuckatuck, Va., by expedition under my command :

Sergeants James Stickler, 17th Va., Co. A, and C. H. Murrell, 11th Va., Co. C. Private James H. Parkham, Lieutenant Colonel Bunchen's artillery ; D. S. Mooney, 7th Va., Co. F ; R. W. Gravatt, 30th Va., Co. F ; J. B. Croy, 7th Va., Co. D ; J. C. Talbert, 29th Va., Co. F ; Thomas Moming, 1st Va., Co. H ; J. D. Williams, 24th Va., Co. I ; W. H. Chishulm, 15th Va., Co. E ; T. B. Luck, 30th Va., Co. E ; S. H. Follax, 11th Va., Co. G ; W. N. Anderson, 1st Va., Co. H ; J. C. Wilkes, 18th Va., Co. K ; J. F. Prebble, 11th Va., Co. B ; W. A. Westmoreland, 1st Va., Co. D ; David Hughes, 29th Va., Co. D ; J. D. Turner, 24th Va., Co. B ; A. M. Kerster, 24th Va., Co. I ; Robert L. Hutchinson, 17th Va., Co. F.

I am, sir, very respectfully, your obedient servant,

JAMES M. WILLIAMS,
Acting Master, Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding North Atlantic Blockading Squadron.

Report of Acting Master Chas. B. Wilder.

UNITED STATES FRIGATE MINNESOTA,
Off Newport News, Va., March 30, 1864.

SIR : I have the honor to report that, in obedience to your order of yesterday, I went with the 4th and 5th cutters, with 32 men and Acting Master Pierson

and Acting Master's Mate Jarvis, and reported to Captain Williams, of the Commodore Barney, to co-operate with him in an expedition to Chuckatuck creek, the object of which was to capture Lieutenant Roy and 27 men of his command. At 11 p. m. we started from the Barney with four boats and 60 men and officers. We landed near Cherry Grove and captured 20 rebel soldiers with all their arms and equipments, but did not succeed in capturing Lieutenant Roy, he being absent from his post. I feel it my duty to mention the brave conduct of the officers and men under my command. Owing to the storm and bad state of our roads, the men of the expedition suffered severely, but they bore it with a zeal and cheerfulness that was surprising. I would not wish better men. I also have to report the loss of one revolver and sword-bayonet belonging to this ship, from accident and not carelessness. * * * *

Very respectfully,

CHAS. B. WILDER,
Acting Master, U. S. N.

Lieutenant Commander J. H. UPSHUR,
Commanding U. S. S. Minnesota.

ATTACK ON THE MINNESOTA BY A TORPEDO BOAT.

Telegram from Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,
April 9, 1864—7 a. m.

The Minnesota was struck by a small torpedo boat in the port quarter, about 2.15 this a. m. No leak whatever; injury very slight.

S. P. LEE,
Acting Rear-Admiral.

HON. GIDEON WELLES,
Secretary of the Navy.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
Off Newport News, Va., April 15, 1864.

SIR: I transmit enclosed the following reports respecting the attack by the rebels on this ship with a torpedo on the night of the 8th inst., viz: (1) report of Lieutenant Commander Upshur, commanding Minnesota; (2) of Acting Ensign Birtwistle, Minnesota, officer of the watch at the time of the attack, both dated 9th inst.; (3) of Acting Ensign I. Miller, commanding tug Poppy; (4) of Acting Master's Mate H. M. Pishon, Poppy, officer of the watch, both dated 12th inst.; (5 and 6) of Acting Third Assistant Engineers James Spears dated 14th inst., and M. Boggins, Poppy, dated 12th inst.; (7) of Fleet Captain J. S. Barnes, reporting investigation made by him, by my order, of the facts and circumstances attending and causing the failure of the tug Poppy to comply with the orders given on the occasion, dated 13th inst.

I also enclose (8) a copy of an order issued by me on the 9th inst., assigning certain vessels to run down any suspicious object seen floating at night; (9) report of survey held by my order to ascertain the nature and extent of the injury done to this vessel; (10) copy of the reports of surveys held at the request of fleet paymaster, showing the injury done in that department; and (11) report of Fleet Engineer Garvin.

I recommend that the appointment of Acting Ensign and Pilot Miller, commanding the Poppy, be revoked, leaving him in his former grade of acting master's mate; and that Acting Third Assistant Engineer James Spears, and Acting Master's Mate Pishon, who was sleeping during his watch, be dismissed the service.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Lieutenant Commander J. H. Upshur.

UNITED STATES SHIP MINNESOTA,

Off Newport News, Va., April 9, 1864.

SIR: I have to report that last night about two o'clock, while riding to the ebb tide, a dark object was discovered slowly passing the ship, about two hundred yards distant. It was thought to be a boat, and hailed: to the hail was answered "Roanoke." By this time it was directly abeam, seemingly without any power of locomotion. The officer of the deck promptly gave orders to the tug astern to go and examine it, and repeated his orders several times before getting any reply, and while endeavoring to have this order executed, the object, a "David," approached the ship just abaft the port main chains and exploded a torpedo under her, the "David" making off in the direction of the Nansemond river. Several muskets and a round shot were fired at it, and every effort made to send in pursuit, but the tug Poppy had failed to keep the required look-out, and also had allowed her steam to go down, which was not discovered until the "David" had disappeared. Vessels were sent in search, but failed to find her.

I submit the accompanying report of Acting Ensign Birtwistle, officer of the deck at the time specified. It is difficult to say how far the ship may be damaged, although she manifests no leak. The shock was quite severe, and I should be glad to have a survey to ascertain the extent of injury sustained.

I am, very respectfully, your obedient servant,

J. H. UPSHUR,

Lieutenant Commander, Com'dg U. S. Steamer Minnesota.

Acting Rear Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

Report of Acting Ensing James Birtwistle.

UNITED STATES STEAMER MINNESOTA,

Off Newport News, Virginia, April 9, 1864.

SIR: At 1.45 this morning, while in charge of the deck, the quartermaster directed my attention to a boat adrift, a little forward of the port beam, and about one hundred and fifty yards distant, and while passing to the port side of the bridge the sentry at the gangway hailed her; she answered "Roanoke." I then hailed her and could not make out her reply. I went down off the bridge and hailed her from the quarter; she answered, "Roanoke." I told him not to come alongside; he answered, "aye, aye". I hailed the tug Poppy three times, and told him to see what that boat was. He said "aye, aye".

I thought the boat was nearing us, and could not see any oars. I sent a messenger to call you, sir, and ordered the boat to keep off, or I would fire into him. I repeated the order, but discovered she was nearing us fast. I then ordered the Poppy twice to run that boat down. I then saw the glimmer of a light. The quartermaster said he could hear her puff. I jumped to a convenient gun; called for help to train it. The sentries on the gangways and forward fired three shots at her; but before I could fire the gun she was inside of range. I jumped back from the gun, and the explosion followed. I then met you at the cabin hatch, and in answer to your inquiry, said it was a torpedo. Men were rushing on deck, the drum beat to quarters, and I went forward and fired a shell, from a nine-inch gun in my division. After the explosion I thought sure the Poppy would capture her, or I would have remained at the quarter-deck guns. The rest, sir, you saw.

I am, sir, very respectfully,

JAMES BIRTWISTLE,
Acting Ensign.

Lieutenant Commander J. H. UPSHUR,
Commanding United States Steamer Minnesota.

Report of Acting Ensign Isaac Miller.

UNITED STATES STEAMER MINNESOTA,
Off Newport News, Virginia, April 12, 1864.

SIR: I would most respectfully submit the following circumstances, in order to exonerate myself, as much as possible, from the blame attached to me:

On Friday, the 8th instant, I was ordered to drop astern of the Minnesota with the tug, of which I was in command, and hang a hawser. This I did. Here I would particularly request your consideration. I had so arranged the watches that I should always be on deck, from four o'clock in the morning until eight o'clock at night. It being after eight o'clock on the night in question, after seeing the tug properly secured, I intended to go below, but before doing so I went to the engine-room and told the engineer of the watch to have everything ready to start at a moment's notice, adding that I did not know the moment we would be called upon to perform some errand. He replied, "aye, aye." I then told the officer of the deck, Mr. Sullivan, to keep a good look-out and answer all hails from the Minnesota, and to call me if anything occurred. After the watch had been reported to me on deck, I went below. I lay down on the settee in the cabin without undressing, in order to be on hand as quickly as possible. I was suddenly roused up about two o'clock in the morning by some noise. I rushed on deck and found they had been hailing us from the ship to come alongside. On going forward I saw a boat on our port bow. Soon afterwards I was ordered, from the Minnesota, to run her down. I jumped into the pilot-house, and with the firm impression that everything was ready to start the tug, I ordered the hawser to be cut off, and rang one bell to go ahead. To my utter astonishment, I found the engine was not started, and I went to the engine-room to ascertain the cause; meantime the hawser had been cast off, and the boat was drifting astern. I told the engineer to try and turn over the engine; and I must do him the justice to say, he made every effort to do so, but in vain. He told me he had only a few minutes before pumped up the boilers. As soon as sufficient steam could be got up I obeyed the order to come alongside the Minnesota. Before sufficient steam could be got up, the boat which I saw had disappeared.

I regret exceedingly the above unfortunate circumstances which prevented

me executing the orders given me, and which accorded so well with my feelings—that of bringing to speedy punishment the perpetrators of a deed as daring as it was vicious.

Trusting that the reasons I have given, as well as my endeavor to do my duty faithfully on all occasions, will relieve me from the imputation of negligence under which I now labor.

I am, very respectfully, your obedient servant,

ISAAC MILLER,

Acting Ensign and Pilot, late in Command of the U. S. S. Poppy.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Master's Mate H. M. Pishon.

UNITED STATES STEAM TUG POPPY,

April 12, 1864.

SIR: The following are the facts concerning this vessel during the night of the 8th instant: Between the hours of 9 and 10 p. m. I "turned in," as has been the custom while lying securely moored alongside or astern the Minnesota. I soon fell asleep, and was conscious of nothing till I was half aroused by a call from the Minnesota, and which was immediately followed by the explosion of the torpedo. I immediately sprang to the wheel and saw the torpedo boat lying about amidships of the ship, and, as near as I could judge, about thirty or forty feet distant from the frigate and about thirty or forty yards from the tug. I was hailed from the ship and ordered to let go and "run her down." I wished them to let go our lines, but was ordered to let go ourselves. We had from thirty to forty fathoms of the hawser coiled on the house. I ordered the watch to let go the line, and rang to go ahead, when I was answered by the engineer that he had no steam. All were aroused by the shock of the explosion, and when I rung up, the captain stood by the wheel-house, down on deck, and hailed the officer of the deck, and told him that he thought it was the picket boat from Norfolk, as it resembled her very much in the gloom of the night. From the time I sprang to the wheel and parleyed with the officer of the deck regarding the hawser, till I rung up, which was probably all done in one or two minutes, the boat lay motionless. When I struck the bell, she sheered off in the direction of the Nansemond, and gave her full steam, judging by her "exhaust" and the sparks from the smoke-stack. She was soon lost sight of in the darkness. During this time the engineer was endeavoring to raise his steam, and by the time he had steam we were something like three-quarters of a mile astern. I know nothing of the state of the fires or quantity of steam at the time. Had we had steam I think we could have run her down; at any rate we should have done all in that direction that was possible for us to do.

While I have been in the tug it has been customary to sleep while lying secure alongside or astern, thinking nothing wrong, and having a good watch on deck to answer all hails from the ship, and when hailed have never been found wanting before as to steam or anything else. We have never received orders to keep guard for the Minnesota, and when cruising in the river or picket, have always received positive orders not to go below the Roanoke iron-clad, except to make a circle around her occasionally. During the winter we have cruised between the wharf at Newport News and the Roanoke; and latterly, while on picket, have received orders to run across the river between the Roanoke and Atlanta. These orders we have strictly obeyed, and by them have always

supposed that no danger was apprehended to the Minnesota, but to the iron-clads. Captain Miller, from the time that he came on deck, did all that laid in his power to get steam up and give chase to the enemy.

Most respectfully, &c.,

HENRY M. PISHON,
Acting Master's Mate.

Fleet Captain BARNES.

Report of Acting Master James Speirs.

UNITED STATES STEAMER MINNESOTA,
Off Newport News, Va., April 14, 1864.

SIR: In obedience to your verbal order of the 14th instant, I respectfully submit the following statement:

Agreeably to the orders of the senior engineer in charge, I had twenty pounds of steam—the quantity maintained while lying alongside the flag-ship. On being hailed, I immediately gave orders to spread fires, which were promptly obeyed, at the same time opening my steam jet. Returning to the engine-room I received “two bells,” (to back,) which was done, the engine running slowly. An order “to go ahead” was next sent to me and obeyed, but very slowly, as the steam was rapidly falling. Perceiving this, and unable to stem the tide, I was compelled to stop the engine until the necessary amount of steam was restored. The sole cause of this loss of steam was due to the fact that I was obliged to *feed my boilers* about five minutes prior to the order to get under way, to keep the same steam down, not being permitted to blow when lying by the flag-ship.

I am, very respectfully, your obedient servant,

JAMES SPEIRS,
Acting Third Assistant Engineer U. S. Tug Poppy.

Fleet Captain BARNES,
North Atlantic Blockading Squadron.

Report of Acting Third Assistant Engineer M. Bogbins.

UNITED STATES STEAMER POPPY,
Off Newport News, Va., April 12, 1864.

SIR: I respectfully submit the following report concerning the explosion of a torpedo and the state of this vessel on that morning:

At or about 12.30 on the night of the 8th instant I turned in, being off watch, and slept until awakened by the explosion of the torpedo. On hurrying to the engine-room I found that the bell had been rung to go ahead, and that there was but twenty pounds pressure of steam on the gauge, and the water in the boilers being cold, (as, in obedience to order of Fleet Engineer Garvin not to blow off steam, we were compelled to keep pumping and blowing,) this was not sufficient to work the engine. The engineer on watch was exerting himself to the utmost to get up steam, aided by the captain and myself as soon as there, notwithstanding we were nearly half an hour before we had steam enough to work the boat. Previous to the order of fleet engineer we had orders from the captain to keep up steam at all times sufficiently to work the engines, and twenty pounds is sufficient if the pressure can be kept up. Our boiler is too small to keep up the pressure to the nicety the order demands at all times, and

that time we were unfortunately caught. All the officers and men did their best to assist in raising steam in time, and are deeply chagrined at their failure.

In speaking of the order not to blow off steam, we were not to blow through the safety-valve, but through the surface-blow, in order to avoid noise.

I am, very respectfully, your obedient servant,

MARTIN BOGGINS,
Acting Third Assistant Engineer, in charge ad interim.

Report of the Fleet Captain Jno. S. Barnes.

FLAG-SHIP, N. A. BLOCKADING SQUADRON,
Off Newport News, Virginia, April 13, 1864.

SIR : I have carefully investigated the facts and circumstances attending and causing the failure on the part of the tug Poppy to comply with the orders given to, and received by, the officers of that vessel to run down and destroy the rebel torpedo boat which attacked the Minnesota on the morning of Saturday, the 9th instant.

I have examined all the officers of the Poppy, and caused written statements to be made from each of them to all the facts coming within their personal knowledge, and from a comparison of their statements and their written reports, the following facts are adduced :

The tug was lying astern of the Minnesota, secured by a hawser from the tug. No watch was on deck known to any of the officers. General directions had been given for an anchor watch to answer hails from the Minnesota, and an order had been given by the captain of the tug, that steam should be ready to move at any moment. When the torpedo boat struck the ship there was no one ready to respond to the order to run the boat down, until Acting Master's Mate Pishon, whose watch it was, and Acting Ensign Miller, in charge of the tug, aroused from sleep by the shock and repeated hails, took the wheel and rang the bells to start the engine. The tug had been lying with fires banked, and, by all accounts, the boiler had but a few minutes before been pumped up with cold water. The gauges showed 20 lbs. of steam, but as soon as the throttle was opened and the jet put on, the steam ran down to four or five pounds, and the engine could not be turned. The hawser which held the tug was slipped from the tug, some forty (40) or fifty (50) fathoms running over the side from the place where it was coiled, and the tug drifted helplessly astern with the ebb-tide about half an hour, during which time the torpedo boat made off towards the Nansemond side of the river, and disappeared in the darkness. A half hour had passed from the time of the explosion of the torpedo before the Poppy had steam enough to move. Previous to this night the Poppy had been employed as a picket boat around the Roanoke, with instructions to run down and ram anything of a suspicious character which was seen approaching or floating near ; and it appears that when not so employed about the iron-clads, the officers had improperly conceived that no vigilance was required from them. Upon the night in question, the tug Young America was guarding the Atlantic ; the tug Violet, just returned from the navy yard, where she had been under repairs, was guarding the Roanoke against torpedoes, and the Poppy was retained at the Minnesota in place of the Mount Washington, previously employed on that duty, and then absent for repairs.

Written orders assigning these tugs to this special duty had been issued with a view of meeting this species of attack, and there is no reason or excuse for the failure of the Poppy promptly to respond to the call made upon her to run the torpedo boat down—a duty which she could easily have performed, had she been in a condition to move, and her commanding officer vigilant. That she

was not in such condition is the fact, and the responsibility of the failure rests upon her commanding officer, Acting Ensign Isaac Miller, Acting Master's Mate Pishon, the officer of the deck, and Acting Third Assistant Engineer James Speirs, the engineer in charge. Had they performed their duty, a vigilant watch would have been kept, steam would have been ready, and the capture or destruction of the torpedo boat would have been accomplished.

There were at the time of this occurrence three (3) acting master's mates, and three (3) engineers attached to the tug Poppy, besides Acting Ensign Miller, who was in command. The senior engineer was absent on leave of absence.

Acting Ensign Miller has heretofore exhibited much zeal and intelligence in the performance of his duty, and I have always regarded him as an intelligent and capable officer, peculiarly fitted for the position he has held.

I enclose herewith the written statements of Mr. Miller, Acting Master's Mate Pishon, and Third Assistant Engineers Speirs and Boggins, of the Poppy.

I am, very respectfully, your obedient servant,

JOHN S. BARNES,

Lieutenant Commander and Fleet Captain, N. A. B. Squadron.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Orders of Rear-Admiral S. P. Lee.

FLAG-SHIP MINNESOTA,

Off Newport News, Virginia, April 9, 1864.

The tug Violet is assigned to the Roanoke; the tug Young America is assigned to the Atlanta; the tug Cohasset, or H. Brincker, is assigned to the Minnesota.

These tugs are to be kept under way from sunset to sunrise, and during thick and foggy weather by day, with a good head of steam up, (a regular watch of officers and men; battery clear and provided,) from 50 to 100 yards astern of these steamers respectively, all ready for ramming and running down, without your waiting for further orders, any David or torpedo, or other suspicious vessel or boat approaching the vessel to which the tug is assigned. These tugs are to be kept for this special service, and to do no other duty, and they are to have bold and trustworthy officers in charge of them, and faithful engineers.

It shall be the duty of the commanding officers of the steamers named, each to see that his tug is kept in a high state of discipline, and that it has the necessary officers and men on board, and that her deficiencies of complement are supplied from his steamer until otherwise provided for, and to apply for a relief tug or gunboat when this fails from any cause.

No boat is allowed to leave or be absent from any vessel of this squadron, in James river, from sunset to sunrise.

It shall be the duty of the officer of the deck, on board the tug, to report every half hour and until answered, whilst under way, to the officer of the deck of the steamer, that the tug "is all ready," and the look-outs on the tug shall make the usual audible call when the bell strikes.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

A copy sent to fleet captain and the commanding officers of the Minnesota, Roanoke, Atlanta, Young America, Violet, and Henry Brincker.

Order of Acting Rear-Admiral Lee for survey of injury of the Minnesota.

FLAG-SHIP, N. A. B. SQUADRON,
Off Newport News, Virginia, April 9, 1864.

GENTLEMEN: Hold a strict and careful survey to ascertain and make separate reports for the respective bureaus of the Navy Department, showing the amount of injury or damage sustained, except in the paymaster's department, by the explosion by the rebels last night of a torpedo under the port side of this ship.

Respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Captain GUERT GANSEVOORT.

Lieutenant JOSEPH FYFFE.

Carpenter J. W. STIMSON.

Report of survey.

UNITED STATES IRON-CLAD ROANOKE,
Newport News, Va., April 12, 1864.

ADMIRAL: In obedience to your order of April 9, we have held a strict and careful survey to ascertain the amount of injury or damage sustained by the explosion of a torpedo under the port side of the United States steamer Minnesota, as far as we can ascertain.

DESCRIPTION OF INJURY.

Port after shell-room.—1st and 3d futtocks of two frames badly sprung. The diagonal straps sprung off. The deck sprung, nine planks being sprung off from the beams about three-fourths of an inch. The linings of the bulkhead sprung badly. Amidship bulkhead started inboard about six inches.

Spirit-room.—Forward frame broken. Planking sprung. Second frame badly sprung. Bilge streak broken and sprung off. Third frame sprung. Planking sprung outboard from timbers about one inch, (2) two butts of second bilge streak sprung up. Decks started up. One deck plank broken over the spirit-room.

The centre of the injury appears to be about ten feet below the surface of the water. The shelving of the port magazine started. Port steerage bulkhead broken. One ladder broken, and all the rest unshipped. Nine deck planks of port steerage broken. In the port after magazine, the shelving has been shattered. Two butts on the gun-deck started upon the port side at No. 13 gun; seventeen planks from the water-way; two axletrees on gun-deck broken, and one on spar-deck broken of nine-inch gun-carriages. Two lower half-ports on spar-deck and two lower half-ports on gun-deck broken; preventive plate for main channel, next to after one, sprung out about half an inch. One of the bolts of the crane for spare spars, in the main chains, started one inch. The paymaster's store-rooms in the cockpit on the port side show the power of concussion, all the shelves being broken and disarranged. Carefully examined the outside of the ship abreast of the place of injury, and were unable to find any of the copper torn off, or any inequalities on the bottom of the ship. The bulkhead of the shaft-alley, abreast of the shell-room, started inboard about six inches for a distance of fifteen feet on the port side.

The binnacle on the quarter-deck forward of the mizenmast unshipped from its pedestal on the bridge and thrown three feet towards port side.

DAMAGE DONE IN THE ORDNANCE DEPARTMENT.

Number of shell boxes destroyed.....	IX inch.....	78
“ “ bags	IX “	32
“ canister broken	XI “	5
“ sabots and straps	IX “	110

Three IX-inch gun-carriages are disabled; the fore axletree of one being broken in two places, the others badly sprung. Two elevating screws that were attached to the guns on the above carriages were rendered useless by being bent, also the elevating screw of the XI-inch pivot by the same cause. The following equipments are broken and rendered useless: three (3) IX-inch sponges, two (2) IX-inch rammers, two (2) ordinary handspikes, one (1) roller handspike; also four (4) tompions and two (2) reinforce sight aprons missing from IX-inch guns on port side.

Very respectfully, your obedient servants,

GUERT GANSEVOORT, *Captain.*

JOSEPH FYFFE,

Lieutenant Commanding U. S. S. Commodore Morris.

J. W. STIMSON, *Carpenter.*

UNITED STATES SHIP MINNESOTA,

April 10, 1864.

SIR: In obedience to your order of this date hereunto annexed, we have held a strict and careful survey on the articles complained of by Purser Charles C. Upham, and beg leave to make the following report, viz: Of seventeen boxes of coffee (850 lbs.) in the spirit-room, but one and a half ($1\frac{1}{2}$) boxes have been saved; the remaining fifteen and a half ($15\frac{1}{2}$) boxes (775 lbs.) we find scattered throughout the spirit-room, mixed up with particles of soap and the salt where-with butter barrels were encased. We find three (3) barrels of butter to be a total loss, the staves and heads being broken and crushed in—butter being mingled with salt wherein it was encased; from heads of the barrels found, the average weight of each barrel may be assumed at ninety (90) pounds. We also find eighty-nine (89) cans (350 lbs.) of preserved meat so jammed and battered as to leak, meat protruding through the cans, already decomposing and unfit to issue.

We respectfully recommend that the foregoing 775 pounds of coffee, 270 pounds of butter, and 356 pounds of preserved meat be thrown overboard.

Very respectfully, your obedient servants,

JAMES D. MURRAY, *Paymaster.*

J. H. UPSHUR, *Lieutenant Commander.*

CHARLES B. WILDER, *Acting Master.*

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Approved.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

I certify that the foregoing articles recommended to be thrown overboard were so disposed of in my presence.

JAMES D. MURRAY.

UNITED STATES SHIP MINNESOTA,

April 10, 1864.

In obedience to your order of the 10th instant, hereunto annexed, we have held a strict and careful survey on the articles complained of by Purser Charles C. Upham, and beg leave to make the following report, viz: We find of soap three boxes (225 lbs.) have been pulverized and mixed with coffee, salt, butter, rubbish, and consider it a total loss; this 225 lbs. of soap (in dust) we also respectfully recommend to be thrown overboard.

Very respectfully, your obedient servants,

JAMES D. MURRAY, *Paymaster.*

J. H. UPSHUR, *Lieutenant Commander.*

CHARLES B. WILDER, *Acting Master.*

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Approved.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

I certify that the foregoing articles recommended to be thrown overboard were so disposed of in my presence.

JAMES D. MURRAY, *Paymaster.*

Report of Fleet Engineer B. F. Garvin.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Va., April 15, 1864.

SIR: In compliance with your order, to inform you in writing as to the nature and time of the order I passed to the senior engineer of the United States steam tug Poppy, I would respectfully state that I have been frequently requested to give orders to the tugs "to stop blowing off steam." Whenever this request has been made, I have always informed the officers that it could not be done, and at the same time have the tugs ready for instant use.

The last request of this kind was made to me about a month since, by the executive officer of this ship, Acting Volunteer Lieutenant Charles B. Wilder, who informed me that the tug Poppy made so much noise by blowing off steam, that his orders, and those of the officer of the deck, could not be heard. I informed Mr. Wilder that I would see the senior engineer of the Poppy, (when she returned with the mail,) and ascertain what could be done.

On the return of that vessel I sent for Acting Second Assistant Engineer John Evans, who was in charge, and inquired whether he could not avoid so much blowing off through the safety-valve, (while alongside this vessel,) by feeding and blowing. He informed me that he did blow and feed as much as he could and keep steam to be ready to move; that the Poppy was carrying the mail, and it was impossible to know at what moment the bell might ring to get under way. I told him he was doing right, and if he could not keep ready without blowing, then he would have to continue it, but to avoid raising the safety-valve higher than was absolutely necessary.

I am, sir, very respectfully, your obedient servant,

BENJAMIN F. GARVIN,

Fleet Engineer, N. A. B. Squadron.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

EXPEDITION TO THE VICINITY OF POQUETANK CREEK.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
Off Newport News, Va., April 11, 1864.

SIR: Acting Master Wright, United States steamer *Mystic*, reports, under date of 9th instant, that on the 7th instant he proceeded up York river, by General Wistar's request, to co-operate with a small party of cavalry sent by him to scout the vicinity of Poquetank creek, where armed boats were reported to be concealed. The *Mystic*, with a small body of infantry aboard, arrived opposite the creek in advance of the cavalry, and sent in three armed boats and two skiffs with the soldiers.

They landed on both sides the creek, and succeeded in capturing and bringing off one large pontoon, two boats, eight skiffs, six compasses, and fifty-eight (58) new oyster-tongs. No resistance was encountered, nor any of the enemy seen.

After further search for any boats that might be secreted, the party re-embarked, and the *Mystic* returned to her anchorage at the mouth of York river.

I have directed Lieutenant Commander Babcock to send these captured articles to Washington, with proper witnesses, as in the former case.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

DESTRUCTION OF STATE SALT WORKS IN NORTH CAROLINA.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
Off Newport News, Virginia, April 26, 1864.

SIR: The statements of refugees received on board the *Nippon*, off Wilmington, on the 7th instant, indicating that the extensive and valuable State salt works in that vicinity are weakly defended, and might be destroyed, I directed Captain Sands to organize a boat expedition, under command of Acting Volunteer Lieutenant Breck, to effect this important object.

I am happy to inform the department of the complete success of the expedition, which resulted in the complete destruction of one large steam-pump, boilers and engine attached, seven large boilers, about two hundred salt-pans, the large vats, reservoirs, and out-buildings of the establishment, a large wind-mill, and fifty or sixty government wagons with harness complete. The furnaces and boilers were blown to fragments with thirty-pound shell. One hundred and sixty conscripts were captured, of whom but fifty could be brought off in the boats across the rough bar. Complete order and discipline were observed, much to the credit of the officers and men engaged. The work was well and quickly done, the bar at Masonboro' safely crossed and recrossed on the same tide, and the vigilance of the military force close by completely eluded. My thanks are especially due to Captain Sands and Acting Volunteer Lieutenant Breck for the

good arrangements made, and to Acting Volunteer Lieutenant Breck for the admirable manner in which they were executed.

I have taken the pilots Orell and Puckett into government service.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Additional Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Off Newport News, Virginia, April 26, 1864.

SIR: I enclose the official instructions given, and reports made, respecting the destruction of the State salt works at Wilmington, North Carolina, on the 22d instant, by an expedition under Acting Volunteer Lieutenant Breck, despatched under my instructions to accomplish this important service as stated in my number 270 of this date, as follows:

1. My letter to Acting Volunteer Lieutenant Breck, of the 22d ultimo.
2. Copy of Acting Volunteer Lieutenant Breck's reply of April 1 to No. 1, with my indorsement of April 6, addressed to Captain Sands, and his indorsement of April 22.
3. Report of Captain Sands of April 22, with its enclosures.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Letter from Acting Rear-Admiral Lee to Acting Volunteer Lieutenant Breck.

UNITED STATES FLAG-SHIP MINNESOTA,

Off Newport News, Va., March 22, 1864.

SIR: I have received from Captain Sands the statements of refugees taken on board the Nippon on the 7th instant.

Can you obtain information of any practicable way of reaching and destroying the State salt works, which these persons agree in saying are weakly defended?

Respectfully, yours,

S. P. LEE,

Commanding N. A. B. Squadron.

Acting Volunteer Lieut. J. B. BRECK,

United States Steamer Nippon.

Letter of Acting Volunteer Lieutenant Breck to Acting Rear-Admiral Lee.

UNITED STATES STEAMER NIPPON,

Off New Inlet, N. C., April 1, 1864.

SIR: In answer to your communication of 22d March, I have the honor to state that one of the refugees spoken of, a Mr. Pucket, offered to pilot boats into Masonboro' sound to destroy the salt works, provided we would take off the

people employed there, as they would be conscripted into the rebel army if the works were destroyed. He seemed to think a force of forty to fifty men would be ample, and that boats could land very near the works. This individual is now at Beaufort, North Carolina, and has applied to me for a position as pilot.

Very respectfully, your obedient servant,

J. B. BRECK,

Acting Volunteer Lieutenant, Com'dg U. S. Steamer Nippon.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Fortress Monroe, Va.

Indorsed on above letter :

MINNESOTA, April 6, 1864.

Acting Volunteer Lieutenant Breck, under date of 7th ultimo, reports picking up a small boat containing six (6) refugees, and gives their statements in relation to the salt works as follows :

J. H. Pucket says : The State salt works in the sound are only protected by a few pickets, and could be easily destroyed. The men employed there are anxious to escape. There is but one battery on the beach between Masonboro' inlet and Fort Fisher.

John Sears states : The State salt works could be easily destroyed, and the men employed in them would make their escape if the pickets were driven away.

John Wheeler states : There is a large number of persons employed in the State salt works. The works are unprotected and could be destroyed by a small force. The men employed there are anxious to escape.

The within reply of Acting Volunteer Lieutenant Breck is referred to Captain Sands, who is hereby authorized to examine these refugees, obtain the services of one or more as guides, and to send a sufficient expedition, under Acting Volunteer Lieutenant Breck, to destroy these salt works, if the project holds out a reasonable prospect of success. Pucket may be taken into service as a pilot, if qualified and needed.

Indorse your action and return.

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Returned April 26, indorsed as below :

UNITED STATES STEAMER FORT JACKSON,
Off Wilmington, N. C., April 22, 1864.

Expedition sent accordingly, and the salt works successfully destroyed. Report will follow.

B. F. SANDS,

Captain U. S. N., Senior Officer off Wilmington.

Report of Captain B. F. Sands.

UNITED STATES STEAMER FORT JACKSON,
Off New Inlet, Cape Fear River, April 22, 1864.

SIR : In conformity with the authority conveyed by your indorsement upon the communication of Acting Volunteer Lieutenant Breck to you, dated 1st April, 1864, I have to report that, as soon as practicable after my arrival here, I despatched the Nippon to Beaufort for the necessary guides, and organized an expedition consisting of three (3) boats' crews and officers from the Nippon, one (1) from the Howquah, and two from this ship, the latter in charge of

Acting Masters W. E. Dennison and R. P. Swann, and Master's Mates Eytinge and Moore, of this ship—six (6) boats and seventy-two (72) men, exclusive of officers—all under the command of Acting Volunteer Lieutenant J. B. Breck, commanding United States steamer Nippon, to destroy the extensive State salt works at Masonboro', North Carolina. Surgeon P. S. Wales, of this ship, volunteered and accompanied them.

After sunset last evening the Nippon and Howquah took up positions off Masonboro' inlet, the latter to take possession of and shell the beach to the southward of the inlet, to cover their retreat, and the expedition was started in.

Before 10 p. m. the work of destruction was accomplished, returning to the vessels without the loss of a man, after demolishing and burning fifty (50) government wagons, seven (7) large buildings containing boilers, two (2) horse-sheds, one (1) windmill, one (1) large and valuable steam-pump, and one hundred and eighty (180) salt-pans, which turned out one hundred and ninety bushels of salt per day, employing over two hundred conscripts. Sixty-two prisoners (conscripts) were brought off in the boat, and as many or more were left behind for want of room in the boats. It was a complete surprise and most admirably conducted.

These were the most extensive salt works in the State. Their loss will be severely felt by the enemy, as they were their main reliance for meat-packing, and the amount of property destroyed must be hundreds of thousands of dollars.

I enclose the reports of Lieutenant Breck, commanding expedition, and Acting Master Balch, commanding Howquah, heartily indorsing their commendations of the steady conduct of the officers and men of the expedition, showing the good discipline of all, and will add that Acting Masters Dennison and Swann, of this vessel, have before been conspicuous for gallantry—the former wounded twice, severely, in the destruction of salt works on the west coast of Florida, and the latter for his conduct when in charge of the naval batteries landed at Vicksburg. * * *

I respectfully recommend that Orell and J. H. Pucket be appointed pilots in the navy for their faithfulness in guiding the expedition which has resulted so successfully.

Enclosed is a sketch showing the locality of the destroyed works and the route taken by the party.

Very respectfully, &c., your obedient servant,

B. F. SANDS,

Captain U. S. N., Senior Officer off Wilmington.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron,

Flag-Ship Minnesota, off Newport News, Va.

Report of Acting Volunteer Lieutenant J. B. Breck.

UNITED STATES STEAMER NIPPON,
Off New Inlet, North Carolina, April 22, 1864.

SIR: In obedience to your order, I have the honor to report the entire destruction of the State salt works on Masonboro' sound. At 6.30 p. m. of the 21st the steamer Howquah proceeded to station number 4, with orders at dark to send in a boat with crew to be landed and to march up the beach to the northward to Masonboro' inlet, and to capture all pickets which they might find, and hold the point of land on the south side of the inlet, to prevent the boats going into the sound from being cut off on their return; all of which was successfully accomplished by Acting Master Balch, commanding the Howquah. Placing this steamer in command of Acting Ensign N. Larsen, the expedition left at 7 p. m.

consisting of 1st cutter of steamer Fort Jackson, commanded by Acting Master Dennison, accompanied by Acting Master's Mate Eytinge and sixteen (16) men; 2d cutter of steamer Fort Jackson, commanded by Acting Master Swann, accompanied by Acting Master's Mate Moore and sixteen (16) men; 1st launch of this steamer, commanded by Acting Ensign Henry S. Borden, executive officer, Senior Engineer T. L. Churchill, Acting Master's Mate George W. Barnes, and seventeen (17) men; 2d launch of this steamer, commanded by Acting Ensign E. N. Semon, and Pilot J. H. Pucket, and seventeen (17) men; the 2d cutter of steamer Howquah, commanded by Acting Ensign St. John's, and crew of ten (10) men; and the gig of this steamer commanded by myself, in command of the expedition, accompanied by 3d Assistant Engineer Sanborn, Francis Belmanna, surgeon's steward, in charge, J. J. Orell, pilot, and twelve (12) men. We proceeded across the bar through heavy breakers without accident, and after some delay by getting ashore, and the narrow channels, reached the State salt works shortly before 9 o'clock. We landed and got in rear of the works without being discovered, threw out pickets and commenced the work of destruction, and succeeded in totally destroying the works and everything connected with them. As near as we could ascertain, the work being done so quickly, we destroyed fifty or sixty large government wagons and harnesses, one large steam-pump boiler and engine attached, one large windmill, several horse-sheds, seven (7) large boilers and some two hundred (200) salt-pans, large vats, reservoirs, and out-buildings attached. After destroying the pans and vats, we threw 30-pound shell into all the furnaces and under all the boilers, which blew them all to fragments; captured one hundred and sixty (160) conscripts engaged in the salt works. We learned that there were two companies of artillery and one of cavalry within a mile and a half of us. We learned also that one of our prisoners had escaped and taken the road to Wilmington, that city being but seven (7) miles from us. Fearing that if I remained over another tide, and we could not cross the bar at low water, I might be captured, and having accomplished all I intended to, took as many prisoners as the boats would carry, sixty (60) in all, and started for this steamer. Got aboard at 11 o'clock without accident of any kind. Made signal to the Howquah "all aboard," when Captain Balch withdrew his men from the point, all safe. Thinking there might be some pickets near the Half-Moon battery, I stationed the Howquah to guard the entrance, and proceeded with the Nippon near the Half-Moon battery, landed fifty (50) men with orders to sweep the beach to Masonboro' inlet, a distance of about ten (10) miles; found no pickets, they having been drawn in, but found and brought off four (4) refugees, one woman and three men.

At 3.30 all boats returned on board, and at daylight stood close in to the beach, and threw a few shell into a rebel camp on the mainland. At 7 a. m. the Nippon and Howquah left Masonboro' inlet and reported to senior officer B. F. Sands. I have to express my high admiration of both officers and men, the good discipline, and the strict obedience to orders, without which it would have been impossible to accomplish so much in so short a time. There was no leaving their posts; and when ordered to search the surrounding houses, no persons were insulted or private property injured. The success of the expedition without loss or accident is due to them, and my thanks also are due to our guides, Orell and Pucket, for the efficient manner in which they performed their duty. I would also add that Surgeon P. S. Wales, of the Fort Jackson, was detailed for duty to this vessel for the occasion.

Very respectfully, your obedient servant,

J. B. BRECK,

Commanding United States Steamer Nippon.

Captain B. F. SANDS,

Senior Officer present.

Report of Acting Master J. W. Balch.

UNITED STATES STEAMER HOWQUAH,
Off New Inlet, N. C., April 22, 1864.

SIR: In obedience to your order of April 21, I reported to Acting Volunteer Lieutenant J. B. Breck, commanding United States steamer Nippon, and by orders from him sent (at 4 p. m.) the second cutter, in charge of Acting Ensign G. P. St. John, and ten men to report to him. At 4.30 p. m. got under way and proceeded to station number (4.) At dark I sent in first cutter, in charge of Acting Ensign and Executive Officer R. W. Rountree, accompanied by Acting Masters Mate F. P. Haskell, of this ship, and Acting Ensign J. J. Reagan, of the United States steamer Nippon, as guide, with twelve men, to march up the beach to Masonboro' inlet, and capture all pickets they might find, and to hold the point on the south side of the inlet, to protect the boats returning from the sound; the Howquah proceeding up the beach in three fathoms of water to shell the beach in case of an attack from the southward. At 10 p. m. our pickets were fired upon by the cavalry. Not being able to surround, fired upon them; one man was seen to fall, but was carried off by his companions. They followed them, finding his rifle. At 10.15 p. m. signals were made to shell the beach southward, and I commenced shelling. At 10.35 p. m. signals were made to cease firing. At 10.45 first cutter returned with eleven conscripts, and immediately returned for the rest of our men. At 11.20 all boats returned on board, having accomplished the duty sent to perform, without loss or accident.

In submitting this report I cannot say too much in praise of the coolness of the officers and good conduct of the men.

I am, sir, your most obedient servant,

J. W. BALCH.

Acting Master, Com'dg U. S. Steamer Howquah.

Captain B. F. SANDS, U. S. N.,

Senior Officer, off Wilmington, N. C.

REBEL RAM NORTH CAROLINA AT WILMINGTON.

Report of Captain B. F. Sands.

UNITED STATES STEAMER FORT JACKSON,
Cape Fear River, May 8, 1864.

SIR: I enclose herewith a report from Acting Ensign J. H. Porter, commanding United States steamer Nansemond, of having exchanged shots with the iron-clad ram, (North Carolina,) on the night of the 6th instant, off New inlet. She seems to have been satisfied with her exploit in keeping away the small vessels that were stationed on the bar, and steamed away inside at the prospect of encountering heavier metal in the light of the day.

Commander Parker, whom I left senior officer on that side, sent the Nansemond on this side yesterday to report the affairs and to warn the vessels here. The Quaker City was here transferring some men to the different vessels, and I deemed it my duty to detain her for the present, or until other vessels arrived to strengthen the blockade and to meet our new enemy. * * * *

The principal object, it seems to me, after the result of the enemy's iron-clad experiment of the night before last, is for her to aid the out-going and in-coming of the runners by driving off the vessels stationed on and near the bar, for which the light recently erected upon the Mound fort is an excellent aid as a leading mark for the night.

Last night was quiet; we heard only one gun, about 10 o'clock. The moderate southwest breeze possibly making the bar rough, or they may be satisfied with the first trial for a few nights. When she comes again we will try to give a good account of her.

Very respectfully, your obedient servant,

B. F. SANDS,

Captain U. S. Navy, Senior Officer present.

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Hampton Roads, Va.

Report of Acting Ensign J. H. Porter.

UNITED STATES STEAMER NANSEMOND,

Off Wilmington, N. C., May 7, 1864.

SIR: By direction of Commander Parker I submit the following report of the occurrences of last night and this morning off New inlet:

At 8.20 p. m., while on station No. 3, in six and a quarter fathoms, saw a rocket thrown from the northward, and in an easterly direction, and saw the flashes of two guns, followed soon after by other rockets and the flash and reports of two guns. Thinking a blockade runner had passed out, I steamed a short distance northeast, and saw the United States steamer Britannia running off shore, but seeing another vessel, and believing it unsafe to leave the bar unwatched, returned to our station. Shortly after saw a *blue light* burned apparently near the buoy. At 9.30 p. m. exchanged signals with and spoke the United States steamer Howquah. After this nothing unusual occurred until 11.45 p. m., when we discovered a sail bearing east by south, apparently still. Steamed up towards her, and made the challenge light, which was answered by *one* flash of a white light, and at the same time the strange vessel started ahead, steering northeast, and crossing our bow; put our helm hard a-starboard to prevent collision, and challenged again, which was answered by a steady red light, the vessel now steering directly for us. Challenged a third time with the Coston signal for the night, not being answered, opened fire on her from the 24-pounder howitzer aft. She immediately replied by a shot, which passed over and near our walking beam, the vessel at this time not over five hundred yards from us. Could see the outline of her hull and the white water from her propeller. Fired another shot from the 24-pounder, which was returned, the shot again passing over us. The vessel coming up with, (going I should judge from six to seven knots,) put on more steam to get out of range, and fired a blue light, which she fired at while burning, but without doing any damage. After burning the blue light, we suddenly lost sight of her until daylight this morning, when we discovered her lying in shore, in a W.S.W. direction from the buoy. At the same time sighted the Howquah, a short distance to the southward of us. As soon as she could distinguish us, the vessel started out and fired four shots at the Howquah, one going through her smoke-stack, near the top. Howquah replied, but think her shot fell short. Strange vessel then altered her course, steering for this vessel, and fired one shot, which burst before reaching; returned fire with the 24-pounder, but out of range. The Mount Vernon and Kansas coming up, fired and received several shots, without injury on either side. At 7.15 a. m. she turned and steamed in toward the bar, and at 8.30 passed inside, accompanied by two small tug-boats, which had lain outside during the morning.

The United States steamers Tuscarora and Britannia arrived from the eastward, and the Nippon and Fahkee from the northward, just after she started in.

The appearance of the vessel is like a large vessel cut down to the waterline and a house built on and plated. The sides of the house are arched,

and having three ports on a side, and one in each end; she has one smoke-stack and a small flag-pole aft. Goes, I think, six to seven knots, and turns very quickly. The guns fired at us during the night were not heavier than 30-pounders, but this morning she used much heavier ones, some think 10-inch.

She flies the rebel flag, and is to all appearances a very formidable craft.

I learned this morning that the Britannia was chased off by her at 8 30 last night, and escaped with some difficulty, fortunately without being hit, though several shots came very near her. I was not able to learn the extent of the damage to the Howquah, but think it trifling.

I am, sir, very respectfully, your obedient servant,

J. H. PORTER,

Acting Ensign, Commanding Nansemond.

Captain B. F. SANDS,

Senior Officer, off Wilmington, Western Bar.

Report of Commander William A. Parker.

UNITED STATES STEAM SLOOP TUSCARORA,

Off New Inlet, N. C., May 7, 1864.

SIR: I have to report that an iron-clad ram came out over the bar at about 8 o'clock (at high water) last night and engaged the Nansemond and Britannia, stationed at the bar, but without doing any damage.

At daylight this morning she was discovered standing out towards the buoy which marks the day anchorage off the bar.

She was engaged by the Mount Vernon, Kansas, Howquah, Nansemond, and Britannia.

The Tuscarora had the outer station, about six miles to the eastward of the buoy, and we did not see her till after sunrise. We stood for her to reconnoitre, but did not get within fighting distance. At a little before 7 o'clock the ram returned and went over the bar. The smoke-stack of the Howquah was struck once about two-thirds of the way up from the deck with a rifled shot, which made a hole about twenty-three inches by sixteen inches, and which appeared to be an 8-inch rifled shot. The ram being about $1\frac{1}{2}$ mile distant by estimation.

The Howquah fired sixteen (16) 30 pounder Parrott rifled shot, and struck the ram twice. It is believed that none of the other vessels hit the ram. There were three other steamers in sight inside the bar, but only one was iron-clad apparently.

A blockade runner ran out over the bar last night at the same time that the ram came out, and was chased by the Nereus, stationed just outside the buoy.

This ram appeared to be about the same size and model as the Atlanta, and was a most formidable and dangerous looking vessel.

There was a house on deck arched over, but with a flat top and sloping sides; she carried 3 guns on each side and one at each end, either 8-inch or 10-inch rifled guns.

If she comes out to-night I shall engage her with the Tuscarora.

I enclose herewith reports from Acting Volunteer Lieutenant James Trathen and Acting Master J. W. Balch.

I am, sir, very respectfully, your obedient servant,

WM. A. PARKER,

Commander.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Hampton Roads, Va.

Report of Acting Volunteer Lieutenant Samuel Huse.

UNITED STATES STEAMER BRITANNIA,
Off New Inlet, N. C., May 8, 1864.

SIR: I have to report that on the evening of the 6th instant, on going in on station No. 1, I noticed a suspicious looking vessel, which I took to be one of the rebel iron-clad rams, inside the bar. I accordingly ran in closer than usual, and the fact that we were not fired on, (though it was still quite light, and were within easy range,) tended to confirm my suspicions. Red, green, and white lanterns were used in a manner quite different from anything ever noticed there before. I managed to keep sight of the suspected vessel, and saw her creep cautiously up toward Fort Fisher, preceded by these lights as guides. At about 8.30 she turned directly for this ship, in company with another vessel, and ran at full speed. I fired several rockets, and fired my 30-pounder Parrott at her, but as she kept on directly after us I ran for the buoy, firing at her with 24-pounder howitzer. She then commenced firing at us. The first shot put out our binnacle light, and the next went a little over the starboard paddle-box, sounding very like a 100-pounder Parrott shot when it tumbles. We now burned a blue light, when the enemy fired again. Our course was changed three times, hoping to elude him, but he followed and gained on us considerably, being within about 600 yards when we passed the buoy. At which time we hauled up short northeast, and think he went on east-southeast, as we shortly after heard a gun fired in that direction. I laid between one and two miles to eastward of the buoy and burned several Coston signals, wishing to communicate with other ships of the fleet. At about midnight saw a blue light, and heard a gun from near the buoy; shortly afterwards fell in with the Kansas, and was desired by Lieutenant Commander Watmough, commanding her, to find the Tuscarora as soon after daylight as possible, and communicate the facts to the senior officer. When day broke we made the enemy west-southwest engaging the Nansemond and Howquah; shortly after the Mount Vernon and Kansas steamed towards her and commenced firing. On making the Tuscarora I proceeded to her, reported to Commander Parker, and returned with him towards the fleet. By this time the enemy, accompanied by two other boats, had steamed in and was under the guns of the fort. The vessel which accompanied the ram out steered off to the northeast when the firing commenced.

I think she was a blockade runner, though we then supposed her to be a gun-boat.

I have the honor to be, sir, very respectfully, your obedient servant,
SAMUEL HUSE,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

Report of Acting Volunteer Lieutenant James Trathen.

UNITED STATES STEAMER MOUNT VERNON,
Off New Inlet, North Carolina, May 7, 1864.

SIR: I have the honor to report that at 6.30 p. m. yesterday we observed in New inlet, behind Fort Fisher, which bore by compass NW. by W., distant three miles, four steamers, two of which appeared to be for river service and two sea-going, one of the former having the appearance of an iron-clad rebel ram. At 6.45 p. m. we steamed down to our night station No. 5, end of woods on

Bald Head, bearing W.NW.; at 8.30 p. m. saw two rockets thrown from the vicinity of Fort Fisher in a S.SE. direction, and saw the flashes of five guns; steamed ahead under full speed, steering to the southward and eastward in order to intercept any vessel trying to escape from New inlet, after having run eight miles, and seeing nothing, we returned to our night station. Everything remained quiet until 12.15 a. m. of this date, when we heard the report of seven heavy guns and saw the flashes of six more; called all hands to quarters and cleared the ship for action, and steamed towards Fort Fisher to ascertain the cause. After arriving at the station usually occupied by the senior officer, seeing nothing, and everything appeared quiet, we returned slowly to our night station. At 4 a. m., as day began to break, we steamed towards Fort Fisher again, and at 4.45 a. m. saw United States steamers Howquah and Nansemond bearing N. by W.; the United States steamer Howquah fired a shot and hoisted her ensign; the shot was returned by a vessel in towards the shore; hoisted our colors and started ahead towards them, and cleared ship for action. At 5 a. m. discovered the strange vessel to be a rebel iron-clad ram flying the rebel flag aft and English red ensign forward, and engaged with the Howquah; we then steamed down close to the Howquah's port quarters to draw the fire of the ram from her, and opened fire on her with the one hundred-pounder Parrott rifle and nine-inch guns; about the same time United States steamer Kansas also opened fire on her.

At sunrise United States steamer Tuscarora and Britannia in sight, coming in to the anchorage. At 6.30 a. m. the ram steered towards Fort Fisher, accompanied by two other steamers, one apparently an iron-clad gunboat, and the other a tug-boat; she was pursued by the United States steamers Howquah, Kansas, Nippon, Nansemond, and this ship. At 7 a. m. she crossed New Inlet bar and entered the river, and was saluted by the different batteries as she passed in.

This ram resembles very much the Atlanta, captured from the rebels, but is much larger than that vessel.

I remain, very respectfully, your obedient servant,

JAMES TRATHEN,

Acting Volunteer Lieutenant, Commanding.

Commander WILLIAM A. PARKER,

Commanding United States Steamship Tuscarora,

and Senior Officer present.

Forwarded by William A. Parker, commander.

Report of Acting Master J. W. Balch.

UNITED STATES STEAMER HOWQUAH,
Off New Inlet, North Carolina, May 7, 1864.

SIR: I have the honor to report, while cruising on our station (No. 7) between five and six fathoms of water, at 8.3 p. m. of the 6th instant, saw the flash of two guns bearing N.NE., and three rockets fired to the southward and eastward. I supposed a blockade runner running in in that direction, and run E.SE. to head him off; stood out as far as the buoy. At 9.10 p. m., while standing back to our station, made a steamer bearing NE. by E.; stood for and challenged her with night signals; not being answered, fired the 30-pounder rifle at her, stood for, and spoke her. She proved to be the United States steamer Nansemond. At 9.30 p. m. saw a white or blue light, (not certain which;) saw flash, and heard report of three guns, but from rockets being thrown, supposed a blockade runner to be running out; stood out to cut her off if possible. At

11 p. m., not seeing anything, stood in for our station. At midnight saw "Coston signal" and a white or blue light; saw the flash and heard the report of three guns bearing NE. by E. $\frac{1}{2}$ E.; stood for it but could see nothing, and returned to our station. At 2.35 saw a rocket thrown from the N.NE. to the S.SE.; stood out but could see nothing, and returned again to our station. At 4.25 a. m. of the 7th instant, United States steamer Nansemond bore E. by N., distance $1\frac{1}{2}$ mile; at the same time saw a strange steamer bearing NW. by N., in line with Fort Fisher, (burning soft coal,) distance $1\frac{1}{4}$ miles. She proved to be the rebel iron-clad ram North Carolina, with confederate ensign flying, accompanied by one armed steamer and two tug-boats. There were no other blockaders in sight at this time except the United States steamer Nansemond; called all hands to quarters. The ram making towards us fast, (good six knots per hour,) wore ship head off shore and commenced firing at her, our shot striking near her. She returned the fire with her bow gun, the shell exploding close to our starboard quarter, we moving slowly towards the buoy, the ram following and firing from her bow and broadside guns. We kept within range, and fighting him out as far as the buoy, (on station No. 1.) At 5 a. m. United States steamer Mount Vernon in sight, bearing S.SE., and steaming to our assistance. At 5.20 the United States steamers Fahkee and Nippon in sight, coming from stations to the northward. At 5.30 United States steamer Mount Vernon fired four shells at the ram, all falling short. At 5.50 made the United States steamers Tuscarora, Kansas and Britannia, bearing to the eastward. At 6 a. m. the ram near the buoy fired at us her fifth and last shot, going through our smoke-stack about two-thirds of the way up, (apparently an eight-inch rifle shot.) We fired fourteen 30-pounder solid shot, two 30-pounder percussion shell, and three shells from 12-pounder howitzer—two of our shells striking him. At 6.15 United States steamer Kansas came in, and fired two shell, both falling short, ram steaming towards the bar with English ensign at the fore. At 6.45 came to anchor near the buoy, the ram going in over the bar. They fired a salute of nine guns from the batteries. The rebel ram North Carolina is a fac simile of the ram Atlanta, (larger, if anything.) She has three ports on a side and one at each end, with a torpedo on her bow, such as the Atlanta had. Fleet anchored at 8.15. This ship was the last to leave her station and the first on it. We were not out of sight of the buoy at any time this morning. The officers and crew under my command deserve much credit. I submit the above report.

I am, very respectfully, your obedient servant,

J. W. BALCH,

Acting Master, Commanding United States Steamer Howquah.

Commander W. A. PARKER, U. S. N.,

Senior Officer present.

FIRING ON BOAT'S CREW OF THE UNITED STATES STEAMER MYSTIC.

Report of Lieutenant Commander Charles A. Babcock.

UNITED STATES STEAMER COMMODORE MORRIS,

Off Yorktown, Virginia, May 8, 1864.

SIR: I respectfully report that on the morning of the 5th instant, while bringing up the rear, convoying the troops from West Point to this place, Acting Master Wright, commanding United States steamer Mystic, came on board and reported that he had seen on shore, on the left bank of the river, some parties waving a flag of truce, whom he took to be refugees or contrabands wishing to come on board. He informed me that he had sent an armed boat's crew on

shore about one-half hour previous, in charge of his executive officer, and that when some forty rods from the beach the boat grounded. Just at that time some guerillas fired four shots from behind a barn which was close to the beach, one ball instantly killing William Wilson, (colored,) first-class boy, the ball passing through his heart. This boy, when shot, was in the water assisting to get the boat afloat, and the executive officer, not knowing how many men were behind the barn, immediately returned to the Mystic, leaving the body in the water near the beach.

After hearing all the facts from Acting Master Wright, I immediately fired seven shells at the barn to drive these guerillas from it, four of the shell passing through the barn. When I had ceased firing, manned five armed boats' crews from this vessel and Mystic, placing them in charge of Acting Master Wright, with an officer in each boat, with instructions to proceed immediately on shore and burn the barn, in order that it might prevent the guerillas from again firing on them while searching for the body. There was a dwelling-house some distance from the barn, otherwise the country was clear. As soon as the crews were landed the barn was burnt, the body found, and all returned to this vessel in safety. The barn contained an old wagon, a fanning machine, and a few bushels of corn. No women or children were molested, and the barn was the only private property destroyed. The barn was owned by Allen Rone, a noted rebel, who has two sons in the Virginia cavalry, part of which have been lately disbanded for guerilla purposes; and, from all the information I can gather, I have no doubt but these men were the parties who fired on the boat's crew, as two men were seen to run across the fields just before our boats landed.

I respectfully forward you Acting Master Wright's report concerning it. Trusting that the punishment I have inflicted on these parties may meet with your approval,

I have the honor to be, sir, very respectfully, your obedient servant,

CHARLES A. BABCOCK,

Lieutenant Commanding, and Senior Officer Present.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Hampton Roads, Virginia.

Report of Acting Master W. Wright

UNITED STATES STEAMER MYSTIC,

Off Yorktown, Va., May 5, 1864.

SIR: Early this morning, (6 o'clock,) while coming down York river, about half a mile above Portopotank creek, I saw what I took to be a number of negroes or refugees on shore. I could not see distinctly, as the objects were in the sun's rays and it was quite hazy. I told my executive officer, Acting Master Mader, he could take an armed boat and go in and see what he could find there. He left the ship, and I shortly afterwards saw I was mistaken, and immediately blew the steam-whistle for him to return; in the mean time his boat had grounded within forty rods of the beach. Some of his men were in the water up to their knees trying to get her off, and while doing so a party of rebels, secreted behind a barn, fired a volley of musketry into the boat, killing William Wilson, (colored,) first-class boy. At the time this ship was lying about half a mile from the shore and nearly opposite them. Mr. Mader returned the fire, but without any effect. He got his boat afloat and came directly back to the ship. (Captain Babcock was then about half a mile astern.) I immediately communicated the facts to him.

The man was shot through the heart; he was one of the recruits enlisted in

January last. The spot where I directed the boat to go in was open and free from everything that the rebels could secrete behind with the exception of the house and barn.

Very respectfully, your obedient servant,

W. WRIGHT,
Acting Master, Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

DESTRUCTION OF BLOCKADE RUNNER GEORGIANNA McCaw.

Report of Acting Master Alfred Everson.

UNITED STATES STEAMER VICTORIA,
Off Western Bar, Wilmington, N. C., June 2, 1864.

SIR: I have the honor to report that at 3 a. m. of this date, and while drifting in $3\frac{1}{2}$ fathoms water, Bald Head light bearing east, saw white water near the beach to the south and westward, which I supposed to be a steamer. I immediately steamed ahead at full speed towards the beach in order to cut her off. On near approach I discovered her to be a side-wheel steamer steering for the bar.

As he crossed my bow I rounded to in his wake and discharged at him my starboard 8-inch gun loaded with 1.5" shell and stand of grape, and kept firing my 30-pounder rifle as I continued the chase, until 3.30 a. m. she struck on the bar.

I immediately ordered the first and second cutters to board and fire her—the former under command of Acting Master's Mate William Moody, the latter under charge of Acting Third Assistant Engineer Thomas W. Hineline.

On their arrival on board they found that two boats with their crews had escaped to the shore. They, however, succeeded in capturing twenty-nine of the crew, including the captain and most of the officers, together with three passengers. They fired her in several places, and she continued to burn until 10 a. m., when she was boarded from the shore.

At daylight Fort Caswell and the adjacent batteries opened fire upon our boats with shot and shell, which compelled them to return without accomplishing her destruction.

She proved to be the Georgianna McCaw, of Liverpool, 700 tons burden, from Nassau, bound to Wilmington, North Carolina. Her cargo consists of about sixty tons of provisions, &c.

I would add, sir, that too much credit cannot be awarded to Acting Master's Mate William Moody and Acting Third Assistant Engineer Thomas W. Hineline for their perseverance and energy displayed, and their cool and gallant conduct while under fire of the enemy.

I am, sir, very respectfully, your obedient servant,

ALFRED EVERSON,
Acting Master, Commanding U. S. Steamer Victoria.

Lieut. Com. M. HAXTUN,

Com'dg U. S. Steamer Maratanza, and Senior Officer present.

DESTRUCTION OF THE BLOCKADE RUNNING STEAMER PEVENSEY.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, ATLANTIC BLOCKADING SQUADRON,

James River, June 20, 1864.

SIR: I have the honor to report the destruction of the blockade runner Pevensey (or Penversey) on the 9th instant by the supply steamer Newbern. She was attempting to run into Wilmington with an assorted cargo, including arms.

The enclosed report of Acting Volunteer Lieutenant Harris gives all the particulars.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.**Report of Acting Volunteer Lieutenant T. A. Harris.*

UNITED STATES STEAMER NEWBERN,

Hampton Roads, Va., June 16, 1864.

SIR: I have the honor to report the stranding, on the 9th instant, of the blockade runner Pevensey (named Penversey in the extracts, April 16, 1864,) under the following circumstances:

3.30 a. m., steering northeast by north, Beaufort forty-five miles distant, made a steamer bearing northeast by east, four miles distant, running slow and bearing east-northeast; she being to the eastward did not immediately discover this vessel hauled up east-northeast; when gaining on her within two and a half miles she made all speed, steering east; opened fire and stood east by north; the second shot carried away the forward davit of her quarter boat.

She immediately changed her course, steered north and struck the beach nine miles west of Beaufort at 8.05 a. m.; her crew took to the boats at once, this vessel at the time being one and a half mile distant; ran into three and a half fathoms, and when within one hundred yards of the strand she blew up; sent in three boats, boarded her, and found her engines and boilers completely blown out; plugged up the pipes, anchored in three fathoms, and made arrangements to pull her off; 9 a. m. tug Violet came down from Beaufort and anchored on the quarter; 9.30 a. m. Commander B. M. Dove arrived in the Cherokee; came on board and said "he would take charge of the wreck, and the Newbern would proceed to Beaufort, it being high water, to save the tide in;" recalled boats and arrived at Beaufort at 10 a. m., anchoring outside, too late for the tide.

One prisoner was found on board the vessel unharmed from the explosion, who proved himself to be an escaped prisoner from Johnston's island, of Morgan's guerillas. One body was found upon the beach, and thirty-five prisoners were captured on shore by the cavalry, three of whom are supposed to be confederate officers, one of them adjutant general to Magruder.

She was loaded on confederate account, cargo consisting of arms, blankets, shoes, cloth, clothing, lead, bacon, and numerous packages marked to individuals. She had been chased on the 7th instant by the Quaker City, and had thrown overboard, by log-book, thirty tons lead and twenty tons bacon; was 543 tons of English register; no manifest of cargo found. Gunner S. D. Hines has discovered seven Whitworth tompons tied together, bright and in good condition, which suggests the possibility of that number of guns being under the musket

The prisoners captured ashore were held in Fort Macon, and the one secured on board was transferred there by order of Commander Dove.

I understood that after the army authorities had satisfied themselves with regard to the identity of the prisoners they were to be transferred to this per Keystone State.

I have learned since leaving Beaufort that the reputed mate is the real captain; that he is a Captain Long, the out-door agent of Major Walker, (the confederate agent at Bermuda,) a citizen of New York, and having formerly commanded a ship from there. The reputed captain (an Englishman) was merely the paper or clearing captain. Of these facts I have informed Captain Gansevoort.

It will not now be possible to get the vessel off, but a large amount of the cargo can be saved if properly guarded.

Had the after 30 Parrott, for which the requisition was approved by yours of April 22, been furnished, his chances of reaching the shore would have been reduced. He evidently was ignorant of his position, as the first question asked was, "How far is it to Fort Caswell?"

Very respectfully, your obedient servant,

T. A. HARRIS,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral S. P. LEE,

Commanding North Atlantic Blockading Squadron.

LOSS OF THE UNITED STATES STEAMER LAVENDER.

Report of Acting Master J. H. Gleason.

UNITED STATES STEAMER SASSACUS,

James River, Va., June 23, 1864.

SIR : It is my painful duty, most respectfully, to report to you the loss of the United States steamer Lavender.

I left the capes of Delaware on the 11th instant, at 10 a. m., being bound to Charleston, S. C.; strong breeze from NE.; sky hazy. On the 12th, at 1 p. m., made Hatteras light-house, bearing S. by W. $\frac{1}{2}$ W., distance 12 miles. At 3 p. m. Cape Hatteras light-house bore N., distance five miles, from which I took departure to clear Cape Lookout shoals, steering SW. by S. until 6 p. m., the vessel going at the rate of 8 miles per hour. I then changed the course to SW. $\frac{1}{2}$ S., which, according to my judgment, should have brought the vessel clear of all danger. At 10.30 sounded $9\frac{1}{2}$ fathoms water; wind now heavy from NE. with rain squalls. At 11 made breakers ahead and on both bows. The vessel was immediately stopped and the engine reversed, but before she lost her headway she struck on the reef. I then steamed ahead, intending to drive her over into deep water, if possible; but at this time a heavy sea washed over the vessel, staving in the sides of the house, and filling the engine-room with water, putting the fires out. We were now left entirely helpless, and about an hour later the vessel was a perfect wreck. Officers and crew took refuge on the top of the house, standing by to launch the boats. When gradually the forward and after parts of the house were washed away, we launched the boats, but they were immediately swamped. We now sought shelter in the wheel-house, which was situated near the forward part of the ship. This was carried away during the next day, and we were now obliged to retreat to the fore-castle, which alone was out of water. During the succeeding night four men were washed overboard and drowned. During the 14th five men died from exhaustion. On the morning of the 15th a large lead-colored side-wheel steamer, apparently a man-of-war, hove in sight, approached us to a distance of $3\frac{1}{2}$ miles, stopped and blew

off steam. We made signals with shirts and blankets; the steamer, however, did not notice them, but steered, about ten minutes later, to the southward. At about 10 a. m. we sighted another steamer, which took notice of our signals, and came to our rescue. She was the army steamer John Farren, Captain J. F. Smallman. They took us on board, kindly provided for our wants, and conveyed us to Newbern, N. C., where we arrived on the morning of the 16th. After reporting to Captain M. Smith, we were transferred to the United States steamer Sassacus for transportation to Hampton Roads, with orders to report to Admiral S. P. Lee.

I am unable to give the names of the nine deceased men, as all my papers and the ship's records have been lost.

I have the honor to enclose here a list of the rescued officers and crew.

The suffering of all on board was most fearful; we had nothing to eat nor drink from the 12th to the time of our rescue by the John Farren, as all our stores were under water. The rescued officers and crew are now, however, slowly recovering their health.

I am conscious of having fulfilled all my duties to the best of my ability, and of having tried all available means to save the *Lavender*; but it was beyond all human possibility to combat the force of the elements.

I am sorry that I could not find an earlier opportunity for reporting this sad event; but that owing to my state of health, and the want of communication, I had to delay it until now.

I am, sir, very respectfully, your obedient servant,

J. H. GLEASON,
Acting Master, Commanding.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

List of surviving officers and crew of the United States steamer Lavender.

Acting Master J. H. Gleason, commanding; Acting Master's Mate Jas. H. McClune; Acting Master's Mate Henry J. Derbyshire; Acting 3d Assistant Engineer Thomas Foley; Acting 3d Assistant Engineer Samuel B. Roane; Acting 3d Assistant Engineer James Fitzpatrick.

Crew.—Owen McGuire, seaman; O. B. Sheldon, ordinary seaman; Wm. S. Lunt, ordinary seaman; John White, ordinary seaman; Henry Drinker, landsman; Geo. Thompson, landsman; Alexander Rogers, landsman; *Charles White, 2d class fireman.

Respectfully,

F. A. ROE,
Lieutenant Commander.

RECONNOISSANCE OF WILMINGTON HARBOR.

Report of Lieutenant Commander W. B. Cushing.

UNITED STATES STEAMER MONTICELLO,
Off Wilmington, N. C., July 2, 1864.

SIR: In consequence of permission received from you to attempt the destruction of the iron-clad ram Raleigh, I proceeded to the blockade at that point with the intention of doing so, judging it prudent to make a thorough reconnoissance first to determine her position.

*Not fit for duty. All the rest of officers and men are or will be soon.

I left this ship on the night of the 23d in the first cutter, with two officers (Acting Ensign J. E. Jones and Acting Master's Mate William Howorth) and fifteen men, and started in for the west bar. I succeeded in passing the forts, and also the town and batteries of Smithville, and pulled swiftly up the river. As we neared the Zeke island batteries, we narrowly escaped being run down by a steamer, and soon after came near detection from the guard boat; evading them all we continued our course. As we came abreast of the Old Brunswick batteries, some fifteen miles from the starting point, the moon came out brightly and discovered us to the sentinels on the banks, who hailed at once, and soon commenced firing muskets and raising an alarm by noises and signal lights. We pulled at once for the other shore, obliquing so as to give them to understand that we were going down; but as soon as I found that we were out of the moon's rays, we continued our course straight up, thereby baffling the enemy and gaining safety. When within seven miles from Wilmington, a good place was selected on the shore; the boat hauled up, and into a marsh, and the men stowed along the bank. It was now nearly day, and I had determined to watch the river, and if possible to capture some one from whom information could be gained. Steamers soon began to ply up and down, the flag-ship of Commodore Lynch, the *Gadkin*, passing within two hundred yards. She is a wooden propeller steamer of about three hundred tons, no masts, one smoke-stack, clear deck, English build, with awning spread fore and aft, and mounting only two guns; did not seem to have many men. Nine steamers passed in all, three of them being fine, large blockade runners. Just after dark, as we were preparing to move, two boats rounded the point; and the men thinking it an attack, behaved in the coolest manner. Both boats were captured, but proved to contain a fishing party returning to Wilmington. From them I obtained all the information that I desired, and made them act as my guides in my further explorations of the river.

Three miles below the city I found a row of obstructions, consisting of iron-pointed spiles driven in at an angle, and only to be passed by going into the channel left open, about two hundred yards from a heavy battery that is on the left bank.

A short distance nearer the city is a ten-gun navy battery, and another line of obstructions, consisting of diamond-shaped crates, filled and supported in position by two rows of spiles; the channel in this instance being within fifty yards of the guns. A third row of obstructions and another battery complete the upper defences of the city. The river is also obstructed by spiles at Old Brunswick, and there is a very heavy earthwork there. Discovering a creek in the Cypress swamp, we pulled or rather poled up it for some time, and at length came to a road which, upon being explored, proved to connect with the main road from Fort Fisher and the sounds to Wilmington. Dividing my party, I left half to hold the cross-road and creek, while I marched the remainder some two miles to the main road and stowed away. About 11.30 a. m. a mounted soldier appeared with a mail-bag, and seemed much astonished when he was invited to dismount, but as I assured him that I would be responsible for any delay that might take place, he kindly consented to shorten his journey. About two hundred letters were captured, and I gained such information as I desired of the fortifications and enemy's force. As an expedition was contemplated against Fisher by our army about this time, the information was of much value. There are thirteen hundred men in the fort; and the unprotected rear that our troops were to storm is commanded by four light batteries. I enclose rebel requisitions and report of provisions on hand.

I now waited for the courier from the other direction, in order that we might get the papers that were issued at 1 p. m. in Wilmington; but just as he hove in sight, a blue jacket exposed himself, and the fellow took to instant flight. My

pursuit on the captured horse was rendered useless from the lack of speed, and the fellow escaped after a race of some two miles.

In the mean time we captured more prisoners, and discovered that a store was located about two miles distant, and being sadly in need of some grub, Mr. Howorth, dressed in the courier's coat and hat, and mounted upon his horse, proceeded to market. He returned with milk, chickens, and eggs, having passed every one, in and out of service, without suspicion, though conversing with many. At 6 p. m., after destroying a portion of the telegraph wire, we rejoined the party at the creek, and proceeded down, reaching the river at dark. In trying to land our prisoners upon an island, a steamer passed so close that we had to jump overboard, and hold our heads below the boat to prevent being seen. As we had more prisoners than we could look out for, I determined to put a portion of them in small boats, and set them adrift without oars or sails, so that they could not get ashore in time to injure us. This was done, and we proceeded down the river, keeping a bright look out for vessels in order to burn them, if possible. None were found, but I found the pilot to take me to where the ram Raleigh was said to be wrecked. She is indeed destroyed, and nothing now remains of her above water. The iron-clad North Carolina, Captain Muse commanding, is in commission, and at anchor off the city. She is but little relied upon, and would not stand long against a monitor. Both torpedo boats were destroyed in the great cotton fire some time since. One was very near completion. As I neared the forts at the east bar, a boat was detected making its way rapidly to the shore, and captured after a short chase. It contained six persons, four of whom were soldiers. Taking them all into one boat, I cut theirs adrift, but soon found that twenty-six persons were more than a load. By questions I discovered that at least one guard boat was afloat, containing seventy-five musketeers, and situated in the narrow passage between Federal Point and Zeke island. As I had to pass them, I determined to engage the enemy at once, and capture the boat if possible.

The moon was now bright, and as we came nearer the entrance, I saw what we supposed to be one large boat just off the battery; but as we prepared to sail into her, and while about twenty yards distant, three more boats suddenly shot out from that side, and five more from the other, completely blocking up the sole avenue of escape. I immediately put the helm down, but found a large sail-boat filled with soldiers to windward, and keeping us right in the glimmer of the moon's rays. In this trying position both officers and men acted with true coolness and bravery.

Not the stroke of an oar was out of time; there was no thought of surrender, but we determined to outwit the enemy or fight it out. Suddenly turning the boat's head, we dashed off as if for the west bar, and by throwing the dark side of the boat towards them, were soon lost to view. The bait was eagerly seized, and their whole line dashed off at once to intercept us. Then again turning, by the extraordinary pulling of my sailors I gained the passage of the island, and before the enemy could prevent, put the boat into the breakers on Caroline shoals. The rebels dared not follow, and we were lost to view before the guns of the forts, trained on the channel, could be brought to bear upon our unexpected position. Deeply loaded as we were, the boat carried us through in fine style, and we reached the Cherokee just as day was breaking, and after an absence from the squadron of two days and three nights.

I am now posted in regard to the city, land, and water defences, and everything that it will interest the department to know.

I beg leave to call your attention, sir, to the fact that Acting Ensign J. E. Jones and Acting Master's Mate William Howorth are the same officers who accompanied me to Smithville some months since, and whom I selected because of their uniform enterprise and bravery.

All the men did well; but my cockswain, David Warren, is deserving of a

medal of honor for marked bravery in every critical moment. I would also mention Ordinary Seaman John Sullivan and Yeoman William Wright, the latter having volunteered upon every expedition of danger since the ship has been in commission—in this instance procuring his discharge from the sick list in order to do service.

I am, sir, very respectfully, your obedient servant,

WM. B. CUSHING,
Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron.

List of provisions at Fort Fisher, North Carolina, on the 23d June, 1864.

REPORT OF PROVISIONS ON HAND AT FORT FISHER, NORTH CAROLINA, JUNE 23, 1864.

Reserved supply, 10,000 rations pork, 9,000 rations beef—19,000 rations meat; 29,000 rations flour, 7,000 rations hard bread—36,000 rations breadstuff; 31,104 rations vegetable food; 30,000 rations rice; 30,000 rations soap; 30,000 rations salt.

For issue, 10,000 rations bacon; 3,000 rations rye meal, 1,500 rations corn meal, 1,750 rations flour—6,250 rations breadstuff; 8,000 rations salt; 8,000 rations soap; 8,000 rations rice.

Respectfully submitted.

L. R. MILLARD,
Commissary Sergeant.

Consolidated provision returns for garrison at Fort Fisher, 9th July, 1864.

CONSOLIDATED PROVISION RETURN FOR GARRISON AT FORT FISHER FOR 7 DAYS, COMMENCING JULY 9, 1864, AND ENDING JULY 16, 1864—1,300 MEN.

9,100 rations bacon; 9,100 rations corn meal; 9,100 rations soap; 9,100 rations salt.

Respectfully submitted.

L. R. MILLARD,
Commissary Sergeant.

The acting commissary of subsistence will issue on the above return.

WM. LAMB,
Colonel Commanding Post.

EXPEDITION TO CUT WILMINGTON AND WELDON RAILROAD.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
Hampton Roads, July 11, 1864.

SIR: Commander Dove reports, under date of 1st instant, that a joint army and navy expedition left Beaufort, on the 20th ultimo, for the purpose of cutting the Wilmington and Weldon railroad, consisting of a detachment of the 9th Vermont volunteers, landed and protected by the Calypso and Nansemond, near

New river, designed to meet and co-operate with a force operating inland. This former part of the plan was carried out, but the enemy had received notice of the expedition, and were in too great a force to make the attempt on the railroad practicable, and the vessels returned to Beaufort on the 23d, the detachment of the 9th Vermont returning in lighters by Bogue sound.

There were no casualties in the naval part of the expedition. The 12th New York cavalry meeting the 9th Vermont, unfortunately mistook them for the enemy, fired on them, killed one man and wounded two.

Commander Dove had heard nothing from Colonel Jourdan, who was in command of the military force, and had been sick since his return, so could not give the particulars of his movements.

I enclose Commander Dove's report, with the accompanying reports of Acting Master Stuart and Acting Ensign Porter, and the sketch of New River inlet made by Acting Master Stuart.

I have the honor to be, sir, very respectfully,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander B. M. Dove.

UNITED STATES NAVAL STATION,
Beaufort, N. C., July 1, 1864.

SIR: I have been waiting for some days to hear from Colonel Jourdan before reporting the expedition for the purpose of cutting the Wilmington and Weldon railroad, but he has been quite unwell since his return and cannot write.

It was, at first, entirely an army affair, and the steamer to be used was the John Farron, a small army transport. She, however, was found impracticable, and on being informed of the impossibility of her taking part, I offered the Nansemond, although she, too, was not very strong. For that reason, and to make our part sure, I directed Captain Stuart, with the Calypso, to assist her.

The great point in the organization was secrecy, and the Nansemond went out from here with the lighters and surf-boats in tow, in the afternoon, as if going to work on the wreck, near which she tarried until near night. The Calypso stood out to sea, with orders to come in off New river in the morning as if from the southward and meet the Nansemond there.

So far as we were concerned the arrangement was perfect, none of the commanders in port even knew anything of it. I am sorry to say, though, that the expedition was a failure from a "leak" in Newbern. The colonel told me that the confederates had two days' notice of his approach, and knew all his plans. Two trains filled with troops, at Kingston, were ready to start as soon as the whereabouts of ours was telegraphed. The country was all alarmed and in arms, and the men could get nothing beyond the rations they carried with them. The inland party did not get near the railroad, nor did it reach the coast at all, and the Calypso and Nansemond, after waiting the allotted time, returned to this port with the prisoners they had captured. The two lighters, with some of the troops from the Nansemond, returned by Bogue sound, and the surf-boats were towed up by the steamers. There are no casualties with us to report.

Enclosed are the reports of Captains Stuart and Porter, with a sketch by Captain Stuart.

Very respectfully, your obedient servant,

BENJ'N M. DOVE, *Commander.*

Acting Rear-Admiral S. P. LEE,

Com'dg N. A. B. Squadron, Hampton Roads.

Report of Acting Master Frederick D. Stuart.

UNITED STATES STEAMER CALYPSO,

Beaufort, N. C., June 24, 1864.

SIR: I beg leave to report that, in obedience to your orders of the 20th instant, I proceeded to sea that evening with the Calypso, and having arranged with the commanding officer of the Nansemond to meet him early the next morning off New River inlet, I cruised during the night to the southward and westward some distance from the land so as not to be seen from the shore, especially in company with the Nansemond towing the lighters and surf-boats, which might arouse a suspicion of our intended movements.

The Nansemond, as Captain Porter's report will inform you, reached New River inlet about 11.30 p. m., the first point in the programme to be visited. Captain Kelley, of the 9th Vermont, and his men (100 in all) had been put on board of the surf-boats, and when abreast of the inlet the boats cast loose and headed for the shore. The Nansemond, with the lighters, passing along to the southward and westward. The boats, however, did not enter the inlet until near daylight, when (as was afterwards learned) they proceeded, without hindrance or molestation, up as far as Swann's Point, where they landed, and the surf-boats returned to the Nansemond.

At daylight of the 21st I made the Nansemond near New River inlet and soon joined her. Both vessels came to anchor off the bar, and with two cutters from the Calypso and the four surf-boats an expedition was fitted out to co-operate with Captain Kelley. No time was lost in getting the boats ready. The first cutter of the Calypso was provided with a 12-pounder rifled howitzer. At noon the party left for the shore with written instructions from me, succeeded in crossing the bar, and were soon out of sight.

It appears that Captain Kelley, with his men, had, as per agreement, proceeded up the river about eight miles and took possession of Sneed's ferry, capturing a number of the enemy's pickets, but, meeting with no opposition, our boats found him at the ferry, and as his position was a secure one, and there appeared to be no signs of rebels in force about, he decided that all the boats should return to the vessels with the understanding that a supply of provisions should be sent to him on the following day; accordingly the boats descended the river again. One of the Calypso's cutters and the surf-boat, manned by a crew from the Calypso, remained inside the inlet all night; the other boats came off.

On the following day, 22d, at daylight, the boats were again despatched to the shore, and as the message from Captain Kelley was indefinite, I directed Captain Porter to take charge of the party. At noon all the boats returned, having left Captain Kelley and his men secure for the time being. On their way down the river, they were fired at from Swann's Point, but suffered no injury. Mr. Sluyter's report will give particulars.

This state of things made me feel apprehensive for the safety of Captain Kelley and his men, for there could be no doubt but that the rebels had taken possession of Swann's Point, and might be in considerable force, perhaps with artillery, which would prevent the boats from reascending the river. I, how-

ever, determined that every effort should be made to bring Captain Kelley and his men off when the time arrived for him to leave. With that view, a plan had been arranged whereby we could be made aware of his situation and wishes. Thus matters rested until near midnight, when a fire was seen on the beach abreast of our anchorage. (Previously, in the early part of the evening, two rockets were seen in the direction of Captain Kelley's camp.) A boat was at once despatched from the Calypso and Nansemond. The Nansemond's boat soon returned and reported that a sergeant and four men were on shore with a message from Captain Kelley to the effect that he wished his men brought off to the ship at once, being apprehensive of an attack. The Calypso's boat entered the inlet and gave Captain Kelley's men protection until the boats passed up the river to the rescue of him and his men. No time was lost in preparing the boats for the expedition, and at 1.35 a. m. (23d) they left with orders to bring Captain Kelley and his men off at all hazards. At noon, "to my great delight," the boats (six of them) appeared and the whole party under Captain Kelley, with our men and a number of prisoners, were safely received on board.

From information received from Captain Kelley I had reason to believe that our services might be required at or near Swansboro'. Colonel Savage, with a part of the land forces, who met Captain Kelley at the ferry, as will be seen by Captain Porter's report, having determined to return to this place through or near Swansboro', where he feared he might meet with a formidable opposition, I accordingly got under way with the Calypso and Nansemond and proceeded to Bogue inlet. Here both vessels anchored at 3.30 p. m. yesterday, and after putting a 12-pounder howitzer, with a crew of eight men from the Calypso, on board the lighters (2 of them) to work the vessels and gun, Captain Kelley left in them with his command, arranging to go to Beaufort through the sound, if nothing occurred to prevent, and, of course, if nothing was heard from Colonel Savage and his party. At sunset the proper signals were made indicating Captain Kelley's intention to pass through the sound, and that our services would be no longer needed.

I concluded to spend the night in cruising, and accordingly left the Nansemond at anchor at 9 p. m. and proceeded seaward. I met the Nansemond outside the harbor this morning, and both vessels entered and anchored about 8 a. m.

I deem it proper to state that a part of the programme made by Colonel Jordan required our presence at New Topsail inlet on Thursday morning. Accordingly I made arrangements to that effect, but events proved that Colonel Jordan had given up that part of his expedition, and our presence was not required there.

That you may be apprised of my plans to serve the army and promote the interests of the expedition at all points, I enclose a copy of my orders to Captain Porter, who I had determined to send to New Topsail inlet. I also enclose a sketch which I made of New River inlet, giving all the points of interest, and Captain Kelley's position and the approaches to it. I also enclose Acting Ensign Sluyter's report, my executive officer, who was in command of the Calypso's first cutter. Also the reports of Acting Ensign Jennings and Acting Master's Mate Thompson, who had charge of boats on separate expeditions.

I have on board thirteen prisoners—seven rebel soldiers and six citizens. Also four of the 9th Vermont regiment, sent by Captain Kelley as a guard. What shall I do with the prisoners?

My 12-pounder howitzer and eight men are on board the lighter, which has just reached this place.

In conclusion, permit me to say that I think Captain Kelley and his men acquitted themselves admirably; all that was desired to accomplish was attained. Captain Porter and his officers and men, and the officers and men under my immediate command, who participated (and all desired to do so) in the opera-

tions at New River inlet, deserve great credit for the interest they manifested in the work in which they were engaged, and for the prompt and efficient manner they carried out my orders.

I am, &c.,

FRED. D. STUART,

Acting Master, Commanding Calypso.

Commander B. M. DOVE, U. S. N.,

Senior Officer present, N. A. Blockading Squadron.

Report of Acting Ensign J. H. Porter.

UNITED STATES STEAMER NANSEMOND,

June 23, 1864.

SIR: I have the honor to submit the following report:

In accordance with your order I left Beaufort with the Nansemond at 3.30 p. m., on the 20th instant, having on board one company of 100 men of the 9th Vermont regiment, under command of Captain Kelly, two lighters and four surf boats in tow, proceeded towards New River inlet, arrived off that place at 11.30 p. m., and with much difficulty succeeded in landing the troops, and capturing every man of the guard without firing a gun or causing any alarm. Captain Kelly then marched to Sneed's ferry, three miles above, took all but two of the guard there, secured the ferry-boat, and crossing the river, intrenched himself on the east bank. The prisoners captured—three privates of the confederate cavalry, and three citizens supposed to have been in the employ of the rebel government—were brought on board this vessel.

On the arrival of the United States steamer Calypso at 5.30 a. m. on the 24th instant, I reported to Acting Master F. D. Stuart, commanding, and with his concurrence and the assistance of his boats, communication by the river with Captain Kelly was secured and signals arranged.

On the 22d I again consulted with Captain Stuart, and with his approval proceeded up the river with supplies for Captain Kelly in the boats of both vessels. On our return from the ferry this p. m., our boats were attacked by rebel pickets at a point three or four miles below on the right bank of the river. Believing that they were supported by artillery, who would dispute our return past the point, we landed to cut them off and capture their guns, but found no artillery, and owing to the thick undergrowth and marshes, we succeeded in taking but one prisoner, a rebel soldier.

At 8 p. m. we observed the signal indicating an attack upon Captain Kelly, and prepared boats for his assistance; at 11 p. m. learned by despatch from him that the attack was made by a detachment of the 12th New York cavalry, and unfortunately, before the mistake was discovered, one of the cavalry was killed, and two slightly wounded. Boats were immediately sent up to the ferry, and as Captain Kelly's object at this point was accomplished, he returned to this vessel with his men, bringing with him Captain Marshall, of the 12th New York cavalry, (wounded by the falling of his horse,) the body of the sergeant killed in the engagement, eight prisoners and four contrabands. Learning from Captain Kelly that we should not meet Colonel Jordan at New Topsail inlet, as at first arranged, and that the retreat of Colonel Savage with the New York cavalry might be cut off at Swansboro', both vessels left New river at 1.30 p. m. to-day, by order of Captain Stuart, and steamed up the Bogue inlet, and sent the two lighters, one carrying a 12-pound howitzer and eight men from the Calypso, to convey Captain Kelly's command, and render any assistance possible at Swansboro'. At 8 p. m. we learned by signals that Captain Kelly, with

the two lighters, had gone to Beaufort through Bogue sound, and it being too late for us to reach there in time to enter the harbor before morning, we stood along the beach on blockade duty for the night.

I beg leave, in conclusion, to testify to the ability and energy of Captain Kelly, of the 9th regiment Vermont volunteers. He has been untiringly at work ever since his first landing, and though more than once in difficult positions, has managed his part of the expedition with perfect success.

For my own officers and men I can only say, that although they have been employed constantly on boat service, rowing long and hard against a strong current and through difficult channels, day and night, I have heard no word of complaint, but an earnest desire to assist the enterprise in every possible way.

I am, very respectfully, your obedient servant,

J. H. PORTER,
Acting Ensign, Commanding.

Instructions to Acting Ensign J. H. Porter.

UNITED STATES STEAMER CALYPSO,
Off New River Inlet, June 22, 1864.

SIR: From information furnished by yourself, based upon observations made, and experience gained by your visit to Captain Kelly at the ferry to-day, it seems absolutely necessary that either the Calypso or Nansemond should remain at this point, at any rate for some days, to render such aid to our forces on shore as they may need, and as we may be able to afford, while the other vessel should repair to New Topsail inlet, to await Colonel Jordan's arrival there, as per agreement.

From the fact that your boats were fired at from Swann's Point on your passage down the river, there is every reason to believe that that point is occupied by the rebels, and it may be in considerable strength; this cuts off our intercourse with Captain Kelly by water for the present.

As Swann's Point is on the right bank of the river, and Captain Kelly, with his men, are on the left bank, he may be able, should it be necessary for him to abandon his present position before he is re-enforced, to reach the coast in safety, which, from your statement, he will no doubt try to do, somewhere near Cedar Point, his retreat must be covered if in our power, and his men must be speedily embarked, should they appear.

Having more men at my disposal, and greater facilities for the prompt and efficient execution of such duties as may devolve upon the vessel left, I will remain with the Calypso, and take charge of the lighters and surf-boats, with the exception of one of the latter, which you will keep, as it may be required to assist in transporting Colonel Jordan's men to your vessel. You will therefore proceed with the Nansemond to New Topsail inlet, and be ready at the proper time to render Colonel Jordan any assistance he may need, should he make his appearance.

As you have seen and conversed with Captain Kelly, and know how he is situated, and what his plans are, you will be better able to explain the condition of things at this place to Colonel Jordan than I can verbally or by letter.

From what you informed me, I may expect to hear from Captain Kelly any moment, either for good or for bad; but should no intelligence reach me from him, I will certainly not leave this place, unless stress of weather drives me to sea, until after Sunday next; perhaps not then.

Should you hear nothing from Colonel Jordan up to Sunday next, you will repair to this place; if I am not here, take it for granted that I have gone to Beaufort, and repair yourself with the Nansemond to that harbor.

You will send all the prisoners you have from the shore on board of this vessel, together with the guard sent by Captain Kelly, with them; send a list of their names, and, if any, what effects they have. Wishing you success,

I am, very respectfully, your obedient servant,

FRED. D. STUART,

Acting Master, Commanding Calypso.

Acting Ensign J. H. PORTER,

Commanding Nansemond.

Instructions to Acting Ensign S. G. Sluyter.

UNITED STATES STEAMER CALYPSO,

Off New River Inlet, June 21, 1864.

SIR: You will take charge of the first and second cutters of this ship, each manned with ten (10) men, and a surf-boat furnished by the Nansemond, to be manned by nine (9) men from this ship, and in company with three armed boats from the Nansemond, will enter the New River inlet and proceed up the river as far as what is known as the ferry, about eight miles from the entrance, where you will meet with Captain Kelly, of the army, who with his company are somewhere in that neighborhood.

The object of this expedition is to render Captain Kelly such assistance as he may require, and to co-operate with him in any demonstration he may make.

The first cutter will be armed with a 12-pounder howitzer on a boat carriage. A field carriage for the howitzer will be placed in the second cutter; each man will be armed with a musket or a pistol, or both, and a cutlass. Ten rounds for the howitzer will be sufficient, and great care must be taken not to expend ammunition without a good reason for so doing. You will bear in mind that you are to traverse the waters of an enemy, and that you and your men will be exposed to danger at every point; be vigilant, therefore, and see that no indiscretions are committed by any one.

Do not land until you fall in with Captain Kelly, who will direct your movements after you meet him. As soon as your services are no longer required, return to your command to the ship.

I give you a rough sketch of the river, which will serve to guide you to your destination.

Captain Porter's officers have been up the New River inlet, and are in possession of information which will be useful to you. Act in perfect unison with the officers of the Nansemond, who have, so far, acted successfully under the orders of Captain Porter.

Should any accident befall you, lose no time in acquainting me with the facts. A careful look-out will be kept for signals from you or Captain Kelly, either by firing guns or rockets.

Wishing you success, I am, your obedient servant,

FREDERICK D. STUART,

Acting Master, Commanding Steamer Calypso.

Acting Ensign S. G. SLUYTER, *Calypso.*

THREATENED ATTACK ON ANNAPOLIS, MARYLAND.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MALVERN,

Hampton Roads, Virginia, July 19, 1864.

SIR: The Vicksburg arrived on the 18th, from Annapolis, having left on the 17th, in obedience to a telegraphic order from the department, and I transmit, enclosed, Lieutenant Commander Braine's report, dated 14th instant, of his arrival at Annapolis on the 13th instant, and the dispositions made by him, in conjunction with the commanding officer of the small force there, (three hundred invalids,) to defend the place, the Vicksburg being stationed above, and the Daylight, which arrived on the 13th instant from Baltimore, below the town, commanding the works. The junction being occupied by the rebels, there were apprehensions felt of an attack by that force. Communication with Washington was cut off. The telegram referred to, sent by way of Baltimore, I received on the 18th, from the department.

I also enclose (2) Lieutenant Commander Braine's report of same date, of his sending a tug up South river to take possession of boats, to prevent the rebels from crossing in the rear of the line of rifle pits; and (3) report, dated the 14th instant, of Acting Ensign Osborne, detailed for this duty, who took possession of one (1) schooner, five (5) scows and three (3) small boats, which were left in Annapolis harbor on the departure of the Vicksburg.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

*Secretary of the Navy.**Report of Lieutenant Commander D. L. Braine.*

UNITED STATES STEAMER VICKSBURG,

Annapolis, Maryland, July 14, 1864.

SIR: Upon my arrival here, Wednesday morning, I found all on shore awaiting anxiously and fearfully the approach of the rebel forces who occupy the Junction. Of course I was welcomed. I find the place defended by invalids from the hospital, about three hundred in all. Everybody fearful of the approach by the way of the Severn river, I placed the Vicksburg above the town to occupy a commanding flanking position, and telegraphed you concisely affairs and wants, which telegram I sent by Mr. Hill, the governor's private secretary. He was to send it from Baltimore. Communication with Washington is cut off. I communicated with Colonel Root, commanding, and find he has a line of rifle pits ready, with four guns, which he thinks he can defend successfully against a raiding force.

The Daylight arrived yesterday evening. I stationed her on the other side of the town; so now the works erected for the protection of the town can be covered by the guns of the two gunboats. I placed my light twelve-pounder howitzer, with crew, upon a tug here, and she will picket up the creek on the line of the rifle pits.

I feel assured we can give the rebels a warm reception, and protect the town.

Very respectfully, your obedient servant,

D. L. BRAINE,

Lieutenant Commander.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron, Hampton Roads, Va.

Additional Report of Lieutenant Commander D. L. Braine.

UNITED STATES STEAMER VICKSBURG,
Annapolis, Maryland, July 14, 1864.

SIR: On Wednesday night I sent up the South river and took possession of some scows used for ferrying across that river; also a schooner and a number of boats. This was done to prevent the rebels crossing in rear of our line of rifle pits. I enclose the report of Acting Ensign F. G. Osborne, the officer commanding.

Very respectfully, your obedient servant,

D. L. BRAINE,
Lieutenant Commanding.

Acting Rear-Admiral S. P. LEE,
Commanding N. A. B. Squadron, Hampton Roads, Va.

Report of Acting Ensign F. G. Osborn.

UNITED STATES STEAMER VICKSBURG,
Annapolis Harbor, July 14, 1864.

SIR: I beg leave respectfully to report that, in obedience to your order, in the afternoon of the 13th instant I took charge of the tug-boat *Grace Titus*, manned by an armed crew of ten men, and on which was mounted a twelve-pounder howitzer, fully supplied with ammunition.

I proceeded up South river about ten miles from its mouth, landed with an armed force at Taylorsville, also at a small settlement above and at the "lower ferry." I also scoured the shores of the river on both banks, in a small boat, in search of scows and other craft that might be used by the enemy in transporting troops.

I seized and took in tow all such scows, boats, vessels, and other means of transportation which I saw, consisting of the following, and which, in obedience to such orders, I have brought into this harbor and anchored near this vessel.

The schooner *Welldone*, commanded by Levi Wilson, and claimed to be owned by him. She has no cargo on board except a tierce of bacon, which the master says belongs to a farmer at Taylorsville. I have brought the master and his crew of three men down in the schooner. Two large scows or flat-boats, also claimed to be owned by Levi Wilson. One old scow or flat-boat, said to be owned by Stephen L. Lee, of Taylorsville. Three small boats said to belong to his sons. One large scow or ferry-boat said to belong to John Davis, of the same town. One scow or ferry-boat, and two small boats, said to belong to Samuel Duvall of Taylorsville and Colonel Walton of Annapolis.

I have the pleasure, sir, in being able to report that, in obedience to your instructions, the expedition was conducted with the utmost quietude. My precautions in this respect, combined with the lateness of the hour, enabled me to perform all my duty and return without the knowledge of any one up the river.

I am much indebted to Acting Assistant Paymaster Thomas E. Smith, for the able assistance which he rendered me.

Very respectfully, your obedient servant,

F. G. OSBORN, *Acting Ensign.*

Lieutenant Commander D. L. BRAINE,
Commanding United States Steamer Vicksburg.

CAPTURE OF THE MAIL-BOAT FAWN.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Beaufort, N. C., September 15, 1864.

SIR: Commander Macomb reports, under date of 13th instant, that he was informed on the 10th instant, by letter from Colonel Wardrop, commanding subdivision of Albemarle, that the mail-boat Fawn, from Norfolk, had been burned by the rebels in the canal on the night of the 9th, and naval assistance was requested to capture the party. He accordingly sent the Wyalusing, Lieutenant Commander English, to Elizabeth City, on the Pasquotank, thinking that the rebels would probably retreat inland and might be found at that point, and directed Lieutenant Commander English to bring off some of the principal citizens of that place to be detained until investigation was made into the affair, as he had heard (unofficially) that an understanding existed that the citizens of Elizabeth City and vicinity should protect vessels passing through the canal in consideration of communication being permitted them with Roanoke island, (and Newbern, and trade with Norfolk, Lieutenant Commander English adds.) Lieutenant Commander English proceeded to Elizabeth City, having on board the marines from the Shamrock and Chicopee, and some men from the Wyalusing, picketed the place, and arrested seven (7) prominent citizens. He learned that the rebels had at least eight (8) hours' start, and thought it useless to continue the pursuit. He ascertained that the Fawn was burned by about twenty (20) men from the Albemarle, commanded by one of her officers named Hopkins, who before the rebellion had run a boat on this canal. They fired on demanding surrender, killing and wounding seven (7) persons; twenty-nine (29) prisoners were taken, including one (1) colonel and two (2) majors, the rest soldiers, government employés, and citizens. A Major Jenney and Mr. Julian, member of Congress, were released at Elizabeth City and went to Roanoke island.

Commander Macomb turned over the seven (7) hostages to Colonel Wardrop, and they were sent by him to General Shepley at Norfolk.

I enclose the reports of Commander Macomb (1) and Lieutenant Commander English (2,) dated, respectively, 13th and 12th instants.

I have, sir, the honor to be, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

HON. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.**Report of Commander W. H. Macomb.*

UNITED STATES STEAMER SHAMROCK,

September 13, 1864.

SIR: I have the honor to report, that on the morning of the 10th instant I received a letter from Colonel D. W. Wardrop, commanding subdivision of Albemarle, stating that the mail-boat Fawn, from Norfolk, had been burned by the rebels in the canal on the night of the 9th instant, and asking me to assist in endeavoring to capture the rebel party. In compliance with this request, I sent the Wyalusing, Lieutenant Commander Earl English, up the Pasquotank river to Elizabeth City, thinking that, as the rebels would probably retreat inland after they had accomplished the destruction of the boat, this would be the point at which they would most likely be found.

I instructed Lieutenant Commander English to bring off as hostages from Elizabeth City some of the principal citizens, to be detained until some investigation had been made into this affair. I gave this order because I had heard (unofficially) that the citizens of this city were responsible for the safety of the boats passing through the canal, a responsibility which they undertook in consideration of being allowed the privilege of communication with Roanoke and Newbern.

My directions were promptly carried out by Lieutenant Commander English, as will be seen by his report, which I herewith enclose.

On the return of the Wyalusing I sent the seven citizens from Elizabeth City to Roanoke island, to be delivered to Colonel D. W. Wardrop, commanding. They have been delivered, and Colonel Wardrop informs me this morning that he has sent them to General Shipley at Norfolk. The colonel also tells me that there were seven men killed and wounded on the mail-boat by the rebels, who fired the moment they demanded her surrender.

Very respectfully, your obedient servant,

W. H. MACOMB,

Commander, Comm'dg Fourth Division, N. A. B. Squadron.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Lieutenant Commander Earl English.

UNITED STATES GUNBOAT WYALUSING,

Albemarle Sound, September 12, 1864.

SIR: In obedience to your order of the 10th instant, I received on board this vessel the marines from the Shamrock and Chicopee, with a company of men under command of Lieutenant Duer, and proceeded to Elizabeth City. Immediately upon my arrival, landed a strong force under command of Lieutenant Duer, of the Shamrock, and Acting Master Hathaway of this vessel, picketed the place and arrested seven of its most prominent citizens; ascertained from them that the mail steamer Fawn had been captured and burned by a party from the rebel ram Albemarle, numbering about twenty (20,) commanded by a person named Hopkins, an officer of the ram, who previously to the rebellion had been employed in running a boat on the same canal. The prisoners numbered twenty-nine (29,) consisting of one colonel, two majors, one or two citizens, the rest soldiers, or employés of the government. Two persons* were released at Elizabeth City, who left immediately for Roanoke island. One small mail-bag only was seen in their possession. I thought it useless to attempt pursuit, as they had all of eight hours' start, which, at moderate traveling, would have brought them quite to the Chowan river, where they were to cross. Having understood that the citizens of Elizabeth City and the adjoining counties had had an understanding with the government that they would protect the canal from all assaults, providing they were allowed the privilege of trading with Norfolk, I have brought these seven citizens with me, and now deliver them to you, in order that a more thorough investigation may be made. If there was the least desire on the part of the inhabitants to guard against such raids, they could all be checked or suppressed by their giving timely notice, which they have ample means of doing. I am satisfied that should the people of this district understand that they will be assessed and *forced* to pay the full value of this loss, hereafter government property passing through

*Major Jenney, U. S. A., and Senator Julian, as I have since been informed by Colonel Wardrop, U. S. A.

W. H. MACOMB.

would be cared for with the same interest with which they *cherish* their own I have discovered that the people in this section of country are as fond of the almighty dollar as the Chinese, and possess about the same amount of patriotism.

I am, very respectfully, your obedient servant,

EARL ENGLISH,

Lieutenant Commander.

Commander W. H. MALCOMB,

Com'dg Fourth Division, N. A. B. Squadron,

U. S. Steamer Shamrock, Sounds of N. C.

DESTRUCTION OF THE BLOCKADE-RUNNER LYNX.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,

Beaufort, N. C., September 30, 1864.

SIR: Referring to Acting Master Kemble's report of the 26th instant, forwarded on the 28th, I transmit enclosed reports from the Howquah and Gov. Buckingham in reference to the destruction of a blockade runner on the night of the 25th, which, as appears from North Carolina papers forwarded in my No. 605, of this date, was the Lynx.

The Howquah sustained a cross-fire from the fort and from our own vessels, and Acting Volunteer Lieutenant Balch thinks that two shots were fired by the Lynx. He lost one man killed and four wounded. The enclosed reports give full particulars.

The main credit of this affair seems to be due to Acting Master Kemble, of the Nippon. I have ordered his examination for promotion to the grade of Acting Volunteer Lieutenant.

Acting Volunteer Lieutenant McDermid, commanding the Gov. Buckingham, and Acting Volunteer Lieutenant Balch, commanding the Howquah, acted promptly and efficiently, as usual. I was present off New inlet at the time.

I have the honor to be, &c.,

S. P. LEE,

Acting Rear-Admiral, Com'dg N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Volunteer Lieutenant J. W. Balch.

UNITED STATES STEAMER HOWQUAH,

Off Wilmington, N. C., September 26, 1864.

SIR: I have the honor to submit the following report:

While standing on our station on the night of the 25th instant saw a rocket and the flash, and heard the reports of three guns; Fort Fisher bearing south-west by west, distance one and a half mile. Ship in four and a half fathoms of water. Spread fires and called all hands to quarters, and wore ship, head to the eastward. Made a side-wheel steamer with two smoke-stacks, standing to the northward and eastward, and two of our vessels to the south and east of the steamer, firing rockets and guns toward the steamer. Started ahead, full steam, intending to run her down, but the strange steamer was going so fast, I found I could not reach her, although we were going a good ten knots at the time. Put

the helm to starboard, which brought the two ships side by side, heading north-northeast, distance about one hundred yards. Fired from the starboard battery two percussion shells from the thirty-pound rifles, one of them striking the paddle-box, and the other forward of the paddle-box. The explosion of the shells illuminated the ship so that we could plainly see the parts of the paddle-box and ship flying in all directions. During this time, to the best of my belief, the steamer fired two shots at us. Shot and shell were fired at us from the shore batteries, and also a continued fire from our own vessels, coming from a southeasterly direction, shot and shell passing over and near us. At 7.20 p. m. one thirty-pound percussion shell struck the main rail on the starboard bow, cutting it through, also striking the forward end of the thirty-pound pivot carriage, cutting the breeching in two and disabling the carriage, glancing over and striking the main rail on the port side and falling on the deck. I have the shot now on board. Fortunately this shell did not explode. This shell in its passage struck Patrick Bagley, ordinary seaman, taking off his right leg and killing him almost instantly; also slightly wounding Martin Glynn, landsman, Thomas Judge, landsman, William Roach, landsman, and George Stevens, cockswain. Owing, at this time, to the cross-fire from the batteries and our own vessels, and with a green crew that had never before been under fire, it was almost impossible to keep them at the guns. Immediately after our shells struck her, she hauled up for the beach, we losing sight of her when getting end on. Shortly after made a sail to the eastward, challenged her, and was answered by the night signal. Spoke the United States steamer Gov. Buckingham, and requested a surgeon to be sent on board. At 7.50 Acting Assistant Surgeon W. S. Parker came on board and did all that could be done for the wounded. At 8.30 p. m. saw the steamer on the beach on fire, where she continued to burn all night. We returned on our station at 8.30 p. m.

I beg to call your particular attention to the gallant conduct and coolness displayed by Acting Assistant Paymaster E. W. Brooks, Acting Ensign G. P. St. John, Acting Second Assistant Engineer William G. McLane, Acting Second Assistant Engineer D. R. Wylie, Acting Master's Mate R. B. Smith, Boatswain's Mates William C. Connor and Alexander Robinson, for the faithful performance of their duties under trying circumstances.

Very respectfully, &c.,

J. W. BALCH,

Acting Volunteer Lieutenant, Com'dg U. S. Steamer Howquah.

Acting Rear-Admiral S. P. LEE,

Commanding N. A. B. Squadron.

Report of Acting Volunteer Lieutenant John McDermid.

U. S. STEAMER GOVERNOR BUCKINGHAM,
Off New Inlet, N. C., September 26, 1864.

SIR: I have the honor to report that shortly after 7 p. m. last evening, while lying in six fathoms water, Mound light bearing southwest by south, observed firing from United States steamer Nippon, followed by a rocket thrown up to north-northeast. Stood in full speed north by west; saw a long side-wheel steamer, with two smoke-stacks and two masts, steering to the northward, and going very rapidly. Endeavored to get alongside of her, but found her too fast. Fired five shells at her, two of which struck and one 100-pounder bursted over her. The blockade-breaker stood for the beach and got out of sight. While standing in after her, and to the northward of her, observed one of our steamers making the night challenges very often. Slowed down, and were hailed

by the United States steamer Howquah to send a surgeon on board, as she had three men wounded. I immediately despatched a boat with Acting Assistant Surgeon W. S. Parker, of this vessel. Upon his return he informed me that one of the men was dead; the other two slightly wounded. About 8.30 p. m. saw a fire on the beach. When I got to the north end of my station, saw that it was the blockade-breaker burning on the beach. After daylight this a. m. picked up twenty bales of cotton. I think the 100-pounder and the 30-pounder shells that struck the blockade-breaker must have set her on fire, as they made a terrific explosion. She was so close that I fired all the charges from my revolver at the men on her bridge.

Very respectfully,

JOHN McDEARMID,

Acting Volunteer Lieutenant, Commanding.

Captain O. S. GLISSON,

First Divisional Officer, off New Inlet, N. C.

Report of Acting Master Edward Kemble.

UNITED STATES STEAMER NIPHON,

Off New Inlet, N. C., September 26, 1864.

SIR: I have the honor to report that at 7.30 p. m. last evening, (25th,) while on the north beat of my station, (No. 1,) in four fathoms water, Mound light bearing west by south, I discovered a long steamer, painted white, with two smoke-stacks and two masts, coming out of Swash channel. I immediately gave chase, went to quarters, cast loose port battery, and commenced firing at her. Fired several broadsides, nearly every shot taking effect in the sides of the steamer. Finding that she was leaving us, I immediately steered to head her off, intending to run her down, but her superior speed enabled her to cross my bow at some twenty yards distance. I still continued firing at her and throwing up rockets until she was sighted by the blockaders to the northward. Feeling satisfied that she could not proceed to sea with the damage she received by this vessel, and the vessels to the northward having her in sight, I stood for my station to watch for her return; also to prevent the escape of another steamer which was lying under the Mound ready to come out. Shortly after returning on my station I discovered a dense column of smoke and flame in the vicinity of Half-moon battery rising from a steamer's hull, and showing plainly her masts and smoke-stacks, satisfying me that she was the same steamer that I gave chase to, having been compelled to run on shore through damages received, as no vessel to the northward claims to have run her on shore. The name of the steamer I have not been able to ascertain.

The ammunition expended was eight 32-pounder 5-inch shell; one (1) 32-pounder shot; three (3) percussion shell, 20-pounder Parrott; and three (3) percussion shell, 12-pounder howitzer.

Very respectfully, your obedient servant,

EDW. KEMBLE,

Acting Master, Commanding Niphon.

Lieut. Com'dr M. HAXTUN,

Senior Officer present, Com'dg First Div. N. A. B. Squadron,

United States Steamer Mercedita.

Forwarded.

Respectfully,

M. HAXTUN,

Lieutenant Commander, and Senior Officer present.

STRINGENCY OF THE BLOCKADE.

Letter of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP MALVERN,
Beaufort, N. C., September 30, 1864.

SIR: I transmit enclosed the Fayetteville North Carolinian of the 17th instant and the Wilmington Daily Journal of the 20th and 27th instants.

I respectfully call the attention of the department to the marked passages in these papers, from which it appears that the stringency of the blockade is felt and acknowledged by the rebels.

I have the honor to be, sir, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Com'dg N. A. B. Squadron

Hon. GIDEON WELLES,
Secretary of the Navy.

[From "The Daily Journal," Wilmington, N. C., September 20, 1864.]

EDITORIALS.

It may be something short of petit treason for us to say so, but still we say it—that we are not so sure that the Tallahassee expedition will pay a large dividend. She certainly kicked up a fuss, but we doubt very much whether she weakened the military resources of the Yankee government to any appreciable extent. It is pretty certain that she has turned an unpleasant amount of attention upon this port, and may be the cause of bringing down upon us the main part of the Yankee navy. The blockade here will be doubly strict—that is certain.

"THE PRIZE STEAMER LILLIAN.—This prize steamer, now at the navy yard in Philadelphia, is a new and sharp-built Clyde propeller of 475 tons burden, and has been libelled and appraised. The Navy Department has been informed of her appraised value, which was \$140,000, and was accepted. She is admirably adapted for cruising, and will doubtless secure many a prize." So says the Philadelphia Enquirer.

How many such have left confederate ports?

[From "The Daily Journal," Wilmington, N. C., September 27, 1864.]

EDITORIALS.

The Mobile Tribune, of a late date, says: "There is not a word of news from below. The fleet is inactive, and we hear nothing of the movement of the troops. Farragut, as we judge from the Yankee papers, has gone to another station. It is believed that he has been ordered to try his prowess at Wilmington."

Possibly. *There is a thundering blockade off here now, that's pretty certain, whether the man with the queer name has got anything to do with it or not. All credit it mainly to the real or supposed presence of the Tallahassee and sundry other mysterious sea monsters. The Yankee papers even report the Florida as among the vessels that have come into this port.*

LOSS OF THE LYNX.—Last night the fine blockade-running steamer Lynx, belonging to Jno. Frazer & Co.,* and commanded by Captain Reid, crossed

* Frazer, Trenholm & Co.; Trenholm, now rebel secretary of treasury.

New Inlet bar and put to sea, bound to Bermuda, with a cargo consisting mainly of over six hundred (600) bales of cotton; one half on government account. She had also \$50,000 in gold on freight for government. She had some few passengers. Just after she got out she was pursued by the blockading squadron, by which she was completely hemmed in. *She was struck eight times, six at or below the water-line. Finding the ship in a sinking condition, the captain beached her some five or six miles above Fort Fisher.* The crew and passengers escaped, with a portion of their effects, and the vessel was burned to prevent it from falling into the hands of the enemy. The gold belonging to the government was saved. The enemy got so close as to fire a volley of musketry at the Lynx, by which one of the crew was wounded.

[From "The Carolinian," Fayetteville, N. C., September 17, 1864.]

EDITORIAL.

The loss of the Advance is a pretty severe blow to our State. She has done noble service for our North Carolina soldiers, and has paid herself twenty times. There are more Clyde-built steamers, and North Carolina has money to her credit in Europe. We believe that the State owned but one-third of the Advance.

DESTRUCTION OF THE BLOCKADE RUNNER NIGHT HAWK.

Report of Acting Rear-Admiral S. P. Lee.

FLAG-SHIP, NORTH ATLANTIC BLOCKADING SQUADRON,
Beaufort, N. C., October 1, 1864.

SIR: I have the honor to report to the department the destruction of the blockade runner Night Hawk by the Nippon on the night of the 29th ultimo. The enclosed report, dated 30th instant, from Acting Master Kemble, gives full particulars. I have disposed of the few articles saved, as thereon noted. In my No. 606, of the 30th ultimo, I informed the department that I had, in consideration of Acting Master Kemble's services in the destruction of the Lynx, ordered his examination for promotion to acting volunteer lieutenant. I now respectfully recommend that this promotion be conferred without the formality of an examination. I also recommend for promotion Acting Ensign E. N. Semon, of the Nippon, who, as will be seen by his report, enclosed in Acting Master Kemble's, boarded the Night Hawk under the heavy fire from the fort, and set her on fire, and who has also rendered valuable services, alluded to in my recent confidential reports to the department.

The blockade is now as close as it can be made with the means at my command. The smaller vessels are stationed as near the bar and batteries as the state of the weather, light, and their draught, will allow. These are pressed in by a line of larger vessels, and these again by the divisional officer, moving along the line. The inner line are not allowed to chase off; those of the second, which see the runner, are. All are kept under way all night.

I have, sir, the honor to be, very respectfully, yours,

S. P. LEE,

Acting Rear-Admiral, Commanding N. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Master E. Kemble.

UNITED STATES STEAMER NIPHON,
Off New Inlet, N. C., September 30, 1864.

SIR: At 11.15 p. m. saw a steamer at the southeast standing in towards New inlet, the Nippon being in five (5) fathoms water, Mound light bearing west by south; gave chase, went to quarters, opened fire upon her, causing her to run ashore on Federal shoals.

At 11.30 sent 2d cutter with armed boat's crew, in charge of Acting Ensign E. N. Semon and Second Assistant Ensign T. L. Churchill, with orders to see if said steamer could be got afloat; if not, to bring off officers and crew, and destroy her. Shortly after his boarding the steamer, the fort and batteries opened fire upon both her and this vessel, several of the shell falling in close proximity to us.

I enclose the report of Acting Ensign E. N. Semon, who carried out my instructions with great coolness and energy under the severe fire of the batteries. At 1.40 this a. m. the boat returned to this ship in company with one of the steamer's boats, bringing the captain, officers, and part of the crew, in all twenty-three, (23.) The complement of the vessel was forty-two, (42,) nineteen (19) of whom escaped on shore.

The vessel proved to be the English steamer Night Hawk, with general cargo for Wilmington, from Bermuda the 26th instant. The steamer was long and low, side-wheel, two smoke-stacks, and two-masted; sailed from Liverpool August 27, and was owned in that place; rate of speed, fourteen knots; three hundred tons burden; cost £30,000; capacity of carrying eight hundred (800) bales of cotton.

Very respectfully, your obedient servant,

EDWIN KEMBLE,
Acting Master, Commanding Nippon.

Captain O. S. GLISSON,
*Com'dg 1st Division N. A. B. Squadron,
United States Steamer Santiago de Cuba.*

Report of Acting Ensign E. N. Semon.

UNITED STATES STEAMER NIPHON,
Off New Inlet, N. C., September 30, 1864.

SIR: In obedience to your orders, I left this vessel at 11.40 p. m. in charge of 2d cutter, accompanied by Acting Second Assistant Engineer T. L. Churchill, and proceeded to destroy the vessel which we caused to run on the Federal shoals, distant about one half mile from Fort Fisher.

At 12.15 a. m. came alongside the vessel, after firing several rifle shots at a boat which was escaping from the steamer. I succeeded in boarding her safely on the port side, although a heavy surf was running at the time.

I immediately sent Acting Second Assistant Engineer T. L. Churchill to the engine-room, and after ascertaining that the steamer could not be got off the shoals, I collected all the combustibles which could be got at, including several cases of spirituous liquors, and set her on fire in the cabin. At the same time Acting Second Assistant Engineer T. L. Churchill, by my order, set her on fire forward; he also threw several shovel's full of live coals, taken from the furnaces, into the coal bunkers. After seeing that the fire was progressing favorably, I ordered all hands belonging to the steamer, including the captain and chief engineer, to get into the boat under my charge. I also gave orders to the

crew of the steamer to lower their own boats and follow me to the Nippon. About this time Fort Fisher opened upon us with shot, shell and grape, which fell all around us. Not deeming it prudent to remain longer on board, I started for this ship and came aboard at 1.40 a. m.

Very respectfully, your obedient servant,

E. N. SEMON,

Acting Ensign United States Navy.

Acting Master E. KEMBLE,

Commanding United States Steamer Nippon.

Blockade runners captured and destroyed off Wilmington, N. C., from August 1, 1863, to October 10, 1864, by the N. A. B. Squadron, Acting Rear-Admiral S. P. Lee, commanding.

SOUTH ATLANTIC SQUADRON.

NAVAL ASSAULT ON FORT SUMTER—SEPTEMBER 8, 1863.

*Letter of Rear-Admiral Dahlgren, transmitting various reports.*FLAG-STEAMER HARVEST MOON,
Port Royal Harbor S. C., February 26, 1864.

SIR: I herewith transmit, for the information of the department, reports of Captain C. W. Pickering, of the Canandaigua; Lieutenant Commander F. M. Bunce, of the Patapsco; Lieutenant F. J. Higginson, of the Housatonic; Acting Master Commanding Benjamin C. Dean, of the Dan Smith; and Acting Master Commanding J. P. Carr, of the Daffodil, of their respective participation in the assault upon Sumter, on the night of the 8th of September last.

These reports were not received until some time subsequent to my despatch upon the subject, and I now forward them in justice to all the officers concerned.

I have the honor to be, very respectfully, your obedient servant,

J. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.**Report of Captain C. W. Pickering.*UNITED STATES STEAMSHIP HOUSATONIC,
Off Charleston, S. C., October 3, 1864.

SIR: In forwarding the enclosed report from Ensign Craven, I would state in reference to the Housatonic's 2d launch, alluded to as not having been brought into action, that I have interrogated the cockswain of that launch upon the subject, who states as follows:

The launch had been employed for several days previous in the creek. Half of her crew being sick, were put on board the flag-ship Philadelphia, and six marines with a sergeant took their place. There was *no officer* in charge of the boat, and none of the crew knew anything of their destination, further than the fact that an attack was to be made *somewhere*. The tug, in approaching Sumter with the boats in tow, swept around a buoy, fouled the boats and cast them off. In the confusion which ensued, this launch followed the lead of the Housatonic's 1st launch, which was manned with a crew from the Powhatan, with no officers in charge. These two launches, instead of going to Fort Sumter, went alongside of the Philadelphia, and from thence were ordered to the fort. Upon getting within fifty or sixty yards of the fort, the cockswain of the 2d launch states that the sergeant told them that they had better go back; that there was no one to tell them where to go, and that they would only get shot; that some of the boats were already retreating, &c. Whereupon the 2d launch alluded to in the report pulled for the Ironsides, where she made fast until the next day.

I am, respectfully, your obedient servant,

C. W. PICKERING, *Captain.*Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

Report of Lieutenant Commander F. M. Bunce.

UNITED STATES IRON-CLAD PATAPSCO,
Port Royal, September 23, 1863.

SIR: I have the honor to acknowledge the receipt of your communication of the 21st instant.

In obedience to its requirements I would state that I left the flag-steamer at 11 p. m., and, with the other boats in tow of a tug, stood up towards Fort Sumter.

After communicating with the two monitors on picket, we were towed to within about 800 yards of Fort Sumter. The boats were then formed in three columns. Lieutenant Higginson, with his column, was ordered to move up the northwest face, the other two columns to close up and move up towards Sumter. As we approached the fort many of the boats gave way strongly and landed. The order was then given to push for the fort, and all gave way.

The foremost boats were received by a very heavy fire of musketry, hand grenades, &c., from the fort.

Moultrie and some of the Sullivan's Island batteries also opened, together with one of the rebel gunboats.

We pushed in till the boat grounded, and it became perfectly apparent that there was no footing for the men nor any means of scaling the high walls. The order was then given for all boats to withdraw, and after some little delay, all, as I supposed, had shoved off.

We then withdrew to the tug, where a large number of boats were already collected.

I have the honor to be, very respectfully, your obedient servant,

FRANCIS M. BUNCE,

Lieutenant Commander, United States Navy.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron,

Flag-Ship Philadelphia, off Charleston, S. C.

Report of Lieutenant F. J. Higginson.

UNITED STATES STEAMER HOUSATONIC,
Off Charleston, S. C., September 21, 1863.

SIR: I have the honor to make the following report of the part taken by the boats under my command in the naval assault on Fort Sumpter on the 8th September, 1863:

After casting off from the tug I pulled up to the northeast face of the fort, in obedience to my instructions. I succeeded in reaching the fort without being seen, and immediately attempted to land.

I found myself upon a narrow ledge of sharp rocks, in which no foothold could be obtained. My boats were in danger of getting stove, and after several ineffectual attempts I withdrew.

I then pulled around to the southeast face and found the boats were in retreat. Picking up a boat in which there were two men, I pulled out. As I was pulling up to the northeast face I observed a steamer close to the fort on my

right. Whether she was an iron-clad vessel or river steamer I am unable to state. My impression is that she was the latter. As I neared the fort she steamed quietly away towards Charleston.

Very respectfully, your obedient servant,

F. J. HIGGINSON, *Lieutenant.*

Rear-Admiral J. A. DAHLGREN.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, S. C.

In forwarding this report, I have to state that Ensign C. H. Craven is too sick to make the report required of him.

C. W. PICKERING, *Captain.*

Report of Acting Master Benjamin C. Dean.

UNITED STATES SCHOONER DAN SMITH,
Off Morris Island, S. C., September 9, 1863.

SIR: I would most respectfully beg leave to transmit the following report:

At 6 p. m. on the 8th instant I received an order from the fleet captain to send two of my boats with men armed with revolvers and cutlasses.

At 7.30 p. m. I sent Acting Master's Mate Jacob C. Van Deventer, in charge of 1st and 2d cutters, with twelve men armed as per order, to report to fleet captain.

At 4.15 a. m. Acting Master's Mate J. C. Van Deventer returned in 1st cutter, after having reported on board flag-ship, whose report you will please find enclosed.

I have also to report that the 2d cutter has not returned, and that the following named crew are missing, namely:

William Dowden, boatswain's mate.

Alexander Clark, carpenter's mate.

Henry B. Middleton, master-at-arms.

Richard Kaine, ordinary seaman.

Francis Swift, landsman.

At 12.15 a. m. I sent gig and four men on board flag-ship, which returned at 7.30 a. m.

Hoping this may meet your approval, sir,

I remain, very respectfully, your obedient servant,

BENJAMIN C. DEAN,
Acting Master, Commanding.

Rear-Admiral JOHN A. DAHLGREN, U. S. N.,
Commanding S. A. B. Squadron.

Report of Acting Master John P. Carr.

UNITED STATES STEAMER DAFFODIL,
Off Morris Island, S. C., September 10, 1863.

SIR: In obedience to your order, I have the honor to make the following report:

At nine o'clock and thirty minutes on the 8th instant, by order of Captain Stevens, I left the flag-ship with twenty-five boats in tow. We stopped at the Montauk, and Captain Stevens went on board of her; in fifteen minutes he re-

turned and ordered me to proceed up to the Patapsco. He went on board of her; in twenty minutes he returned, put his pilot on board, and ordered me to proceed to Fort Sumter. At eleven o'clock and thirty minutes was within a quarter of a mile of Fort Sumter in eight feet of water, which I reported to Captain Stevens. He then said he wanted to go nearer. I told him I could not go any nearer, as we had already touched the bottom. He then ordered me to go up to the picket monitor, which I did, and he went on board. In a short time he returned and took his pilot into the boat. He then ordered me to go toward Fort Sumter again, which I did; and after getting within a quarter of a mile of the fort, and in eight feet of water, I reported to him. He ordered the boats to cast off from the steamer, and told me to come to an anchor, and wait for the boats to tow them out. After coming a short distance I saw the Philadelphia, and told them they would be ashore if they went twice their length further. I was then near the small buoy off the point of the flats near Sumter. About 2 o'clock I came to anchor in two and three-quarter fathoms of water. About 3 o'clock Captain Stevens came alongside and ordered me to leave with the boats in tow, and take them to the steamer Memphis and leave them, which I did.

I am, respectfully, your obedient servant,

JOHN P. CARR,

Acting Master, Commanding Daffodil.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron, off Morris Island, S. C.

Report of Lieutenant Commander E. P. Williams.

ROXBURY, MASS., September 27, 1864.

SIR: I have the honor to make the following report of the capture of myself and party on the morning of the ninth of September, 1863, in an attempt to storm Fort Sumter:

On the morning of the eighth I received orders from Admiral Dahlgren to take command of a division of boats in a night attack on Fort Sumter; to proceed with the vessel under my command outside the bar and call for the requisite number of men and boats from the vessels stationed there. During the day I collected the men and boats; the number and names of which have been reported by their respective commanders. I recrossed the bar after sunset, so late as to render it impossible for the enemy to see the boats in tow. On reporting on board the flag-ship, I found the remainder of the force assembled around that vessel, but the order of attack had not been arranged. Lieutenant Preston and myself at once arranged the different divisions; Commander Stevens, who commanded the party, approving of the arrangement and of the orders. The landing party was in three divisions.

First division, commanded by myself.

Second division, commanded by Lieutenant Remey.

Third division, commanded by Lieutenant Preston.

The orders were to form the divisions as soon as cast off from the tug, pull quietly for the fort, land without firing, and do our best to gain the walls; the other divisions, with the marines, to cover or land, as circumstances should require. Commander Stevens fully approved of these orders. At nine o'clock I saw Commander Stevens, and received his last orders; I said to him that the orders were fully understood; if he should not be up to land with me I would land as soon as I reached the fort; if the enemy should offer no resistance to the landing, would form my men, wait for him, and all go over together; but if resistance was made, I would storm the walls at once, and depended upon

being supported. He said he expected to land with me; and if not, would see that the others supported my division. That is the last order I received from him. Between ten and eleven o'clock the tug got under way, and with the boats in tow we steamed up the harbor. After nearing the fort it turned back, and three times it made a circle near the fort. None of us in the boats could understand the manœuvre, and it had the effect of dampening the ardor of the men. Suddenly, without any word being passed to prepare for it, we found the boats adrift, the tug, at the same time, heading so as to render it impossible to form the divisions without great confusion. Ordering the first division to follow me, I pulled clear of the boats, and formed line abreast. The first division was composed of the following boats:

Powhatan, third cutter, Acting Master Hustace and Lieutenant Pope, of the marine corps, with fifteen marines.

Powhatan, 4th cutter, with myself, Acting Master's Mate Hovey, and sail-maker Wm. Brayton.

Gig from the New Ironsides, Ensign Porter.

Wissahickon, 1st cutter, Acting Master Dayton.

Wissahickon, 2d cutter, Acting Master's Mate King.

As I was to land in the gorge wall, I took the right of my division; ordered Mr. Porter on the left, to make sure the boats should be kept close. As soon as the division was formed I ordered the boats to lie on their oars, and only use them to keep our position. The tide swept us rapidly up to the fort; when within fifty yards the sentinel on the gorge wall hailed. I made no reply, but with my night glass sought a good place to land. He hailed three times, and fired on us at the third hail, to which I answered "passing." On his firing, having found a good landing place, I ordered the boats to give way and land. Three strokes of the oars sent us to the beach. I at once jumped from my boat, followed by the men, and started up the walls. On reaching the top of the second tier of casemates we found the top of the wall projected, so as to render it impossible for us to close with the enemy. Mr. Porter, who was on the left of the division, and most distant from the beach, was by my side almost as soon as I struck the beach. Mr. Dayton, in the Wissahickon, third cutter, also landed at once with his men; but of those in the third cutter of the Powhatan, in charge of Acting Master Hustace and Lieutenant Pope, only two landed, William Simms, boatswain's mate, and corporal Cully, marines. They reported that when they left the boat Mr. Hustace was giving the order to shove off, and they jumped from the boat to follow the landing party. I know no reason why all in the third cutter should not have landed at once. They could have landed with a small loss, and retreating only exposed them to a heavy fire. I saw nothing of the Wissahickon's second cutter, under the charge of Acting Master's Mate King. He must have retreated at the first fire. I know no reason why the officers of these two boats should not have landed at once and followed me, as they were ordered. Lieutenant Remey, commanding the second division, landed, only a part of his division following him. Lieutenant Preston, commanding third division, also landed, but was not followed by the others of his division. The boats that held back opened fire with their revolvers, the shot striking among us, who were half way up the walls. Hoping to find a place where we could close with the enemy, I ordered the boats outside to cease firing and land, repeating the order several times. Lieutenants Meade and Bradford, of the marine corps, at once ceased firing and landed, losing but a few men, which shows how easy it would have been for the other boats to land. At this time the forts on James and Sullivan's islands opened fire with shell; also a ram with grape and canister. It was then impossible for my boat to pass through the fire. The enemy sunk or disabled all the boats by shot and bricks thrown from the wall. Finding it impossible to get over the walls, I ordered the men to shelter themselves in the holes made by our shells. The

enemy kept up a constant fire on us, throwing hand grenades, bricks, fire-balls, and other missiles among us. Hoping something might be done for our relief, I would not surrender, but some of the men from Lieutenant Bradford's boat, he having been mortally wounded in landing, surrendered, and were ordered around on the left to come into the fort. I stopped these and ordered them under the walls. Soon finding it was only losing my men without gaining anything, on a consultation with the officers I surrendered, and was shown inside the fort, where we were courteously treated by Major Elliott, commanding the fort. The following officers were captured:

First division.—Lieutenant Commander E. P. Williams, Ensign B. H. Porter, Acting Ensign E. G. Dayton, Acting Master's Mate C. P. Hovey, Sail-maker W. S. T. Brayton, severely wounded.

Second division.—Lieutenant J. C. Remey and Acting Master's Mate C. S. McCarty.

Third division.—Lieutenant S. W. Preston, Lieutenant E. T. Brower, and Third Assistant Engineer J. W. Harmony.

Fifth division.—Lieutenants of marines, R. L. Meade and C. H. Bradford, the latter mortally wounded.

Ninety-five seamen and marines were also captured, and loss in killed and wounded amounted to three killed and twenty wounded; the names of which I will forward to the department as soon as I can receive them from Columbia.

The wounded were well treated by the enemy. All the officers and men who landed behaved gallantly, and only surrendered when there was no hope of a relief, and it was found to be impossible to close with the enemy.

I would request that Lieutenants Remey and Preston may make a report of the conduct of the officers of the boats of their divisions. I know of no reason why they should not have followed their commanding officers. The small loss sustained in the boats which landed shows how easy it would have been for all to land. They could not tell but that those who landed were engaged hand to hand with the enemy, for, with good glasses and time enough to have a fair look at the walls, I fully expected that we would be able to go over them.

The conduct of all since our capture has been good, with the exception of William Hill, seaman from the Powhatan, and William Beeby, officers' steward from the Housatonic, who were bribed by the enemy and deserted, giving all the information in their power regarding the squadron off Charleston. They took the oath of allegiance, and are now in the southern confederacy.

I have the honor to be, very respectfully, your obedient servant,

E. P. WILLIAMS,

Lieutenant Commanding, U. S. Navy.

HON. GIDEON WELLES,

Secretary of the Navy.

REPORT OF LIEUTENANT COMMANDER F. M. BUNCE, OF THE ATTACK ON MORRIS ISLAND, JULY 9, 1863.

UNITED STATES STEAMER PAWNEE,

Stono River, July 12, 1863.

SIR: In obedience to your order, I, on the 9th instant, at 2 p. m., started from this vessel for the purpose of co-operating with the army in an attack on Morris island. Under my command were the launch of the vessel, armed with one rifled and one smooth-bore Dahlgren howitzer, Acting Master's Mate Bache; two launches of the Wabash, each with a smooth-bore 12-pound Dahlgren howitzer, Ensign James Wallace and Acting Master's Mate Bonn;

one army lighter fitted up, armed with two 24-pound Dahlgren smooth-bore howitzers, furnished by the Commodore McDonough, Acting Ensign Knapp; two unarmed cutters of the Wabash, one of the New Ironsides, and one of the Flag, Lieutenant Robertson and Acting Master Frost. I proceeded up Folly river and reported to General Gilmore, and by his order to General Strong. Lieutenant Mackenzie, in charge of transportation, not having arrived, I gave all the assistance in my power to General Strong, and by 1 a. m. of the 10th instant his brigade was in boats ready to proceed to Light-house inlet.

Forming the boats in line ahead, Acting Ensign Knapp taking the lead, being well acquainted with the intricate channel, we proceeded up the creek, and by daybreak, were, with the whole brigade, at or near the junction of the creeks with Light-house inlet.

Just after daylight the batteries on Folly island opened upon the enemy. Getting the armed launches in line abreast, I pulled into Light-house inlet, and, at a distance of 1,800 yards, opened fire upon the Morris island batteries with the rifled howitzer. Pulling down the inlet, slowly firing till we got within good distance of the batteries, I opened with all the howitzers, using 4 second shrapnel; the enemy returned the fire briskly with three or four heavy guns, but without effect. After an hour's rapid firing the enemy's batteries ceased to answer, except with one heavy gun.

General Strong determined to effect a landing with his brigade, and designated the point. I sent the two launches of the Wabash below, while I took up a position above this point, that, with the heavier guns, I might cover him and enfilade the enemy's rifle pits, should he attempt to occupy them to oppose the landing. The landing was successful; all the launches keeping up a rapid and effectual fire of shell and shrapnell over the heads of the troops, forming about a hundred yards in their front, and between them. This fire did not cease till the assaulting forces had so far advanced as to render it unsafe to continue, lest injury might result to our own forces. Although several of the transports were struck and one sunk, none of the boats under my command were hit, we being in a measure protected by the banks, which, as the tide ran out, afforded some shelter. Every officer and man did his whole duty with alacrity.

Very respectfully, your obedient servant,

FRANCIS M. BUNCE,

Lieutenant Commanding.

Commander G. B. BALCH,

Commander U. S. S. Pawnee, Senior Officer.

CAPTURE OF BOAT'S CREW OF THE T. A. WARD.

Report of Rear-Admiral Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, November 6, 1863.

SIR: The schooner T. A. Ward arrived here on the 3d instant, from Murrell's inlet, where she was stationed, with the intelligence that on the 17th ultimo a schooner was discovered lying about half a mile up the inlet.

Acting Ensign Tillson, of the Ward, "with two boats, immediately proceeded to board her, which he succeeded in doing without any resistance, there being but one man on board. She proved to be the schooner Rover, a vessel of about fifty tons, and formerly a Charleston pilot boat.

"Upon examination she proved to be loaded with a full cargo of cotton. Joseph Stewart, the person captured on board of her, states that she had been lying there for several weeks, waiting a crew to run the blockade to some English port. Finding the schooner hard and fast aground, and impossible to get

her off, Mr. Tillson set fire to and destroyed her. No papers or documents of any kind were found on board."

On the 20th of October a party of nineteen men, under Acting Ensign Tillson, was despatched for a short distance from the Ward in quest of water. Leaving the boats in charge of Acting Master's Mate Elwell, with seven men, Acting Ensign Tillson, with ten men, landed. They had proceeded about a mile from the boats when they were surprised and attacked by a large body of the rebel cavalry, who made them prisoners. The boats were also attacked, but were successfully defended by Acting Master's Mate Elwell and the seven men who remained. The commander of the Ward speaks highly of their conduct. * * * * *

I have the honor to be, very respectfully, your obedient servant,

JNO. A. DAHLGREN,

Rear-Admiral, Commanding.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Ensign Myron W. Tillson.

SOUTH HANSON, MASSACHUSETTS,

November 5, 1864.

SIR: I have the honor to report that on the 20th of October, 1863, I left the United States schooner T. A. Ward, then lying off Murrell's inlet, South Carolina, in command of a howitzer boat, with a crew of eleven men, under orders from Acting Master William L. Babcock, commanding the T. A. Ward, to go in and lie off the beach, within easy range, and shell the enemy's cavalry if they attempted to retreat down the beach, while the schooner shelled the building to the northward, occupied by them as quarters. On being joined by another boat with six men, in charge of Acting Master's Mate A. Elwell, and on a given signal being made from the ship, I landed, in further obedience to my orders, to ascertain if a schooner then lying up the inlet about one and a half miles from its mouth, and which I afterwards found to be the schooner Cecelia, of Nassau, N. P., could be cut out or destroyed; also to examine the locality with a view to obtaining water. Leaving the boats in charge of Acting Master's Mate A. Elwell, I proceeded up the beach with ten men. On approaching the schooner we were surprised by a considerable detachment of the enemy, consisting of companies A and C, 21st Georgia cavalry, and after a brief and ineffective resistance were compelled to surrender to a greatly superior force. After the skirmish I found James Lacy (ordinary seaman) missing; have reason to believe he was killed in the skirmish on the beach. An unsuccessful attempt was also made by the enemy to capture the boats. I have no knowledge of any damage sustained by them. After our capture we were forwarded via Georgetown, S. C., and Charleston, to Richland jail, Columbia, S. C.

I am, very respectfully, your obedient servant,

MYRON W. TILLSON,

Acting Ensign, U. S. Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

SIR: Many of our seamen and marines have died since their removal from Richmond to Andersonville, Georgia. I have been informed by reliable members of that prison that the cause of such mortality was starvation and its effects.

The following is a list of the men captured with me and died during their severe imprisonment at Andersonville, Georgia :

William Raymond (cockswain) died July 27, 1864; James Dauphinee (seaman) died August 21, 1864; Augustus Kultz (ordinary seaman) died March 29, 1864; John Regan (ordinary seaman) died June 18, 1864; Michael Tearney (landsman) died June 30, 1864. Thomas J. Reynolds, ordinary seaman, missing when last heard from, was held as hostage at Salisbury, North Carolina.

Very respectfully, your obedient servant,

MYRON W. TILLSON,

Acting Ensign, U. S. Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

ATTACK ON FORT SUMTER—OCTOBER 26, 1863.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Off Morris Island, South Carolina, November 4, 1863.

SIR: Since my last on the general course of operations here, our own part has still been restricted to the repair of the monitors and the cleansing of their bottoms, which had become so foul by adherence of grass and barnacles as to reduce their speed from $6\frac{1}{2}$ or 7 knots to $3\frac{1}{2}$ and 4. The divers have been engaged in removing these from two or three of the monitors, it is believed with good effect; but in this respect the information is not yet complete, and it is probable that a surer means has been discovered through the agency of Mr. Griffin; that is, the vessels are beached at a suitable place, and the barnacles, &c., removed completely from the sides, leaving only the flat part of the bottom to be cleaned by the divers. It was necessary to replace the rifle gun of the Patapsco, and the 11-inch of the Montauk.

There are now two monitors at Port Royal; the Montauk arrived here last evening, with clean bottom, a new gun, and in good condition.

Mr. Griffin is now engaged with the Ericsson torpedo, and I am in hopes he will be successful in getting it into operation. The rough weather which has prevailed lately has stopped his proceeding for a week or ten days, but he thinks one will be ready for trial soon.

I wish very much that some measures could be taken to form a kind of framework, projecting from the monitors, so as to prevent contact with the torpedoes at the bows of the enemy's iron-clads, and also to apply their method to the monitors. Here, I have neither the time nor the means for such undertakings.

The army having sufficiently advanced with the re-fortification of Morris island, opened fire on Fort Sumter 26th October; the object being to complete its reduction by driving out the garrison and occupying it. The firing has been prosecuted steadily since, and I have examined the progress daily by going up the channel, where a near view could be obtained of the works.

I directed the Patapsco and Lehigh, being armed with rifle guns, to take position also at effective range, but not exposed to that of Fort Moultrie and its adjacent batteries.

The line of fire from Putnam passed directly through the northwest and southeast angles of Sumter, therefore looked equally on the gorge and southeast front.

The fire from the monitors was nearly perpendicular to the southeast front,

and looked acutely on the northeast front. At first the fire ashore seemed aimed at the gorge, which had been originally faced for two-thirds of its height with sand-bags. Upon these the fragments of the top of the wall had lodged and formed one mass of sand and crumbled brick, where the rifle shells entered to no great depth.

The fire of the monitors was directed at the southeast face, and appeared to exhibit a more marked action there, because the debris had fallen down into deeper water, and not lodged to the same extent as on the gorge.

The fire of Putnam and Strong was soon after applied to the southeast front, which gradually gave way to the united fire, until it, too, was reduced to a slope of fragments, much lower, however, than that of the gorge.

By the end of the week the opposite walls of the fort were cut and jagged by the shells which passed over the main front, and the northeast face looked very dilapidated.

On Sunday I had a conversation with General Gillmore on the state of affairs, and on Monday went up with him and General Seymour to view Sumter from Fort Strong; after which we had a conversation in General Seymour's tent on the best probable course to be pursued. General Gillmore finally concluded for the present to continue the fire on Sumter.

The fire of the monitors has been generally very good, and on many occasions most excellent.

Captain Stevens reports that of 455 shells, fired in seven days, 315 took effect on or in the fort.

I regret to say that on the 2d two men were killed in the Patapsco by the premature explosion of the rifle gun. Their names were William Colter and John Morris.

Captain Stevens states: "The explosion of the fifteen-inch shells, fired with 5" and 20" fuzes in the inside of the fort, which gun was fired occasionally, produces an effect which is hardly describable, throwing the bricks and mortar, gun-carriages, and timber in every direction, and high into the air."

I find that the effect of these shells is also noticed by the commanding general ashore.

Last evening I examined the appearance of the fort, (as I have done every day,) and could plainly observe the further effects of the firing. Still this mass of ruin is capable of harboring a number of the enemy, who may retain their hold until expelled by the bayonet, which, in the proper order of things, will devolve on our comrades ashore.

Last evening the schooner Ward came down from Morrill's inlet and reported the capture of an officer and nine men by a party of the enemy, who were, no doubt, annoyed by the presence of the schooner, and her endeavor to prevent some effort to run in or out. I shall despatch a gunboat to stop that game. This is another of the indications that the perfect blockade of Charleston is driving speculators to the smaller ports to get cotton out, and a return cargo in.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

P. S.—The speed of the Montauk was tried this morning, and found to be improved from $3\frac{1}{2}$ to 6 knots, with the same amount of steam. The Ericsson raft will be tried to-day on a monitor.

Report of Commander T. H. Stevens.

UNITED STATES IRON-CLAD PATAPSCO,

Off Charleston, November 2, 1863.

SIR: I have the honor to inform you that, according to your instructions, I have been engaged for the past week in co-operation with the batteries on Morris island, formerly called Forts Gregg and Wagner, and in company with the monitor Lehigh, Commander Bryson, in bombarding Fort Sumter. On Monday last, owing to some unfinished work upon the Lehigh, she did not participate. The Patapsco upon that occasion proceeded within 1,800 yards of the fort and opened fire. As the tide was running flood when the order was given, I was compelled to fight the ship under way, and of course to some disadvantage; notwithstanding, the fire was effective, almost every shell bursting near upon or inside the fort. The next two days, the 27th and 28th, as soon as the tide served, both monitors opened upon the northeast bastion, the fire being very destructive upon this part of the fort and the walls adjacent; so that when the army batteries were directed to this position, the walls being already greatly weakened by our fire, they soon crumbled.

Subsequent to this our fire has been mainly directed to the Charleston face and interior of the fort; with what effect the appearance of Sumter will clearly indicate. The explosion of the 15-inch shells, fired with 15" to 20" fuzes in the inside of the fort, which gun was fired occasionally, produced an effect which is hardly describable, throwing the bricks and mortar, gun-carriages, and timber in every direction, and high into the air.

The flag upon Sumter was yesterday, at two o'clock, shot away for the third time, and has not since been hoisted. A man was seen making an attempt to get it up again, but just at the time three shells from the army and navy batteries exploded over him, doubtless with fatal effect.

The shells of the enemy have fallen around and about us without causing any casualties. It was not, however, until last Saturday, the 31st, their fire seemed to be directed to us, when battery Beauregard and a battery upon James island opened upon us, striking the Lehigh twice, but doing no damage of importance. Upon hauling off from Sumter, I stood over toward Beauregard and delivered five shots, four of which landed in the battery and produced great excitement, the people in the neighborhood flying from our shells. Upon this, Fort Moultrie fired one gun. Yesterday we were not molested on that side, although the James island batteries still continued to fire.

We have been engaged at a distance varying from 1,600 to 2,000 yards.

I enclose herewith a tabular statement of the firing, from which it appears that out of 455 shots 315 have taken effect upon some portion of the fort.

The guns appear to stand the firing well. I have forwarded to the Ordnance office an impression of the vents of both guns, taken yesterday after the firing was over. The rams of the enemy appear to be anchored in four-fathom hole, and above Fort Johnson.

On Friday last, as we were steaming up from the lower anchorage toward Sumter, a boat with a considerable number of men around and in it was seen upon the north shore of Sumter, but before we could get in range the boat and men had disappeared.

Very respectfully, your obedient servant,

T. H. STEVENS,

Commander, Commanding U. S. Steamer Patapsco.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron.

Report of Commander A. Bryson.

UNITED STATES IRON-CLAD LEHIGH,
Off Morris Island, South Carolina, November 4, 1863.

SIR: I have the honor to inform you that, in accordance with your order, I have been engaged for the last nine days, in company with the Patapsco and the shore batteries, in the bombardment of Fort Sumter; during which time I have fired from the 8-inch rifle 408 percussion shell, and from the 15-inch smooth-bore twenty-four shell; the distance varied from 1,600 to 1,800 yards. The effects of the lodgement of many of these shell were those of displacing large masses of masonry, and throwing high in the air pieces of heavy timber, knocking over gun-carriages, and opening casemates. During the greater part of the bombardment my attention was given almost wholly to the inner face of the northwest wall, and the result of the firing can easily be seen by the naked eye. On the afternoon of the 31st of October the flag of Fort Sumter was shot away by the shore batteries; a short time after two flags were raised very near each other. The rifle was then directed to the flags, and at the third fire both flags were shot away. (Lieutenant Commander Phythian had this pleasure.) On the fourth of November my attention was given to the northeast face of the fort. At the angle at which I was firing I found that the shell glanced from the face, doing but little damage; after having fired a few shell at the fair face, and finding that they would not lodge, I then directed the fire to the angle of the same face nearest Cummings's Point, which was already somewhat broken. At this point I found that the shell lodged; I then continued the fire at this point with very fine effect, knocking down tons of masonry and exposing the arch of a new casemate.

After I had made a lodgement for the shell at this part of the wall, I inclined the fire gradually to the right, and succeeded during the day in cutting into the wall for about thirty feet along its fair or northeast face. On the afternoon of October 31 battery Beauregard opened on this ship and the Patapsco, (firing six shots,) doing, however, little damage; one shot cutting away half of the pennant staff of the Lehigh, and a shell exploding on the after part of the deck.

I enclose a tabular statement of the firing.

I am, respectfully, your obedient servant,

A. BRYSON, *Commander.*

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

Additional report of Commander T. H. Stevens.

UNITED STATES IRON-CLAD PATAPSCO,
Off Morris Island, November 10, 1863.

SIR: Since my last report of the bombardment of Sumter, I have the honor to inform you we have fired from this vessel ninety-six rifle projectiles at the fort, of which three were defective, eighty-two struck the fort, and eleven missed.

From the XV-inch gun twenty-two twenty-second fuzed shell have been fired at the same object, of which sixteen struck the fort, and six missed.

During all the time we have been engaged, there have been five hundred and seventy-three shells (of which five hundred and fifteen were from the rifle gun) fired, of which number four hundred and thirteen struck the fort, twenty-seven were defective, and one hundred and thirty-three missed.

Very respectfully, your obedient servant,

T. H. STEVENS, *Commander.*

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

ATTACK ON CUMMINGS'S POINT BATTERIES.

Complimentary letter of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, November 17, 1863.

SIR: I beg leave to call your attention to meritorious service, *under a severe fire* of the enemy, by certain persons of this squadron.

Last evening the enemy unexpectedly opened a very heavy fire from Moultrie upon our works on Morris island. General Gillmore telegraphed me accordingly thus: "The enemy have opened a heavy fire on Cummings's Point. Will you have some of your vessels move up so as to prevent an attack by boats on the sea face of the point?"

It was now about 10 p. m., and I at once ordered the monitors on picket to move up so as to attend to this duty, and also to cause the tugs on patrol to keep a good look-out.

This morning early it was reported that the Lehigh had grounded, and the enemy had opened heavily on her from Moultrie and the adjacent batteries. I at once signalled to the iron-clads to get under way, and myself went up in the Passaic. On reaching the spot I perceived that the Nahant was very close to the Lehigh, so I passed to her, where I found Lieutenant Commander Cornwell preparing to assist his comrade.

With difficulty and much danger it was contrived to get three or four hawsers successively from the Nahant to the Lehigh; two were cut by chafing and one by the enemy's shot; the last one held, and at high water the Lehigh floated off.

With pleasure I bring to your notice the gallant behavior of Acting Ensign R. Burke, who was severely wounded, and also of the medical officer of the Lehigh, Dr. W. Longshaw; twice he passed in a small boat from the Lehigh to the Nahant, carrying a line bent on the hawser; the shot and shells from cannon and mortars were flying and breaking all around.

The third time this service was performed by three seamen, Horatio Young, William Williams, and Frank S. Gile. These I advanced on the spot in their rates.

I have also given appointments as master's mates to the two petty officers who rowed Dr. Longshaw, George W. Leland and Thomas Irving.

It would also have been very gratifying to me if it had been in my power to advance Acting Ensign Burke and Dr. Longshaw under the fire, when they so well performed their duty, and by which the former had been severely hurt; for a recognition of this kind has always been more valued in military service than any other. I beg leave to recommend them to the notice of the department, with the observation that they risked their lives to save an invaluable vessel, which, I am glad to say, sustained no great damage.

It is proper for me to remark that the few officers were actively employed in other duties at the time.

The Passaic and Montauk fired with great precision, and I think with effect, for their shells seemed to me to strike the test of the parapet every time.

Commander Bryson and Lieutenant Commander Cornwell, with their officers, did their duty handsomely on the occasion.

I enclose the report of Commander Bryson.

I have the honor to be, very respectfully, your obedient servant,

JNO. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander A. Bryson.

UNITED STATES IRON-CLAD LEHIGH,

Off Morris Island, S. C., November 17, 1863.

SIR: I have the honor to report that, in obedience to your order of the night of November 15, I moved up, whilst on picket service, to a position which would enable me to use my guns on any boats of the enemy which might be seen approaching Cummings's Point.

I anchored the ship in three-quarters fathom of water, on a half ebb tide, feeling that she was perfectly secure. On the making of the flood tide she swung, and in swinging it is my belief that she touched on a lump and there hung. The water was so smooth, and she went on so easily, that it is impossible for me to say at what time during the night she touched. After daylight I made the attempt to get under steam, and found, to my surprise, that the ship was on the bottom. Signal was then made to this effect, and that assistance might be rendered me. I was within range of the enemy's batteries on Sullivan's island, and as soon as they perceived that the ship was ashore they opened on me from nine different batteries, striking twenty-two times, nine of which are wounds on the deck plating; and these are the most serious of all the wounds she received.

The Nahant, being the nearest ship to me, immediately came to my assistance, and anchored near us. Lines were procured from the Nahant on three occasions, the first two being shot away, and the third successfully made fast. The Nahant then steamed ahead, the Montauk being ahead of her, the Lehigh backing, and in the course of an hour the ship floated. No injury has been done the ship by grounding that can be perceived. I regret to inform you that, while under the fire of the enemy's batteries, there were wounded one officer and six men—two seriously, the others slightly.

It is a pleasure for me to say that all under these trying circumstances did their duty, there being no confusion and everything working well.

I would especially mention the valuable services voluntarily rendered by Assistant Surgeon Longshaw, and the promptness and alacrity with which George W. Leland (gunner's mate) and Thomas Irving (cockswain) manned the boat which was engaged in passing lines under a heavy fire.

Acting Ensign Richard Burke also commanded my admiration for the courageous manner in which he performed all his duties, the value of which I cannot speak too highly of.

I am, respectfully, your obedient servant,

A. BRYSON, *Commander.*

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

Recommendation for promotion.

BUREAU OF MEDICINE AND SURGERY,
November 28, 1863.

I beg leave to recommend, as a recognition of the gallant conduct and efficient service, under a heavy fire of shot and shell from the enemy's cannon and mortars, of Assistant Surgeon William Longshaw, of the monitor Lehigh, so amply set forth by Rear-Admiral Dahlgren in general orders of the 17th instant, that an order issue giving Assistant Surgeon Longshaw the privilege of examination as soon as his two years' sea service required by law shall be completed, and if successful, that he shall rank as passed assistant surgeon from the date of his examination, without reference to others of his date or class.

W. WHELAN, *Chief of Bureau.*

NECESSITY OF IRON-CLADS FOR THE PROTECTION OF THE SOUTHERN COAST.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, January 19, 1864.

SIR: The department's letter of the 4th of January has been received.

The irregularities in regard to complement of officers is rather the result of circumstances. The Ironsides, as well as all the monitors, occupy positions entirely exceptional. Our entire safety on the southern coast depends on these vessels. Without them, the rebel iron-clads would quickly ruin the blockade and capture our land forces. They also have the most severe and never-ceasing duties to fulfil while on picket, particularly in keeping off the various submerged devices of the rebels. I can, from frequent inspection of them after dark, bear witness to this. For these reasons I keep them at the highest possible state of efficiency, and, as a general rule, give whatever they ask for. * * * *

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

SINKING OF THE WEEHAWKEN.

*Report of Rear-Admiral J. A. Dahlgren.*FLAG-STEAMER PHILADELPHIA,
Off Morris Island, December 6, 1863.

SIR: With feelings beyond my ability to express I have to announce that the monitor Weehawken sank at her anchorage to-day at half past two o'clock. It was blowing a moderate gale from east by north at the time, and I had been occasionally noticing the motions of the Montauk, which was anchored the highest up the harbor, and had been under way.

Mr. Hughes, the superintendent of repairs of the monitors, was talking to me at the time—asking leave to go home—when the signal officer announced that the Weehawken had flying a signal “for assistance,” and this was followed almost immediately by the entrance of the fleet captain, who reported that the Weehawken appeared to be sinking.

Directions were given at once to let her make for the beach, but before the least measure could be taken the Weehawken disappeared beneath the water, and nothing was seen above but the flag and the top of the smoke-stack.

Scarcely five minutes elapsed between the time that the signal “for assistance” was made and the sinking of the vessel.

I am entirely unable, from the imperfect information at hand, to satisfy myself of the real cause of the disaster. Some attribute it to the entrance of a heavy sea into the fore hatch, filling the anchor well; others say that there was an excess of water in the vessel three hours before she went down, which is also attributed to the hawse-pipe. Some talk of the water forcing in at the joint of the overhang; but it would appear that no apprehension of danger existed until ten or fifteen minutes before the signal was made.

The Weehawken lay about east of the beacon-house on Morris island, and nearest to her were a mortar schooner, a tug, and my own steamer. The Ironsides and other vessels lay lower down, except the Montauk, which was on picket.

Steam-tugs and boats were despatched at once to pick up the crew, but it is to be feared that some lives have been lost. These cannot yet be known with exactness, as the survivors are scattered among different vessels, and it blows too fresh to communicate with facility.

I shall send to Port Royal for the divers and other means to raise the Weehawken, and would ask that the department would also send here any assistance that is available.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

*Detailed report of the sinking of the Weehawken.*FLAG-STEAMER PHILADELPHIA,
Off Morris Island, December 8, 1863.

SIR: Another despatch informs you of the sad disaster that has befallen the Weehawken. I have ordered an inquiry, which will supply all the evidence that is attainable. Meanwhile there are differences of opinion among well-informed officers. Some attribute the cause to the water in the anchor well,

the influx through the hawse-pipe, and the depression forward, so that the water would not flow to the pumps.

A written opinion (A) from Lieutenant Commander Simpson, who has the monitor Passaic, states that the water did run aft, and that the rotatory pump was in full action. He thinks that weakness from injuries in service, with, perhaps, some strain in beaching, had loosened rivets of bottom plates, and did the rest.

Among the melancholy consequences are the loss of life. Four engineers and twenty men are missing, the names of whom are enclosed, (B.) Every effort was made to save the crew, and in a few moments the water was alive with boats. It is to be hoped that some may have escaped ashore, but the chances are very slight.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

A.

Report of Lieutenant Commander E. Simpson.

UNITED STATES IRON-CLAD PASSAIC,

Off Morris Island, S. C., December 6, 1863.

SIR: I respectfully submit my opinion of the cause of the sinking of the Weehawken.

From the testimony that I have been able to collect, it appears that between 11 a. m. and meridian the windlass-room was full of water; the forward hatch was then closed, and no water could find its way in except through the hawse-hole. At this time the centrifugal pump did not work, as there was not enough water aft to make it "fetch." This indicates a want of free communication through the limbers. It seems that this difficulty was overcome, for some time afterwards the water rose to about four inches of the fire-room floor (which would make it twenty-six inches below the grate-bars) when the centrifugal pump was in operation discharging steadily its 2,000 or 3,000 gallons of water per minute. No apprehension seems to have been felt at this time as to the danger of sinking, the vessel was not noticed to be settling, but the commanding officer desired the presence of the captain, and commenced to signalize to that effect. At this instant the water suddenly rose in the vessel, and she commenced to settle forward. The signal "in want of assistance" was made immediately, and she went down. My conclusion is, that the sinking of the vessel was not occasioned by the water that found its way into her through the hawse-hole, for it seems clearly proven that free communication was established (through the limbers) between the hawse-hole and centrifugal pump, and I conceive that the centrifugal pump is able to discharge all water that enters by the hawse-hole. I believe that the injuries that the vessel had received in service, particularly while aground under the fire of the Sullivan's Island batteries, (assisted perhaps by the straining produced by being beached at Port Royal,) had so strained her that the rivets were loose on some of her bottom plates, and the rough sea that was running at the time of the disaster must have been sufficient to open the plates and admit the water. From all that I can learn, it was no gradual accumulation of water that caused the vessel to sink, but it was almost instantaneous. This could alone be caused by such reason as I here assign.

I merely submit this hurried paper with a view to rendering some slight aid towards assigning a reason for the terrible disaster.

Very respectfully, your obedient servant,

E. SIMPSON, *Commanding.*

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Report of Commander J. M. Duncan.

UNITED STATES FLAG-SHIP PHILADELPHIA,
Off Charleston, S. C., December 7, 1863.

SIR: I have to report that on the evening of the 4th instant I received orders detaching me from gunboat Paul Jones, and ordering me here to take command of the iron-clad steamer Weehawken. On the morning of the 5th I arrived here, and in the evening took command of her and went up on the advanced picket, and remained there until 9.30 of the morning of the 6th; then came down; made fast to buoy No. 2; then came on board this vessel.

About 1.30 p. m. a signal was made that the Weehawken wanted assistance. I immediately got in a boat with the pilot of this vessel. Before we could reach her she went down. Boats from all the vessels around went to the assistance of the men that were overboard, and succeeded in saving all but four of the engineers and twenty-seven of the men. When I left the vessel everything appeared to be right; the anchor-hold was all dry, no water coming through the hawse-pipe. I enclose you statements of all the officers now on board. Not being on board myself at the time, I am not able to give any account of the sad accident.

Very respectfully, your obedient servant,

J. M. DUNCAN, *Commander.*

Rear-Admiral J. A. DAHLGREN,

Com'dg S. A. B. Squadron, Flag-Ship Philadelphia.

B.

Report of Lieutenant M. S. Stuyvesant.

UNITED STATES FLAG-SHIP PHILADELPHIA,
Off Morris Island, December 7, 1863.

SIR: In obedience to your orders of to-day, I make the following report of circumstances attending the loss of the United States iron-clad steamer Weehawken:

At or near 12 o'clock yesterday the seas were washing over the bows of the vessel, and water was going down the forward hatch in small quantities, as has frequently been the case.

To prevent its splashing into the cabin the iron door leading into the anchor-room was closed; and in order to ease the ship, fifteen fathoms of chain were veered. We were at our usual moorings, made fast to buoy No. 2. The wind freshened, and the seas grew larger very rapidly, and while closing down the forward battle-plate several seas went over, almost filling up the anchor-room. Men were immediately sent down to keep the limbers clear. The berth-deck battle-plate was then let down, and at this time I observed that the vessel was

not so much by the stern as usual. This I attributed to the large body of water forward. As the limbers were clear, I had no fears but that the water would run aft, and be pumped out. It was now reported to me that my room was flooded, and while on my way to examine it, the captain of the hold reported five (5) inches of water, which was evidence that the water was making its way aft.

The leak in my room was around the end of one of the beams where it joined the side, and seemed to be one that could be easily stopped.

In the cabin the water was pouring in in small streams by the upper edge of the forward bulkhead. The hatches were taken off the cabin-lockers to let the water into the bilge.

For many minutes the vessel did not settle any by the head. I saw nothing serious in the condition of the vessel, but thought that the commanding officer ought to be on board, and began to make signal for him. I should have mentioned that the commander, James M. Duncan, was on board the flag-ship, near at hand.

The centrifugal and other pumps were started as soon as the water was high enough for their suction to take effect, and all of them worked well apparently.

After some minutes had elapsed with the vessel in this condition—I cannot say how long—she suddenly began to settle forward and to cant to starboard. Signal was made for assistance immediately, and all hands ordered on deck, but she sunk so rapidly now that many were caught below. Assistance arrived promptly, and I believe that all who succeeded in reaching the upper deck were picked up by boats. The saving of many lives is attributable to the self-possession displayed by all those officers and men who fell under my observation.

I have since heard from officers of the vessel that there were leaks in all the wing-rooms, and, as she had been much strained from various causes, my impression is that these leaks became suddenly enlarged, filling the ship forward, and causing her to sink almost immediately.

I am, respectfully, your obedient servant,

M. S. STUYVESANT,

Lieutenant and Executive Officer.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron, off Charleston, S. C.

C.

Additional report of Lieutenant M. S. Stuyvesant.

UNITED STATES STORESHIP SUPPLY,

Off Morris Island, December 9, 1863.

SIR: Agreeably to your orders, I have questioned the officers and crew from the late United States steamer Weehawken regarding the use of a jackass in her hawse-hole.

A temporary one made of coal bags was used on her passage from New York to Fortress Monroe, but nothing has been seen of it since. None others made, nor any one detailed for that duty on the ship.

It will gratify you, sir, to know that the Weehawken's officers and men are well cared for in their new quarters, and as comfortable as possible under the circumstances.

I am, respectfully, your obedient servant,

M. S. STUYVESANT,

Lieutenant United States Navy.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

D.

Letter from Lieutenant M. S. Stuyvesant transmitting various reports.

UNITED STATES STORESHIP SUPPLY,
Off Morris Island, December 11, 1863.

SIR : I enclose copies of the reports of J. B. Allen, acting second assistant and senior engineer, and E. M. Stein, assistant surgeon ; also, a second report from W. E. Bayne, acting masters's mate, in accordance with your orders of December 10.

I forwarded the reports of the first two officers on the 9th ultimo, and am sorry they failed to reach.

I am, respectfully, your obedient servant,

M. S. STUYVESANT,
Lieutenant United States Navy.

Lieut. Com. J. M. BRADFORD,
Fleet Captain, S. A. B. Squadron.

E.

Report of Acting Master Charles C. Kingsbury.

FLAG-SHIP PHILADELPHIA,
Off Morris Island, December 8, 1863.

SIR : In obedience to your orders, I beg leave to submit the following statement of what came under my observation in relation to the sinking of the iron-clad Weehawken.

At about 1 o'clock p. m., being in my room, received an order from Mr. Stuyvesant, the executive officer, to come on deck, and, in obeying the order, heard some one say "the water is coming in the cabin through the door." When I got on deck I received an order from executive officer to veer away chain, the vessel being fast to her mooring buoy ; and whilst obeying the order observed the sea washing over her from three to five feet in depth. After having obeyed the order, having given her about forty-five fathoms of chain, received permission to go below, and, upon my doing so, found the water rushing into my room in large streams ; raised the hatch in my room and found the place full of water ; looked into the cabin, and also saw the hold full ; then went on deck and reported the same to executive officer, and the want of some one to haul the limber chains ; was ordered by executive officer to take some men and go down and see to the hauling of them myself, and whilst executing the order saw the hold under the berth deck was rapidly filling. Saw Mr. Allen, second assistant acting chief engineer, and spoke to him about the water not running aft ; he made answer, "the pumps work well ;" then went into the turret-room, and heard the order given for everybody to come off the berth deck ; then used all my endeavors to get the men up as quickly as possible ; got up myself, leaving one or two on the ladder to come up after me.

In my opinion, the cause of her sinking was the shattered condition of her side armor, and a large increase of weight in ammunition and coals, which, with a rough sea, and her forward compartment full of water, caused an opening between the overhang and hull, which made itself manifest by the rushing in of water in all the side rooms.

I have the honor to be, very respectfully, your obedient servant,

CHA'S. C. KINGSBURY,
Acting Master United States Navy.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron, Flag-Ship Philadelphia.

F.

Report of Assistant Surgeon E. W. M. Stein.

UNITED STATES STORESHIP SUPPLY,
Off Charleston, S. C., December 9, 1863.

SIR: I am of opinion that the sinking of the Weehawken was caused by the filling of the forecastle with water, which caused her to go down by the head, besides straining her to such a degree as to separate the overhang from the hull, thereby causing a general leakage throughout the fore part of the vessel. The over-cramming of the vessel with shot and shells increased the strain on her, and no doubt caused her to sink more rapidly than she otherwise would have done. These are the chief causes, as it appears to me, to which the loss of this vessel is attributable.

Very respectfully, your obedient servant.

ED. W. M. STEIN,
Assistant Surgeon.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron, off Charleston, S. C.

G.

Additional report of Assistant Surgeon E. W. M. Stein.

UNITED STATES STORESHIP SUPPLY,
Off Charleston, S. C., December 11, 1863.

SIR: In obedience to your order requiring the officers of the Weehawken to present you with a statement of the facts, as far as they know, connected with the loss of that vessel, I would respectfully say that the filling of the forecastle with water, and "the going down by the head" of the vessel in consequence of the accumulation of water in the fore part thereof, are the facts which immediately caused the sinking of the Weehawken, *as it appears to me*. The excessive quantity of shot and shells stowed away in the vessel is another fact which, I take it, caused her to sink sooner than she otherwise would have done.

I have the honor to be, very respectfully, your obedient servant,

ED. W. M. STEIN, Assistant Surgeon.

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron,
Flag-Ship Philadelphia, off Charleston, S. C.

H.

Report of Acting Assistant Paymaster F. R. Stow.

FLAG-SHIP PHILADELPHIA,
Off Charleston, S. C., December 7, 1863.

SIR: In compliance with your request, I have the following statement to make in regard to the sinking of the iron-clad steamer Weehawken on the 6th instant:

About 1 o'clock p. m. I observed the water making so fast in the anchor-room that it was necessary to close the bulkhead door. About thirty or forty

minutes afterwards I noticed that the anchor-room was so full of water as to cause it to flow over the top of the door and flood the cabin floor. The water did not appear to flow aft but a very little, but accumulated rapidly forward, and fast coming up with the cabin and wardroom floors. I also observed the water leaking rapidly into the officers' rooms and into my own room, through the seams in the sides of the ship. This latter I had never known to occur since I had been on board. When I observed this I became at once convinced that she was making water fast throughout the entire forward part. When I left the wardroom, which was about five minutes before she sank, the water was an inch upon the floors.

The quantity of ammunition stowed forward was larger than it ever was since I have been on board, which caused her to be more down by the head than I have ever known her to be. Taking the large stock of shells and the vast quantity or weight of water in the anchor-room together, I believe so strained her forward as to let water into scores of places aft the cabin. She fast settled forward and prevented the water flowing aft. In my opinion the ship would not have sunk if she had not opened in her side.

Very respectfully,

FREDERICK R. STOW,
Acting Assistant Paymaster.

Commander J. M. DUNCAN,
Flag-Ship Philadelphia.

I.

Report of Ensign J. M. Reed.

FLAG-SHIP PHILADELPHIA,
Off Morris Island, December 7, 1863.

SIR: In obedience to your order, I respectfully submit an account of the circumstances connected with the sinking of the Weehawken that came under my observation.

At about 9.30 a. m. we came down from the picket ground and shackled on to the buoy known as buoy No. 2. At that time, and until 12 meridian, when I gave up charge of the deck, the sea was breaking over the ship forward, but being nearly an every-day occurrence, no notice was taken of it.

Between 1.15 and 1.30 p. m. a heavy sea broke over the ship and filled the anchor-well with water. The forward battle-plate and also the berth-deck battle-plate were immediately closed, and the iron door connecting the captain's cabin and anchor-well was also closed and secured by iron turn-buckles. When the door was first closed the water leaked from the top to the bottom of the door, but in a short time it leaked but a very little from the bottom. This, in my opinion, proves that the limbers were clear, and that the hawse-hole, which was not closed, had nothing to do with the sinking of the ship. At about the same time a large leak was observed in the executive officer's room. This leak was about half way from the berth to the main deck. I reported it to the executive officer, and went on top of the turret.

The sea was then breaking over the ship forward, but not more than I have seen it before. In fifteen or twenty minutes it became apparent that we were sinking a little by the head. The centrifugal pump was started and threw a large stream of water through the out-board delivery on deck; but she did not rise any, and the executive officer ordered all the officers and men on deck, and also ordered the signal "captain needed on board" to be made.

I had mastheaded the first number of the signal, when she commenced to sink very rapidly. I was ordered to discontinue the first signal, and substitute "as-

sistance needed." The crew were directed to go aft and save themselves, and in from five to ten minutes the sea was making a clean run over the deck.

It is my opinion, and I believe the opinion of most of the officers, that the leak in the executive officer's room enlarged suddenly and caused the ship to sink.

I have honor to be, very respectfully, your obedient servant,

J. M. REED,
Ensign, United States Navy.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

K.

Report of Acting Second Assistant Engineer J. B. A. Allen.

UNITED STATES STORESHIP SUPPLY,
Off Charleston, S. C., Wednesday, December 9, 1863.

SIR: In accordance with your order requiring those officers who were saved from the ill-fated iron-clad steamer Weehawken to send in to you their report regarding the sinking of that vessel, I herewith transmit my views.

After having made my usual visit, at 9 a. m., around that part of the vessel belonging to the engineer department, and finding all the machinery in good order, I retired to my room, feeling somewhat unwell. Soon after (I cannot exactly name the hour) I heard a rush of water forward, and went into the cabin to find out the cause. I there found Ensign Chadwick engaged in closing the communicating door between the anchor-well and cabin. I assisted him in closing this door and securing it, (which is done by means of iron turn-buckles and bars,) and by this means the water was prevented for a time filling up the bilge. I then went into the engine-room, and ordered *one* Worthington pump started to pumping out the bilge, and then went to the executive officer and requested that the limber-chains might be hauled. This was done, and I returned to the engine-room, and there found that the water was coming aft very fast. I ordered the remaining Worthington pump started, and the centrifugal pump cleared and got ready for use. I then went back into the cabin, and saw the water forcing its way through all sides of the communicating door, and that the water under the cabin floor covered the shot and shell, and was nearly over the floor. I returned to the engine-room, and ordered the centrifugal pump started. This pump worked well, but drew the water from the bilge faster than it ran through the limbers, and therefore, for a time, it was sucking.

All that possibly *could* be done by the engineers was done, as is plainly seen by those four noble fellows dying at their posts.

The vessel (Weehawken) having been *twice* subjected to heavy straining, (first while ashore near Fort Sumter, and lastly while beached at Port Royal,) and having an unusual weight of ammunition forward, I respectfully submit as my reasons for the melancholy loss. As fast as she filled with water forward, so much more did it pull her down by the head, and prevent the water from running aft; and I believe that heavy weight of ammunition and water caused a large opening between the overhang and hull.

I am, very respectfully, your obedient servant,

J. B. A. ALLEN, U. S. N.,
Acting Second Assistant Engineer,
Late Senior Engineer United States Steamer Weehawken.

Rear-Admiral JOHN A. DAHLGREN, U. S. N.,
Com'g S. A. B. Squadron, Flag-Steamer Philadelphia, off Charleston, S. C.

L.

Report of Acting Ensign B. H. Chadwick.

FLAG-STEAMER PHILADELPHIA,
Off Charleston, South Carolina, December 7, 1863.

SIR : I have the following to report in relation to the disaster on the iron-clad Weehawken, on the afternoon of the 6th instant, as came under my observation, viz :

About 1 p. m. I was seated in the wardroom, when my first apprehension of any unusual occurrence in regard to the safety or sinking of the Weehawken was occasioned by the pilot's calling my attention to the volume of water flowing in around the bulkhead iron door, between the captain's cabin and the anchor-room, which was closed and only latched ; and from the flow of the water in at the sides of the door should judge the water in the anchor-room at that time to be about eighteen inches deep. This water was flooding the cabin floor. I called for assistance. Mr. Allen, the chief engineer came, and we put on and screwed up the cross-bars to the door, which nearly stopped the water coming through. The water rose gradually in the anchor-room, as indicated by the leak about the door, and in about thirty minutes it was on the top of the door. I next saw a leak around the end of a beam in executive officer's room, on starboard side forward, and, on opening a hatch in the starboard forward room, the water came up over the floor.

The sinking of the Weehawken I attribute to the excessive weight of ammunition, keeping the vessel down by the head, causing the water to flood the anchor-room through the hawse-pipe ; then the combined weight of water and ammunition caused the ship to strain and leak badly between the overhang and the hull forward when in a sea way ; and, lastly, the water would not flow aft to the pumps, making it impossible to free her.

Most respectfully submitted.

BENJ. H. CHADWICK,
Acting Ensign, United States Navy.

Commander J. M. DUNCAN.

M.

Report of Ensign F. N. Crandall.

FLAG-SHIP PHILADELPHIA,
Off Charleston, S. C., December 7, 1863.

SIR : In obedience to your order, I respectfully submit the following statement in relation to the sinking of the United States monitor Weehawken on December 6 :

I relieved the officer of the deck at 12 meridian, noticing that we were shackled on to a buoy, and not very far from several steam-tugs lying at anchor. The wind was quite fresh from northward and eastward, and a pretty heavy sea on, breaking over the decks forward, which, I suppose, is a common occurrence to the monitors during rough weather. About 1 p. m. a heavy sea partly carried away the forward hatch. I immediately called all of the watch on deck.

About this time Lieutenant Stuyvesant, the executive officer, came on deck also. I went forward with the watch to replace and secure it, and found the battle-plate unshipped and hanging by the tackle. This was placed and closed down as soon as possible. The room which had been closed up below was about half full of water before the battle-plate could be shipped. Acting Master Kings

bury came on deck about now, and received orders from the executive officer to veer away chain, which was done. After everything was secured, Mr. Stuyvesant told me to go below and change my clothing for a dry suit. Before arriving below I observed the water coming over the door from the anchor-room into the cabin. Just as I started to come on deck the water came up through the hatch in my room.

When I arrived on top of the turret the order was sent down by Mr. Stuyvesant for everybody to come on deck. Soon after, the order to go aft and save themselves. Under the circumstances, officers and men behaved with great coolness.

In going down she canted over to starboard. I staid aboard until a heavy sea washed me off, when I made a spring and caught hold of the boat, and was hauled in. I then took charge, but found her completely unmanageable. Her row-locks were gone, and all we could do was to keep her head to sea. Finally we were picked up by a tug-boat.

As to the real cause of her filling with water I am not able to state. I judge she must have parted the "overhang" from the main hull. The anchor-room is supposed to be a water-tight compartment, which, being filled with water, would not affect the vessel.

Very respectfully, your obedient servant,

F. N. CRANDALL,
Acting Ensign United States Navy.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

N.

Report of Acting Master's Mate W. E. Bayne.

UNITED STATES STORESHIP SUPPLY,
Off Morris Island, December 10, 1863.

SIR: In obedience to your order, I transmit an account of what I saw in reference to the sinking of the United States steam iron-clad battery Weehawken.

The first intimation that I had of anything being wrong was, upon looking through one of the turret ports, I saw that the forward battle-plate over the captain's hatch had been washed by a heavy sea out of its place, and I also saw Mr Stuyvesant, in person, having it put in its place. When, about five or ten minutes afterwards, I went and found the water rushing over the door leading to the anchor-well, which was closed but not secured; finding which, I looked for and found the cross-bars, and helped to secure it. The pilot was in the cabin at the same time. I also had the hatches taken off the forward shot-lockers to let the water run aft quicker to the pumps. After seeing all secure, went to dinner, thinking that the water would soon run aft. In fifteen minutes afterwards heard that the water was running into the first lieutenant's room; went to see what could be done with it. I sent for padding and tallow, and stopped it as far as possible. Afterwards I went to look at the cabin again, thinking it might be all clear, but found it worse than ever, but did not think there was any danger, as all the pumps were working well; but found things still getting worse and the water still rushing into the ship. I also thought that the ship was sinking by the head, and upon going to the top of the turret found it to be so; when I got an order to fire a gun, but could not do so for the boats. Heard the executive officer give an order to leave the ship by any means

in our power. He was busy at that time with signals. Left the top of the turret, and held the boats till they were full of men, and got washed overboard, but got into the boat again.

I remain, very respectfully, yours,

WM. E. BAYNE,

Acting Master's Mate, Acting Gunner.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron.

O.

Report of Pilot Levi Jump.

OFF MORRIS ISLAND,

December 7, 1864.

SIR: The sinking of the United States iron-clad steamer Weehawken, moored at buoy No. 2, on the 6th instant, in my opinion, was caused by leaving the battle-plate over the captain's hatch off too long, causing the forecastle to be filled with water, and that, coupled with extra weight of shell, caused her to sink by the head, preventing the water from going aft; and the pressure of water was so strong as, in my opinion, to burst the main hull from the overhang, as all the leaks started were fresh ones.

I remain, very respectfully, your obedient servant,

LEVI JUMP, *Pilot.*

J. M. DUNCAN,

Late Commander of U. S. Iron-clad Weehawken.

List of officers and men saved from the United States steamer Weehawken.

Officers.—J. M. Duncan, commander; M. S. Stuyvesant, lieutenant; C. C. Kingsbury, acting master; E. M. Stein, assistant surgeon; F. R. Stow, acting assistant paymaster; J. H. Reed, ensign; B. H. Chadwick, acting ensign; F. H. Crandall, acting ensign; J. B. A. Allen, acting second assistant engineer; William E. Bayne, acting master's mate; Levi Jump, pilot.—Total, 11.

Men.—John Smith, first-class fireman; John Hurley, do.; John Connolly, do.; Edward Clarkson, do.; Edward Carr, do.; David H. Serburne, second-class fireman; James Collins, do.; James Byers, do.; Patrick Reardon, do.; Henry Sumner, do.; Maurice Phelan, coal-heaver; Bernard Cassiday, do.; Thomas Hogan, do.; Thomas Doran, second master; C. B. Brunn, do.; William A. Munson, second gunner; George Crotts, do.; William Brown, seaman; Michael Rice, do.; John Williams, 1st, do.; William A. Davis, do.; Thomas Goggin, captain of hold; Carl Grandman, ordinary seaman; Edward Christenson, do.; John Walters, do.; Thomas Bailey, landsman; John Nee, do.; Stephen McDonald, do.; L. Johnson, second-class boy; Charles Drage, landsman; John Russell, do.; William Batten, do.; Edward Lewis, do.; Patrick McGovern, do.; Matthew T. Jackson, do.; Michael Dunn, do.; John Anderson, do.; E. A. Redding, do.; Samuel E. Seaman, do.; James T. Brace, do.; Francis Gallagher, do.; William H. Dunbar, do.; William Orange, do.; James Kohlay, do.; Dan. O'Brien, do.; Henry Dobson, wardroom cook; Harry Read, paymaster's steward; Benjamin S. Birdsall, doctor's steward; James Hagan, boatswain's mate on board the Home; William R. Nongle.

Missing.—Thomas Piper, second master; John Scallen, landsman; — Buckley, do.; John Kerrigan, do.; John Carpenter, do.; Joshua Crogan, second-class boy; Charles F. Davis, first-class fireman; John Williams, 2d, landsman; Charles Wilson, master-at-arms; William H. Williamson, captain's cook; Christian Anderson, ship's cook; John Rutledge, landsman; Ralph Anderson, do.; James Gayhan, first-class fireman; Edward Mullen, second-class fireman; Michael Clines, coal-heaver; James Lenman, second-class fireman; Thomas Mee, first-class fireman; Robert Nugent, coal-heaver; George M. Leighton, first-class fireman; Thomas Stothers, do.; Stephen C. Newman, second-class fireman; Thomas Donaran, ordinary seaman; William G. Pike, do.; Thomas Dowlin, landsman; Thomas A. Mason, yeoman, (since dead.)

CAPSIZING OF BOATS ON CHARLESTON BAR.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, December 18, 1863.

SIR: I have to regret the loss of several men yesterday by drowning in the breakers of the bar. The boat of the Clover was incautiously put across the breakers, though previously warned against doing so, and capsized. The boat of the Mangham, which had just crossed, going out, put back and picked up the boat's crew, but by some unexplained cause lost the plug, was filled and swamped. Two tugs sent boats to the rescue, and were also capsized. So that in a brief space twenty-four officers and men were adrift in a sea breaking heavily. By this time my own barge reached the spot and picked up fifteen officers and men. Two were picked up by the Sanford's boat. One officer and five men were not rescued, and must have been drowned. Such accidents are always painful, and yet they are a part of the necessary experiences that our present duties and the season entail. The winter time is now upon us, and our good people cannot be aware of the hardships that follow close watches, by day and night, of a rebel enemy, who is rendered almost desperate.

I would also take the occasion to note the value of a well-modelled boat. My barge, with a crew of thirteen men, was able to bring off with safety fifteen comrades who might otherwise have perished. Some of the boats of late build have the defect of not being high enough in the gunwale, and the row-locks, instead of being framed in, as formerly, are of metal, and liable to be unshipped in a surf at a critical moment. I hope that no more such will be sent here.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

P. S.—Since writing the above, two bodies have come ashore and have been interred.

I transmit a list of the boats' crews that were capsized.

List of boats' crews capsized December 17, 1863.

George Mangham.—John Collins, jr., acting master, commanding; J. G. Holland, assistant paymaster; Edwin J. Thomas, cockswain; Joseph H. Ternald, ordinary seaman; James Kelly, ordinary seaman; Michael Deasey, ordinary seaman; John Leonard, landsman.

Geranium.—Stewart D. Lee, acting master's mate; James Norton, boat-swain's mate; George Bouger, captain of hold; John Dunne, ship's cook; George Russell, boy, lost.

Clover.—Thomas H. Davis, acting master's mate, lost; William Miller, seaman, lost; J. Steele, ordinary seaman, lost; William Dalton, landsman; William Jackson, landsman.

Oleander.—A. B. Bashford, acting ensign; Frank Brown, landsman, lost, body recovered; Benjamin Brown, landsman, lost; Kit Jenkins, landsman; Manuel White, landsman; Toby Howard, landsman.

Total in boats, 23; survivors, 17; lost, 6—5 men and 1 officer.

ATTACK ON THE UNITED STATES STEAMER MARBLEHEAD IN STONO RIVER.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, December 27, 1863.

SIR: I enclose herewith reports in relation to an attack made by the rebels upon the Marblehead, (Christmas morning,) lying in Stono, which was repulsed by the Marblehead, Pawnee, and schooner Williams.

It will be seen that Lieutenant Commander Meade acted with promptness and vigor, and that the whole defence was highly creditable. I beg leave to indorse the recommendations made in his report.

The casualties of the Marblehead were three men killed—Robert Brown, Lorenzo D. Snow, Joseph Phillips; and four wounded—Charles Moore, Alexander Henderson, John Hackett, and Charles Semmes.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander George B. Balch.

UNITED STATES STEAM-SLOOP PAWNEE,
Off Legareville, S. C., December 25, 1863.

ADMIRAL: I have the honor to submit the following report of the action of to-day with the batteries on John's island, in which all the naval force was engaged.

At 6.20 a. m. a sharp fire from several batteries was opened on the Marblehead, Lieutenant Commander R. W. Meade, jr., commanding, at distances from 800 to 1,200 yards, to which she replied quickly and most vigorously.

I have already transmitted the report of Lieutenant Commander Meade, as also that of the surgeon.

At 6.25 this ship got under way, and at 6.35 opened fire on the rebel batteries from the 100-pounder rifle and her starboard battery; and taking an enfilading position near the mouth of the Keowah, we dropped anchor, swang around to the tide, and opened a rapid fire from her port battery.

At 7 the C. P. Williams, Acting Master S. N. Freeman, commanding, under her energetic and skilful commander, had, immediately on hearing the enemy's guns, slipped her cable and came down the Folly river under sail, and opened fire handsomely. Acting Master Freeman's report is herewith transmitted.

The rapid fire from the three vessels engaged soon caused the enemy to retreat. On discovering this, I weighed anchor and directed Acting Master Freeman to work up to Legareville, and to keep up a fire from his guns. At 7.30 the enemy had retreated in disorder, leaving two guns in the batteries. I proceeded in the Pawnee off Legareville, receiving the verbal report of Lieutenant Commander Meade as to his loss in killed and wounded, and the damages to his vessel.

I desire to bear my testimony to the skill and bravery of Lieutenant Commander Meade, who, under a sharp fire, worked his battery in a most rapid manner, and handled his vessel admirably.

Acting Master S. N. Freeman, commanding the C. P. Williams, who, though in a sailing vessel, and stationed four and a half miles from the scene of action, slipped his cable, coming down under sail, and handsomely participated in the engagement.

My officers and crew merit my warm commendation for their coolness and good gunnery, and I take pride in thus testifying to their usual bearing in presence of the enemy; and I deem it but an act of justice to state that I am indebted to Lieutenant John W. Phillips for his zeal and ability in the discharge of his duties.

Soon after anchoring at Legareville, General Gordon, commanding the troops at the south end of Folly island, came up the river, and after ascertaining that the rebel shells had done no harm to the troops in Legareville, came on board and offered, if I would cover the advance, to send an infantry force and endeavor to bring off the guns which the enemy had left. I of course agreed to this proposal, and the troops advanced, found two guns, one dying rebel, six dead horses, intrenching tools, knapsacks, &c., and everything denoting that the enemy had made a precipitate retreat.

Whilst the troops were engaged in making the reconnoissance, I sent Acting Master Champion and Acting Master's Mate J. G. Bache, by one of the creeks, to ascertain if it were possible to get the guns off by water. General Gordon informed me of the result of the reconnoissance, which is substantially as stated above, and that it was impossible to get the guns off by the troops on account of the difficulty of transporting them, the enemy lying in heavy force in sight, and night coming on. He directed the officer in command, by signal from this ship, to disable the guns and fall back.

Very respectfully, your obedient servant,

GEO. B. BALCH,

Commander, and Senior Officer present.

Rear-Admiral J. A. DAHLGREN,

Com'dg S. A. B. Squadron, off Morris Island, S. C.

Additional report of Commander G. B. Balch.

UNITED STATES STEAM-SLOOP PAWNEE,

Off Legareville, S. C., December 25, 1863.

ADMIRAL: The enemy opened fire this morning at six on the Marblehead; she lost three killed and four wounded.

The Pawnee and C. P. Williams got under way instantly and proceeded into cation, taking up an enfilading position, and the enemy retreated with four pieces. I enclose for your information Lieutenant Commander Meade's report, as also that of the surgeon. I enclose the expenditure of ammunition aboard the

Pawnee. I beg leave to state that, at General Gordon's request, I am here for the purpose of covering our troops, who will soon advance and endeavor to capture guns which we suppose the enemy have left.

Very respectfully, your obedient servant,

GEORGE B. BALCH,

Commander, and Senior Officer present.

Rear-Admiral J. A. DAHLGREN,

Com'dg S. A. B. Squadron, off Morris Island, S. C.

Report of Lieutenant Commander R. W. Meade, jr.

UNITED STATES GUNBOAT MARBLEHEAD,
Off Legareville, Stono River, S. C., December 25, 1863.

ADMIRAL: I have the honor to report that the enemy on John's island opened fire on us at six o'clock this morning from two batteries of field and siege artillery posted advantageously in the woods. At the time the enemy opened fire the vessel had steam only on the port boiler, as the bad leak in the starboard one had rendered it necessary to haul the fires under that boiler.

We replied vigorously to the enemy, and slipping the cable, took a position nearer their guns; in which, after a sharp contest of an hour, the enemy retired in disorder, leaving one gun and caisson behind them. (It is reported that they abandoned two guns.) Both officers and men of this vessel behaved admirably, and though the vessel was struck over twenty times, and was much cut up aloft, on deck, and in personnel, stood to their guns until the enemy retired discomfited from theirs. I have to commend the gallantry and good service of Acting Ensign George F. Winslow and the officers of the two gun divisions.

William Farley, (boatswain's mate,) captain of the XI-inch gun, behaved in the most gallant manner, assisting his men, and keeping up a rapid and effective fire on the enemy. I trust you will take suitable notice of this man's conduct; he deserves the medal of honor. James Miller (quartermaster) behaved gallantly, and Joseph Bonden, (second master's mate,) a prisoner at large, behaved so well in the action that I am induced to hope that the department may overlook the grave offence for which he was tried by court-martial recently. Robert Blake, a contraband, excited my admiration by the cool and brave manner in which he served the rifle gun. The enemy's fire was very effective, and the vessel is badly cut up aloft (losing main topmast) and on deck; has several shots in the hull, and one or two in the foremast, and has lost three (3) men killed and four (4) wounded, one seriously. The surgeon's report is herewith enclosed. The report of ammunition expended is also enclosed, by which you will observe that a rapid fire was kept up. The loss of the enemy must have been very considerable at our short range, as the abandonment of their artillery proves. The Pawnee, which, when the action commenced, was at anchor in the inlet, took an enfilading position on the Keowah river, and by her fire contributed greatly in demoralizing the enemy and forcing him to retreat. The mortar-schooner also came down and joined in the action.

In conclusion, I have again to commend the good conduct of every one on board; their courage was so well displayed that the enemy, who had doubtless counted on disabling us, were forced to retire (without effecting their object) in confusion and ignominy.

Very respectfully, your obedient servant,

RICHARD W. MEADE, JR.,

Lieutenant Commander, U. S. N.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

Casualties on the Marblehead.

UNITED STATES GUNBOAT MARBLEHEAD,
Off Legareville, South Carolina, Dec. 25, 1863.

SIR: The following is a list of casualties received in action this morning:

Killed, three, viz:

Robert Brown, captain forecastle.
 Lorenzo D. Snow, ordinary seaman.
 Joseph Philips, ordinary seaman.

Wounded, four, viz:

Charles Moore, landsman, in scalp.
 Charles Semmes, landsman, contusion of foot.
 Alexander Henderson, landsman, contusion of thigh.
 John Hackett, coal-heaver, seriously, in thigh.

Respectfully, &c.,

B. H. KIDDER,
Assistant Surgeon.

Lieut. Com. RICHARD W. MEADE, Jr.

Charles Moore, (landsman,) wounded in the action, returned to his quarters until so exhausted by loss of blood that he had to be taken below.

RICHARD W. MEADE, JR.,
Lieutenant Commander.

Report of damages to Marblehead.

UNITED STATES STEAM GUNBOAT MARBLEHEAD,
Off Legareville, South Carolina, December 26, 1863.

ADMIRAL: I enclose herewith a list of the damages sustained by this vessel in the action of yesterday, which resulted in the utter defeat of the rebels. You will observe that the vessel has been badly cut up. Her foremast is wounded. She has twelve shots in the hull (one between wind and water;) eighteen shot struck in the upper works and aloft. We have one thirty-pounder shell which lodged in the steerage and did not explode, showing that the rebels had something heavier than mere field-pieces. The loss of the enemy it is, of course, impossible to ascertain, though, judging by subsequent results ascertained, it must have been heavy. We know that they abandoned on the field (as our troops ascertained) two twenty-four pounder guns and caissons, six dead horses, seventy-two shovels for intrenching purposes, one dead man, and a large number of knapsacks and accoutrements, indicating a rapid and disordered flight.

I think we have every reason to believe that they were punished severely. Our fire was most rapid and effective. Fortunately, only two days ago I received a new set of trucks for eleven-inch gun, and it worked admirably. The action was fought within a range of eight hundred yards until the enemy finched from his guns. The executive officer particularly commends the good conduct and bravery of Wendill Lennan, (boat swain's mate,) and Samuel Pearce, (messenger boy.) Where all behave well, it is almost impossible to particularize. I can only say that, under God, to the bravery of the officers and men of the Marblehead is owing a result so highly creditable to the navy.

Very respectfully, your obedient servant,

RICHARD W. MEADE, JR.,
Lieutenant Commander.

Rear-Admiral JOHN A. DAHLGREN,
Com'dg S. A. B. Fleet, off Charleston, South Carolina.

[Indorsement.]

Forwarded. And I deem it but proper to testify to my satisfaction in ascribing all due credit to the Almighty; but I must, in justice to the efficient service rendered by the Pawnee and C. P. Williams, dissent from this claim of the Marblehead, which vessel, however well she may have done her duty, as she undoubtedly did, cannot lay sole claim to such "a result so highly creditable to the navy," especially as it was observed that the enemy's fire did not cease or diminish until the Pawnee and C. P. Williams got into position; and to the combined effect of the three vessels engaged, an undoubted claim may be laid as highly creditable to the navy.

Very respectfully, your obedient servant,

GEO. B. BALCH,

Commander, and Senior Officer present.

Report of Acting Master S. N. Freeman.

UNITED STATES SCHOONER C. P. WILLIAMS,

Stono River, December 27, 1863.

SIR: On the morning of the 25th of December, at 6.20 a. m., the officer of the deck reported the enemy had opened fire on the Pawnee and Marblehead who were lying in the Stono river, opposite Legareville. I could not see them at the time, as it was scarcely light and the atmosphere hazy. I immediately gave the order to slip cable, made sail, and proceeded with all possible despatch to the scene of action. At 6.55 a. m., when within range, I opened fire on the enemy, at the same time bearing down on the Pawnee to receive my orders from Commander Balch, senior officer present. He said that the enemy had commenced a retreat, and ordered me to work my vessel up the Stono, and to use my guns to the best advantage on the enemy. This order I executed to the best of my ability and with all the despatch possible with a sailing vessel in a narrow reach, and using my guns as directed by senior officer, Commander Balch. About half past eight or nine a. m. I came alongside the Pawnee, and was ordered by Commander Balch to drop astern, within hailing distance and anchor. I subsequently received orders from him to open a slow fire with my mortar on a piece of woods from which the enemy had retreated; on this I expended twenty shells, all of which exploded. The conduct of my officers and men was very satisfactory to me—they paying strict attention to their respective duties and performing them with alacrity. I enclose the ex-officer's report of the firing.

Very respectfully, your obedient servant,

S. N. FREEMAN,

Acting Master, Commanding.

Commander G. B. BALCH,

Senior Officer present, Stono River, South Carolina.

Additional report of Lieutenant Commander R. W. Meade, jr.

UNITED STATES STEAM GUNBOAT MARBLEHEAD,
Off Legareville, December 28, 1863.

SIR: In obedience to your verbal order of this date, I have the honor to report the result of the expedition, under my command, sent to capture and bring off the guns abandoned by the enemy in the action of the 25th instant, I had previously, by order, made a reconnoissance of the ground, and had ascertained the feasibility of the project.

The expedition consisted of three boats, three officers, and 50 men from the Pawnee; four boats, four officers, and 20 men from this vessel, and one officer and 12 men from the C. P. Williams—total, eight boats, eight officers and 82 men, of which 22 were marines, under Sergeant W. Fredrickson, of the Pawnee. A rough plan of the ground and of the rebel earthworks is herewith enclosed. They are field-works of great strength, and the loss of the enemy must have been great to have caused their abandonment.

Upon reaching the earthworks near the bayou, which flows southwestwardly of Legareville, I directed Acting Ensign Moore to take the men of the Pawnee, get the nearest gun into the Pawnee's cutter, and destroy the carriages, and then to come to the assistance of the rest of the expedition. I have to commend this officer for the celerity and efficiency with which he performed his work.

With the remainder of the men I proceeded half a mile to the northward, to the other two rebel works. The marines were thrown out well in advance as pickets to prevent surprise. The gun in the most northern work being dismounted, it proved an *immense labor* to raise it, and lash it on the siege carriage; the trail of the carriage was then lifted by the main force of the 30 men *on to* the 12-pounder howitzer carriage brought for the purpose, and lashed there; a rude wagon was thus formed.

It being impossible to drag the gun through the marsh, (knee deep in stiff mud,) which was the way we came, a detour over a mile was necessary; plank was laid along the edge of the marsh, and the gun was hauled with great exertion to the bayou, and gotten into the Marblehead's launch. Mr. Moore having finished his part of the work, came gallantly to our assistance, and it required the united force of the whole expedition, except the marines and boat-keepers, to drag the guns to the bayou. The carriages and rest of the equipage was tumbled down the embankment into the deep stream.

Nothing of importance was left behind. The expedition was a perfect success; the boats entered the creek 10 minutes past 2 p. m., and shoved off with the guns (2 8-inch howitzers, weighing about 3,000 pounds each) at 4 p. m. The conduct of officers and men was everything to be desired. Volunteers for the work, they vied with each other in zeal and labored with a will. The navy has reason to be proud of such men. I have the honor to commend the coolness and good service of Ensign Henry Glass, (signal officer;) Acting Ensign Thomas Moore, and Acting Master's Mate J. G. Bache, of the Pawnee, rendered most efficient service. Acting Ensign G. A. Harriman, Assistant Surgeon B. H. Kidder, 3d Assistant Engineer A. P. Sutherland, and Assistant Paymaster James Winter, all volunteers from the Marblehead, and Acting Ensign J. Cochrane, of the C. P. Williams, also rendered efficient service. These gentlemen cannot be too highly commended. The conduct of the blue jackets, and especially of the marines, was excellent.

After the destruction of the enemy's property was complete, and not until then, was the order given to fall back on the boats. The expedition returned in good order, and the rebels can boast two guns less than they had December 24, 1863.

From the 8-inch gun brought to the Marblehead, and which was loaded, a cylinder conical projectile, (with soft metal case,) weighing 100 pounds, was drawn. Both shells and fuze I have preserved for the Bureau of Ordnance.

Very respectfully, your obedient servant,

RICHARD W. MEADE, JR.,

Lieut. Com. U. S. Navy, Commanding Marblehead.

Commander G. B. BALCH,

Com'dg U. S. S. Pawnee, and Senior Officer in Stono, S. C.

Approved and forwarded.

GEORGE B. BALCH,

Commander, and Senior Officer present.

Additional report of Lieutenant Commander R. W. Meade, jr.

UNITED STATES STEAM GUNBOAT MARBLEHEAD,

Stono River, December 30, 1863.

ADMIRAL: My report of the 26th stated that the guns abandoned by the rebels in the action of the 25th were 24-pounder guns. This statement was based upon information derived from General Gordon. Since that report was handed to Commander Balch to forward, an expedition under my command captured and brought off the guns. They proved to be 8-inch sea-coast howitzers, weighing 2,650 pounds each, and throw shot of 69.5 pounds weight. I request that this correction may be made in my report of 26th instant.

Very respectfully, your obedient servant,

RICHARD W. MEADE, JR.,

Lieutenant Commander.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Fleet.

SERVICES OF THE IRON-CLADS BEFORE CHARLESTON.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Off Morris Island, January 28, 1864.

SIR: Conformably to the wishes of the department, I submit the following review of the services of the monitors while under my command; and as some knowledge of the circumstances under which they have been tested may afford a better appreciation of their qualities, I shall briefly narrate some of the leading events in which they have participated during the operations at this place.

On the 6th July Rear-Admiral DuPont delivered to me the command of the naval forces occupying the coast of South Carolina, Georgia, and part of Florida; they embraced seventy (70) vessels of all classes, and were distributed at various points along an extent of more than three hundred miles. There was no concentration, the purpose being rather to distribute the vessels in order to enforce an efficient blockade.

Of the iron-clads, the Ironsides was off Charleston bar, two monitors were at Edisto, one at Stono, three at Port Royal, and one at Ossabaw.

The orders of the department (June 24, 1863) only directed me to assume the command; they went no further, nor was there need that they should. There was an enemy in front, and it was my duty to compel him to obedience, so far as my means permitted. On the day that I arrived, an interview occurred

with General Gillmore, in which the details for a descent on Morris island were arranged to commence on the Wednesday following, but which were postponed first to Thursday and then to Friday, in order to allow General Gillmore to perfect his arrangements.

In the absence of specific instructions, I was obliged to assume the responsibility of action, which the department was advised of.

The naval part of the operations consisted of—

1. In assembling the iron-clads at the Charleston bar, so as to cross at early daylight on the day named, to cover the attack of the troops, to prevent the arrival of re-enforcements during that attack, and to engage the rebel batteries, particularly Fort Wagner.

2. To furnish a convoy for the column that was to ascend to Stono, cover its landing, and shell James's island.

3. To guard the depots of the army at Hilton Head and at Seabrook during the withdrawal of the troops concentrated on Folly island. I should here state that Mr. Ericsson had decided to increase the thicknesses of the pilot-houses of all the monitors and add heavy circles of metal to the bases of the turrets and pilot-houses.

The three at Port Royal were already in hand for this purpose, and some progress had been made. A part of my preparation consisted in putting a stop to the work, and having the vessels fitted temporarily for service.

This was effected in season, and before daylight of the 9th of July the monitors were off the bar, ready to pass in at the first sign of movement by the United States batteries on Folly island.

The plan was to open from the masked batteries on the north end of Folly island, cross the bar with the monitors, and enfilade the rebel position on the eminences of Morris island, while the troops were to cross the narrow inlet which divides Morris island from Folly island when the proper moment arrived.

The obscurity of the night still rested on land and sea when I went on board the Catskill, (July 10,) and not a symptom of preparation on shore was visible to us.

It was important that the monitors should not by their appearance give any intimation of what was meditated by being seen on the bar until the details ashore were completed; so I waited the first fire of the batteries. This was not long coming, and I led with my flag in the Catskill, followed by Captains Fairfax, Downes, and Colhoun, in the Montauk, Nahant, and Weehawken. Steering for the wreck of the Keokuk, and passing it, the monitors were laid in line about parallel to the land, opposite the southern eminences of Morris island, and poured in a steady fire among the rebel garrison, who were there posted, making a feeble and ineffectual return to the storm of shot and shell that came upon their front and flank. I could see plainly the great confusion into which they were thrown by this sudden and overwhelming onslaught. It was a complete surprise, both as to time and to power developed.

The monitors were run in as close as the shoal waters permitted, so that the shells from our own batteries on Folly island passed close ahead of and at times over some of them.

About 8 o'clock a body of men were seen coming over the low sand beach of Morris island, and while hesitating whether to treat them to some volleys of grape, the sight of the Union flag* told who they were. They composed the brigade which had been brought from the Folly river by the boats of the squadron under Lieutenant Commander Bunce and Lieutenant Mackenzie.

I paused for a moment to observe the gradual accumulation of our men in masses, and their advancing movement; then pushed forward to accelerate with our enfilading fire the retreat of the rebels.

* The first planted on Morris island by Lieutenant Robeson.

The sight was now of great interest. Our own troops could be seen taking possession of the sand hills where the enemy had rested the sole defence of this end of the island, while some battalions were moving along the beach. The defeated rebels were hurriedly making way along the low, flat land north of their position, and some two or three detached dwellings were in flames, while the monitors skirting the shore maintained a steady fire on the retreat. Presently they reached Fort Wagner, and here we were advised that our advance was checked, at least for the day, though it was but 9 o'clock. The discomfited rebels were safe in the work, and our own men halted at a reasonable distance from it.

The monitor with my flag was now anchored as near the beach as the depth of water permitted, (twelve hundred yards,) and the other monitors in line to the southward. A steady fire was begun about 9.30—the fort replying briskly—and maintained through the day, except the dinner hour, until six in the evening; then I retired and anchored lower down.

Next morning before six o'clock the flag-lieutenant reported to me that an assault had been made at daybreak by our troops and failed, and about nine o'clock I had a note in pencil from the general, saying: "We attempted to carry Fort Wagner by assault this morning and reached the parapet, but the men recoiled and fell back with slight loss."

It is known *now* that re-enforcements had been hurried to the island by the rebels, and had entered the work about midnight.

I had no notice whatever of the general's intent, and could, therefore, render no aid in time.

Here ended the first part of the enterprise against Morris island. It had been in all respects a surprise, and so complete that the rebels do not seem to have had any idea of it until the day before; and it is not certain they were then aware of the scale on which it was to be conducted.

Had a work like Wagner crowned the sand hills of the south end, we could not have established our position on the island—even a surprise would probably have been out of the question. But there were to be no more surprises—the undertaking was to be completed only by hard work patiently endured in the trenches, and by batteries ashore and afloat.

The general now decided to make a second assault in force, and to cover it by some light batteries established at distances varying from one thousand to seventeen hundred yards.

While the preparations for this design were going on the monitors were daily at work to occupy the attention of Wagner and keep down its fire—the gunboats assisting at long range.

On the 18th July, all being ready, about noon I led up in the Montauk, followed by four monitors and the Ironsides, anchored at twelve hundred yards, as near as the state of the tide would permit, and opened fire—the gunboats firing at a greater distance, and the shore batteries also in action.

As the tide rose the Montauk gradually closed in, until at seven o'clock she was about three hundred yards from Wagner, when I ordered grape to be used. Unable to endure the fire of the vessels the guns of the fort were now silent, and not a man was to be seen.

About sunset a note in pencil from General Gillmore announced his intention to assault, but it was quite dark before the column reached the work. The fire of the vessels was continued so long as it was safe for our own men ashore, but ceased when the darkness made it impossible to distinguish friend from foe. The rattle of musketry soon made known the commencement of the assault, and continued with little intermission until 9.30, when it ceased, and then came the painful tidings of our defeat.

This was the end of the second part of the operation, and proved that the work was too strong and too pertinaciously defended to be taken by any off-

hand blow. The slow and laborious operation by trench and cannon only were capable of reducing it.

And here I may remark, that in this necessity is to be found a principal cause for the delay in reaching Charleston that subsequently ensued. It was no doubt unavoidable, for it is to be presumed that no more troops could *then* be spared from the main armies. If there had been sufficient to make such an assault as would have overpowered all opposition, Wagner might have been carried at the first assault, Gregg would have yielded immediately, Sumter would soon have followed as a matter of course, and the iron-clads, untouched by severe and continued battering, would have been in condition to come quickly in contact with the then imperfect interior defences.

The rebel movements clearly indicate that they admitted the impracticability of defending Morris island, and consequently Sumter, after our position on it was fully established and covered by the iron-clads. They only sought to hold the island long enough to replace Sumter by an interior position; hence, every day of defence by Wagner was vital to that of Charleston.

This policy was successful for two months, (10th July to 7th September,) and gave time to convert Fort Johnson from a forlorn old fort into a powerful earthwork—improved by the experiences of Wagner. Moultrie received similar advantages, and most of the cannon of Sumter were divided between Johnson and Moultrie. Batteries were established along the south shore of the channel from Johnson towards the city; and thus an interior defence was completed which, though it separated more widely the salient and principal works of the defence, by substituting Johnson for Sumter, yet rendered access to the upper harbor far more difficult, because a more powerful fire was concentrated from additional batteries upon vessels attempting to enter.

And thus it was that, even after Morris island was evacuated and Sumter dismantled, the fleet must still pass the fire of Moultrie and Bee to find itself in presence of a formidable earthwork, supported by continuous batteries, and commanding obstructions more difficult than any between Sumter and Moultrie.

The real nature of these obstructions was not suspected until the winter freshets had broken away and floated into our hands a fair specimen of them, which were certainly far more formidable than had been anticipated.

So well do the rebels keep their counsel that the best-informed refugees, who had been constantly engaged about the harbor, appeared to know as little about them as we did.

During the progress of the engineers towards Wagner the iron-clads played an important part, using their guns whenever an opportunity offered, as shown in the instances quoted on page 272. It may be readily conceived that, all things being equal, it was just as easy for the rebels to have worked towards our position as it was for our troops to work towards theirs. But there was a serious difference in the fact that the cannon of the iron-clads, and also of the gunboats, completely enfiladed the entire width of the narrow island, and absolutely interdicted any operation of the kind on the part of the rebels. In addition, whenever their fire was bearing severely on our own workmen, a request from the general always drew the fire of the vessels; and I do not know that it failed to be effective in any instance.

As a consequence the rebels were restricted to Wagner, and were powerless to hinder the progress of the trenches that were at last carried into the very ditch of the work, and decided its evacuation without assault.

The day before the contemplated assault, I led in the iron-clads in force, as agreed on, and battered the fort all day, tearing it into a sand heap.

The next morning it was to have been stormed, but the enemy had fled: they foresaw the inevitable result.

The vessels thus shared fully with the army in the operation that led to the abandonment of the works on Morris island, and besides what is already men-

tioned, prevented the access of re-enforcements or their accumulation between Wagner and Gregg.

The boats of the squadron were also engaged on picket duty by night along the sea-shore of Morris island, and the little stream on its inner border.

A detachment of seamen and marines, under Captain Parker, participated in the practice of the batteries at Fort Sumter, by working four navy rifle cannons, landed for the purpose.

The duties of the iron-clads were not performed under idle batteries. The guns of Wagner never failed to open on them, and fired until their crews were driven, by those of our iron-clads, to take shelter in the bomb-proofs. One of these cannon, a 10-inch, left deep dents on every turret, that will not easily be effaced.

The operations of the iron-clads against Morris island were appropriately closed by a severe contest with Fort Moultrie, Batteries Bee, Beauregard, &c., to relieve the Weehawken, which had grounded under their fire, and was finally got off with some severe injuries, owing to the falling tide having exposed the hull under the overhang.

There were other occasions when severe conflicts occurred with the rebel works on Sullivan's island.

And besides the principal attacks in force, there were few days from the first attack on Morris island (July 10) to its evacuation (September 7) that some iron-clads or gunboats were not engaged in firing at the enemy's works, so as to facilitate the labor of our troops ashore, as will be perceived by the following sample from the record :

Date.	Object.	Vessels engaged.
1863.		
July 18	Assault on Wagner	Montauk, (flag,) Ironsides, Catskill, Nantucket, Weehawken, Patapsco; gunboats Paul Jones, Ottawa, Seneca, Chippewa, Wissahickon.
July 22	Wagner.....	Nantucket, Ottawa, (gunboat.)
July 24	Wagner, to cover advance	Weehawken, (flag,) Ironsides, Catskill, Montauk, Patapsco, Nantucket; gunboats Paul Jones, Seneca, Ottawa, Dai Ching.
July 25	Wagner.....	Gunboats Ottawa, Dai Ching, Paul Jones.
July 28	Wagner.....	Weehawken, Catskill, Ottawa, (gunboat.)
July 29	Wagner.....	Ironsides, Patapsco.
July 30	Wagner.....	Ironsides, Catskill, Patapsco, Ottawa, (gunboat.)
July 31	Rebel batteries on Morris island.	Ottawa, (gunboat.)
Aug. 1	Wagner.....	Montauk, Patapsco, Catskill, Weehawken, Passaic, Nahant, Marblehead, (gunboat.)
Aug. 2	Wagner.....	Ottawa, Marblehead, (gunboats.)
Aug. 4	Wagner.....	Montauk, Marblehead, (gunboat.)
Aug. 6	Wagner.....	Marblehead, (gunboat.)
Aug. 8	Wagner.....	Ottawa, Marblehead, Mahaska, (gunboats.)
Aug. 11	Wagner and vicinity	Patapsco, Catskill.
Aug. 13	Rebel batteries on Morris island.	Gunboats Dai-Ching, Ottawa, Mahaska, Wissahickon, Racer.
Aug. 14	Rebel batteries on Morris island.	Gunboats Wissahickon, Mahaska, Ottawa, Dai Ching, Racer, Dan. Smith.
Aug. 15	Wagner.....	Mortar-boats Racer, Dan. Smith.
Aug. 17	Rebel batteries on Morris island, to direct fire from our batteries which opened on Sumter.	Weehawken, Ironsides, Montauk, Nahant, Catskill, Passaic, Patapsco; gunboats Canandaigua, Mahaska, Ottawa, Cimarron, Wissahickon, Dai-Ching, Lodona.
Aug. 18	Wagner, to prevent assault.....	Ironsides, Passaic, Weehawken; gunboats Wissahickon, Mahaska, Dai Ching, Ottawa, Lodona.
Aug. 19	Wagner.....	Ironsides.
Aug. 20	Rebel batteries on Morris island.	Ironsides; gunboats Mahaska, Ottawa, Dai Ching, Lodona.

Date.	Object.	Vessels engaged.
1863.		
Aug. 21	Sumter and Wagner	Ironsides, Patapsco; gunboats Mahaska, Dai Ching.
Aug. 22	Wagner	Weehawken, Ironsides; gunboat Montauk.
Aug. 23	Sumter	Weehawken, Montauk, Passaic, Patapsco, Nahant.
Sept. 1	Sumter and obstructions	Weehawken, Montauk, Passaic, Patapsco, Nahant, Lehigh.
Sept. 5	Between Sumter and Gregg	Lehigh, Nahant.
Sept. 6	Wagner and Gregg	Ironsides, Weehawken, Montauk, Passaic, Patapsco, Nahant, Lehigh.
Sept. 7	Batteries on Sullivan's island	Ironsides, Patapsco, Lehigh, Nahant, Montauk Weehawken, (ashore.)
Sept. 8	Batteries on Sullivan's island	Ironsides, Patapsco, Lehigh, Nahant, Montauk Weehawken, (ashore.)

I shall now briefly comment on the various qualities of the monitors.

1st. Capacity for resistance.

2d. Power of ordnance.

3d. Draught of water.

4th. Speed.

5th. Number of crew.

1st. *Endurance*.—During the operations against Morris island the nine iron-clads fired eight thousand projectiles, and received eight hundred and eighty-two (882) hits. Including the service at Sumter in April and the Ogechee, the total number was eleven hundred and ninety-four (1,194,) distributed as follows :

Service of iron-clads. South Atlantic blockading squadron. Shots fired and hits received by them during operations against Morris island.

Vessels.	No. of shots fired.		Hits.	Hits April 7, 1863.	Hits at Ogechee.	Total hits.
	15-in.	11-in.				
Catskill	138	425	86	20	-----	106
Montauk	301	478	154	14	46	214
Lehigh	41	28	36	-----	-----	36
Passaic	119	107	90	35	9	134
Nahant	170	276	69	36	-----	105
Patapsco	178	230	96	47	1	144
Weehawken	264	633	134	53	-----	187
Nantucket	44	155	53	51	-----	104
Ironsides	-----	4,439	164	-----	-----	164
Total	1,255	6,771	882	256	56	1,194

* No. of shots fired. Weight of proj. fired, in tons.

By Ironsides	4,439	288½
11-inch, by monitors	2,332	151½
15-inch by monitors	1,255	213½
Total	8,026	653½

Of the eight monitors, one was always absent at Warsaw (Nahant or Nantucket) to blockade the rebel ram. The Lehigh did not arrive until August 30, therefore was only able to participate in the operations of the remaining seven days, but did good work.

For some time only five monitors were available for general attack, and then six, which was the greatest number disposable at any one time.

The consequences of the protracted firing and hard usage to which the monitors were exposed during these two months of incessant service, were unavoidably very considerable in the aggregate; and the greater, also, that all repair which could possibly be dispensed with was postponed to the conclusion. It was therefore necessarily extensive when entered upon. The battering received was without precedent. The Montauk had been struck two hundred and fourteen (214) times; the Weehawken one hundred and eighty-seven (187) times, and almost entirely by 10-inch shot. What vessels have ever been subjected to such a test?

It is not surprising that they should need considerable repair after sustaining such severe pounding for so long a time, but only that they could be restored at all to serviceable condition. The force of the 10-inch shot must be experienced to be appreciated. Any one in contact with the part of the turret struck falls senseless, and I have been nearly shaken off my feet in the pilot-house when engaging Moultrie.

All the little defects of detail were marked by such a searching process. Decks were cut through; cannon were worn out; side armor shaken; tops of pilot-houses crushed, &c. But all these were reparable, and no vital principle was seriously touched.

With such workshops and means as a northern navy yard includes, the repair of all monitors would have been speedily executed; but when machinery, tools, labor, and material have all to be obtained, as they were here, from a great distance, there was of necessity considerable delay; and, moreover, it was not admissible to withdraw but a portion of the monitors at a time from the blockade.

The additions that were deemed advisable for strengthening the pilot-houses and turrets were also put on at this time, and the bottoms cleaned, for they had now become so foul with oysters and grass that the speed was reduced to three or three and a half knots, and, with the strong tide of this harbor, added considerably to the difficulties of working the vessels properly under fire.

On one night I was caught by heavy weather from the southeast while close up to Sumter, when I had gone to attack it, and it was well that the darkness of the night prevented the slowness of our motion from being perceived while extricating the monitors from their position.

Power of ordnance.—Each turret contains two guns, and from the peculiar facility which it has for giving direction to the heaviest ordnance, no doubt, arises the desire to make these of the heaviest description. How far other considerations should control the character of the ordnance is necessarily an unsettled question.

To strike an armored ship it may be best to use a gun capable of the greatest power; but whether this shall be derived from a projectile of great weight, driven by low velocity, or of less weight, and high velocity; whether it shall be a fifteen-inch gun, fired with thirty-five or forty pounds, or a thirteen-inch, fired with fifty pounds of powder, is not here material; the weight of the gun for either purpose will not vary to any important degree. But in operations against earth works, whose material cannot be damaged permanently, but only disturbed and which are only to be dealt with by keeping down their fire, a much lighter projectile would be preferable, in order that the practice may be as rapid as possible. Hence a piece of 16,000 pounds for ten-inch or eleven-inch shot and shell.

When a number of monitors are brought together it would be better also to have guns of like kind in each turret, and bring into action whichever might be preferable. Each of the monitors of this squadron had a fifteen-inch and a smaller gun, (eleven-inch or eight-inch rifle,) and hence the rapidity of fire, which was most desirable, was not attained. That this was due to the calibre of the gun, and not to its being located in a turret, may be shown by one notable instance.

November 9, 1863, the Montauk, Captain Davis, was engaged in battering Sumter. In so doing, the eleven-inch gun fired twenty-five shells successively in one hour, of which twenty-one hit the wall of the fort aimed at—distance sixteen hundred yards. This is at the rate of one shell in 2.4 minutes, which is not only rapid but also exceedingly accurate practice. There is no reason why another eleven-inch, if placed in the adjoining carriage, (instead of the fifteen-inch,) could not have been fired in the same time, at which rate that monitor would have delivered an eleven-inch shell every 1.2 minute.

The rates of fire reported for the Ironsides, by Captain Rowan, are—

	Time. h. m.	No. fired.	Time for each fire. m.
Most rapid	0.50	25	1.74
Continuous	2.55	490	2.86
Assumed	1.00	360	1.33
Montauk	1.00	25	2.40

It will be perceived that for a short space of time the frigate delivered a shell from each gun in 1.74 minute, for three hours in 2.86 minutes, and it is believed that a fire could be sustained at the rate of 1.33 minute. The last rate is therefore possible, but I am sure it would be difficult to sustain it long with much regard to good aim and considerable distances; and I believe, on the whole, that for every practical purpose there would be all desirable rapidity of fire from the eleven-inch in turret. Thus it is to be presumed that there will be equality of ordnance power in the same number of eleven-inch guns as to rapidity of fire, whether in a turret or broadside.

Draught of water.—The monitors of the Passaic class draw about eleven and a half (11½) feet of water when properly trimmed. On this coast ten and eleven feet is the most convenient draught of water for penetrating all the principal sounds and rivers and navigating them to any extent. A greater draught restricts a vessel in movement, and in many instances excludes her from several ports, except under very favorable circumstances.

Speed.—The speed of the monitors is not great, (seven knots,) but it is quite respectable with a clean bottom, and is fully equal to that of the Ironsides. Their steerage is peculiar, but when understood and rightfully managed, not difficult of control. They pivot with celerity and in less space than almost any other class of vessel.

Number of men.—The number of men required to work them and the guns is only eighty, which is very moderate.

In common with all iron-clads, the scope of vision is much restricted, for the plain reason that in such vessels apertures of any size must be avoided. There are some other defects, but they are not inherent, and it is believed are susceptible of being remedied wholly or in part. So much for the monitors.

The Ironsides is a fine, powerful ship. Her armor has stood heavy battering very well, and her broadside of seven eleven-inch guns and one eight-inch rifle has always told with signal effect when opened on the enemy. Draught of water about 15½ to 16 feet. Speed six to seven knots, and crew about four hundred and forty men.

The defects of the vessel are the unplated ends, which are consequently easily damaged by a raking fire, and involve the rudder and screw more or less, while

she can return no fire in either direction. This was particularly and frequently inconvenient in attacking the works on Morris island, for at certain stages of the tide vessels tail nearly across the channel, and present bow and stern to the beach of Morris island, so that sometimes it was necessary to delay placing the vessel in position, and at others she would swing around very awkwardly when engaged.

The monitors, on the other hand, were almost equally well defended on all sides, and could fire in any direction. The Ironsides was also open to descending shot, and her scope of fire too much restricted by badly placed ports.

The desire for comparison which rages just now can easily be satisfied by bringing the above data in juxtaposition.

Just as they are, the Ironsides is capable of a more rapid and concentrated fire, which, under the circumstances, made her guns more effective than the fifteen-inch of the monitors. On the other hand, she was restricted by draught to the mid-channel, was very vulnerable to a raking fire, and the direction of her own guns was very limited laterally.

The monitors could operate in most of the channels—could direct their fire around the whole circle—and were almost equally well defended on all sides.

The defects in both classes of vessels are susceptible of being remedied partially or entirely. The defence of the Ironsides could be made complete, and that of the monitors equally so. The armament of the monitors could be perfected so as to give all desirable rapidity of fire, but by no contrivance could the Ironsides be enabled to use much heavier guns than those mounted. Yet when such changes were made as experience has suggested, there still would remain to the monitors the lighter draught, choice of guns from the heaviest to the lightest, defensibility, and direction of fire around the whole circle; consequently the ability to carry a heavy battery into the least depth of water, with equal power of offence and defence in any direction, and that with half the number of guns carried in broadside by another vessel.

The comparison now made is to be understood as having relation to existing circumstances, and not at all intended as conclusive in regard to the general merits of iron-clads.

It is in this sense that the action of the Navy Department is to be considered with reference to the selection of one class of vessels over another.

It is evident that it was not designed to adopt any one style exclusively, for of the three vessels first ordered two were of the ordinary broadside class—the Ironsides and the Galena. The latter was quickly proved to be absolutely inefficient, and so must any armored steamer of that size. It is universally admitted that plates of less than four and a half ($4\frac{1}{2}$) inches cannot stand the shock of heavy projectiles, and vessels so armored must be of considerable tonnage.

I presume the department only intended to build such vessels as were best adapted to the service at the scene of war.

Keeping in view the peculiar exigencies of the case, which required light draught and great ordnance power, it appears that the selection of the department could not have been more judicious in preferring a number of monitors to operate from a heavy frigate as a base; and if the intent of the department could have been carried out in regard to numbers, we should now have been in entire possession of the coast from the capes of Virginia to New Orleans, including Wilmington, Charleston, Mobile, &c.

Many defects of both classes are easily remediable, but some of those in the monitors could only be determined by the test of battle; before that, approximation only was possible.

What other style of vessel could the department have chosen? Certainly

none that has been built by English or French naval authorities. The Warrior and her class are exceedingly powerful, but could not get within gunshot here.*

On the other hand, there is very little navigable water on this coast which is not accessible to the monitors. They command supremely all that is near the shore, and cannot themselves be reached by vessels of heavier draught. So that when there was some reason to apprehend the appearance of certain rams in this quarter, I assured the department that the iron-clads could maintain position so long as coal and provisions lasted.

It may appear that I speak too positively on the subject, but some experience with them certainly gives a right to do so. With a single exception I have been on board a monitor in all the principal actions, and the recurrence of casualties to the fleet captains† near me shows that I was in a situation to judge. I was once in the Ironsides in an attack on Moultrie and Sumter. I have also watched the behavior of the monitors at anchor through all the phases of winter weather in this exposed situation.

The completeness with which four little monitors, supported by an iron-clad frigate, have closed this port, is well worth noting.

Very soon after entering the roads I advanced one Monitor well up towards the inner debouches of the northern channels, supported by another. On the night of the 19th of July an English steamer attempted to run in, and having eluded the hot pursuit of the outside blockade, no doubt indulged in the belief that all danger was past. But the gallant Captain Rodgers was in advance that night with the Catskill, and a shell sent suddenly by him ahead of the culprit steamer signified no escape. In despair or alarm the latter grounded on a shoal, and her wreck has since served as a warning to like evil-doers. Two or three steamers that were in managed to get out immediately after, and one or two may have gotten in, for the crews of the monitors were often too fatigued then with a day's battle to keep watch at night; but there ended the business as such, and for several months not a vessel has passed in or out.

These four monitors, who thus keep watch and ward, muster eight (8) guns and three hundred and twenty (320) men, which is almost insignificant in contrast with the work done.

I have thus put on paper the general impressions now uppermost, but very hastily and under great pressure of business, which will, I hope, excuse such imperfections as may have inadvertently occurred.

With more leisure I could do full justice to this interesting subject.

I have the honor to be, very respectfully, your obedient servant,

JNO. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Off Morris Island, May 17, 1864.

SIR: I find that several omissions have occurred in my report to you on the iron-clads; they are handed to me just as the mail closes, and I have time only

* According to Rear-Admiral Paris, the French Gloria draws 28 feet; the British Warrior 26 feet; the Black Prince 23½ feet; even those of inferior class, Defence and Resistance, draw 24 feet. Not one of these vessels could cross the Charleston bar, and would be perfectly impotent to render the least service in any of the operations now being carried on.

† Captain George W. Rodgers was next ahead when killed off Wagner, and his successor, Captain Badger, had his leg broken by an iron splinter in the attack on Sumter.

to request that they may be inserted in the report of January 28, among the list of actions then given, and also published in the Army and Navy Journal which has published that report.

As my object was to show what the navy had done in this quarter, I am very glad to be able to extend the list. The loss of three fleet captains in succession—Captain Rodgers, killed in the Catskill; Captain Badger, wounded in an action with Moultrie, and Lieutenant Preston, taken prisoner in the assault on Sumter—necessarily deranged all the business of my command very much.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Additional list of actions in which the iron-clads were engaged with the rebel batteries in Charleston harbor while reducing Morris island.

Date.	Name.	Rounds fired.	Hits by enemy.	Distance.	Object.	Remarks.
1863.				<i>Yards.</i>		
July 18	New Ironsides .	805	4	1,400	Fort Wagner ..	
July 20	do.....	168	13	1,300	do.....	
Aug. 23	do.....	90	4		do.....	Ship was under way; distance varied from 1,100 to 1,300 yds.
Sept. 2	do.....	41	7	1,000	Fort Gregg....	Hits from Gregg and Moultrie; ship at anchor.
Sept. 2	do.....	9		1,500	Fort Sumter...	
Sept. 5	do.....	488		1,300	Fort Wagner ..	
Sept. 5	do.....	32	1	1,800	Fort Gregg....	Hit from Gregg.

On July 29 the Passaic engaged Wagner, and on August 31 Moultrie. On September 8 the Passaic, (in a disabled condition,) Patapsco, Weehawken, and Nahant engaged Moultrie.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Report of Commodore S. C. Rowan.

UNITED STATES STEAMER NEW IRONSIDES,

Off Morris Island, May 13, 1864,

SIR: In obedience to your order of the 12th instant, I enclose herewith a tabular statement of various actions of this ship with the rebel fortifications of Charleston harbor, and

Have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Commodore, Commanding.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron, Flag-Steamer Philadelphia.

Statement of firing by the United States steamer New Ironsides during her several engagements with the rebel fortifications in Charleston harbor.

Date.	Rounds fired.	Hits by enemy.	Distance.	Object.	Remarks.

6	38		1,300	do	At anchor; firing from meridian to sundown.
7†	152	24	1,200	Fort Moultrie.....	} These hits were from Sullivan's island batteries; at anchor.
8	483	70	1,200	do	

* Night attack.

† Night attack on Moultrie.

Respectfully submitted

S. C. ROWAN,
Commodore, Commanding.

Report of Lieutenant Commander E. Simpson.

UNITED STATES IRON-CLAD PASSAIC,
Off Morris Island, S. C., April 21, 1864.

SIR: In the Army and Navy Journal, of the 16th instant, there is published a review of the service of the "monitors," by Rear-Admiral J. A. Dahlgren. As this review does not give this vessel credit for the service performed by her, I respectfully ask your attention to the subject, in order that the statement may be corrected at the Navy Department.

On the 29th of July, 1863, this vessel went into action with Fort Wagner, followed by the Patapsco; the New Ironsides joined in the action also. The presence of the Passaic in this action is not mentioned in the review.

On the 31st of August, 1863, the most serious engagement for iron-clads that had taken place to that date occurred between Fort Moultrie on one side, and the monitors Patapsco, Weehawken, Passaic and Nahant on the other, the detachment being under command of Commander T. H. Stevens, commanding the Passaic.

The conflicts with Fort Wagner and Battery Gregg, on Morris island, each using two guns on the water face, were but trifling actions for iron-clads, but every collision with the batteries on Sullivan's island that has taken place by daylight has been formidable. This action of the 31st of August, 1863, was of such a character.

During the action the Passaic grounded about half a mile from Fort Moultrie, and was severely hammered by the fort before she floated off. This engagement is not mentioned in the review.

On the 8th of September, 1863, the most remarkable action between iron-clads and sand batteries was fought under command of Commodore S. C. Rowan, between the batteries on Sullivan's island, on one side, and the Ironsides, Patapsco, Lehigh, Passaic, Montauk, Nahant and Weehawken, (aground,) on the other. This action lasting for three hours, terminated in silencing the fire of the batteries on the island.

During this action the Passaic was at the head of the line, having received an order from the commodore, as she was going into action, to go well up and engage Battery Bee. In this action the Passaic was hit in fifty-one new places, which were easily counted after the action, and I have no doubt that she was actually struck oftener than I have reported. Strange as it may seem, the presence of the Passaic in this action is not mentioned in the review.

I feel especially concerned about the omission in reference to this vessel on the 8th of September, in consequence of the great efforts that were made on board to keep her in an effective condition.

This was very difficult to do in consequence of her turret having been jammed on the night of the 6th of September, which had caused the spindle and pilot-house to take up motion with the turret, thus disabling the steering gear. Ingenious expedients were adopted (of all of which Rear-Admiral Dahlgren has reports,) and the vessel was carried successfully into action notwithstanding her disabled condition.

After all these efforts to keep the vessel available, and after having endured the battering of those batteries on Sullivan's island for three hours, it is most disheartening to find that the presence of the vessel in the action is not mentioned in the review; and I respectfully request, in justice to my own reputation, as well as that of every officer and man on board of this vessel, that you will have this report corrected.

I feel, sir, that the service of this vessel has been underrated. It is patent to all the commanders of iron-clads in the fleet that the Passaic is more battered than any of them, in many cases showing three shot-marks to one; and I ask that justice may be done her by correcting at the Navy Department the errors that I have pointed out in the review of Rear-Admiral Dahlgren.

For further information I enclose a copy of statements of firing made to Rear-Admiral Dahlgren during the past nine months.

Very respectfully, your obedient servant,

E. SIMPSON,

Lieutenant Commander, Commanding.

Hon. GIDEON WELLES,

Secretary of the Navy.

Statement of firings by United States iron-clad Passaic, Lieutenant Commander E. Simpson.

Date.	Rounds fired.	Hits by enemy.	Distance.	Object.	Remarks.
1863. July 29	XV-inch, 12 shells; XV-inch, 1 shot; 150-pounder, 9 shells; 150-pounder, 1 shot.	None	1,200 yards	Fort Wagner	Carried away cap square bolt of rifle.
Aug. 9	Rifled 150-pounder, 1 shell	None	1,200 yards	Battery Gregg	Returning fire of Bat'y Gregg while on picket duty.
Aug. 15	XV-inch, 2 shells; 150-pounder, 2 shells.	None	1,200 yards	Black steamer and Battery Gregg	While on picket duty.
Aug. 17	XV-inch, 30 shells; 150-pounder, 9 shells.	Thirteen	1,200 yards	Fort Wagner and Fort Sumter*	Engaged Wagner in forenoon, then engaged Sumter, and after dinner engaged Wagner again.
Aug. 18	XV-inch, 18 shells	Five	1,000 yards	Fort Wagner	Several bad hits, deck leading over bread-room.
Aug. 23	XV-inch, 9 shells; 150-pounder, 1 shell and 9 shot.	Five	750 yards	Fort Sumter	Shot from Sumter drove in a bolt of ring around wave of turret.
Aug. 31	XV-inch, 1 shell; 150-pounder, 9 shells	Nine	875 yards	Fort Moultrie	Three shots through; one of them over coal-bunkers, 20 inches by 9; the other two causing bad leaks on berth deck. Another bolt driven in from ring around wave of turret.
Sept. 1	XV-inch, 20 shells; 150-pounder, 20 shells and 6 chilled shot.	Seven	From 1,200 to 600 yards.	Fort Sumter	No bad hits, but side armor sprung apart 6 inches at the stern, caused by fouling a monitor.
Sept. 6 (a. m.)	XV-inch, 6 shells; 150-pounder, 9 shells.	None	1,100 yards	Covered way between Wagner and Gregg.	No reply from the enemy.
Sept. 6 (p. m.)	XV-inch, 1 shell; 150-pounder, 1 shell	None		Obstructions	This firing was done on picket to prevent reinforcements coming to Wagner. In revolving turret the spindle and pilot-house torn up. Motion with the turret; turret, spindle, pilot-house revolving together.
Sept. 8	XV-inch, 19 shells; 150-pounder, 30 shells.	Fifty-one	750 yards	Battery Bee, on Sullivan's Island	Three new holes through the deck, and side armor badly injured in several places. Eleven hits on ring around base of turret; one of them at the base caused so much friction on deck-plate as to require 34 pounds of steam to revolve the turret. Twenty-nine new hits on turret.
Nov. 16 (a. m.)	XV-inch, 3 shells; 150-pounder, 31 shells.	Three	1,500 yards	Fort Moultrie	Covering the Nahant and Montauk, towing off the Lehigh that was aground.
Nov. 16 (p. m.)	150-pounder, 3 shells	None	1,750 yards	Moultrie House	Trying to ignite Moultrie House.
1864. Feb. 2	XV-inch 3 shells; 150 pounder, 68 shells.	None	2,356 yards	Blockade runner	Blockade runner aground off Fort Moultrie.
Feb. 3	150-pounder, 35 shells	None	2,356 yards	Blockade runner	Trying to destroy blockade runner off Fort Moultrie.

* Distance from Wagner 900 yards, from Sumter 2,000 yards.

DESTRUCTION OF BLOCKADE-RUNNING STEAMER PRESTO.

Report of Rear-Admiral Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, February 3, 1864.

SIR: But a few days since I closed a long communication on the subject of iron-clads by a remark on the efficacy which they gave to the blockade here, and I stated therein that no vessel had gone in or passed out of Charleston since they were able to give full attention to this matter.

Agreeably to the information recently communicated to the State Department, however, the attempt has been made and was so far successful as to insure the ruin of the intruder.

On Tuesday morning, (February 2,) having passed the night, as usual, among the iron-clads, when I came on deck about sunrise to go into the inlet to transact current business, my attention was drawn to a very handsome steamer close under the batteries of Moultrie, which was the first notice I had of her being there. She showed a fine, very low and long hull, with two short funnels, painted white.

Hastening up to the advanced monitor, I directed her to open fire with her rifle gun, the distance about 2,500 yards. The other monitors were ordered up, and some exceedingly fine practice was witnessed. The rifle guns of the Lehigh and Passaic soon gave evidences of their being well handled; the 11-inch of the Catskill and Nahant had not port room for a little more elevation, and their shells just fell short.

I ordered a 12-pounder boat howitzer to be tried from the Nahant. Captain Cornwell and his executive officer, Lieut. H. C. Tallman, between them managed to put the first shell into the steamer, which was a capital shot, when the distance was not less than 2,700 yards, for the Nahant had dropped below the other monitors to get the howitzer and ammunition.

Colonel Davis, commanding Morris island, also opened from Fort Strong and Battery Gregg. Between us the vessel was well spotted by sunset—some very large holes appearing in the hull and wheel-boxes.

This morning I observed that the northwest gale had so blown out the water that the bottom of the steamer was nearly bare. I ordered the Lehigh and Passaic to recommence, and also asked Colonel Davis for the fire from Gregg. By one o'clock the vessel was in flames, which will, I hope, deter others from similar exploits.

That she was able to get in so far was chiefly due to the exceeding paucity of steamers on the outer blockade. The great wear and tear experienced by the heavy weather of the season always keeps an inconvenient number off duty.

On Tuesday night another steamer attempted to get in; was discovered and chased, but was lost sight of.

The party of refugees who left Charleston on Wednesday night, at 8 o'clock, state that no vessel had arrived since Monday night, when the Presto was run ashore near Moultrie.

An officer of the Presto said that six or seven other steamers were to try to run the blockade.

I beg leave again to urge that a few more smart steamers of light draught be spared for this place, or I fear there may be an occasional failure to stop this business.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

HON. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander A. Bryson.

UNITED STATES IRON-CLAD LEHIGH,
Off Morris Island, S. C., February 4, 1864.

SIR: At daylight on the morning of February 2 a blockade runner (a long, low side-wheel steamer) was discovered ashore on Sullivan's island, and just to the right of Fort Moultrie. I dropped down to the supporting picket station and there made preparations for opening on the steamer, at the same time sending an officer down to communicate with Captain Rowan, of the Ironsides, to ask if the Lehigh should be put under the fire of the batteries on Sullivan's island. While the officer was on his way down he saw you on your way up to the Lehigh. After you came on board you directed me to open fire with the 8-inch rifle from where the ship then was. We fired from the rifle on the first day forty-two rounds, hitting nine times. On the following day (February 3) opened again with 8-inch rifle and two 12-pounder howitzers, throwing from the rifle twenty-six shell, of which four hit; and from the howitzers seventy-four hollow shot and shell, of which eight hit. The distance was from 2,400 yards to 2,500 yards. The steamer was on fire twice, the first day the flames making apparently but little progress; on the second day she was again on fire, and she continued burning until late at night. That she is so thoroughly injured that she will never again float I have no doubt, as I have every reason to believe that some of the shot and shell passed through and through her, and two of our shell were seen to explode inside.

I am, respectfully, your obedient servant,

A. BRYSON, *Commander.*

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

Report of Lieutenant Commander John J. Cornwell.

UNITED STATES MONITOR NAHANT,
Off Morris Island, February 5, 1864.

SIR: I send a report of our firing at the blockade runner Presto on the 2d and 4th instant.

The distance was so great on the 2d that I was unable to do much execution with our turret guns. I withdrew, took on board two 12-pounder rifled howitzers, with 135 shell, and returned to within twenty-two hundred yards. The howitzers were fired from the deck and did good service.

On the 4th instant, in obedience to your order, I moved up the channel far enough to reach the vessel with our turret guns. The water being very smooth and wind light, I tried the range at 1,750 yards, guns level; found the shells reached, passed through the vessel and burst over the batteries on shore.

I tried to regulate the fuzes to burst in her, but found the time of flight differed very much, and I think none of the shells did burst inside the vessel. She is, however, very much injured, being almost cut in two amidships. Several of our shells passed through her below the water-line, which must have damaged the machinery and cargo seriously.

I think the fire which was burning on the 2d and 3d instant consumed all that will burn, she being an iron vessel.

On the 2d the enemy returned the fire with rifles and mortars; on the 4th no return was made.

Very respectfully, your obedient servant,

JOHN J. CORNWELL,
Lieutenant Commander.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

ARMY EXPEDITION INTO FLORIDA.—CO-OPERATION OF THE NAVY.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
 Port Royal Harbor, S. C., February 15, 1864.

SIR: On Friday, 5th instant, I received a letter from General Gillmore, by his aide-de-camp, stating that he was "about to throw a force into Florida" on the west bank of the St. John's river, and desired my assistance very much.

As the general had expressed a wish, at the last interview, for my presence, I lost no time in making arrangements accordingly.

The Mahaska, Dai Ching and Water Witch were ordered to the St. John's, and in the evening I myself left.

Previous to doing so, I assigned Commodore Rowan charge of the blockade at Charleston.

Stopping at Port Royal, I had an interview with General Turner, chief of staff to General Gillmore, and reached the St. John's river on Monday, about 8 o'clock; General Gillmore was just crossing the bar, as well as a number of transports. I passed in on board the Oleander, and General Gillmore came alongside to confer.

Soon after I went up the river in the Mahaska, and General Gillmore followed in a steamer carrying troops, which were passing up rapidly.

The Ottawa and Norwich had conveyed the van to Jacksonville. The Water Witch and Dai Ching were waiting high water to cross the bar.

On Tuesday I reached Jacksonville and learned from General Gillmore that the troops were advancing rapidly, the rebels not making a stand.

The Norwich was the first to pass up the river, preceding the land force of General Seymour, and after witnessing his landing at Jacksonville, moved very promptly above the town, and cut off the escape of a steamboat, (the St. Mary's,) which had been watching an opportunity for some time to escape with a load of cotton, whereupon the rebels burned the cotton and sank the steamboat. I have directed that every effort shall be made to raise her, but to destroy her if any danger should arise of reverting to the rebels.

On Wednesday evening General Gillmore advised me that General Seymour had got some fifty miles into the interior without resistance.

Seeing no further need of my presence at Jacksonville, and not wishing to be absent from Charleston too long, I informed General Gillmore accordingly, and that I would leave three gunboats—Mahaska, Ottawa and Norwich—under an experienced officer, Commander Creighton. He answered that the force would be ample, and acknowledged the action of the navy. (Copy enclosed, marked A.)

At this time these three gunboats were at anchor off the town, together with the Dai Ching and Water Witch, also the tugs Oleander and Dandelion. The Pawnee arrived on the 10th, and remained below.

On the 12th I left in the Oleander, the Dai Ching and Water Witch having already dropped down to the mouth of the river where was the Pawnee.

Next day I crossed the bar and steamed for Port Royal, leaving orders for the Pawnee, Dai Ching, and Water Witch to proceed to other stations.

In this instance the *presence* of the navy was all that was required. The several commanders, Balch, Creighton, Breese, Pendergrast, Chaplin and Merriam, exhibited the most gratifying promptness. * * *

I have the honor to be, very respectfully, your obedient servant,

JNO. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

HON. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Letter from Major General Gillmore to Rear-Admiral Dahlgren.

ON BOARD STEAMER B. DEFORD,
Jacksonville, Florida, February 10, 1864.

ADMIRAL: I received, some miles from here, your letter stating that you intended to leave this locality, and that three gunboats would remain in the St. John's. That force is ample. The enemy will not make any resistance in East Florida for the present. They are panic stricken; my advance will be fifty miles from this place to-night. We have taken eight good field-pieces well supplied with ammunition, a number of cars, a large quantity of cotton and other valuable property. I am very busy, or I would come and see you. I shall return to Hilton Head Saturday next.

Please accept my thanks for prompt co-operation afforded me, and believe me,
Your obedient servant,

Q. A. GILLMORE,
Major General.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron, St. John's River.

Report of Acting Master Frank B. Merriam.

UNITED STATES STEAMER NORWICH,
Off Jacksonville Florida, February 11, 1864.

SIR: In obedience to your order, I have the honor to make the following report:

While getting under way on the morning of the 6th instant, at 5.40, a steamer was reported in sight to the northward. At 5.45 she came up, and, upon being hailed, reported as the army steamer *Island City*, with Major Brooks, of General Gillmore's staff, on board, from Fernandina, bound to St. John's, in a hurry. I told the captain to follow me in. At 5.50 got under way; stood to the southward to bring the ranges on, and at 6.20 crossed the bar. At 7.05 anchored in the St. John's river, off Mayfort. The *Island City* anchored a few minutes sooner. After breakfast I visited the *Ottawa*, and then first learned of an expedition to arrive that day for the purpose of taking Jacksonville, &c. In company with Captain Breese I met Major Brooks on shore. Captain Breese proposed that pickets should be stationed so as to prevent news of the expedition being carried inland by the people on shore. At 9.50, by order of Captain Breese, an officer and two men, armed, were sent on shore from this ship to do picket duty on the Mayfort side of the river. Captain Breese proposed to send the *Norwich* up the river at once to blockade the St. Mary's in McGist's creek, should she attempt to escape up the river. Major Brooks opposed such a movement, as he thought it might interfere with the plans of the general. Major Brooks hired four men, refugees, to go inland on Saturday night to cut the telegraph wire and burn a railroad bridge. He asked for arms, rations, and a quantity of spirits turpentine, which were furnished by the *Ottawa* and *Norwich*. At 6.30 the *Island City*, with four men on board and a canoe in tow, proceeded up the river to Trout creek. At 6.45 sent a picket-boat up the river as usual. At 9.15 the *Island City* came down the river and anchored.

At daylight, on the morning of the 7th, two vessels were seen off the bar. At 6 20 the *Ottawa* made signals to this vessel to send pilot outside; executed the order at once. Between half past 7 and 8 o'clock three transports came in and

anchored. At 8.50 the Maple Leaf, with a general on board, came in and anchored. At about 9.15 I visited the Ottawa, and met General Seymour on board that vessel. It was arranged that the Norwich should proceed up the river some distance ahead of the transports. My orders were as follows, given verbally by Captain Breese:

"Furnish the Maple Leaf with a pilot; then get under way; proceed up the river to Mr. Palmer's place, communicate with Mr. Palmer, and learn from him what force is in Jacksonville. If a force has been thrown into town to oppose the landing, inform the general. After a landing should be effected by our troops, proceed up the river and anchor off the mouth of McGist's creek, to prevent the St. Mary's from escaping up the river."

At 10.10 got under way and proceeded up the river. When about six miles up the river, saw the transports under way, coming up. At 2.5 p. m. stopped off Mr. Palmer's place, and communicated with Mr. Palmer; learned from him that only twenty men were in town, and that the expedition was not expected. At 2.45 started ahead. At 3.05 went to quarters. At 3.20 arrived off the town, the Maple Leaf being in sight of Commodore Point; steamed slowly by the wharf, close in. When up with the upper end of the town, turned round and steamed down to the Maple Leaf, which had made fast to a dock. At 3.40 the troops commenced landing; took a position ahead of the Maple Leaf; several transports went alongside the wharfs—one, the Hunter, was fired into by the rebel pickets. At 4, a landing having been effected, anchored. The Ottawa had not come up; I informed the general that I should be obliged to go up the river to blockade McGist's creek, so that the St. Mary's might not escape up the river. I asked him if he intended moving that night. He said no, the artillery or the horses had not come up. He told me one company of cavalry had gone a short distance to look after the pickets that fired at the Hunter. At 5.25 got under way. At 6.30 anchored off McGist's creek, as close in as the depth of water would permit, and I at once went in-shore and stationed a picket-boat in the mouth of the creek.

On the morning of the 8th I reported to Captain Breese on board the Ottawa; was on shore and saw General Seymour at about 12 m.; asked him when he intended moving forward. He answered, this afternoon, if the horses come up. Returned up the river to the Norwich in my gig at about 12.30 p. m. At 8.15 I went in and stationed a picket-boat in the mouth of McGist's creek.

On the morning of the 9th, at 3.30, went to quarters as the picket-boat had made signals. While at quarters, heard the officer of the picket-boat hail a boat twice, and the reports of three muskets. Sent the launch, armed, in-shore to find the picket-boat, and learn the cause of the firing. At 4.10 the launch returned, having been unable to find the picket-boat in the fog. At 6.15 the picket-boat returned; the officer reported having fired in the direction of a boat, which he heard, but could not see, on account of the fog, his hails not being replied to. At about 11 o'clock I saw Captain Breese on board the Ottawa. He informed me that the cotton had been burned and the St. Mary's sunk during the night. I saw two men on the Ottawa who stated to me that they deserted from the St. Mary's the night previous, and that when pulling out McGist's creek into the St. John's river, they had been hailed and fired into; that they did not answer the hails, as they thought the rebels were pursuing them. By order of Captain Breese I armed three boats of the Norwich to proceed up McGist's and Cedar creeks, in company with the Ottawa's boats. At about 1 p. m. we reached the St. Mary's and boarded her. No indications were found that any one had boarded her since she had been sunk. A small rifle gun was found on shore near a deserted camp, and the boats of the St. Mary's were found in a creek. At 3.20 the boats returned to the ships. At 3.50 got under way. At 5.05, in obedience to signal from the flag-ship, anchored in line ahead, off Jacksonville.

I am fully convinced that if the Norwich had not been anchored off McGist's creek, with a picket-boat in the creek, that the St. Mary's would have escaped up the river.

I am, sir, very respectfully, your obedient servant,

FRANK B. MERRIAM,

Acting Master, Commanding.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

CAPTURE OF A REBEL SLOOP NEAR BRUNSWICK, GEORGIA.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, S. C. February 17, 1864.

SIR: I enclose herewith copy of a report from the commander of the *Braziliera*, giving an account of the capture of a rebel sloop by the boats of the *Braziliera*.

The affair seems to have been very well managed by Captain Gillespie.

The claim made by Mr. Lasserre to the sloop and (20) twenty bales of cotton on board, I refer to the department for its decision.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Master W. T. Gillespie.

UNITED STATES BARK BRAZILIERA,

St. Andrew's Sound, Ga., February 3, 1864.

SIR: I have the honor to report the capture, on the night of the 1st instant, by a boat expedition from this vessel commanded by myself, of a sloop just built and loaded with seventy-two bales upland cotton, weighing 35,700 pounds, she at the time lying at the picket station at Cabbage Bluff, about ten miles above Brunswick. We also secured the picket, consisting of a sergeant and six privates belonging to the 4th Georgia cavalry, and six civilians, five taken aboard the sloop and one ashore.

I divided my force, numbering twenty eight all told, into two parties: one under myself, securing the sloop, and the other under Acting Ensign Nelson E. Borden, capturing the pickets; the surprise was complete in both instances, and we effected our object without resistance.

Having entirely cut off the communication with the rebel camp, I remained about two hours, and brought away the families of Mr. Lasserre and Mr. Dangaix, consisting of their wives and eight children. The civilian we took ashore proved to be a Mr. Williams, an inoffensive old man who had come down with a pass for Mr. Lasserre's family to go through the rebel lines. In consideration of this fact, I have concluded to land him on the main again.

Mr. Lasserre, who has been for some time living aboard this vessel, took the oath of allegiance on the 16th of October, 1863, and has kept me constantly notified of her progress. He built her with the intention of putting his family

and what of his property he could convert into cotton in her, and then delivering her into our hands.

At the time of taking the oath of allegiance, I drew up and he signed the accompanying paper to that effect. The rebels having divined his intention, he was compelled to seek refuge aboard my vessel; he piloted me up, and was invaluable throughout. I think that, in justice, his claim to her, and to the twenty bales of cotton, should be recognized. Without his assistance it would have been impossible for me to have succeeded, and all that he is worth is in her.

Concealed in the hold I found papers which abundantly established her intention to have run the blockade, also a small mail, all of which I shall forward to you by the prize master. I shall let the *Oleander* tow the sloop to Port Royal and shall also send the prisoners and crew on her.

On one of the men I found two hundred and seventeen dollars in specie, and one thousand in Georgia State bank bills, which I have placed in the paymaster's charge awaiting orders.

Very respectfully, your obedient servant,

W. T. GILLESPIE,
Acting Master, Commanding.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

SINKING OF THE UNITED STATES STEAMER HOUSATONIC BY A TORPEDO
DAVID.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Port Royal Harbor, South Carolina, February 19, 1864.

SIR: I much regret to inform the department that the United States steam sloop *Housatonic*, on the blockade off Charleston, South Carolina, was torpedoed by a rebel "David," and sunk on the night of the 17th February, about nine o'clock.

From the time the "David" was seen until the vessel was on the bottom a very brief period must have elapsed; so far as the executive officer (Lieutenant Higginson) can judge—and he is the only officer of the *Housatonic* whom I have seen—it did not exceed five or seven minutes.

The officer of the deck perceived a moving object on the water quite near, and ordered the chain to be slipped; the captain and executive officer went on deck, saw the object, and each fired at it with a small arm. In an instant the ship was struck on the starboard side, between the main and mizen masts; those on deck near were stunned. The vessel began to sink, and went down almost immediately. Happily the loss of life was small: Ensign E. C. Hazeltine, Captain's Clerk C. O. Muzzy, and three of the crew, Quartermaster John Williams, second-class fireman John Walsh, and landsman Theodore Parker.

Two boats of the *Housatonic* were lowered and received all they could; the *Canandaigua*, which knew nothing of the catastrophe, sent her boats immediately on hearing of it, and took off the crew, who had ascended into the rigging.

The enclosed printed orders will show the precautions which have been directed from time to time to guard the iron-clads that lay inside the bar, and would naturally be the objects of attack from their importance and proximity; and I also transmit copy of a communication (January 15) to the senior officer outside on the same subject. In addition, I have been in the habit of giving personal attention to the inside blockade, sometimes visiting the picket monitors several hours after dark.

Being notified on the 5th February by General Gillmore that he was about

to throw a force into Florida, and would need naval assistance, I left promptly for the St. John's, in order to be sure that no aid should be wanted that was possible, leaving Commodore Rowan, an experienced officer, commanding the Ironsides, in charge of the blockade off Charleston.

On my return I touched here to examine into the condition of our depots, and particularly in regard to the repairs of the monitors, intending also to visit the blockade of Savannah river.

The department will necessarily perceive the consequences likely to result from this event; the whole line of our blockade will be infested with these cheap, convenient, and formidable defences, and we must guard every point.

* * * * *

I have attached more importance to the use of torpedoes than others have done, and believe them to constitute the most formidable of the difficulties in the way to Charleston. Their effect on the Ironsides in October, and now on the Housatonic, sustains me in this idea.

The department will perceive, from the printed injunctions issued, that I have been solicitous for some time in regard to these mischievous devices; though it may not be aware of the personal attention which I have also given to the security of the iron-clads. I naturally feel disappointed that the rebels should have been able to achieve a single success, mingled with no little concern, lest, in spite of every precaution, they may occasionally give us trouble. But it will create no dismay nor relax any effort; on the contrary, the usual inquiry will be ordered, though the whole story is no doubt fully known.

I desire to suggest to the department the policy of offering a large reward of prize money for the capture or destruction of a "David"—I should say not less than \$20,000 or \$30,000 for each; they are worth more than that to us.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Letter from Rear-Admiral Dahlgren to Captain Green.

FLAG-STEAMER PHILADELPHIA,

Off Morris Island, January 15, 1864.

SIR: The Navy Department has received information that the rebels have a plan to blow up this fleet, and considers it of sufficient importance to inform me thereof.

I can hardly think that the design would extend beyond the iron-clads that constitute the inner blockade, for the outer vessels are distant and difficult of access; still it would be unwise to omit any proper precautions, and I therefore advise that you will take such measures as may suffice to defeat any attempt of the kind.

I enclose for your information the directions prescribed to the iron-clads. You can use these, or whatever else may seem more adaptable to the purpose.

Let this be circulated among the commanders of the vessels outside for their guidance.

Respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Captain JOSEPH F. GREEN,

Commanding United States Steamer Canandaigua,

Senior Officer present, off Charleston bar.

Letter from Captain Rowan to Rear-Admiral Dahlgren.

UNITED STATES STEAMER NEW IRONSIDES,
Off Morris Island, February 18, 1864.

SIR: I despatch the Paul Jones with information of the loss of the United States steamer Housatonic, which was sunk by a "David torpedo" last night about 9½ o'clock.

As soon as the signal was made from the Canandaigua, "Assistance, in want of," Lieutenant Commander Belknap went out in a tug. I enclose Captain Green's report.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Captain and Senior Officer, off Charleston.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

Report of Captain J. F. Green.

UNITED STATES SLOOP CANANDAIGUA,
Off Charleston, South Carolina, February 18, 1864.

SIR: I have respectfully to report that a boat belonging to the Housatonic reached this ship last night at about 9.20, giving me information that that vessel had been sunk at 8.45 p. m. by a rebel torpedo craft. I immediately slipped our cable and started for her anchorage, and on arriving near it, at 9.35, discovered her sunk, with her hammock nettings under water; despatched all boats, and rescued from the wreck twenty-one (21) officers and one hundred and twenty-nine men.

There are missing, and supposed to be drowned, the following-named officers and men: Ensign Edward C. Hazeltine, Captain's Clerk Charles O. Muzzy, Quartermaster John Williams, second-class fireman John Walsh, landsman Theodore Parker.

Captain Pickering is very much, but not dangerously bruised, and one man is slightly bruised.

I have transferred to the Wabash eight of her officers and forty-nine men on account of the limited accommodations on board of this vessel.

Very respectfully, your obedient servant,

J. F. GREEN, *Captain.*

Commodore S. C. ROWAN,

Commanding Officer off Charleston, S. C.

Report of Lieutenant F. J. Higginson.

UNITED STATES STEAMER CANANDAIGUA,
Off Charleston, S. C., February 18, 1864.

SIR: I have the honor to make the following report of the sinking of the United States steamer Housatonic by a rebel torpedo off Charleston, S. C., on the evening of the 17th instant.

About 8.45 p. m. the officer of the deck, Acting Master J. K. Crosby, discovered something in the water about one hundred yards from and moving towards the ship. It had the appearance of a plank moving in the water. It

came directly towards the ship; the time from when it was first seen till it was close alongside being about two minutes. During this time the chain was slipped, engine backed, and all hands called to quarters. The torpedo struck the ship forward of the mizenmast on the starboard side, in a line with the magazine. Having the after pivot gun pivoted to port, we were unable to bring a gun to bear upon her. About one minute after she was close alongside, the explosion took place, the ship sinking stern first, and heeling to port as she sank. Most of the crew saved themselves by going into the rigging, while a boat was despatched to the Canandaigua. This vessel came gallantly to our assistance and succeeded in rescuing all but the following officers and men, viz :

Ensign E. C. Hazeltine, Captain's Clerk C. O. Muzzey, Quartermaster John Williams, landsman Thomas Parker, second-class fireman John Walsh.

The above officers and men are missing and are supposed to have been drowned.

Captain Pickering was seriously bruised by the explosion, and is at present unable to make a report of the disaster.

Very respectfully, your obedient servant,

F. J. HIGGINSON, *Lieutenant.*

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

NAVY AND ARMY EXPEDITION UP ST. MARY'S RIVER.

Report of Acting Master S. N. Freeman.

UNITED STATES BRIG PERRY,
Fernandina, Fla., February 23, 1864.

SIR : I have the honor to report that, at the request of the colonel commanding the post, I sent the United States schooner Para, Acting Master E. G. Furbur commanding, up the St. Mary's river as far as Woodstock to co-operate with the land forces under the command of Major Penneypacker, 97th Pennsylvania volunteers. The expedition proved very successful, and we brought away about one million feet of lumber.

While the Para was up the river Captain Furbur cut out the steam-flat Hard Times; her intrinsic value might perhaps be two hundred dollars, (\$200.) I propose to use her as a picket boat on the St. Mary's river, if you have no objection to my retaining her for that purpose.

I have taken the Para from her former anchorage, off Cumberland island, and placed her in the Amelia river to protect the crossing leading from the island to the main land. I have done this in consequence of a rumor that we are to be attacked by the enemy. I shall picket the St. Mary's river every night. I was forty miles up the St. Mary's, but I neither saw nor heard anything of importance.

I enclose the report of Acting Master Furbur, and trusting that my course will meet with your approval,

I am, very respectfully, your obedient servant,

S. N. FREEMAN,

Acting Master, and Senior Officer present.

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

Report of Acting Master E. G. Furbur.

UNITED STATES SCHOONER PARA,
Cumberland Sound, Ga., February 23, 1864.

SIR : In obedience to your orders of the 15th instant I got under way from this anchorage at 6 o'clock on the morning of the 16th, in tow of the United States army transport *Island City*, which was placed under my orders by Major Brooks, commanding the expedition, and in company with the armed transports *H. A. Weed*, *Nelly Baker*, and *Beaufort*, proceeded up the *St. Mary's* river to *Woodstock* mills, about fifty miles from its mouth, where we found a detachment of the 97th Pennsylvania volunteers, under the command of Major *Pennypacker*, numbering two hundred men. After consulting Major Brooks, I anchored in the most advantageous position to protect the forces on shore and the steamers employed in loading lumber at the landing, from any attack from the enemy from the Georgia side, and to assist in repelling any that might be made in our rear from the Florida side. At 10 o'clock the next morning we were fired upon by the enemy's picket from the Georgia side, fortunately without effect. I immediately opened fire upon them with grape and canister from the 32-pounder and shell from the howitzer and Parrott, and was not afterwards troubled by them. About 4.30 p. m. of the 19th, Major *Pennypacker* informed me that he thought the enemy were making preparations to cross the river from the Georgia side, about two miles below us. I immediately sent Ensign *Ryan* down on the opposite side to obtain their position as near as possible, and at 5 p. m. commenced firing, under his direction, with shell from the 32-pounder and Parrott, and fired twelve shell, which, as the major commanding informed me, immediately drove them back to their camp, about three miles in their rear, the fire being very accurate.

Having obtained quite reliable information that a small flat-bottomed steamer was lying in a creek about six miles below us, on the Florida side, at 7 p. m. of the 20th I took the first and second cutters (armed) in tow of the *Island City* down the river to the mouth of the creek, when I took the boats up it, and after proceeding about a mile we discovered her, and taking her in tow, brought her up to the landing at the mills, arriving there at 1 a. m. of the 21st. We found her to be a small scow-built steamer, said to be called the *Hard Times*. At 2 p. m. of the 22d I received your orders to proceed down the river, in tow of one of the transports, with all possible despatch, and retake my anchorage off *Cumberland* island. Having sent the *Hard Times* down in tow of the *Island City*, and all the troops being embarked, at 5 p. m. I was taken in tow by the *H. A. Weed* and started down, arriving here at 8 p. m. of the 23d. The ammunition expended during the time we were in the *St. Mary's* was for the 32-pounder twenty-two shells and twelve stands each of grape and canister, forty-six shells for the 20-pounder Parrott, and twenty-seven for the 12-pounder howitzer.

Hoping that my course may meet your approbation,

I am, very respectfully, your obedient servant,

E. G. FURBUR,
Acting Master, Commanding.

Acting Master S. N. FREEMAN,
Com'dg U. S. Brig Perry, Fernandina, Fla.

Forwarded for the information of the department by,
Very respectfully,

S. C. ROWAN,
Captain, Com'dg S. A. B. Squadron pro tem.

EXPEDITION TO PREVENT THE REBELS FROM TAKING THE MACHINERY
FROM A BLOCKADE-RUNNER, BEACHED.UNITED STATES STEAMER GEORGE MANGHAM,
Off Morrill's Inlet, February 25, 1864.

SIR: I have the honor to report to you that I received information from Captain Parker that the rebels were taking the machinery out of the blockade-running steamer on the beach near my station, to put in a steamer they are building at Georgetown, S. C. He gave me orders to destroy all I could of it. I proceeded towards the steamer, and on approaching saw a number of men at work on her. I opened fire on them, which made them run for the woods for shelter. I then fired shells at them, and called away the first cutter, manned with fourteen men, well armed. It being high water at the time, I found it smooth inside the steamer's stern, and it gave us a safe landing. I went on board of the steamer and found they had some of the machinery out of her, and a number of pieces were lying on the steamer ready to go on shore. They left all their tools on the beach, consisting of mauls, axes, augers, saws, crowbars, wrenches, and a cutter fall and blocks for hoisting it out with. I commenced with my men to destroy all the machinery I could find, and a large cargo winch which they had to hoist with. The steamer was full of water at the time, and I could not get at what was left in her, and at low water it was too rough to land. I took all the tools with me on board, and made sail for my station; I had not sailed far when the rebels came back to the steamer, took a hasty survey, and then left in haste. I think they will have to wait some time for machinery for their steamer, for I think it will puzzle them to put it together again. I shall give them another call as soon as it is smooth enough to land on the beach. I think the tools belonged to the steamer, and it will be some time before they can get more to work with.

I am, sir, very respectfully, your obedient servant,

JOHN COLLINS, Jr.,
Acting Master, Commanding.

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron, off Charleston, S. C.

Respectfully forwarded for the information of the department, by
S. C. ROWAN,
Commanding S. A. B. Squadron, pro tempore.

CAPTURE OF BOAT AND BOAT'S CREW OF THE NIPSIC.

Report of Commodore S. C. Rowan.

FLAG-SHIP NEW IRONSIDES,
Off Morris Island, February 29, 1864.

SIR: I regret to inform the department of the capture of the Nipsic's boat by the rebels on the night of the 26th instant. The crew list and officer in charge are detailed in the report of Lieutenant Commander R. F. R. Lewis, herewith enclosed.

The officer in charge of the boat allowed himself to be drifted far beyond the position assigned him, through ignorance or recklessness, and was not equal to the emergency when it arose.

The circumstances of the capture are detailed in the enclosed reports of Lieutenant Commanding J. L. Davis and Lieutenant G. C. Wiltse.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Commanding S. A. B. Squadron, pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander John L. Davis.

UNITED STATES IRON-CLAD MONTAUK,
Off Morris Island, February 27, 1864.

SIR: I have the honor to acknowledge the receipt of your order of this date to Commander Bryson, of the Lehigh, which was referred to me.

At twilight last evening, being at anchor abreast Wagner buoy, the picket boats received their orders from me governing them for the night. The boats from the Nipsic and Flag were to patrol across the channel in advance of this vessel, not more than two or three ship's lengths above, and to keep within sight. The flood tide was running; water smooth; atmosphere hazy. About 9 o'clock I saw and heard the flashes and reports of six or eight muskets in the direction of Sumter, and apparently they came from there. No signal was made. My impression was that the Supply's boat, which was reconnoitring, had been seen from the fort and fired at. On her return soon after, Lieutenant Wiltse reported what came under his observation, which is embodied in a communication herewith enclosed.

I have the honor to be, very respectfully,

JOHN L. DAVIS,
Lieutenant Commander.

Captain S. C. ROWAN, U. S. N.,
Commanding Frigate New Ironsides.

Report of Lieutenant G. C. Wiltse.

UNITED STATES IRON-CLAD MONTAUK,
Off Morris Island, February 27, 1864.

SIR: I respectfully submit the following report in regard to the capture of Acting Master's Mate William H. Kitching and boat's crew of five men, belonging to the Nipsic.

Last evening I received permission from you to take a boat belonging to the Supply, and reconnoitre in the direction of Sumter and Moultrie. I left the ship and pulled directly for Sumter. Shortly after, when within about 300 yards of the fort, I discovered a large boat of about fourteen oars, filled with men and lying close to the wall nearest Moultrie. After perceiving her I pulled in the direction of Moultrie, she pulling in the same direction. Thinking she was trying to cut me off, and having only one officer and a boat's crew of five men, I pulled in the opposite direction, towards Morris island, and then lost sight of her. About half an hour afterwards I saw a large boat coming towards me from the direction of Moultrie, apparently the same one that I had seen before. I heard a hail from a boat which I could not see. The answer was "Patapsco; this is the Nipsic's boat." It was immediately followed by a volley of musketry from the large boat and an order to come alongside. A cry arose from the other boat, as though some person was injured, and the reply to the

order to come alongside was, "I am coming." The rebel boat being so much larger than mine and in such close proximity to Sumter, I deemed it unadvisable to attack her. I immediately returned to the ship and reported the circumstances.

Very respectfully, your obedient servant,

G. C. WILTSE,
Lieutenant U. S. Navy.

Lieutenant Commander J. L. DAVIS,
Commanding U. S. Iron-clad Montauk.

Report of Lieutenant Commander R. F. R. Lewis.

UNITED STATES STEAMER NIPSIC,
Outside Blockade, off Charleston, S. C., February 27, 1864.

SIR: I am sorry to have to report the capture by the rebels of one of the boats of this vessel last night, together with her officer and crew, whilst doing picket duty in the inner harbor.

It appears from the statement given me this morning by the tug that the officer in charge of the boat either must have misunderstood or exceeded his orders with respect to the limits prescribed for rowing guards, and got too far up in the harbor, was hailed, brought to, and captured.

Officer in charge of boat—Acting Master's Mate William H. Kitching, jr.

Crew—George P. Johnson, landsman.

Lyman Holbrook, landsman.

Martin L. Atkinson, landsman.

Uriah B. Marshall, landsman.

William O'Brien, landsman.

The crew were each armed with carbine, cutlass, and revolver, with several rounds of ammunition.

The boat contained as her equipment a night glass, compass, lantern, and tarpaulins.

Very respectfully, your obedient servant,

ROBT. F. R. LEWIS,
Lieutenant Commander.

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron, off Charleston, S. C.

Report of Acting Master's Mate Wm. H. Kitching, jr.

NEWBURYPORT, November 3, 1864.

SIR: I have the honor to report to you the capture of the United States steamer Nipsic's 1st cutter, with five (5) men, in my charge, while on picket duty in Charleston harbor, on the night of February 26, 1864. I left the Nipsic between the hours of 5 and 6 p. m., and was towed up to the advance monitor by a tug-boat, and at 7 p. m. shoved off from the monitor with instructions to proceed up the channel in the direction of Forts Sumter and Moultrie. The night was thick and hazy, and the tide was on the flood, running strong. I pulled leisurely up until I had got abreast of Fort Sumter, when I changed the direction of the boat and pulled towards the fleet. I had got about one hundred and fifty (150) yards from Fort Sumter, when I caught sight of a dark object directly ahead, and almost immediately after was hailed: "Boat ahoy!" Under the supposition that the hail proceeded from one of our picket boats, I gave them in answer, "Nipsic's 1st cutter," as I did not wish the enemy to know the countersign. They hailed me again; I then gave the countersign "Patapsco." They hailed the third time, and beginning to have suspicions that

all was not right, I gave in return "*Catskill*." My object in doing this was, that the rebels should not know the true countersign. I had scarcely returned the hail when I received a volley of musket balls, which passed over our heads, doing us no damage. I immediately ordered my men to take to their oars, and "pull strong" in the hope of escaping, for I could see that the enemy's boat was superior to my own. I soon saw it was useless, so ordered my men to "*trail oars*," and give them a volley in return. I kept it up; but as no assistance arrived, I was forced to surrender, which I did after throwing the arms overboard. None of my men were wounded, myself but slightly. As near as I could find out, there were nineteen (19) men in the enemy's boat. We were taken on board their flag-ship, the *Charleston*, where we spent the night; the next morning were sent up to the city and placed under confinement. On the 17th of May I was sent to Macon, Georgia, and my men to Andersonville. That is the last I saw of them; I have since learned they are dead. The following are their names: George P. Johnson, Martin L. Atkinson, Uriah B. Marshall, William O'Brien, Lyman Holdbrook, all landsmen.

I certify this to be a true statement of my capture.

Very respectfully, your obedient servant,

WILLIAM H. KITCHING, JR.,

Acting Master's Mate, U. S. Navy.

Hon. GIDEON WELLES,

Secretary of the Navy.

OPERATIONS IN ST. JOHN'S RIVER, FLORIDA.

Report of Commander George B. Balch.

UNITED STATES STEAM-SLOOP PAWNEE,

Off Jacksonville, Florida, March 6, 1864.

ADMIRAL: I have the honor to report, that on the afternoon of the 1st instant sharp firing was heard in the direction of our advance, which I learned from General Seymour, on visiting him at his request, was between his forces and the enemy.

I dropped this ship in as close to McCoy's creek as the depth of water would allow, moored her head and stern, shifted three guns over, and made every preparation for a fight which seemed likely to take place.

The *Ottawa* shifted her anchorage just above the Pawnee, and by a hawser to this ship sprung her broadside in the direction of the approach of the enemy.

To Commander Creighton, of the *Mahaska*, had been assigned the defence of the flank by way of Hogan's creek, and he lost no time in taking an advantageous position.

As yet the enemy has developed no plan of attack, and I am of the opinion that he will rest satisfied in keeping our troops in and close around Jacksonville. You know how hard the enemy is pressed for supplies, and his force in front of Jacksonville enables him to drive cattle, &c., to the confederate forces in other parts.

Great activity has been shown here in erecting earthworks, &c., and I am confident that an attack on the forces now here would be handsomely repulsed.

We cannot get from the gunboats a cross-fire, but we can get an admirable flank fire. The rebels were at "Three-Mile Branch," and the artillery duel on the 1st instant took place from three to four miles from Jacksonville.

I sent an expedition last night under command of Acting Ensign Thomas Moore, of this ship, to Mandarin, distant fifteen miles up the St. John's, for the purpose of capturing a man named Jones. Mr. Moore was successful, and I

now have Jones on board the Pawnee. My reasons for taking him are, that he has been employed by General Finnegan in transporting stores, troops, &c. He is owner of a sloop, capable, I am informed, of carrying a company of men, and that he has been inimical to the Union people at Mandarin; in fact, I received yesterday information that this sloop was to be used to-night, or in a few days, for the purpose of transporting troops across to Mandarin to make a raid. I have, therefore, as a first step, taken Mr. Jones, and, if I can, will get his sloop.

That the raid may be stopped, I have just sent (9.30 p. m.) the Columbine, with a force detailed from this ship, under command of Lieutenant J. W. Philip, up the St. John's river, with directions to capture the raiders should the attempt be made to cross.

Re-enforcements are coming in, and some ten pieces of artillery arrived to-day.

The Dai-Ching will leave in the morning if the tide serves.

The Norwich is now at Yellow Bluff, and I shall send her down to Mayport to look out for our interests there; there are a number of refugees which have to be cared for.

I am happy to report all well on the station.

I am, very respectfully, your obedient servant,

G. B. BALCH,

Commander and Senior Officer present.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron, off Charleston, S. C.

Forwarded for the information of the Navy Department, by,

Very respectfully,

S. C. ROWAN,

Commanding S. A. B. Squadron, pro tem.

ENGAGEMENT AT PILATKA.

UNITED STATES STEAMER OTTAWA,
St. John's River, off Pilatka, March 21, 1864.

SIR: I have the honor to report to you that this afternoon, at 1.35, heard firing at the front; rebels advancing, and driving the pickets before them. At 1.40 p. m. weighed anchor and beat to quarters. At 1.45 commenced shelling the woods in the direction of the enemy, and back of the town, with the 150-pounder and 30-pounder rifle Parrott guns, at the same time dropping down the river to get an enfilading fire. At 2.15 ceased firing by request from shore, as the enemy were retreating.

At 2.25 moored ship, head and stern, in position to continue the action if necessary.

I am pleased to state that the efforts of this vessel were appreciated by the commanding officer on shore. It appears that there was no one injured on our side; the attacking force in the advance was not more than three hundred cavalry, I believe. I regret to say that two of the 30-pounder shell miscarried, one tumbling over and falling short, and the other exploding before reaching its proper destination. Fifteen shell were fired altogether. The loss of the enemy is not known. I presume the Columbine and her prizes have arrived at Jacksonville ere this, as they left here at 12.30 this afternoon. I would beg to remind you that this vessel is very much in want of coal.

Very respectfully, your obedient servant,

S. LIVINGSTON BREESE,

Lieutenant Commander.

Commander GEORGE B. BALCH,

Senior Officer, Commanding St. John's River, Florida.

WHOLESOME DREAD OF THE GUNBOATS.

[Extract.]

UNITED STATES STEAM-SLOOP PAWNEE,
Off Mayport Mills, St. John's River, March 24, 1864.

COMMODORE: The Ottawa still remains at Pilatka, and, I am pleased to state, gives increased confidence to the forces stationed at that place. I have been informed many times that the people in these parts have a wholesome dread of gunboats. I have the honor to report all well under my command, and that the most satisfactory relations exist between the commanding general and myself.

I am, very respectfully, your obedient servant,

GEORGE B. BALCH,
Commander and Senior Officer present.

Commodore S. C. ROWAN,
Com'dg S. A. B. Squadron, Flag-ship New Ironsides, off Charleston, S. C.

Respectfully forwarded for the information of the Navy Department, by
S. C. ROWAN,
Commodore, Commanding S. A. Blockading Squadron, ad int.

CONDITION OF AFFAIRS IN ST. JOHN'S RIVER.

UNITED STATES STEAM-SLOOP PAWNEE,
Off Jacksonville, Florida, May 10, 1864.

ADMIRAL: I have the honor to acknowledge the receipt of your communication of the 6th instant, by the Columbine, which arrived at 10 p. m. last evening.

In compliance with your directions to report the state of affairs in the river, I have respectfully to state, that there seems to be no movement of great importance by the rebels against our troops in this vicinity. From the latest information we have, I believe the force in front of Jacksonville does not exceed, at most, three thousand men.

General Gordon arrived yesterday, and has assumed command of the district of Florida. I beg leave to state, that I have referred to him the question as to whether the naval force can be reduced on the St. John's; his reply was, that at present it could not be, and in view of the long line of river to be kept open, I cannot but concur in the opinion of General Gordon.

Our forces occupy Picolata, and the rebels are exceedingly active in putting down torpedoes, even notwithstanding the vigilance which has been exercised; and I regret to report, that this morning the steamer Harriet A. Weed was destroyed by the explosion of two torpedoes whilst on her way to the bar, and following the transport Boston. The Mahaska's picket boat was quickly at the wreck, but as yet nothing has been saved, as the steamer sunk in less than one minute. There were five killed and two badly wounded. From an inspection of one of the covers of the torpedo, I am led to the belief that this torpedo is of the plunger pattern, such as were used in the Stono.

I deem it proper to report, that General Birney, late in command of this district, having received information that four hundred rebel cavalry had crossed at Fort Gates, formed an expedition, which he accompanied, for the purpose of capturing this force. He did not, however, succeed in meeting with the enemy, but has gotten a large number of cattle, some cotton, turpentine, &c.

Being short of provisions near Lake Harney, he asked for assistance of the Sumter, (a small prize steamer,) to transport supplies to him from Jacksonville. I sent the Sumter in company of the Weed, the latter vessel not being able to go up the river high enough to land the supplies. The Sumter has not returned, but I hope she will be down to-night or to-morrow.

Being exceedingly short of coal and having borrowed several times of the army, I was compelled to send the Unadilla to Fernandina to fill up, and I regret to report, that in crossing the bar she broke the extension shoe, and I am in receipt of communications which lead me to fear she will have to go to Port Royal for repairs. I regret this accident, and will endeavor to run over to Fernandina and see if it is absolutely necessary for her to go to Port Royal, though I fear it is. The army is short, very short of coal.

I am, very respectfully, your obedient servant,

GEORGE B. BALCH,

Commander and Senior Officer present.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron, off Charleston, S. C.

Respectfully forwarded for the information of the Navy Department.

J. A. DAHLGREN,

Rear-Admiral.

EXPEDITION TO CAPTURE FOUR HUNDRED REBEL CAVALRY.

UNITED STATES STEAMER PAWNEE,

Off Jacksonville, Florida., April 30, 1864.

COMMODORE: I have the honor herewith to transmit the report of Lieutenant Commander S. L. Breese, commanding the Ottawa, relating to an expedition sent up the St. John's for the purpose of capturing a rebel force of 400 cavalry, reported to have crossed near Fort Gates, to the east side of the St. John's, their design being to make a raid towards St. Augustine, and also to strip the Union people on that side of the river.

General Birney applied for any support that I could give; and orders were sent up for the Ottawa to convey the troops, and give every assistance to the troops, as also to Union people along the river. The Pawnee's launch, under Acting Master Champion, of this ship, was also detailed to accompany the troops.

The steamers and my launch have returned, leaving the troops under General Birney on the east side of the St. John's. Picolata is the point selected by General Birney to embark again, where he will find the steamers ready for him, I suppose, and will be conveyed to this place by the gunboats.

I desire to express my satisfaction at the prompt and efficient manner in which my orders were carried out by Lieutenant Commander Breese, of the Ottawa, and also by Acting Master J. C. Champion, of the Pawnee.

I have always found the Ottawa ready for service, and the service demanded of her well performed.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,

Commander and Senior Officer present.

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron.

Respectfully forwarded for the information of the department.

J. A. DAHLGREN,

Rear-Admiral.

CAPTURE AND DESTRUCTION OF BOATS, &c.

UNITED STATES GUNBOAT OTTAWA,
Off Picolata, Florida, April 28, 1864.

SIR: I have the honor to report that, in compliance with your instructions of the 26th instant, I convoyed in this vessel the steamers Mary Benton and Harriet A. Weeds as far as Dunn's creek, where General Birney came on board, and after a consultation concluded that I had better return to Pilatka, as there was not water enough for me to proceed as far as Fort Bates. After lending him the assistant surgeon, the pilot of this vessel, and supplying Mr. Champion with three days' rations for his men, I turned about and anchored off Pilatka. After anchoring, I fired three 150-pounder shells in the direction of Old Camp Call, at the general's request. Pilatka is deserted, though I was told that Dickinson has about thirty men encamped there.

At 11 a. m. to-day the steamers returned to Pilatka, not having gone further than Weleska, where the troops disembarked to proceed by land to Picolata—the steamers to meet them there.

On my way up the Pawnee's launch captured a sloop boat of about ten tons. Just above the flats she saw us coming, and was run into the bank, and attempted to be concealed by throwing brush over her; the crew had abandoned her.

Enclosed are two letters taken from her. With your permission I will retain her for a picket boat.

Before leaving Pilatka I destroyed the scow left by Colonel Barton, and the Pawnee's launch destroyed two boats and brought off one.

From what I can learn, there never were more than four hundred men in our front when the town was occupied. My men landed and were not disturbed. No hostile demonstration was made either in going or returning; I saw no troops. Dickinson was in Pilatka day before yesterday; so his raid with four hundred men was a mistake.

Very respectfully, your obedient servant,

S. LIVINGSTON BREESE,

Lieutenant Commander United States Navy.

Commander GEORGE B. BALCH,

Commanding St. John's River Flotilla, Jacksonville, Florida.

ENGAGEMENT AT MAYPORT MILLS.

UNITED STATES STEAM SLOOP PAWNEE,
Off Mayport Mills, Florida, March 30, 1864.

COMMODORE: I have the honor to enclose a communication of the 26th instant from Lieutenant Commander Breese, of the Ottawa, for your information. The Ottawa is rendering good service off Pilatka, in co-operating with our forces stationed at that place. I respectfully beg leave to report that about three hundred cavalry yesterday attacked and drove in our pickets to the intrenchments, and you will perceive, from the report of Lieutenant Commander Breese, that there are reports of a force of 5,000 men being in the vicinity of Pilatka. The Ottawa opened fire yesterday, but I have not yet received a report from Lieutenant Commander Breese in relation to the attack; when I do, which will probably be by next boat, I will promptly forward it for your information. I deem it proper to report that I had a conversation to-day with General Gillmore, who seemed anxious that an addition should be made to the naval force on this river, and in view of the large force believed to be concentrating in the vicinity of Pilatka, I respectfully suggest that an addition of at least one light-draught gunboat be sent here. When the Pawnee leaves,

which she will if possible on the next spring tides, say the 6th or 7th April, there will be only the Mahaska and Norwich off Jacksonville, and the Ottawa off Pilatka.

Knowing the many demands for the services of all the vessels of the fleet, it is with reluctance that I ask for another vessel; but I feel it my duty to call attention to the state of affairs here, that you may take such steps as in your judgment the necessity of the case requires.

The defences at Pilatka are said to be quite strong, though I have thought, from an inspection of the approaches to that place, that it was not easily defended. General Seymour, with whom I had frequent conferences, differs with me in opinion, and believes that it can successfully resist an attack from 10,000 men. The defences of Jacksonville are strong, and I have but little fear of an attack here. The Mahaska anchored so as to protect the left flank, taking the position held by the Pawnee, and the Norwich protects the right flank, having taken the Mahaska's position. The left flank we think the key to the position, and I have no doubt of our being able to successfully repulse any attack.

Should you deem it necessary to send a gunboat to the St. John's, I respectfully suggest a light draught, as it is impossible for even the Ottawa to get up to Pilatka without she is towed across the flats near Orange mills.

General Seymour has been relieved from the command of the district of Florida, and General Hatch has assumed command. I have expressed my readiness to co-operate in every way in my power.

I am, very respectfully, your obedient servant,

GEORGE B. BALCH,

Commander and Senior Officer present.

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron,

Flag-ship New Ironsides, off Charleston, S. C.

The Unadilla has been despatched to the St. John's, as requested by General Gillmore.

Respectfully,

S. C. ROWAN, *Commodore.*

EXPEDITION TO DUNN'S CREEK.

UNITED STATES GUNBOAT OTTAWA,

Pilatka, Florida, March 26, 1864.

SIR: I have the honor to inform you, that on the 24th instant I embarked on board this vessel thirty-six (36) soldiers, under the command of Captain Nichols and Lieutenant Tantrum, of the 48th New York volunteers, for the purpose of transporting them up the river as far as Dunn's creek. They were not prepared to start until dark, when I commenced steaming for the destination, but the pilot making a mistake, the vessel grounded before we had gone a mile. All exertions were made to get her afloat at once, but failed; she did not float again until near four o'clock in the morning, when it was too late to proceed. I anchored off Pilatka until half past two p. m. yesterday, when I got under way and proceeded to the creek. I then embarked the men (41 in all, 3 guides) in our launch, and 1st and 2d cutters. The command then set off up the creek in our boats. I returned to my position off Pilatka. I gave my boats at the request of Colonel Barton, who represented to me the necessity for having them. They returned this afternoon without accomplishing the object intended; none of my crew went. I have supplied the army with the necessary signals

for day and night. The deserters who come in represent the rebels as being 5,000 strong some 14 miles from here, and contemplate making an attack soon. We are prepared for them.

Very respectfully, your obedient servant,

S. LIVINGSTON BREESE,

Lieutenant Commander United States Navy.

Commander G. B. BALCH,

Senior Officer, Jacksonville, Florida.

MAPLE LEAF BLOWN UP BY A TORPEDO.

UNITED STATES STEAM-SLOOP PAWNEE,

Off Mayport Mills, Florida, April 1, 1864.

COMMODORE: I have just received information that the transport Maple Leaf was blown up by a torpedo when she was off Mandarin, distant fifteen miles above Jacksonville.

The Maple Leaf was on her way down the St. John's from Pilatka, and my informant states that her bow was blown off.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,

Commander and Senior Officer present.

Commodore S. C. ROWAN, U. S. N.,

Commanding S. A. B. Squadron, off Charleston, S. C.

Respectfully forwarded for the information of the Navy Department.

S. C. ROWAN,

Commodore, Commanding S. A. B. Squadron ad interim.

CORRESPONDENCE BETWEEN COMMODORE ROWAN AND GENERAL GILLMORE.

FLAG-SHIP NEW IRONSIDES,

Off Morris Island, S. C., April 2, 1864.

SIR: I herewith enclose, for the information of the department, copy of an official communication this a. m. received from Major General Gillmore, commanding Department of the South, and would respectfully state that agreeably to the request of the commanding general, I have detailed the Unadilla for the specified service.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Commodore, Comm'dg S. A. B. Squadron ad interim.

HON. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

HEADQUARTERS DEPARTMENT OF THE SOUTH,

Hilton Head, S. C., March 31, 1864.

SIR: I returned from Jacksonville and Pilatka this morning, and in view of the condition of affairs there, I respectfully request that another gunboat may, if possible, be added to the force in St. John's river. Captain Balch entertains the

same views that I do on this subject, and desires me to say that a boat drawing not over $8\frac{1}{2}$ feet of water would be preferable. It is not probable that the additional boat will be wanted these many weeks.

Very respectfully, your obedient servant,

Q. A. GILLMORE,
Major General Commanding.

Commodore S. C. ROWAN,
Commanding S. A. B. Squadron, off Charleston, S. C.

FLAG-SHIP NEW IRONSIDES,
Off Morris Island, S. C., April 2, 1864.

GENERAL: I have the honor to acknowledge the receipt of your communication of the 31st ultimo, by the hands of your aide-de-camp, Captain Bragg.

I shall comply with your wishes with great pleasure, and put another gunboat in the St. John's river as soon as Commander Reynolds can prepare the Unadilla. I am greatly in want of the number of vessels necessary to preserve the blockade, and will ask you to do me the favor to direct the general commanding the department of the St. John's to notify Captain Balch when the vessel can be safely withdrawn.

Very respectfully, your obedient servant,

S. C. ROWAN,
Commodore, Commanding S. A. B. Squadron.

Major General Q. A. GILLMORE,
*Commanding Department of the South,
Headquarters, Hilton Head, S. C.*

LETTER OF THANKS FROM BRIGADIER GENERAL G. P. HATCH.

[General Orders, No. 19.]

HEADQUARTERS DISTRICT OF FLORIDA,
Department of the South, Jacksonville, Florida, April 4, 1864.

The brigadier general commanding announces that the marine battery which was so promptly and cheerfully placed on the line of our intrenchments when they were first thrown up in the vicinity of Jacksonville, and at a time when it was much needed, has been ordered on board the sloop-of-war Mahaska.

The brigadier general commanding takes this opportunity to return his thanks to Captain G. B. Balch, commanding United States naval forces on the St. John's river, for his kindness, and to Ensign Augustus E. French, and the petty officers and men under him, for their valuable services, very good conduct, and exhibition of excellent discipline throughout their intercourse with the troops of this command.

By order of Brigadier General G. P. HATCH.

R. M. HALL,
*First Lieutenant 1st U. S. Artillery,
Acting Assistant Adjutant General.*

Captain G. B. BALCH,
Commanding U. S. Naval Forces, St. John's river.

Respectfully forwarded for the information of the department, as acknowledging the services of the navy and the officers named herein.

S. C. ROWAN,
Commodore, Commanding S. A. B. Squadron ad interim.

ATTACK UPON A REBEL BATTERY OFF PILATKA, FLORIDA.

UNITED STATES GUNBOAT OTTAWA,
Off Pilatka, Florida, March 29, 1864.

SIR: I have the honor to report that the enemy appeared in about the same force as on the occasion of my former report, this afternoon, and drove in the pickets. The batteries opened fire on shore, and I opened from this vessel with the 30-pounder and 200-pounder, firing one shell from the latter and nine from the former, when the signal was made to cease firing, the enemy having retired. The vessel was under way during the firing. Nobody hurt.

Very respectfully, your obedient servant,

S. LIVINGSTON BREESE,
Lieutenant Commander United States Navy.

Commander GEO. B. BALCH,
Comm'dg St. John's River Flotilla, Jacksonville, Florida.

EVACUATION OF PILATKA, FLORIDA.

UNITED STATES STEAM-SLOOP PAWNEE,
Off Jacksonville, Florida, April 16, 1864.

COMMODORE: I have the honor to report that our troops evacuated Pilatka on the 14th instant, and are now embarked on transports, and will go north immediately, reports say, to join the army of the Potomac.

I have withdrawn the Ottawa from Pilatka, where you will be pleased to learn she has rendered very good service. She has by my orders taken position off Picolata, a place forty-five miles above Jacksonville, where some two regiments are stationed. Picolata is on the east side of the St. John's, and from this point it was intended to scout that portion of the State between the St. John's and the coast; but this plan may be modified in consequence of the orders lately received to send the troops north.

The Unadilla and Norwich are still up the river, and assisted in convoying the troops.

Lieutenant Commander Lewis, of the Mahaska, rendered valuable assistance also.

I am, very respectfully, your obedient servant,

GEORGE B. BALCH,
Commander and Senior Officer present.

Commodore S. C. ROWAN,
Commanding S. A. B. Squadron, off Charleston, S. C.

NAVY CO-OPERATION WITH THE ARMY AT BULL'S BAY.

Report of Commodore S. C. Rowan.

FLAG-SHIP NEW IRONSIDES,
Off Morris Island, S. C., March 12, 1864.

SIR: In compliance with a request of Major General Gillmore (copy of which is enclosed) I sent a naval force, under the command of Captain Joseph F.

Green, to co-operate with the army at Bull's bay. The object of the expedition was a diversion.

I enclose a copy of Captain Green's report.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Captain, Com'dg S. A. B. Squadron, pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Captain Joseph F. Green.

UNITED STATES STEAM SLOOP CANANDAIGUA,
Off Bull's Bay Light-house, S. C., March 11, 1864.

SIR: I have the honor to report that, in obedience to your instructions, all the vessels of the outside blockade off Charleston, excepting the Wabash, rendezvoused off Bull's Bay light-house at six o'clock on the morning of the 9th instant. Seven army transports arrived in the course of the forenoon and immediately proceeded in over the bar, which had previously been buoyed, preceded by three gunboats.

Bull's island was found apparently unoccupied. Colonel Gurney, commanding the army part of the expedition, immediately landed a portion of his force, which remained on shore until yesterday morning, when, having accomplished his object, he re-embarked his troops and the expedition left this morning to return.

I took my departure for Port Royal, having ordered the commanding officers of the respective vessels to resume their stations off Charleston, and directing Commander Williamson to report their arrival to Captain DeCamp.

Very respectfully, your obedient servant,

J. F. GREEN,

Captain, and Senior Officer present.

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron, off Morris Island, S. C.

Requisition from Major General Q. A. Gillmore.

HEADQUARTERS DEPARTMENT OF THE SOUTH,
Hilton Head, S. C., March 7, 1864.

DEAR SIR: I have directed General Terry, commander on Folly and Morris islands, to make a demonstration or display of force to engage the attention of the enemy for a day or two, and have to request that, if not inconsistent with the interests of the service confided to you, you will render him such naval assistance as he may request.

Very respectfully, your obedient servant,

Q. A. GILLMORE,

Major General Commanding.

Commodore ROWAN,

Commanding U. S. Naval Forces before Charleston.

ATTEMPT OF A TORPEDO "DAVID" TO BLOW UP THE UNITED STATES STEAMER MEMPHIS.

*Report of Commander S. C. Rowan.*FLAG-SHIP NEW IRONSIDES,
Off Morris Island, March 13, 1864.

SIR: I enclose herewith a copy of the report of Acting Master R. O. Patterson, commanding United States steamer Memphis, giving the particulars of an attempt made by the enemy to blow up that vessel by a torpedo "David." The presumption is, that on the second attack made by the "David," the propeller (just then put in motion) struck the torpedo bearer and broke it off, and possibly disabled the "David."

I have directed out-riggers, &c. to guard against a repetition of the attack.

The commander of the Acacia reports having seen a torpedo-boat on the night of the 11th instant, while cruising off Rattlesnake shoal, but lost sight of it immediately.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Captain, Com'dg S. A. B. Squadron, pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

*Report of Acting Master R. O. Patterson.*UNITED STATES STEAMER MEMPHIS,
North Edisto River, S. C., March 6, 1864.

SIR: I have the honor to report that an attempt has been made by the rebels to blow up this ship, but am happy to state did not succeed.

A 1 a. m. a torpedo-boat was discovered about fifty yards distant, approaching us rapidly on the port quarter from up river. We immediately beat to quarters and slipped the chain; in an instant the torpedo was under our port quarter and we could not bring a gun to bear on her. The watch being armed at the time, we were enabled to concentrate a rapid fire with muskets, revolvers and pistols down upon her, and into what looked like a hatchway, nearly in the centre; the rapid firing seemed to stop her progress, and dropping about twelve feet astern, in an instant she darted ahead again, and at the same time we rang to go ahead, and our propeller, I think, must have caught and broke some of her gear, as she appeared to be disabled and drifted up river; in a few moments they showed a light, at which we fired a 12-pound rifle shot; she then disappeared, and an armed boat was immediately despatched to search for and capture her if possible, but returned without success. This torpedo-boat was about twenty-five feet long, painted lead color, and in appearance was like a ship's boat in the water, bottom up.

I am, sir, very respectfully, your obedient servant,

R. O. PATTERSON,

Acting Master, Commanding.

Captain S. C. ROWAN,

Commanding S. A. B. Squadron.

EXPEDITION FOR THE CAPTURE OF THE LITTLE ADA.

UNITED STATES STEAMER WINONA,
Off Suwanee River, S. C., March 25, 1864.

SIR: In obedience to your order of the 21st instant, directing us to proceed off the Santee river and to prevent the steamer loading at McClellanville from going to sea, and to use such efforts to capture said steamer as might best meet that end consistent with safety, I have to report that I left Charleston harbor in this vessel on the morning of the 23d instant, and arrived off the Santee at 5.30 p. m. of the same day. After making a careful reconnoissance of the north and south mouths of the Santee, I decided that there must be the deepest water in the latter, and anchored this vessel as near there as was prudent. At sunset I started a boat expedition in command of Acting Master E. H. Sheffield, executive officer of this vessel, consisting of the gig, second and third cutters, Acting Ensign William McKendry in charge of one cutter, and Acting Master's Mate L. A. Cornthwaite in charge of the other, Acting Second Assistant Engineer W. J. Barrington, Acting Assistant Surgeon Charles Little, and twenty-one of the crew. I gave Mr. Sheffield orders to proceed up the Santee, and if he discovered the steamer Ada to either destroy her or bring her out. At 4 a. m., on the 24th, the expedition returned, Mr. Sheffield reporting that he went 12 miles up the river, passed a village 11 miles up on the right bank, two wharves and several warehouses, but saw no vessel. The party was not discovered. At 11 a. m. communicated with the United States steamer Paul Jones. I learned from her pilot (a colored man and familiar with the country) that McClellanville is a small village on a salt water creek that makes into the sea just to the northward of Cape Roman, about eight miles distant. I started for the above-mentioned creek at 4 p. m. and anchored the Winona in sixteen feet of water near there at 5 o'clock. I again started the expedition with the same officers and men, having learned that the country on either side of the creek, up to the village, was nothing but a marsh. I ordered the officer in command to so time it as to arrive there on the commencement of the ebb tide, and to reconnoitre the first firm ground well before proceeding further. At 6 o'clock p. m. the expedition returned. Acting Master Sheffield reports that in consequence of the darkness of the night and the many bayous making into the creek, it was with great difficulty that he kept in it—in fact, several times he lost his way. At 6 a. m. this morning he discovered the village and a steamer lying at anchor off the bank, it being by that time broad daylight, and being fearful that he had been discovered, he determined to attempt the capture of the steamer. The boats got within a few hundred yards before they were perceived by the enemy. At this time a large number of men were seen rushing about the steamer's deck, and a boat was lowered immediately after. The gig and second cutter boarded her on the port side, the third cutter running across her bow, intercepting a boat which had the captain in her, and forcing him to return on board. The surprise was complete, and in five minutes the captain and crew were disarmed and below decks, with a sentry at each hatch. There being no indications of a battery, Mr. Barrington at once started fires; the chain was hove short, but she was so fastened with stern moorings that the chain could not be slipped, and they proceeded at once to cut it with cold chisels. Soon after a masked battery of three rifled guns (supposed to be about 12-pounders) opened on the steamer at short range, the shot striking about amidships, going in one side and out of the other, one shot penetrating the steam drum and another the boilers, destroying tubes, &c.; in fact, they had the range so perfectly that their shot completely riddled her; they were evidently prepared for an attack, as they had a target placed ahead and one astern of her, and were determined to disable her in case she was boarded. At

this time it was broad daylight, and as by remaining longer there would have been great danger of having the boats sunk, Mr. Sheffield had all the arms passed into them and reluctantly withdrew, feeling assured that the capture of our small force would have been the result had he not done so. The steamer proved to be iron, with scarcely any wood-work about her; what little there was of an inflammable nature about the vessel was wet, as it was raining heavily at the time. In consideration of this and the fact that there was no cargo on board, it was deemed best not to attempt to fire her; in fact to have remained five minutes longer would have imperilled the lives of the whole party, the enemy's fire being so severe. The steamer is not the *Ada*, as supposed, but the *Little Ada*, of Glasgow, commanded by a Baltimorean named Martin. He remarked to our officers that they had done their work well, and asked only to be treated as a gentleman and as a prisoner of war. No sooner did the boats leave, however, than this same man opened a fire on them from a small Whitworth gun which the *Little Ada* had mounted on her deck, and this fire was kept up some time after the batteries had ceased theirs, shrapnell bursting near the boats when they were a long distance off.

I cannot speak in too high praise of the conduct of the officers and men, with but one exception, Charles M. Muldoon, an ordinary seaman, an Englishman, and a man of no character, who deserted to the enemy. Although there was an abundance of liquor on board, and it was offered freely to the men, not one would take it, though they were cold and wet at the time. I was compelled by necessity to include five colored men in the party, and they behaved admirably under fire.

In conclusion, I wish to recommend to the favorable consideration of the Navy Department Acting Master E. H. Sheffield, Acting Ensign William McKendry, and Acting Master's Mate L. A. Cornthwaite. Acting Ensign William McKendry applied some time since for an appointment, and I think he has well earned promotion. Acting Assistant Surgeon Charles Little and Acting Second Assistant Engineer W. J. Barrington also deserve much credit for their coolness and zeal.

I am, sir, respectfully, your obedient servant,

A. W. WEAVER,
Lieutenant Commander.

Com. STEPHEN C. ROWAN,

Com'dg S. A. B. Squadron, Flag-Ship New Ironsides, Charleston harbor.

Respectfully forwarded for the information of the department.

S. C. ROWAN,
Commodore, Com'dg S. A. B. Squadron ad int.

RECONNOISSANCE UP CHICKISEE AND COLLETON RIVERS.

Report of Lieutenant Commander E. E. Stone.

UNITED STATES STEAMER CHIPPEWA,
Port Royal, South Carolina, March 31, 1864.

SIR: Agreeably to previous arrangement I got under way this morning having on board one hundred men from the 85th Pennsylvania regiment, under command of Colonel Howell, and proceeded on a reconnoissance, in company with the picket tug-boat Thomas Foulkes, up Chickisee and Colleton rivers. At the mouth of the Colleton river a few men were landed to search the houses on one of the Seabrook plantations; after leaving which, and while proceeding

up the river, we were fired upon from the wooded bank, on the port hand, by the enemy's riflemen. The fire was immediately returned by grape, canister, and shell, and I regret to state that two of our men were wounded; one slightly, the other severely in the arm. We found no obstructions or indications of batteries as far as we went, which I judged to have been about ten miles. Neither did we see more than twenty men in one body. The usual picket and signal stations were seen at the commanding points.

I am satisfied that there are no obstructions in Colleton river, except at points too high up for this vessel to be carried with safety or efficiency.

Accompanying please find surgeon's report of wounded.

Respectfully, your obedient servant,

EDWARD E. STONE,

Lieutenant Commander United States Navy.

Captain S. C. ROWAN,

Com'dg S. A. B. Squadron pro tem., off Charleston, S. C.

Casualties on board the Chippewa.

UNITED STATES STEAMER CHIPPEWA,

Port Royal, South Carolina, March 31, 1864

SIR: I have to report the following as a list of the casualties occurring to-day in the skirmish with the enemy on the Chickisee river, viz:

Michael Gorman, coal-heaver, gun-shot wound in left arm, very slight; Edward Reeves, first-class boy, (colored,) gun-shot wound of left arm, near the shoulder, passing through and grazing the humerus, making quite a serious flesh wound.

I am, sir, very respectfully,

H. L. GIBBS,

Acting Assistant Surgeon.

Lieutenant Commander E. E. STONE,

Commanding U. S. Steamer Chippewa.

CAPTURE OF STEAMERS GENERAL SUMTER AND HATTIE.

FLAG-SHIP NEW IRONSIDES,

Off Morris Island, April 2, 1864.

SIR: I herewith enclose extract from a communication received from Commander Balch, reporting the capture of the prize steamers General Sumter and Hattie Brock, also copy of a letter of instructions to Commander Balch, as to the temporary disposition of these vessels. I am not yet in possession of the detailed reports of the respective captures, which, when received, will be forwarded for the information of the department.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Commodore, Commanding S. A. B. Squadron ad int.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander G. B. Balch.

[Extract.]

UNITED STATES STEAM-SLOOP PAWNEE,
Off Jacksonville, Florida, March 23, 1864.

COMMODORE: I have the honor to report the arrival at this place of the Columbine and her prize, the steamer Sumter, as also the steamer Hattie Brock, captured by the prize steamer Sumter, armed and manned by a detachment of officers and men from the Pawnee, under the command of Acting Master J. C. Champion of this ship. I have not, as yet, received a detailed report from Mr. Champion, but will soon do so, as also a list of property secured by the expedition sent up the St. John's. I may mention, however, that 130 bales of cotton were brought down, $13\frac{1}{2}$ barrels of turpentine, and some 25 barrels of rosin, also railroad iron, &c.

The Hattie Brock is valuable, and will carry some 200 or 300 bales of cotton, and is fitted up as a passenger boat and has a fine saloon. She has been employed in transporting stores down the St. John's, which were brought over from Smyrna, doubtless having run the blockade.

At the earliest possible moment I will send exact lists of property captured, and I very respectfully ask instructions in reference to the two prizes, as also in relation to the captured property. May I ask that you will, as early as convenient, give me instructions as to how I shall proceed in these cases. I deem it proper to state, that a properly constituted court exists in this department of Florida, Judge Frazer, who has lately held court at Key West, where he has adjudicated many cases of prizes.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,

Commanding, and Senior officer present.

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron, off Charleston, S. C.

DESTRUCTION OF PENNEMAN'S MILL, IN ST. ANDREW'S SOUND, GA.

UNITED STATES BARK BRAZILIERA,
St. Andrew's Sound, Ga., April 14, 1864.

SIR: On the night of the 7th instant I took the guard-boat up the Saltilla river, and destroyed a saw-mill known as the Penneman's mill, situated 27 miles from the sound. The building was used as a picket station, and was at work cutting cross-pieces for a railway. We landed cautiously and effected our purpose. After exchanging a few shots with the rebels, they withdrew, giving us full sway.

Per United States steamer Oleander I send to Port Royal two contrabands that escaped from the main on the 12th. I also send J. J. Hall, seaman, sent north for medical treatment. Received per United States steamer Oleander a circular from Navy Department, dated March 6; also general order No. 30.

I have the honor to remain, very respectfully, your obedient servant,

W. T. GILLESPIE,

Acting Master, Commanding.

Commodore J. C. ROWAN,

Commanding S. A. B. Squadron pro tem.,

United States Steamer New Ironsides,

off Charleston, South Carolina.

NAVY AND ARMY EXPEDITION UP THE ST. JOHN'S,—CAPTURE OF COTTON, &c.

Report of Commodore S. C. Rowan.

FLAG-SHIP NEW IRONSIDES,

Off Morris Island, April 14, 1864.

SIR: I have the honor to enclose, for the information of the department, communication received from Commander G. B. Balch, senior officer present in the St. John's, under date of April 1, enclosing detailed reports of Acting Master J. C. Champion of the Pawnee, and Acting Ensign F. W. Sanborn of the Columbine, of the expedition up the St. John's, together with invoices of captures made during the expedition, and list of prisoners taken from the steamer General Sumter.

Also communication, under date of April 5, from Commander Balch, enclosing copy of his letter to Brigadier General J. P. Hatch, commanding United States forces in Florida, together with the reply of General Hatch.

I have the honor to be, very respectfully, your obedient servant,

S. C. ROWAN,

Commodore, Commanding S. A. B. Squadron ad interim.

Hon. GIDEON WELLES,

*Secretary of the Navy, Washington, D. C.**Report of Commander G. B. Balch.*

UNITED STATES STEAM SLOOP PAWNEE,

Off Mayport Mills, Florida, April 1, 1864.

COMMODORE: I have the honor herewith to enclose, for your information, the detailed reports of Acting Master J. C. Champion of the Pawnee, and Acting Ensign F. W. Sanborn of the Columbine; as also invoices of articles captured during the expedition up the St. John's.

The indefatigable labors of these officers, and those under their command, call for a warm acknowledgment in their favor, and I respectfully beg leave to testify my appreciation of the service rendered by Acting Master J. C. Champion and Acting Ensign F. W. Sanborn, as also Acting Master's Mate T. L. Fisher and W. B. Spencer. Mr. Alfred Adamson, 2d assistant engineer of the Pawnee, and Mr. Arthur Price of the same vessel, rendered valuable service in working the engines of the prizes; indeed all hands did well and succeeded in penetrating the St. John's river two hundred and twenty miles above Jacksonville, bringing away two steamers and some ninety-three bales of cotton, and other valuable property.

I should be greatly gratified if Acting Master J. C. Champion, Acting Master's Mate Thomas L. Fisher of the Pawnee, and Acting Ensign F. W. Sanborn and Acting Master's Mate W. B. Spencer of the Columbine, could be promoted one grade, respectively. I feel well assured that they would endeavor to merit consideration in the future for such promotion, and I cheerfully ask for it for them, but entirely without their solicitation.

I am, very respectfully, your obedient servant,

GEORGE B. BALCH,

Commander and Senior Officer present.

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron, off Charleston, S. C.

The recommendation contained in above communication approved, and forwarded for the consideration of the department.

S. C. ROWAN,
Commodore, Commanding S. A. B. Squadron ad interim.

Report of Acting Master J. C. Champion.

UNITED STATES PRIZE STEAMER HATTIE,
Off Jacksonville, March 23, 1864.

SIR : I have the honor to report, in obedience to your orders of the 9th instant, I proceeded up St. John's river in charge of the Pawnee's launch in tow of the United States steamer Columbine, having under my command Acting Master's Mate Thomas L. Fisher and twelve men as volunteers, Second Assistant Engineer Alfred Adamson, Third Assistant Engineer Arthur Price, and four firemen. On the morning of the 10th instant anchored off Pilatka; shortly after, army transports, conveying troops, arrived to occupy the town. Ascertaining from Colonel Barton, who was in command, that the services of the Columbine and launch were not requisite for their protection, we proceeded up the river to Buffalo Bluff, where we found one Hampton Daniels, who kindly offered to guide us where a quantity of spirits of turpentine and rosin were hidden. Under his guidance we went in the launch up the Oclawaha river nearly five miles, then up a creek to the right nearly one and a half mile, there obtaining thirteen barrels of turpentine and twenty-five barrels of rosin. As Colonel Barton expressed a wish for us to return on the 11th to Pilatka, we did so. At daylight of the 12th instant we again left Pilatka, and proceeded up the river, and at 6.30 p. m. anchored in Great Lake George, near Drayton's island. Seeing a suspicious light on the main land, we went in the launch to ascertain the cause of the same; finding nothing unusual, we proceeded to the house of W. P. Rembert, on Drayton's island, to ascertain the whereabouts of his son, whom I learned was in the rebel service, but was anxious to get clear, but did not succeed in finding him. At 10.30 p. m. returned to the Columbine, and found that during my absence she had captured the river steamer Sumter on her passage from the upper lakes to the Oclawaha with only a few passengers. Transferred the passengers and crew of the Sumter (excepting the cook, whom we retained as guide) to the Columbine. I then assumed command of the Sumter, transferring all arms and ammunition from the launch, also the officers and crew under my command, together with Acting Master's Mate W. B. Spencer, Acting Third Assistant Engineer Henry Johnson and six men from the Columbine. At midnight proceeded up Great Lake George and St. John's river. Owing to defective machinery and want of wood we did not reach Lake Monson until the morning of the 14th instant. As soon as we could see the landmarks, we proceeded across the lake to St. John's river, and followed it up to Deep creek, where we found the steamer Hattie. At 4 p. m. I assumed command of the Hattie, giving the command of the Sumter to Acting Master's Mate Spencer. At 4.15 p. m., with the Hattie in tow of the Sumter, we proceeded down the river, the engineers and men of their department in the meantime overhauling the Hattie's engines and putting them in working order, and were obliged to make wooden valves for the feed-pumps, as the original ones had been taken away. Stopped at Watson's landing, where we saw cotton on our passage up, and took the same on board of the Hattie, finding it stowed in five different places at some distance apart. At 10.30 p. m. proceeded down the river. At 11.30 p. m. started the engines of the Hattie, and found them to work finely. Owing to some defect in the Hattie's rudder, or her bad steering

qualities, we were obliged to be towed by the Sumter. Notwithstanding all precautions we could not keep her clear of the overhanging trees in this very narrow and circuitous river; consequently I was not able to deliver the Hattie to you in as good order as we found her. On the afternoon of the 16th we were joined by the United States steamer Columbine (the Columbine having returned to Pilatka, when I assumed command of the Sumter, and was again sent back to look for us) at the head of Lake Monroe. The three steamers then proceeded to the wharf at Enterprise to procure wood; while there we found a small metallic boat belonging to the Hattie, which we took possession of. After wooding, all steamed out in the centre of the lake and anchored for the night, having brought away the following colored persons: three females and one male belonging to Mr. Sanchez, two males of Gilead Parsons, one male of Captain Brock, and one female of John Sinclair. The colored man of Captain Brock informed Acting Ensign Sanborn, commanding the Columbine, where there was some sugar intended for the rebel army. The Columbine returned for the sugar, near Enterprise, on the morning of the 17th, while the Hattie, accompanied by the Sumter, proceeded down the lake. During the afternoon we were rejoined by the Columbine (she having obtained some sugar and destroyed all but one of the kettles where it was manufactured) and taken in tow by her. At 8 a. m., March 18, stopped at Volusia for wood, and there found a cotton-gin, grist-mill, steam-engine, two worthless rifles, and a small quantity of unginned cotton, which articles we took possession of, and destroyed a boiler. The place is owned by a man named Doyle, whom I learned was in the rebel service. At 10.30 a. m. proceeded down the river. At noon the Columbine and Hattie were fast on the bar at the head of Great Lake George, and not until 7 p. m. of the 19th were we over it; then anchored for the night. Before the Columbine succeeded in crossing, every movable article was taken from her. With Hattie on one side and Sumter on the other, she was then raised nearly eight inches by wedges and long levers placed upon the guards of the prize steamers. At 9 a. m. of the 20th instant came to anchor near Rembert's plantation, on Drayton's island, to obtain wood, and while there captured the son of W. P. Rembert, who had been in the rebel service. Learning from Rembert's overseer that eighty rebels were lying in wait for us at Fort Gates, near Little Lake George, we barricaded ourselves with bales of cotton, but passed the place without seeing any one. At Gardusi's distillery, below Welaka, we stopped to take possession of all the copper apparatus for distilling spirits of turpentine; in the mean time sent the Sumter with the launch's crew in charge of Master's Mate Spencer up the Oclawaha to obtain a large quantity of rosin that we left there on our first trip. The Hattie, in tow of the Columbine, proceeded down to Pilatka. At 8 p. m. anchored off the town. On the 21st, the Sumter not making her appearance, with your permission the Columbine went in search of her after towing the Hattie to Pilatka wharf, that we might obtain wood and take in our first capture of spirits of turpentine, rosin, and five bales of cotton—the latter obtained at Drayton's island. At 10 a. m. the Columbine returned with the Sumter in tow, the latter having her engine in a disabled condition. Acting Master's Mate Spencer reported that he was unable to reach the position of the rosin with the Sumter, or even by boats, as the rebels had felled trees across the river in many places. At noon the Hattie and Sumter, in tow of the Columbine, left Pilatka wharf and proceeded down the river. At 5.15 p. m. stopped at Socai's landing to take in some railroad iron belonging to St. John's and St. Augustine railroad, but owing to a severe storm were unable to work. By noon of the 22d instant had taken in all the loose railroad iron, obtained wood, and proceeded down the river. At dark anchored near Piney Point for the night. At 5 a. m. of the 23d, under way; proceeded down the river. At 7 a. m. came to anchor off Jacksonville, having been in the enemy's country nearly two weeks, without meeting any rebels with arms or any accident worthy of note.

The officers and many of the crew under my command did nobly during this tedious expedition, and I would especially recommend Thomas L. Fisher, master's mate, and Charles McDonald, seaman, for promotion.

I would call your attention to the valuable services that Captain Tumblin (who was in command of the Sumter when captured) has rendered us in acting as pilot of the Columbine; also to the following colored persons, to whom we are indebted for the capture of the Hattie and cotton: Henry, acting ship's cook of the Columbine, and Willie, who was cook of the Sumter when captured.

Very respectfully, your obedient servant,

JOHN C. CHAMPION,
Acting Master U. S. N.

Commander GEORGE B. BALCH,

Senior Officer present, Com'dg Naval Forces in St. John's River, Fla.

Report of Acting Ensign F. W. Sanborn.

UNITED STATES STEAMER COLUMBINE,
St. John's River, Florida, March 20, 1864.

SIR: I have the honor to report to you, that I left Pilatka with this vessel on the morning of the 14th, and at night anchored ten miles to the southward of Great Lake George, having lightened her across the bar.

At early daylight of the 15th, again weighing anchor, I ran to Enterprise by three, we having wooded at Hawkinsville. On my arrival here I saw the Sumter and Hattie approaching, when I anchored and waited their approach. Just before reaching Enterprise the vessel caught on fire, but was soon extinguished. After communicating with the other vessels, we all ran to the wharf and wooded up, after which we anchored in the mouth of the lake.

Having received information of a sugar refinery being in operation, making sugar for the Confederate States, about two miles from Enterprise, I determined to destroy it, and for this purpose, on the morning of the 16th, I sent Mr. Davis with the launch, and seven of the 48th New York ashore. He succeeded in destroying the greater portion of the works, and by impressing negroes, cattle, and wagons, in transporting the greater portion over about a mile and a half of country to the river, where I put it on board the Sumter. I would have more entirely destroyed it, had I deemed it worth the loss of life; but as a force of thirty or forty guerillas were approaching, and as they outnumbered us, we retired.

As the Hattie had gone down the river ahead, I took the Sumter in tow, and ran down the river. I had not gone over ten miles before I found the Hattie ashore, unmanageable; I took her in tow, and at night anchored about ten miles from Volusia.

On the morning of the 17th ran to Volusia, at which place we found a cotton-gin and corn-mill, together with a good engine and boiler, which last we destroyed, taking the rest on board the Hattie. We also found some cotton unginned, but while removing it on board the Hattie some person or persons unknown set it and the store-house on fire, both of which were soon consumed and destroyed. At about 3 p. m. we again started down the river. Just before reaching the bar at Great Lake George I let go the other vessels, and attempted to cross the bar, but could not; the Hattie also grounded. I endeavored to get her off, working till late, discharging shell, provisions, and fuel. The Hattie was unsuccessful in getting off the bank.

On the morning of the 18th I requested Mr. Champion to send me some men, which he kindly did; and I used every available means in my power to get

off, without success. I then sent my heavy deck tackles and my own crew to the Hattie, and they succeeded in getting her afloat. Coming alongside, they (the Sumter and Hattie) endeavored to pull this vessel off, but were unsuccessful. Both vessels having by this time become short of wood, I despatched the Sumter to Volusia for some, at 4 p. m. At 7.30 p. m. she returned, bringing two heavy timbers, which I sent for to assist in getting the ship afloat.

On the morning of the 19th I got the Sumter on one side and the Hattie on the other, and succeeded in getting afloat and over the bar; came to anchor 7.30 p. m. over the bar, and by 10 p. m. we had again received on board my guns, ammunition, and stores. At 7 p. m. weighed anchor and crossed the lake, stopping at Mr. Rembert's place to wood up. I went on shore and arrested Mr. W. P. Rembert, jr., formerly a lieutenant in the Confederate States army. After wooding, ran to Welaka, where we again wooded up. The Hattie taking on board the boiler and worm of a turpentine distillery from here, I sent the Sumter with some men up the Oclawaha, to take on board some rosin which was about five miles up the river; giving orders to use all possible haste and to follow us to Pilatka. After getting the copper boiler and worm on board, we immediately started for Pilatka, where we arrived at 8 p. m.

Respectfully, your obedient servant,

F. W. SANBORN,
Acting Ensign, Commanding.

Commander GEORGE B. BALCH,
Senior Officer present, Com'dg Naval Force, St. John's River.

Vessels and materials captured.

UNITED STATES STEAMER COLUMBINE,
St. John's River, Florida, March 25, 1864.

SIR: I have the honor to report the capture of the following prizes:

March 11, 1864.—The Pawnee's launch captured twenty-five barrels rosin and thirteen barrels spirits turpentine on the Oclawaha river.

March 12.—We captured the Confederate States steamer General Sumter on Big Lake George. She had on board one barrel copperas and one spy-glass. The spy-glass was expended for the Columbine's use.

March 13.—We captured five bales cotton, marked W. P. R., belonging to W. P. Rembert.

March 14.—The steamer Hattie captured by the prize steamer General Sumter, in Deep creek. Captured ninety-three bales cotton at Watson's landing, and put it on board of the prize steamer Hattie; the weight of which is in Acting Master Champion's report.

March 16.—We captured and put on board the prize steamer General Sumter five barrels of sugar; the weigh of which is in Acting Master Champion's report.

March 17.—One cotton-gin and engine captured at Volusia, belonging to Doyle.

March 20.—One copper boiler and one copper worm captured at Welaka, belonging to Gardiner.

March 21.—From five to six hundred bars of railroad iron captured at Decoy, belonging to St. John's Railroad Company.

(Two barrels sugar expended for ship's use.)

I have the honor to remain, very respectfully, your obedient servant,

F. W. SANBORN,
Acting Ensign, Commanding.

UNITED STATES STEAMER COLUMBINE,
St. John's River, Florida, March 25, 1864.

SIR: I have the honor to report to you the names of the prisoners taken aboard of confederate steamer General Sumter, March 12, 1864.

W. W. Tumblin, captain of the steamer; O. C. Skinner, engineer; Berry Justice, deck hand; William Leman, deck hand; Amos Emanuel, passenger; A. C. Emanuel, passenger; S. G. Cabbell, passenger; T. R. Craig, passenger; D. H. Welles, passenger; G. M. Bowen, passenger.

I have the honor to remain, very respectfully, your obedient servant,
F. W. SANBORN,
Acting Ensign, Commanding.

Commander GEO. B. BALCH,
Commanding Naval Forces, St. John's River, Florida.

Correspondence between Commander Balch and General Hatch.

UNITED STATES STEAM SLOOP PAWNEE,
Off Mayport Mills, Florida, April 5, 1864.

COMMODORE: I have the honor herewith to transmit the reply of Brigadier General J. P. Hatch, commanding district of Florida, to the letter which I addressed to him by your order of March 28 ultimo, as also a copy of my letter to the general.

I deem it proper to report that I have sent the Mahaska and Norwich up the St. John's for the purpose of more effectually patrolling the river, and have directed that they convoy all transports going up and coming down.

The Mahaska and Norwich have that portion of the river below the flats at Orange mills, and the Ottawa, assisted by the Harriet A. Wood, the portion above the flats.

I was informed by the commanding officer at Pilatka, two days since, that the enemy intended putting up batteries on the river, as he learned from rebel deserters.

I have the honor to acknowledge the receipt of your order of the 25th ultimo, directing me to detain the Pawnee until I received further instructions.

With the Mahaska and Norwich up the river, I do not think that the communications with Pilatka can be seriously threatened. Batteries will probably be thrown up on the bluffs favorably situated for the annoyance of our transports; but we shall be able to drive the enemy out of them.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,
Commander, and Senior Officer present.

Commodore S. C. ROWAN,
Com'dg S. A. B. Squadron, Flag-ship New Ironsides, off Charleston, S. C.

UNITED STATES STEAM SLOOP PAWNEE,
Off Mayport Mills, Florida, April 4, 1864.

SIR: I am in receipt of a communication from Commodore S. C. Rowan, commanding South Atlantic blockading squadron, in which he expresses a desire to obtain the views of the commanding general of the United States troops in Florida in reference to the necessity of retaining the naval forces in the St. John's.

May I ask that you will, at your earliest convenience, be pleased to inform me if there be a necessity for retaining the naval forces in the St. John's, and if the whole naval force now here is necessary, or if the naval force may, without detriment to the public service, be reduced.

I am, general, very respectfully, your obedient servant,

GEO. B. BALCH,

Commander, and Senior Officer present.

Brigadier General G. P. HATCH, U. S. A.,

Commanding District of Florida, Headquarters, Jacksonville.

HEADQUARTERS DISTRICT OF FLORIDA,

Department of the South, Jacksonville, Florida, April 5, 1864.

CAPTAIN : I have the honor to acknowledge the receipt of your letter of yesterday's date, informing me that the commander of the South Atlantic blockading squadron desires my views as to the necessity of a naval force in the St. John's river.

In answer, I would state that I consider it very important, I may say necessary, that a naval force should be retained here as a patrol of the river, to aid us in the event of an attack, and to cover the landing of the troops at other points.

The points of Jacksonville and Pilatka, although important as political positions, to be used in inducing the people of the State to return to their allegiance, are not strategical, and are both closely invested by the enemy. To make an advance, it would be necessary to transport the troops to other points, and the landing should be under cover of a strong naval force.

The length of the river now occupied, (one hundred miles,) requires for its thorough patrol a naval force of the size of the present squadron. In this opinion General Gillmore concurs.

Very respectfully, your obedient servant,

GEO. P. HATCH,

Brigadier General, Commanding.

Captain GEO. B. BALCH,

Commanding U. S. Naval Squadron in St. John's River.

RECONNOISSANCE UP MAY RIVER.

UNITED STATES STEAMER CHIPPEWA,

Port Royal, S. C., April 19, 1864.

SIR : On the morning of the 7th instant I proceeded on a reconnoissance up May river, accompanied by Colonel Howell, who had with him a detachment of seventy-five men of the 85th Pennsylvania regiment, on board the picket boats Thos. Foulkes and Croton. On arriving at the deserted plantation of James Kirk, and within a mile of the town of Blufftown, a landing was effected and the pickets driven in, after an exchange of a few musket-shots, and two or three from the 30-pounder Dahlgren rifle of this ship. Having found that there were no obstructions in the river, and that the enemy were not in force at or near Bluffton, we returned to our night station.

Respectfully, your obedient servant,

EDWD. E. STONE,

Lieutenant Commander United States Navy.

Commander WM. REYNOLDS,

Commanding Naval Station, Port Royal, S. C.

TORPEDO ATTACK ON THE WABASH.

UNITED STATES STEAMER WABASH,
Off Charleston, S. C., April 19, 1864.

SIR: I have to report that last night at about 9.45 an object was discovered by Ensign Charles H. Craven, the officer of the deck, on the starboard quarter, distant about one hundred and fifty yards, which corresponded in shape and movements to the torpedo boat which sunk the Housatonic. It moved rapidly up against the tide till about the mainmast, then turning, stood directly for the ship. Ensign Craven opened fire with musketry; beat the gong for the crew to assemble at quarters; rang four bells for the engine to go ahead; opened fire with the watch with the starboard battery; and gave orders for slipping the chain. The men rushed quickly to their quarters; the ship moved ahead; the chain was slipped, and when the object was being left in the quarter, distant at the time about forty yards, a round shot is supposed to have struck it; at all events, the second shot struck in its immediate vicinity, and it was seen no more. One round shot was fired from each of the spar-deck guns on the starboard side, and the crew were kept at their quarters, while, with the helm hard a-port, the ship kept cruising round the spot.

The marines were also stationed along the starboard side, where they could use their pieces to advantage. Signal was made to the effect that "rams were coming," as that most likely to place the other cruisers on their guard, and soon the Canandaigua and Flag came up within hail. Chaplain Davis, Paymaster Richardson and Dr. Burbank all saw the object spoken of, which corresponded exactly to the description given of the torpedo boat which sank the Housatonic, except that this had but one elevated place or turret.

I am, sir, very respectfully, your obedient servant,

J. DE CAMP, *Captain.*

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron, off Charleston, S. C.

DESTRUCTION OF A MILL AND 5,000 BUSHEL OF RICE NEAR WINYAH BAY, S. C.

UNITED STATES STEAMER CIMARRON,
Winyah Bay, S. C., April 22, 1864.

SIR: Having learned from a contraband whom we picked up on South island on the 30th instant, that the rebels were removing rice from a mill about five miles distant to the main land, I determined, if possible, to take them prisoners and to destroy it.

This report was confirmed by Prince, our pilot, a very reliable man, who informed me that the rebels had some 15,000 bushels of rice stored in the mill alluded to.

At 10 p. m. of that day I sent an armed expedition of 30 men, in charge of Acting Master John K. Crosby, with Acting Ensign George F. Howes and Acting Master's Mate Edward P. Crocker, to assist him, with orders to land at a point about one mile distant from the mill, to lie in wait until the morning, seize the persons employed in loading the flats, destroy the building and return to the ship. A landing was effected without difficulty, and, guided by Prince, the party reached the mill at midnight and remained quartered there until the following morning, the 21st.

Traces of men, such as foot-prints, and rice scattered around near the landing of the flat-boats, gave unmistakable evidence of their recent presence, and of

the manner in which they had been employed the day before; but no men were seen, neither were any flat-boats discovered. I presume scouts had been stationed on the island to warn them of our approach. They had taken all the rice but about five thousand bushels, which we had no means of removing, and to prevent it from falling into the hands of the enemy the mill was set on fire and completely destroyed, when the party returned to this vessel.

Very respectfully, your obedient servant,

A. K. HUGHES, *Commander.*

Commodore S. C. ROWAN,

Commanding S. A. B. Squadron.

DESTRUCTION OF SALT WORKS AT CANE PATCH, S. C.

UNITED STATES BARK ETHAN ALLEN,
Off Murrill's Inlet, S. C., April 23, 1864.

SIR: I have the honor to submit the following report:

On learning, from contrabands I have on board, of extensive salt-works at a place called Cane Patch, twelve miles N. E. of this inlet, I got under way on the morning of the 21st instant, with a light breeze, and stood along the coast. When eight miles from this inlet we discovered one man and two women by an old house on the beach, waving a white flag. I hove the ship to, and sent in an armed boat in charge of Acting Ensign William Mero. He landed under the cover of our guns. The three came down to the boat, one of the women handing Mr. Mero a note, telling him that some of their party would like to come off that night. The man being a mulatto—contraband—improved the opportunity of making his escape, and came off in the boat. After reading the note, which you will find enclosed, I filled away and stood along the coast. When about two miles further on, I discovered two more negroes on the beach with a white flag; sent a boat and took them on board. I then proceeded on, arriving off the salt-works about two p. m. I hove the ship to, opposite the works, and within easy range. My executive officer being unwell, I left him in charge of the ship, taking Acting Ensign Wm. Mero and twelve men with me, and landed safely near the works. I deployed part of the men as pickets, to prevent a surprise, Mr. Mero taking the remainder as a working party to destroy the works. On examination we found the works much more extensive than I expected, they being partly concealed from the ship by a high sand ridge. There were four separate works, each containing twelve large pans, the water being raised from the beach by horse-power, leading into a cistern large enough to contain one hundred thousand gallons, built of timber, planked and caulked on the inside. There were twelve pans ready for setting, also timber and materials for extending the works to double their size. There were about thirty buildings, three of them large warehouses, built of heavy logs, containing about two thousand bushels of salt, a large quantity of rice, corn, and bacon. One of the warehouses was constructed as a block-house, with loop-holes on all sides. The salt pans were six feet by four, and from six to eighteen inches deep, and of cast-iron, which were easily broken. After breaking all the pans, making it impossible to repair them, and having no other way of destroying the salt, I had it mixed with sand as far as time would allow, then set fire to all the buildings, also to about fifty cords of pine wood. The buildings being built of pine logs, were soon enveloped in flames. On landing, we discovered two white men and one old negro behind a fence, who immediately gave themselves up. The rest, about thirty in number, took to the woods on our approaching the shore. While we were destroying the works, four negroes came out of the

woods and assisted us in the work of destruction. Two of them wishing to get their families before leaving, I allowed them to remain, also the old negro who had his cabin near by; his wife being a free woman, he did not wish to leave. Taking the two white men and the two contrabands, we returned to the ship, arriving on board at five p. m., filled away and stood back for the inlet. The wind being light, we made but little headway during the night. At 9 o'clock the next morning we were off "Withers's Swash," and saw a man behind the house before alluded to, waving a white handkerchief. I sent the second cutter, in charge of Mr. Mero, and took him on board. His name is Allen Jones, of North Carolina. He reports himself to be a commissary sergeant of the rebel army. He informed me that the house on the beach had a furnace in it, with boilers for making salt, and that Mr. Chilton, the owner of the works, was in the edge of the woods and wished to communicate with me. I armed and manned two boats, putting them in charge of Acting Master W. H. Winslow, executive officer, and Acting Ensign James H. Bunting, with orders to destroy all the pans. They landed safely, destroyed the works, and returned to the ship at eleven a. m. We then filled away, and arrived off the inlet at four p. m. Enclosed you will please find Mr. Winslow's report.

I am, sir, very respectfully, your obedient servant,

J. A. PENNELL,
Acting Master, Commanding.

Commodore STEPHEN C. ROWAN,
Commanding S. A. B. Squadron pro tem.

DESTRUCTION OF SALT WORKS AT WITHERS'S SWASH, SOUTH CAROLINA.

UNITED STATES BARK ETHAN ALLEN,
Off coast of S. C., April 22, 1864.

SIR: I have the honor to report, in obedience to your orders, I landed at Withers's Swash, with two armed boats' crews, and throwing out one as pickets, in charge of Acting Ensign J. H. Buntin, with the other destroyed six old long steam-boilers, set as salt-pans, with such portions of the masonry as possible, but leaving the building as a shelter for refugees, as per orders. A man named Asa Chilson made the following communication:

That he was a citizen of North Carolina; that he occupied the salt works as a cover to his design of giving himself, and a party of forty others, including one rebel ex-colonel, up to the blockading vessels; that they were in the woods, and he was only waiting for his daughter and certain personal property on the way from his plantation; that he had a quantity of turpentine, which I informed him we could not take; that three weeks from date he would be ready, and when there was no danger, he would hold his arms up vertically, or make a sign a mason would understand, as a signal for us to send boats to take him and party on board. He also informed me that five hours previously, a messenger had gone for a force of cavalry thirteen miles away; so my work being accomplished, I immediately embarked.

I am, respectfully, your obedient servant,

W. H. WINSLOW,
Executive Officer.

J. A. PENNELL,
Acting Master, Commanding.

OPERATIONS ON ST. JOHN'S RIVER, FLORIDA.

Report of Commander G. B. Balch.

UNITED STATES STEAM-SLOOP PAWNEE,
Off Jacksonville, Florida, May 14, 1864.

ADMIRAL: I have the honor to report that the prize steamer Sumter, in charge of Acting Master J. G. Champion of this ship, returned to this anchorage on the evening of the 12th instant. As you have already been informed, by my letter of the 10th instant, she was sent up for the purpose of carrying supplies to the troops under command of General Birney, near Lake Harney. She successfully accomplished this duty, and returned with a quantity of cotton captured by the general in that vicinity. The cotton was turned over promptly to the treasury agent at this place. Acting Master Champion reports having been fired into several times on his passage down the St. John's, but no one was wounded. On the passage up the river, in company with the Harriet Arveed, a sharp fire from the banks, with small arms, was opened on the vessels, and Charles W. Morgan, O. S., attached to the Pawnee, was slightly wounded. There were no other casualties to report.

I have the honor to report all quiet on the St. John's, from Picolata to the bar.

In two days more I expect to have steam up in this ship, her repairs having been completed, and the machinery and boilers in as good condition as when she left Philadelphia.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,

Commander, and Senior Officer present.

Rear-Admiral J. H. DAHLGREN,

Commanding S. A. B. Squadron, off Charleston, S. C.

Letter from General Gordon to Commander Balch.

JACKSONVILLE, FLORIDA,

May 20, 1864—12 m.

CAPTAIN: I learn that the rebels have crossed the river some four hundred strong, (said to be.) They have captured another of my pickets about 20 men—the one at Saunders. I have also a picket at Volusia—50 men. I am afraid they will gobble these men up unless I can get a gunboat up stream to intimidate them. The Sumter can reach Volusia and protect them much sooner than I can. I will push up to-night in the Hampton with two hundred men. Can you not start the Sumter immediately for Volusia, and aid me with your gunboats in cutting off these rascals?

Yours,

GEO. H. GORDON,

Brigadier General, Commanding District of Florida.

Commander BALCH,

Commanding St. John's River.

Letter from Captain H. B. Scott to Commander Balch.

HEADQUARTERS DISTRICT OF FLORIDA,
Jacksonville, May 21, 1864—11.40 p. m.

CAPTAIN: The general has just received word from Colonel Noble that the enemy, reported at 400 strong, have captured another post higher up the river. He will go to Picolata himself, and would like it if you will send a gunboat to-night as far up as possible to prevent their recrossing to the west bank of the river.

I am, captain, with great respect, your obedient servant,

H. B. SCOTT,

Captain and Acting Adjutant General.

Commander BALCH,

Commanding Squadron.

Letter from Colonel Noble to Captain H. B. Scott.

HEADQUARTERS, FLORIDA,
East St. John's River, (Haw Creek,) May 26, 1864.

CAPTAIN: I have the honor to report that I am returning from Volusia with the detachment of the 17th Connecticut, who have been stationed there, accompanied by two families of refugees; have five loads of unginned cotton. It is reported to me this morning, by a party of soldiers of the 35th United States colored troops, that the gunboat Columbine was captured (with all on board, except themselves) by the rebels on Monday night. The vessel was disabled by the enemy's cannon from opposite Horse Landing, so that she ran aground, when a party (reported by them to be 200 strong) came off from the other shore and captured the vessel. No further particulars can be gained from these men, except that there were a number killed and wounded on board the ship by the enemy's cannon. These men are without clothing except their shirts. One of them is slightly wounded.

I have the honor to be, very respectfully, your obedient servant,

W. H. NOBLE,

Colonel 17th Connecticut Volunteers, Commanding Forces.

Captain H. B. SCOTT,

Acting Adjutant General, District of Florida.

HEADQUARTERS DISTRICT OF FLORIDA,
Department of the South, Jacksonville, May 27, 1864.

Official. For your information.

JOHN C. GRAY, JR.,

Second Lieutenant and Acting Aide-de-camp.

Commander BALCH, U. S. N.,

Commanding U. S. Squadron, St. John's River, Florida.

LETTER OF REAR-ADMIRAL DAHLGREN TRANSMITTING LETTER OF COLONEL NOBLE.

[Despatch No. 276.]

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, June 20, 1864.

SIR: I take pleasure in forwarding the enclosed for the information of the department.

It is satisfactory to find that the incessant labors of the navy in this quarter are sometimes acknowledged.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Letter of Colonel W. H. Noble to Commander G. B. Balch.

HEADQUARTERS OF AUXILIARY COLUMN TO GORDON'S COMMAND,
Jacksonville, Florida, June 3, 1864.

CAPTAIN: It is a duty and pleasure to express through you, to the officers and privates of your branch of the service, my high sense of the efficient aid rendered by them to my column in their advance, auxiliary to General Gordon's late expedition.

We found the whole extent of the waters to be traversed by one portion of the expedition had been thoroughly searched for torpedoes, and that in the vicinity of our landing your picket boats had pervaded and patrolled every part of the surface. I desire you particularly to express to Captain Lewis my thanks for his admirable arrangements for the rapid landing of the troops and his efficient supervision thereof.

Accept, also, for yourself our obligations for the prompt and complete arrangements made by you to protect and effect our transportation and debarkation.

I am, captain, with sentiments of high respect and regard, your obedient servant,

WM. H. NOBLE,

Colonel Commanding Auxiliary Column.

Captain GEO. H. BALCH,

Commanding Naval Squadron, St. John's River.

ARMY AND NAVY EXPEDITION UP THE ST. JOHN'S RIVER, FLORIDA.

UNITED STATES GUNBOAT OTTAWA,
Off Bay Point, May 28, 1864.

SIR: In compliance with your instructions of the 22d instant, I got under way in this vessel, with the Columbine in company, and proceeded to Picolata, where I had a consultation with General Gordon on the subject of the expedition. It was arranged that I should take 270 troops on board this vessel and 100 on board of the Columbine, and proceed with them opposite to Pilatka,

and there land them; the Columbine to retain 30 of hers on board as a guard. The steamer Houghton accompanied us with General Gordon and about 300 men. At 4.15 p. m. we arrived at Pilatka, where the troops were disembarked, and the Columbine and this vessel proceeded up the river. I sent the Columbine ahead, as she was the faster, and the object was to reach Volusia as soon as possible. The Columbine was protected by fifty sand bags and some bales of hay. I enjoined caution on the captain, and directed him to make the best of his way to Volusia, and take our troops on board if they were there and return immediately, and if they had been captured to return at once. The understanding between the general and myself was, that I should go on up as far as the pilot could take the vessel, which I thought would be about Brown's landing, two or three hundred yards above Dunn's creek. At 7.20 p. m. of the 22d instant I came to anchor off Brown's landing, about two hundred and fifty yards distant, and just astern of us the Houghton anchored. Not knowing why she came up, I took the dingey and went on board to ascertain, when I was informed that the general thought it best that she should be under the protection of this vessel during the absence of the troops. I had scarcely been told this when I was startled by the report of a field-piece fired at the Ottawa. I immediately jumped into my boat and returned to the ship before she had fired a shot in return, but she was all prepared, and in the act of firing. At 7.50 engaged the enemy, and fired by the flash of their guns; we could distinguish nothing else. The enemy had four field-pieces, of from 6 to 12 pounders I should judge, and fired shell, grape, and solid shot at us and the Houghton. The firing was quite rapid at first and very accurate, but after the third discharge of the 150-pounder rifle they ceased firing entirely, and retreated I presume.

This vessel was struck by grape thirty-seven times, and received a shell through the smoke-stack, carrying away also the mainstay; fortunately there were no casualties. The chain was shipped as soon as possible to get the vessel in motion, as we were too good a target for them. The firing was continued on our side until 9.20 p. m., some time after the enemy had ceased, because I was not certain but what he might be lurking somewhere on the banks, and I spread the fire along the river. At 9.45 p. m. anchored off the mouth of Dunn's creek. At 9 a. m. on the 23d got under way and weighed anchor, which had been shipped. The vessel was not again fired upon. The landing would scarcely be noticed, the woods were very dense, and the undergrowth extends to the water's edge. I do not know whether we inflicted any damage upon the enemy or not, but presume we did, or he would not have ceased firing so soon. I did not feel justified in landing a boat, as it would be in the way if fired upon. It is with pleasure I can testify to the spirited and manly conduct of the officers and men.

On the afternoon of the 24th a messenger arrived from General Gordon, informing me that all had been accomplished by the expedition that could be, and that he wished this vessel to return to Pilatka and embark the troops she had landed there, and that he had sent a messenger to the Columbine to return. I immediately returned to Pilatka and anchored at 5.20 p. m. I then saw an orderly from General Gordon, informing me that as the Houghton was not there he had concluded to go by land to Orange mills and there embark the troops. I remained at anchor all night, with the hope that the Columbine would return, but heard nothing of her. At 11.10 a. m. on the 24th anchored at Orange Mills, but found no troops; the general had embarked part of his men on board of the Houghton, and the remainder he had marched across to Picolata. It left me in an awkward position, as the vessel could not float across the flats. I received on board seven stragglers left behind at Pilatka and from Orange Mills, belonging to the 144th and 157th New York volunteers. On the 28th instant crossed the flats unassisted, and anchored off Bay Point, agreeably to your order.

Accompanying this is a report of ammunition expended in the engagement with the battery.

Very respectfully, your obedient servant,

S. LIVINGSTON BREESE,

Lieutenant Commander, U. S. N.

Commander GEO. B. BALCH,

Com'dg St. John's River Flotilla, Jacksonville, Fla.

EXPEDITION TO CUT THE CHARLESTON AND SAVANNAH RAILROAD.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, May 28, 1864.

SIR: Since my last nothing of importance has occurred. The blockade is maintained as well as it can be with the present force.

In the St. John's our positions are undisturbed, attention being given to tracing out the torpedoes which the rebels are so industriously engaged in placing about the channel, and have already resulted in the loss of three transports by the army.

On the 20th Captain Balch writes to me:

"From information received, by deserters, it is believed that the force immediately in front of Jacksonville has been much reduced; but whether our force here is strong enough to make an advance is somewhat doubtful."

When I returned here on the 22d from Ossabaw I found an expedition preparing by General Birney to ascend a certain stream and sever the railroad.

My co-operation being asked, I directed Lieutenant Commander Stone to take the McDonough, (Lieutenant Commander Phythian,) and the Hale, Acting Master C. F. Mitchell, and render whatever aid might be needed. The Dai-Ching, Lieutenant Commander Chaplin, was to assist so far as circumstances permitted. Two boat howitzers and a detachment of marines were added.

The expedition left this place on Wednesday, and early on Friday the army transports returned.

I was telegraphed that the affair was a failure, with the loss on the part of the army of a fine transport steamer, the Boston, which grounded under fire, and was destroyed to prevent falling into the hands of the rebels; some lives were lost, and about sixty horses were burned.

The Hale and McDonough did not return until the afternoon, not having been informed of the retreat of the troops.

The reports of the commanding naval officers show that the gunboats did the part assigned them satisfactorily and without loss.

Lieutenant Commander Stone was senior officer in command; Lieutenant Commander Chaplin commanded the Dai-Ching; Lieutenant Commander Phythian commanded the McDonough; and Acting Master Mitchell the E. B. Hale. I enclose the reports of these officers.

Captain Boutelle, of the United States coast survey, with his usual zeal, accompanied the gunboats in the Vixen, and skilfully piloted them along the windings of the narrow channel.

I take this opportunity of making my acknowledgments to the eminent head of the coast survey, Professor Bache, for the many advantages which I have derived, while in command here, from the accurate surveys executed by his

orders. Their scientific and practical excellence have never been surpassed in any country, and have rendered them invaluable in conducting operations in this quarter.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Instructions from Lieutenant Commander E. E. Stone to Lieutenant Commander J. C. Chaplin.

UNITED STATES STEAMER VIXEN,

Off mouth of South Edisto River, S. C., May 25, 1864.

SIR: On the receipt of this order you will immediately prepare to accompany General Birney up the Ashapoo river. Captain Boutelle, U. S. coast survey, informs me that you will have no trouble until you arrive at Bennett's Point, at the mouth of Mosquito creek, (marked A in the accompanying tracing,) at which point you may find some difficulty in turning, after which you will find the channel on the port hand. The object of your going is to act as a cover and feint.

General Birney will land to-night at the mouth of Mosquito creek, and take up his line of march on the road towards the Savannah and Charleston railroad, which it is his intention to cut if possible. You will please communicate with the general, and render every assistance in your power, having due regard to the safety of your ship. When the expedition returns you will resume your station.

I shall proceed up the South Edisto with the Vixen, McDonough, and Hale, and to-morrow morning open on Willstown if I can get near enough; therefore you will understand any heavy firing in that direction.

I send you a tracing of the proposed route and points:

A. Bennett's Point.

B. As far as I think it prudent for you to go.

C. The point at which I propose to land two howitzers and a few marines, in case I cannot get up to Willstown with the vessels.

Proposed route of General Birney.

You will find General Birney on board of the Pato, a small side-wheel steamer.

Hoping you will have a merry time,

I remain, respectfully, your obedient servant,

EDWARD E. STONE,

Lieutenant Commander, U. S. Navy.

Lieutenant Commander J. C. CHAPLIN,

United States Steamer Dai-Ching.

Report of Lieutenant Commander E. E. Stone.

UNITED STATES STEAMER CHIPPEWA,

Port Royal Harbor, South Carolina, May 27, 1864.

SIR: In obedience to your orders of the 24th instant, I proceeded with the McDonough, Hale, and Vixen to and up the South Edisto river, as far as Governor Aiken's plantation, on Jehossee island, at which point I landed the marines and two howitzers on field carriages, who were ordered to cross the plan-

ation to a point as near Willstown as they could get. I sent a boat to the point agreed upon with General Birney with the expectation of communicating with him, but was disappointed, no vidette having been found.

On the morning of the 26th, at 7.35, I opened with the howitzers on Willstown, and in the supposed direction of the battery, which we afterwards discovered from the window of one of the mills, but entirely out of range. As soon as the fog lifted the vessels were ordered up as far as it was deemed prudent to go, and fire opened at 11.30 in the direction of the battery and houses at Willstown by the rifle guns of the McDonough and Hale. After firing for a couple of hours orders were given for the vessels to return to the previous anchorage, and for the marines and howitzers to fall back to the place of debarkation. I despatched an armed boat through Mosquito creek to communicate with the Dai-Ching, being anxious to learn the cause of a large fire observed to the westward, and the whereabouts of General Birney. On her return, at 3 o'clock in the morning of the 27th, I received the melancholy news of the disaster to the steamer Boston, and that the general had returned to Port Royal; whereupon the marines and howitzers were ordered on board, and at daylight we proceeded down the river, en route for this place, where we arrived this evening. For the details of the loss of the Boston, and the part taken by the Dai-Ching, in compliance with my orders, are fully set forth in the accompanying report of Lieutenant Commander Chaplin. Although we did not meet the enemy, I am confident, from the alacrity and cheerfulness with which my orders were obeyed, that the naval portion of the expedition would have brought back a far different account than that which must be told of the army.

Enclosed you will please find a copy of my orders to Lieutenant Commander Chaplin, and a sketch showing the points occupied and covered by the forces under my command. Hoping I have carried out your instructions to your entire satisfaction,

I remain, respectfully, your obedient servant,

EDWARD E. STONE,

Lieutenant Commander U. S. Navy.

Rear-Admiral J. A. DAHLGREN,

Com'dg S. A. B. Squadron, Port Royal Harbor, S. C.

Report of Lieutenant Commander J. C. Chaplin.

UNITED STATES STEAMER DAI-CHING,

Saint Helena Sound, May 21, 1864.

ADMIRAL: In obedience to orders from Lieutenant Commander Stone to co-operate with General Birney in his expedition to cut the Charleston and Savannah railroad, I have to report as follows:

The transports, with the exception of the Boston, arrived here at 6.30 p. m., May 25. I immediately called on General Birney for instructions, telling him I had no pilot, but thought I could find one on Ash island. He replied, if I did not find one he would send the captain of the transport Wyoming to pilot this vessel up in the morning, but in the mean time to send the Wild Cat outside to bring in the Boston. All the steamers proceeded up the Ashepoo, with the exception of the Boardman, which grounded near the mouth of the river; the Boston arrived about this time. I sent Acting Ensign Nelson on board the Boardman to render assistance, as he knew the channel; Mr. Nelson afterwards went on board of the Boston to pilot her to Bennett's Point. On his arrival at Mosquito creek he informed Colonel Montgomery that that was the

place where the landing was to be made; Colonel Montgomery, seeing a steamer standing up the river, said his orders were to follow; Mr. Nelson said he could pilot no further. The Boston still kept on, and got in shore, under Chapman's battery, about midnight. At daylight a pilot having been found, I started up the river to carry out my orders; while under way an aid of General Birney's came on board and informed me of the grounding of the Boston, and the general thought it useless for me to attempt to get up, and to send our pilot and two boats to him. The pilot of this vessel was confident he could carry the ship up with safety; then the aid said I had better try it, as we could render them valuable assistance in case of danger. I proceeded at once up the river to the point where the Boston was in shore, and on my arrival found the enemy firing briskly on her from the battery, and nearly all of the troops ashore in the marsh, having thrown away their arms and accoutrements, and, in many instances, their clothing. I immediately opened fire from all of our guns, and in a very few minutes silenced the battery. The army gunboat Plato then proceeded to the Boston, we firing occasionally for two hours without a response.

I called on the general again, and asked if I could be of service in getting her off, or saving public property. He replied, "No;" that he had already sent one of the Dai-Ching's boats, with one of his own officers up to set her on fire, and requested me to send another in tow of the Plato; however, before she arrived the vessel was in flames, having on board some sixty horses.

After the rebels got the range, every shot struck the steamer; fortunately none were killed by the fire of the enemy, but some seven or eight were drowned in their hurried attempt to get on shore. It was supposed she had been struck seventy or eighty times, one or two shots going through her boiler. The colored troops, being in a position where they could not return the fire, seemed to have been panic stricken, and Mr. Nelson says it was as much as the officers could do to keep them from crowding into the boats and swamping them.

At 11 a. m. the general started down to Bennett's Point to embark his troops, as the object of the expedition failed. The Dai-Ching followed to cover embarkation. At 2 p. m., the troops being all on board the transports, they started down the river; we followed, covering the retreat, and anchored off Otter island at 3.30.

It was the impression of Acting Ensigns Nelson and Sheppard that the Boston could have been gotten off; at all events, the horses might have been saved, as the Plato was alongside of her for some time before she was set on fire, and not a shot fired at them by the rebels.

Very respectfully, your obedient servant,

J. C. CHAPLIN,
Lieutenant Commander.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

CAPTURE OF THE UNITED STATES STEAMER COLUMBINE.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-SHIP PHILADELPHIA,
Port Royal Harbor, South Carolina, May 30, 1864.

SIR: I have just received, by the courtesy of General Foster, the enclosed despatches to him from General Gordon, now commanding the troops at Jacksonville, from which it will be perceived that the Columbine has been captured.

The loss will be much felt, because this is one of the few steamers that I have of such light draught. Captain Balch will, no doubt, report the details when he gets them.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Despatch of Brigadier General George H. Gordon.

HEADQUARTERS DISTRICT OF FLORIDA,

Jacksonville, Florida, May 27, 1864.

CAPTAIN: I have to report that on the night of the 20th instant I received from Colonel Noble, commanding forces east of St. John's river, information that a force of about fifteen men and one officer had been captured by the enemy, who had crossed the river and surprised the post. On the morning of the 21st I advanced Colonel Noble a communication, in which I ordered him to withdraw his guards from the river opposite Volusia and Sanders. On the night of the 21st I received another communication from Colonel Noble stating that a force less in number than that at Welaka had been captured; that the enemy, reported to be four hundred (400) strong, were said to be pushing northward on the east side of the river. I received the last communication at about 11 at night. In an hour I started for the nearest point to that threatened. I carried with me in the steamer Charles Houghton two hundred (200) men from this garrison. At my request Captain Balch ordered two gunboats to accompany me, the Ottawa and the little steam-tug Columbine. At Picolata I added to my force six (6) companies of Colonel Beecher's regiment, and all the available force of the 157th New York regiment, numbering in all about six hundred and fifty (650) or seven hundred (700) men. I was obliged to use the naval boats, as well as the Houghton, to transport the troops. On Sunday, the 22d instant, I arrived at the landing opposite Pilatka. My movements had been slightly delayed by time expended at Picolata in filling sand bags (no cotton or hay bales, save one of the latter, being available) to render the little tug Columbine less vulnerable. I designed running the tug up the river to Volusia to protect that portion if threatened, which I could not doubt from the report of Colonel Noble. Although my march was lengthened by disembarking opposite Pilatka, I did not deem it prudent to convey troops further up the St. John's. The Ottawa was to continue to the mouth of Dunn's creek to afford all possible protection to the Columbine. The Columbine was ordered to proceed immediately to Volusia and afford all possible assistance to the force at Volusia. The Houghton was to await further orders, and was to keep near the Ottawa for her protection. I directed my march towards the road from St. Augustine to the crossing of the Haw creek, thence to Volusia.

I had sent on the evening of the 21st a despatch to Colonel Noble, saying that I should move for this position, and directing him to keep forward to the same point, and beyond if practicable, all his available infantry and cavalry.

I have thus stated all the movements ordered and commenced from Saturday night at 12 o'clock until Sunday at 4 p. m.

Before the Columbine started I placed on board of her, at the request of Commander Breese, of the Ottawa, a guard of twenty-five men and two officers of Colonel Beecher's regiment. I informed her commander that I should press forward with my troops in the direction in which she was going; that I would

afford him all assistance as soon as I could reach him; that I should not consider the discharge of his artillery as an indication that he was in danger. This was assented to by the commander of the *Columbine*, who said he would throw up a rocket if he was in danger.

My march was prolonged into night. I accomplished about nine miles, and encamped on the north side of Haw creek. This creek is impassable but by boats. I heard a great deal of firing from artillery in the direction of the mouth of Dunn's creek, but saw no rocket, and had no despatches. I presumed the firing to be the ordinary shelling of the woods by the gunboats. I pressed forward on Monday morning, making that day about thirty miles. I encamped at night at the crossing of Haw creek. I found Colonel Noble had pushed his infantry four (4) miles further, and that his cavalry was at Volusia.

The garrison at Volusia was safe, no rebels this side of the river. The two small posts at Welaka and Saunders captured, shamefully surrendered, I hear—not a gun fired. I have ordered full reports to be made, which I will transmit when received. I found the country people quite excited, and quite confident that the enemy, seven hundred (700) strong, were at the crossing of Haw creek. Indeed, from reports, I had reason to believe some truth in this.

On Tuesday morning, the 23d, I directed Colonel Noble to send the cavalry down the country to drive in herds of beef cattle, which it is well known are going towards rebel armies. I also directed him to tell the *Columbine* to go down the river, that I had no further use for her. The infantry I ordered to concentrate at camp, nine miles south of St. Augustine, at that place, and at Picolata. The two hundred of the 144th were ordered to return to Jacksonville. My reasons for this disposition, and my views of the only mode of operating with infantry in this country, of immense distances and illimitable pine deserts, I have given to the commanding general in a private letter. Having accomplished all I could, I did not deem it advisable to attempt to pursue the enemy across the river; and being totally unprepared to do it, if I had thought it advisable, as I had no boats, and having no rations, and no transportation for any with me, I made my way back to the landing at Picolata, to take the steamer *Houghton* to Jacksonville. I reached the river on Tuesday, the 23d, at about 4 o'clock p. m.

A despatch from the *Ottawa*, at the mouth of Dunn's creek, to whom I sent my aid, gave me the first information that the enemy had opened with artillery on Sunday night on the *Houghton* and on the gunboat. The *Houghton* had got under way and proceeded down stream; she was struck three times with 12-pound solid shot, once amid-ships and near walking beam. No great harm done. I proceeded to Orange mills, and there found the *Houghton*. This morning a report from Colonel Noble informed me of the loss of the tug *Columbine*, and capture of most of those on board. Colonel Noble writes me that some (he does not say how many) of the 35th colored had made their way to Haw creek, and had given this information. They say that on Monday night, the 23d, opposite Horse landing, the *Columbine* was opened upon as she was coming down the river; that she was disabled by the enemy's artillery, and was captured by two hundred of the enemy. It was on Tuesday, the 24th, at 4 o'clock p. m., that I communicated with the *Ottawa*, then lying at the mouth of Dunn's creek, and within five miles of Horse landing. The *Ottawa* had been here since Sunday, and yet she knew nothing of the report. This morning my cavalry captured a prisoner, who says that Dickerson (rebel) says he has captured a "little boat and two small guns;" that he has "burned the boat."

It seems, therefore, that this firing on Sunday night was by the enemy's artillery. This fact was not communicated to me until Tuesday afternoon, too late to do anything for the *Columbine*, if, indeed, anything could have been done for her. I deem it fortunate that I did not attempt to run further up the river than Picolata with my troops. I will submit further facts in relation to the loss

of the Columbine and the capture of the two posts at Welaka and Saunders as soon as received. While regretting the losses, and condemning whatever there may have been reprehensible in the conduct of the commanders at Welaka and Saunders, I feel keenly the disaster to the Columbine and her gallant crew, resulting, as it did, in the attempt to relieve my command.

My reconnoissance to the front, of the 25th, has developed the fact that there is no enemy at Camp Finnegan. I captured a prisoner this morning, who confirms the fact.

The force in Florida is as follows: At Camp Milton, of the 2d Florida cavalry, Colonel McCormick, (effective men,) six hundred (600;) artillery, two (2) small pieces. Camp Milton and McCurth's creek strongly fortified. At Baldwin, no troops, strong fortification, two pieces of artillery. At Trestle, across the St. Mary's, being fortified at this time by negroes. State troops raised for State defence—three companies expected daily at Milton, and two thousand (2,000) in all looked for. Captain Dickerson's cavalry has two hundred (200) effective men stationed at Pilatka. Dunham's artillery of light pieces on St. John's river, near Welaka, Saunders, and Horse landing.

I am, captain, very respectfully, your obedient servant,

GEORGE H. GORDON,
Brigadier General, Commanding.

Captain BURGER.

Assistant Adjutant General, Department South.

Additional report of Rear-Admiral Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Port Royal Harbor, S. C., June 4, 1864.

SIR: I enclose herewith a report from Commander Balch, senior officer present in the St. John's river, Florida, from which there seems to be little doubt of the capture of the Columbine. As the officers and crew are probably prisoners, it will be impossible to have any investigation at this time. There is always more or less risk in passing these light steamers through narrow streams, where they are liable to be fired on without any warning from the densely wooded banks, and cannot turn readily or manœuvre, while their armament is too trifling to be of much account. Still, when the operations of the land forces require such aid, it is necessary to give it and do as well as we can.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,
Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

Report of Commander George B. Balch.

UNITED STATES STEAM-SLOOP PAWNEE,
Off Jacksonville, Florida, May 30, 1864.

ADMIRAL: I regret to have to report the capture of the Columbine by the rebels on Monday, the 23d instant, and under the following circumstances:

By the enclosed communications you will perceive that two of our posts on the east side of the St. John's, left by General Birney, were captured by the

enemy; and another, consisting of fifty men at Volusia, was in imminent danger of being captured. Information was received by General Gordon, at 11.40 p. m. of the 21st instant, who immediately asked my assistance in trying to save the post at Volusia. Upon consultation with the general, it was deemed by us advisable to send the Ottawa and Columbine up the St. John's—the former to go as far up the river as the depth of water would admit, and the latter to proceed to Volusia with all despatch, to assist the troops at that point, and also to prevent the enemy from recrossing to the west bank of the St. John's.

General Gordon embarked his troops in the Charles Houghton, and without delay proceeded to Picolata, where he put aboard the Ottawa and Columbine an additional force, and, together, proceeded up the river to a point near Pilatka, where he disembarked his troops and marched at once for Volusia.

The Ottawa and Columbine left for the purpose of carrying out the plan as agreed upon—the Ottawa anchoring at Brown's landing, distant twelve miles by the river from Pilatka; the Houghton in company for greater protection, by order of General Gordon; the Columbine proceeding without delay to Volusia bar, which she reached at 11 p. m. of the 22d instant.

I herewith transmit the report of Lieutenant Commander Breese, of the Ottawa, detailing an account of the attack made on his vessel and the Houghton by a rebel battery. You will be pleased to learn from the report of Lieutenant Commander Breese that the battery was soon silenced, and much to the credit of the officers and crew of that vessel. The engagement took place on Sunday night, the 22d instant, and the Ottawa remained at anchor off Brown's landing till the afternoon of the 24th, when the messenger (referred to in Lieutenant Commander Breese's report) arrived, bringing the information from General Gordon that all had been accomplished, and that the general had sent word to the Columbine to return.

From Lieutenant Commander Breese I learn that the pilot of the Ottawa (one of the best on the river) declined to take the Ottawa further up the river than Brown's landing—not on account of the depth of water, but on account of the narrowness of the channel and the impossibility of making the turns in it with a vessel of the Ottawa's length. It would, therefore, seem that Lieutenant Commander Breese literally obeyed my orders, which were to go as far up the river as possible.

By the report of Colonel W. H. Noble, commanding United States forces on the east side of the St. John's, you will learn that the Columbine was captured on Monday night by the enemy at Horse landing. This landing is distant by the river some five miles above Brown's landing, where the Ottawa was then at anchor. Lieutenant Commander Breese and his executive officer, Acting Master Gamble, state that they heard nothing which led them to believe that the Columbine was engaged with the enemy. This they account for by the dense woods intervening, and thus preventing the sound of the guns reaching them.

General Gordon informed me to-day that he expected the men who had escaped from the Columbine, and who had arrived at St. Augustine, to reach Jacksonville this evening, and I regret that they have not, as I was anxious to see them, and get their statements in relation to the capture of the Columbine, that I might transmit them to you for your information. Colonel Noble has sent General Gordon statements from two of those who escaped from the Columbine, and they are to the effect that she was on her way down the river, and that when near Horse landing she commenced shelling the woods in that vicinity; soon after opening fire, the enemy opened fire from four pieces of artillery, her rudder chains being shot away at the first discharge, and that she ran aground; that she fired on the enemy, and, from the account referred to, surrendered after being under fire from one hour to three hours; these men report several killed and some eight wounded and five men drowned. It will be

more satisfactory to you to have the statements of those who have escaped, and at the earliest moment possible I will examine them, and transmit to you their statements.

I regret exceedingly the loss of the *Columbine*, but I did not, under the pressure of the call made upon me, feel that I could do otherwise than to co-operate to the utmost to save our forces, threatened as they were, and which we had reason to believe would be captured if vigorous and prompt assistance were not rendered. I have proposed to General Gordon to send out a flag of truce for the purpose of learning everything we can in relation to the capture of the *Columbine*, and this will be done at the earliest moment deemed advisable; but as the general intends to move against the enemy on the morning of the 1st of June, he seems to think it better to delay taking a step of this kind till he has accomplished his movement. The rebel force in front is said to be weak, and I trust he will succeed in inflicting a serious blow on the enemy.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,

Commander and Senior Officer present.

Rear-Admiral J. A. DAHLGREN,

Com'dg S. A. B. Squadron off Charleston, S. C.

Additional report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Off Morris Island, June 18, 1864.

SIR: I transmit herewith a report from Commander Balch giving some particulars of the capture of the *Columbine*. There is always some satisfaction in knowing that when a vessel is lost every effort has been made to prevent it by a stout defence. Of course it is impossible to be certain of all the facts until they are developed by a court of inquiry, which can only be instituted when a sufficient amount of evidence is obtained.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Additional report of Commander G. B. Balch.

UNITED STATES STEAM-SLOOP PAWNEE,

Off Mayport Mills, Florida, June 12, 1864.

ADMIRAL: I have the honor herewith to transmit the statement of Drover Edwards, (landsman,) lately attached to the *Columbine*. He escaped from that vessel after she surrendered, but before the rebels took possession. He is intelligent, and gives the subjoined statement clearly and with every appearance of truth. From his statement I rejoice to believe that the honor of the navy was fully and gloriously maintained; and though we have to regret the loss of a very useful vessel, still it is gratifying to know that she was in the performance of most important service, viz: the assistance of our troops, which were in imminent danger of being cut off by the enemy.

I am, very respectfully, your obedient servant,

GEO. B. BALCH,

Commander, United States Navy.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron off Charleston, S. C.

Statement of Drover Edwards, (landsman,) late attached to the Columbine, who escaped by swimming to the east side of the St. John's on the 23d day of May, 1864, the day of the engagement of the Columbine with the rebel battery at Horse landing, on the St. John's river, Florida.

The Columbine arrived at Volusia bar at 11.30 p. m. on Sunday night, the 22d instant. Next morning a boat was sent to communicate with our troops at that post; found all safe. At noon Monday, 23d instant, the Columbine started on her return; she stopped at Wilatka, a landing place above Horse Landing, about half an hour, and then proceeded down the river.

At 4 p. m., when near Horse Landing, called all hands to quarters, and commenced shelling the woods, and when opposite the landing fired two more rounds; the rebels opened fire from a battery distant not more than thirty yards, the forward gun being struck and knocked around, the carriage being injured, but not so as to render the gun useless; and the wheel-ropes being shot away, endeavors were made to repair the wheel-ropes, but before this could be done she was aground.

We continued firing; Captain Sanborn had given orders to hook her on with the object of endeavoring to run by the battery, but she was aground; directions were given by Captain Sanborn to shift the forward gun over to the star-board side, to bring it to bear on the battery; this was done, and fire opened again on the battery. The captain (Sanborn) fired every gun, and this continued till about 6 p. m., steady firing.

Many were killed by the rebel fire, as also many wounded; estimates the total killed and wounded at twenty (20.)

Captain Daniels, commanding detachment of 35th United States colored troops, was wounded; saw many lying in the gangway killed and wounded; I saw five drowned, four being soldiers, and the other belonged to the Columbine, William Moran, (landsman,) colored. At about 6 p. m. Captain Sanborn showed a white flag and surrendered. The rebels hailed and told him to send a boat ashore; boat was riddled with shot; did not send a boat. The rebels sent off three boats; when nearly alongside, I jumped overboard and swam to the east side of the river, and escaped to the woods. Here I met three soldiers of the 35th United States colored troops, who had also jumped overboard; together we made our way to St. Augustine, which place we reached in five days.

I hereby certify that the above statement is true and correct.

DROVER ^{his} + EDWARDS.
mark.

Certified to as the statement of Drover Edwards, (landsman,) late of the Columbine.

June 12, 1864,

GEORGE B. BALCH, *United States Navy.*

List of officers and men captured.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, June 27, 1864.

SIR: I herewith enclose, for the information of the department, list of the officers and men of the United States steam-tug Columbine, captured by the enemy May 23, 1864, and have the honor to be,

Very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES, *Secretary of the Navy.*

List of prisoners captured on the steamer Columbine, May 23, 1864.

F. Sanborn, acting ensign; J. H. Johnston and George Whitney, 3d assistant engineers; W. D. Spencer, master's mate; G. F. Allison, quartermaster's cook; Jno. Smith and Geo. Walsh, quartermasters; Nicholas Fierny, Robert Haddon and J. H. Ellis, firemen; John McDonald, Michael Noe, Patrick Kelly and Mike Drilly, coal-heavers; Wiley Bloom, A. Mills, J. Hastings, A. Lewis, George Hall, W. Austin, T. Wiggins, W. Wyatt, W. Hampton, J. Jenkins, W. Hart, and J. Harrison, sailors; H. Pearson, cook—total 27.

I certify that the above is a correct abstract from the list furnished by Major General Anderson, commanding confederate forces in Florida.

EDELEMIRE MAYER,

Major 7th Regiment U. S. S. F., A. A. A. G.

HEADQUARTERS DISTRICT OF FLORIDA,

Jacksonville, June 13, 1864.

Report of Acting Ensign Frank W. Sanborn.

UNITED STATES STEAMER PHILADELPHIA,

Port Royal Harbor, S. C., September 3, 1864.

SIR: It becomes my painful and unpleasant duty to report to you the particulars of the loss of the United States steamer Columbine, under my command, in the St. John's river, on May 23, 1864.

On the 22d of May, at 4 a. m., I received orders by the army transport Charles Houghton to report to Lieutenant Commander L. L. Breese, commanding the United States steamer Ottawa. I reported to him at 5 a. m. and assisted her in reaching Pilatka. From this place I was by him ordered to proceed to Volusia and convey such orders as I might receive from General Gordon, to whom he ordered me to report. Reporting to General Gordon at a landing opposite Pilatka, I received orders from General Gordon to receive on board a detachment of the 35th United States infantry, (colored,) under command of Captain Daniels, as a guard, and verbal orders to be communicated to the commandant of the post of Volusia, fifty miles further up the river.

Leaving Pilatka and the Ottawa, with orders to return immediately, at 6 p. m., I reached Volusia bar, five miles from Volusia, at 11.30 p. m., when I dropped anchor. In the morning, owing to the low state of the tide, I found it impossible to safely cross the bar with the Columbine. I therefore despatched Acting Master's Mate W. B. Spencer with an armed boat's crew to convey General Gordon's orders to the commandant of the post at Volusia and return immediately. He was successful in so doing, and returned to the vessel at 11.30 a. m. of the 23d.

Immediately after his return I weighed anchor and commenced my return. I stopped at Rembert's and Welaka on my return, at which latter place I obtained the particulars of the capture of a detachment of the 17th Connecticut volunteer infantry, under command of one Captain Hovey. This was part of my orders.

Immediately after my departure from Welaka I beat to quarters, as I expected to be fired upon by infantry at Horse or Cannon's landing. Upon rounding the point next above, I opened fire upon the landing and road above, leading to it, as soon as my guns could be brought to bear. Also giving the orders to slow down and lower the torpedo-catchers, which were immediately executed.

I could discover nothing suspicious until directly abreast the landing, distant about one hundred yards, when two pieces of artillery, concealed by the shrub-

bery and undergrowth, almost simultaneously opened fire upon me. I instantly gave orders to hook on, but unfortunately the second shot of the enemy cut my wheel-chains, and at the same time the pilot abandoned the wheel and jumped over the bow. The vessel almost immediately went ashore upon a mud bank. Before she struck, one of the enemy's shot struck the main steam-pipe, knocking a hole in it, causing a great loss of steam. Her being ashore, and the injury to the wheel-chains, were reported to me at nearly the same moment. I left the hurricane deck, and took charge of the forward gun, sending Mr. Spencer aft on the quarter deck to ship the tiller and hook the relieving tackles, at the same time stopping and backing the engine.

The engineer, Mr. Johnson, now reported the loss of steam, and at nearly the same moment Mr. Spencer reported the quarter deck swept by the enemy's sharpshooters and grape, and the after gun abandoned, and Mr. Davis killed.

I now placed the forward gun in charge of Quartermaster James Smith, and repaired to the quarter deck. I saw immediately the utter impossibility of saving the vessel unless the enemy could be dislodged. I now returned to the forward gun, of which I took charge, at the same time ordering Mr. Spencer to try and rally the infantry, which was now jumping overboard on all sides and swimming ashore. By our united exertions we finally stopped them. The engineer in charge, Mr. Johnson, at this time informed me the engine was useless, as one of the frame timbers had been shot away and locked the wheel. The officer in charge of the infantry having been wounded, the second in command and myself seeing all hopes of escape cut off, and the riflemen on the port bank of the river shooting the men down at the forward gun, I called a council of my remaining officers, in which it was decided to surrender. I was spared the mortification of hauling down the flag, it having been shot away in the early part of the action. It now became my humiliating duty to hoist a white flag to prevent the further useless expenditure of human life. A boat from the enemy immediately boarded me, demanding the surrender of the vessel. I refused to surrender to the officer in the boat, but having my own boat, went on shore and asked to see the commanding officer. I was immediately presented to Captain Dickerson, Confederate States army, from whom I demanded, in case of an unconditional surrender, personal safety to the officers and colored men on board, which was immediately guaranteed, whereupon I surrendered myself, officers, and crew as prisoners of war, and my vessel a prize to the (so-called) Confederate States of America.

The loss in killed, wounded and missing is as follows, viz :

Acting Master's Mate John Davis, while nobly performing his duty, killed; privates, five (5) wounded, sixteen killed and missing.

I take great pleasure in recommending to your favorable notice the conduct of Acting Third Assistant Engineer Henry J. Johnson, who coolly performed his duty until the engine became disabled, when he rendered me the most valuable assistance on deck; also that of Acting Master's Mate W. B. Spencer.

I have the pleasure to inform you that immediately after the removal of the wounded the enemy set her on fire, burning her to the water's edge, without removing an article of value.

She also formed the funeral pyre for those who fell while nobly defending her and the flag from dishonor. The remains of Mr. Davis were decently interred, covered by the flag he loved so well and which he died bravely defending.

I have the honor to remain, very respectfully, your obedient servant,

FRANK W. SANBORN,

Acting Ensign, United States Navy.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron, Port Royal, S. C.

Additional report of Acting Ensign Frank W. Sanborn.

UNITED STATES STEAMER PHILADELPHIA,
Port Royal Harbor, S. C., September 3, 1864.

SIR: In obedience to your expressed desire, I have the honor to present to you a report of my movements since the time of my capture, May 23, 1864.

On the evening of my capture I was taken to Camp Call, the headquarters of my captor, Captain Dickerson, by whom I was very kindly treated, together with my officers and crew.

On the morning of the 24th, at 11 a. m., he gave to the officers a wagon, and to the wounded a wagon, to transport them to Gainsville. The privates were compelled to march, but the officer in command made frequent halts, in order that the men might not become too fatigued. We reached Gainsville on the morning of the 26th, and remained until that of the 27th, when we were placed in passenger cars and conveyed to Lake City, at which place we arrived at 12 p. m. We remained here until the following morning, when we took passage in a box-car for Madison, (all the negroes and Captain Daniels remaining behind,) which place we reached at about 9 a. m. Transportation was procured for our baggage, and we commenced a wearisome march for Quitman, which place we reached on the evening of the ensuing day.

On the following morning we were placed in box-cars and taken to Savannah,, which place we reached at 5 p. m., and were marched to Oglethorp barracks where we remained all night; this being the first time since our capture a roof of any kind covered us, or we had been directly insulted by the officer in command.

The next morning we were again placed in box-cars, and on the same evening arrived in Macon. From the depot a guard of Georgians took us in charge and marched us to Oglethorp barracks, about a mile distant from the depot. Here, I regret to say, myself and officers were separated from the white portion of the crew, who were taken to Andersonville.

I regret to say my officers and myself were here compelled to submit to a most humiliating search of our persons and baggage, the confederate authorities taking any and all money from each officer, giving him therefor a receipt. In many cases the officers never saw their money again, or were compelled to draw it from the confederate authorities at the rate of four and a half ($4\frac{1}{2}$) confederate for one United States national currency, while, at the same time, the rates of exchange by private parties was from eight to ten (8 to 10) for one of the same. After having been subjected to the searching process, we were shown into a yard, containing about three and one-half ($3\frac{1}{2}$) acres or less, in which were already confined over eleven hundred (1,100) prisoners, with no instructions as to the rules and regulations, nor what to do or how to act.

We finally, as it was now dark, bivouacked in the open air. The next morning showed us here we would have to remain for some time. Mustering together our blankets, we formed them into a sort of a tent, which, though open at both ends, protected us from the hot, scorching rays of a noonday sun. During the morning a ration was served out to us, which consisted of about a pint of corn-meal and a table-spoonful of salt each.

I remained in Macon, together with my other officers, until the latter part of July, when I was among the first six hundred sent to Charleston. At the time of our leaving, it was stated one thousand remained, of which I have no doubt. Our rations in Macon were of the poorest kind—the bacon frequently decayed and always full of maggots; the rice full of weavils; the beans full of worms and musty, and the meal sometimes musty; our supply of salt very insufficient, and no vegetables.

At the time of my leaving Macon many were prostrated by the scurvy, and some had died of it. Among my immediate acquaintances was and is a Mr.

Ellis, of the navy, who was suffering severely from its effects in Macon; his body being covered with huge sores, which, since his removal to Charleston, have become somewhat better, but far from well.

During the first few days we were in Charleston we (the six hundred) were confined in the jail-yard, with no protection from the weather but what is known in the army as a shelter tent, into each of which six were obliged to crowd, and in one case eight. We were here nearly starved; compelled to mix with deserters, murderers, house-breakers, and felons of every description; add to this the brackish water and the filth, dirt, refuse which was allowed to collect in piles, and which created a stench sufficient to breed the most loathsome diseases, and the meagre food, our position was far from pleasant. For several days a tablespoonful of lard and a cup of meal was the only ration, but then again, on some days, our ration would consist of a loaf of wheat or rice bread and a pound of fresh meat.

From the jail-yard I was removed to the workhouse, together with a number of others; here the rations were better a little, but we only remained a few days, when we were taken to Roper hospital. Here we were required to give our parole not to attempt to escape or hold any communication with any person outside the prison limits. The building is large, airy, and commodious, has a fine yard and balcony in front, good yard and accommodations in the rear for cooking and washing, and is altogether far superior to any former accommodations. The rations are also of a better quality, and I am inclined to think have been increased in quantity, but still are very poor rations indeed.

There is a great scarcity of the proper medicines in the confederacy, and many of our officers are now suffering in the hospitals for the want of proper medicine.

I am sorry to say, sir, that at the time of my capture my officers and myself were robbed of much clothing and valuables, and find it a common practice of the confeds to rob men of boots, hats, pants, coats, or anything they may choose to fancy.

During the time I have been confined in Charleston I have been unwell, and have repeatedly gone to the confederate surgeon, Doctor Rett, for medicine, which he has given me, but uniformly without success. My case now became quite bad, and on my reporting to him on Tuesday last for medicine, he frankly informed me he could do nothing for me, and said, furthermore, I would not live in the south, offering at the same time, if I would make application, to give his certificate and influence in my behalf. I accepted his kind offer, and made application, which was granted. I signed my parole September 1, was placed inside of our lines, off Charleston, on the 2d; came here on the Wyoming last night at 9 p. m., and now have the honor to report to you.

The person for whom I am to try and effect an exchange is Captain Henry Boneau, captured in the blockade runner Ella Annie.

I have the honor to remain, very respectfully, your obedient servant,

FRANK W. SANBORN,

Acting Ensign, United States Navy.

Rear-Admiral J. A. DAHLGREN,

Com'dg S. A. B. Squadron, Port Royal Harbor, S. C.

CAPTURE OF THE UNITED STATES STEAMER WATER WITCH.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, S. C., June 4, 1864.

SIR: It is with great regret that I have to forward the enclosed, giving information of the capture of the United States steamer Water Witch.

The news reached me about 1 p. m. to-day, and shortly after I despatched the Winona to Ossabaw with a steam-tug.

The Unadilla will leave soon, in order to assist in remedying this disaster. The Fernandina, which was lying at St. Catharines, not far from Ossabaw, got under way, on hearing the news, and put to sea.

If the rebels had used despatch, they might have captured the Fernandina, too, as she is a sailing vessel, and not suspecting anything wrong, would have fallen an easy prey. * * * * *

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Volunteer Lieutenant W. W. Kenniston.

UNITED STATES STEAMER SOUTH CAROLINA,

Tybee Roads, June 4, 1864.

SIR: I very respectfully report the capture of the United States steamer Water Witch, as communicated to me by Master's Mate Wright, attached to the United States ship Fernandina, which arrived off here this morning, and sent a boat in.

The following is the report of a contraband, who escaped from the Water Witch after her capture, and was taken on board the Fernandina from the SE. point of Ossabaw island:

The Water Witch first saw a large barge loaded with men close to them, about 2 a. m., June 3. They hailed it, and the answer was, Go to hell, you sons of bitches, followed by a volley of musketry at the Water Witch. The executive officer was on deck and sprung the rattle at once, and the pilot, who was in the pilot-house, rung the bell to go ahead. Before they could slip the cable the rebels were on board, and at the same time they were boarded by boats on the other side. The fighting commenced at once, hand to hand, with cutlasses and pistols, and lasted some half hour or more before the capture was complete.

The contraband was ordered on deck, together with the engineers from the engine-room; got forward and jumped overboard as soon as he could. As he was leaving, heard one of the crew say "My God, I am shot;" does not know how many were killed. When overboard, saw four boats on the side he jumped from, and thinks there were four on the other side; started for shore, and finally succeeded in reaching Raccoon island, having swam $1\frac{1}{2}$ mile; went from there to Ossabaw, where he lay in sight of the Water Witch until some time after daylight. Water Witch had not then been moved; rebels seemed to be having a grand "jubilee" on board. Contraband went to southeast point of Ossabaw, made signals to the Fernandina, which took him on board at 11.30 a. m., 3d June.

The Fernandina intended to communicate with Wassaw, but drifted by and sent a boat in here. I have sent a boat to Wassaw to communicate with the vessels lying there; have also sent a telegraph to you from Fort Pulaski, and shall send a boat with this immediately.

I have ordered the Fernandina to cruise along the coast, and communicate with the Pawnee as she comes north.

I have coal brig alongside discharging coal for Harvest Moon, and shall bal-

last her to-night, if possible, in order to have her out of the way. Have sent boats off in preference to moving myself, as they will save time.

I have the honor to remain, very respectfully, your obedient servant,

WM. W. KENNISTON,

Acting Volunteer Lieutenant, Senior Officer present.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron.

P. S.—The Harvest Moon left here, in obedience to orders, at 3 p. m., June 3, 1864, for St. John's Florida.

Additional report of Rear-Admiral Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, S. C., June 6, 1864.

SIR: There seems to be no reason to doubt the capture of the Water Witch, with all on board, except one contraband, who escaped and gave information of what took place; on hearing of which, I despatched the Winona at once, and two other gunboats followed soon after. The Wissahickon also went round from Wassaw. The orders were to retake her or destroy her.

Captain Stone, the senior officer present, reported last evening that, after arriving at Ossabaw, he proceeded up the sound, and into Vernon river, as far as the batteries permitted, but could see nothing of the Water Witch. She may have been taken to sea, or into some of the inland passages entirely out of sight.

It is to be apprehended that long and undisturbed possession has relaxed the vigilance of our blockaders, and that in some instances precautions have been omitted, because they seemed needless in places where, as far as the eye can reach, not a living soul is to be seen for months that looks like an enemy.

In February last the following passages occur in a general order which I issued:

"If vessels on blockade are at anchor, they are not safe, particularly in smooth water, without out-riggers and hawsers stretched around, with rope-netting dropped in the water.

"Vessels on inside blockade had better take post outside at night, and keep under way until these precautions are completed.

"All the boats must be on the patrol when the vessel is not in movement.

"The commanders of vessels are required to use their utmost vigilance—nothing less will serve."

It seems, however, that occasional warnings will alone serve to keep up attention, and it is well when the disaster is not too serious.

It is not to be disguised, however, that the force under my command is becoming inadequate to the duties of this station. It is now so much reduced by the absence of vessels that are disabled and under repairs, by losses, and by the reduction in numbers of men whose times have expired, that it is difficult to sustain the blockade efficiently, and, in some cases, with safety.

But for the fortunate escape of the contraband, which gave warning, the rebels might have captured several isolated blockaders, who would never have suspected her new character. * * * * *

I have just received a report from the Fernandina, from which it would appear that the Water Witch was not yielded without a severe contest.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Lieutenant Commander E. E. Stone.

UNITED STATES STEAMER WINONA,
Ossabaw Sound, June 5, 1864.

SIR: I crossed the bar at Ossabaw, and anchored this morning at 6.30. I found the United States steamer Wissahickon, Lieutenant Commander Crossman, here, he having come up last evening on information received from the only person who escaped capture. It appears that the Water Witch was captured by four armed launches, at about 2 o'clock in the morning, as I informed you by telegraph. I ascended the Vernon river, to a point as near to the battery at Buely as it was deemed prudent to go. From that point I was enabled to see well up, above Fort McAlister, and I am certain that she has either been taken to sea or carried entirely out of my reach. Had I been able to see her, I should have captured or destroyed her if it had cost me one-half of my command. I buried the remains of one of her crew, a black man, whose body we found floating near Raccoon key. I shall send out to-night two picket-boats at points which will render it impossible for them to surprise me, and continue to do so as long as I remain here.

Mr. Hafford thinks that the vessel below this Saint Catherine has left, as nothing could be seen of her as we passed in this morning. Taking that into consideration, I judge it must have been her that we saw last evening standing to the northward. I have not deemed it necessary to retain the Unadilla, as I cannot now see the least chance for active operations. She will therefore carry back the despatches. The Larkspur, Captain Davis, I have despatched to the southward to communicate the intelligence and necessary warning. I am indebted to Mr. Hafford and Captain Davis, of the Larkspur, for that assistance which alone has enabled me to make so promptly the above-mentioned reconnaissance. I think I shall carry out the suggestion of Mr. Hafford with reference to some negroes on a farm near by. He will inform you where it is. I send you an *unintelligent* contraband.

Respectfully, your obedient servant,

E. E. STONE,
Lieutenant Commander, United States Navy.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron, Port Royal Harbor, S. C.

Additional report of Acting Volunteer Lieutenant W. W. Kenniston.

UNITED STATES STEAMER SOUTH CAROLINA,
Tybee Roads, June 4, 1864.

SIR: I very respectfully report that while Captain Babcock, commanding United States schooner T. A. Ward, was at Fort Pulaski, to forward telegraphic despatch concerning the capture of United States steamer Water Witch by the rebels at Ossabaw, he heard that some deserters from Savannah had reached there. Was not allowed to communicate with them, but was informed by the major commanding that there was nothing new at Savannah, and that the deserters stated that several boats from the rams and gunboats at Savannah, filled with men, passed Thunderbolt on the night of June 2, bound to Ossabaw. A Savannah paper of June 1 stated that some of the crew of the steamer Columbian, meaning, perhaps, the Columbine, had passed through

Savannah on their way north. Also, stated that about sixty negroes were captured at the same time as the Columbian.

I have the honor to remain, very respectfully, your obedient servant,

WM. W. KENNISTON,

Acting Volunteer Lieut., Com'dg, Senior Officer present.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

Report of Acting Master Lewis West.

UNITED STATES BARK FERNANDINA,

Off Wassaw, June 5, 1864.

SIR: At 9.30 a. m. June 3, during my absence at Sapelo, where I had gone to communicate with the Massachusetts, a man was seen on the south end of Ossabaw island making signals to the ship. On getting him on board, he proved to be a contraband named Peter McIntosh, belonging to the Water Witch, and reported the capture of that vessel by the rebels, at 2 a. m. that morning, under the following circumstances:

The night was dark and squally, so that it was difficult to see more than one or two ship's lengths, except in the flashes of lightning. The officer of the deck discovered a boat ahead, close to, and hailed. The reply was "Who the hell are you hailing," followed by a discharge of musketry. The alarm was at once given, but before the watch below could get up, the boarding nettings were cut through, and the ship boarded on both sides and ahead. There was a hard struggle on deck before the ship's company were overpowered by numbers, and many killed and wounded.

Soon after the surrender, McIntosh slipped overboard and swam ashore, where he concealed himself till daylight. He says that they had not moved her by that time, and that she was blowing off steam as if something was the matter. He then made his way to this ship. The executive officer at once despatched a boat to the Lodona with the information, and she must have reached there soon after I got back, which I did at 4 p. m., coming outside. I thought it very probable that they would attack us during the night; and as I had little hope of making a successful defence at anchor, and the wind and tide were favorable, determined to get the ship outside, if it was at the risk of losing her. We crossed the bar at 8.30 p. m., striking lightly several times.

It was my intention to remain off the bar, but on reflection it appeared to me to be very important that the vessels in Wassaw should know what had happened, that the news might be sent to you as soon as possible. Accordingly, at midnight, I bore up, and ran for Wassaw, but at daylight, finding I had got to leeward of it, sent Acting Master's Mate Wright in a boat to Tybee with a verbal communication to Acting Volunteer Lieutenant Kenniston. He sent Mr. Wright by the inland passage to Wassaw, and I picked him up in the afternoon, with orders from Lieutenant Commander Madigan to return to my station as soon as possible, which I am now doing. I wish to express my obligations to Acting Ensign C. Flood, who was the only person on board who knew anything about St. Catherine's bar, which he had once or twice sounded over, and who piloted the ship in the dark, without any guide but the lead and compass courses, with great judgment and coolness.

I endeavored to ascertain from McIntosh if any of the officers of the *Water Witch* were killed, but beyond the fact that Captain Pendergrast was not, he could tell nothing.

Very respectfully, your obedient servant,

LEWIS WEST,
Acting Master, Commanding.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

I forgot to state that McIntosh described the boats that made the attack as "cotton barges," capable of carrying about 40 men. He saw four of them on the side that he jumped overboard on, but did not know how many there were altogether.

Report of Lieutenant Commander Austin Pendergrast.

CONFEDERATE STATES NAVAL HOSPITAL,
Savannah, Georgia, June 9, 1864.

SIR: Through the kindness of Commodore William W. Hunter, commanding the Confederate States naval forces at this place, I am permitted to report to you the capture of the United States steamer *Water Witch*, at 2 a. m., on the morning of the 3d instant, by being boarded by seven of the enemy's boats, whilst lying in Ossabaw sound, Georgia. It affords me great satisfaction to state that the vessel was well defended, and we had only to succumb to superior numbers, and I have but little doubt we would have succeeded in beating the enemy off had it not been that the majority of the officers, including myself, were wounded early in the attack. Of the crew forty-nine men and thirteen officers are now prisoners.

The wounded are well cared for in this hospital, the surgeons manifesting much kindness towards us. At some future day I will make out a report in detail, when I hope to be able to give such an explanation of this sad affair as will prove satisfactory.

I hope and beg, in the most expressive terms, that the department will take such steps as will effect an early exchange of the officers and crew, for reasons which I shall be able to give when that event occurs.

I have the honor to be, very respectfully, your obedient servant,

AUSTIN PENDERGRAST,
Lieutenant Commander United States Navy.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Assistant Surgeon W. H. Pierson.

PORT ROYAL, S. C., *September 10, 1864.*

SIR: In compliance with your request, I have the honor to submit the following report:

The *Water Witch* was attacked while at anchor in Ossabaw sound, on the morning of the 3d of June last, by a rebel force belonging partly to their army and partly to the navy, whose number is variously estimated at 120 to 150 men. I should judge, from the excellent appearance of the men, that they were carefully selected for the enterprise. They came in six or eight small boats

It was very dark at the time of the attack; so dark that I suppose it would have been difficult to see a small boat at a distance of more than 30 to 50 yards, and I was informed by the rebels that they had considerable difficulty in ascertaining the precise locality of the *Water Witch*, on account of the darkness. The officer on watch, E. D. Parsons, acting master's mate, told me that he was keeping a careful look-out at the time, but thinks, nevertheless, that the enemy were within 30 or 40 yards of us when first discovered, and that the boat then first seen was not, in that light, hardly recognizable as a boat. Parsons says that he hailed, and no answer was made; he hailed again, and the foe came on with a rush and a yell. He sprang the rattle, ordered the watch to repel boarders, and advanced himself, firing his revolver at the advancing foe.

I myself was waked by the firing; noticed no one in the wardroom; hastily slipped on my pants and boots, and was about to try and force my way to my usual sick-quarters between decks forward, when Chase Hill, acting ensign, came limping into the wardroom with a dangerous looking wound, and almost at the same moment followed another wounded man, John Parker, gunner's mate.

Having pocket case, lint and bandages at hand, I dressed these wounds on the spot. Then followed a rapid succession of wounded, some of whom were attended to in the wardroom, some in the cabin, and some on deck. Our loss, as will appear by reference to my medical report, amounted to one killed, thirteen wounded, and two missing—total, sixteen.

The rebels lost from six to eight killed on the spot, two mortally wounded, and fifteen to twenty more wounded in a less degree. They lost their leader, Lieutenant F. P. Pelot, Confederate States navy, whom they esteemed a most able and gallant officer. They also lost their pilot, a colored man, whom they considered the best of their pilots for the Savannah river and vicinity, as well as the Ogeeche. In attending to the wounded, I had the assistance of a rebel surgeon who had boarded us, Doctor C. Wesley Thomas, Confederate States navy, for whom, should he ever fall into our hands, I bespeak the courtesy due to an honorable and gentlemanly adversary.

During the combat the engine and wheels were got in motion. The cable was not stopped, though Parsons and Rufus B. K. Murphy, pilot, each told me that he made an effort to slip it. Some think that the engine-room was given up without proper resistance on the part of the engineers. The engineers, on their part, allege that they were unarmed, and that they understood the ship to have been surrendered before the demand to surrender the engine was made of them.

There is a difference of opinion, both among ourselves and the rebels, whether the ship was formally surrendered or not.

Some of our officers say that they heard our executive officer surrender, but I do not understand them to say that he surrendered the ship. A rebel officer likewise, Thaddeus Gray, told me that Mr. Buck surrendered to him, but I do not know that he considered it other than a personal surrender.

I myself did not hear any one surrender except our chief engineer, who had come into the wardroom unarmed. A rebel officer had just come into the wardroom, which I was then using as hospital quarters. Genther surrendered to him. I think the words he used were, "I surrender, we surrender, the ship surrenders." I turned, surprised and vexed, and put the question, "What, Genther, is the ship surrendered?" He answered, "Yes!" A moment or two afterwards I heard some one on deck, whose voice I did not recognize, give the order to "cease firing," and the firing ceased. I suppose the contest had lasted from fifteen to twenty minutes.

Of the crew only a part engaged in the fight. Their wounds speak for those who were wounded, and I have endeavored by inquiry of them to ascertain who those were that fought without being wounded. As the result of this inquiry, I have been informed that the following persons took part in the fight besides

those who were wounded : W. H. Fenner, master-at-arms ; John Williams, captain of the forecastle ; Thomas Cowers, landsman ; Francis Johnson, boatswain ; Henry Thornton, cockswain ; James Alexander, steerage steward. In this connexion, let me add that William Wilkins, the paymaster's steward, though taking no part in the fight, made himself very useful to me in attending the wounded. Wilkins has been in delicate health for a good while, and I fear it will go hard with him in his imprisonment. Parsons, too, has been a long while unwell, and was sick in hospital when I left Charleston ; Lieutenant Commander Pendergrast also was complaining, and seemed to me to be threatened with fever when I left.

I hope it will not be taken amiss if I say that some of our officers earned and received the highest admiration of foe as well as friend for the gallant and efficient manner in which they fought. First among these stands L. Gittean Billings, acting assistant paymaster ; Ensign Abner D. Stover, Acting Master's Mate Charles P. Westen, and Rufus B. K. Murphy, pilot, might contend for the second place. The colored boy who was killed, Jeremiah Sills, is said to have fought most desperately, and this while men who despised him were cowering near, with idle cutlasses in the racks jogging their elbows.

To proceed with my narrative : Their pilot being killed, the rebels were at a loss how to navigate the ship. They finally asked our pilot, Murphy, if he would not pilot the vessel for them. Murphy was badly wounded, but consented to try on being carried up and supported as carefully as might be on the hurricane deck. The ship got under way, and in a short time was run aground. A rebel officer afterwards told me that he had stood by Murphy with his pistol cocked watching him, and would have shot him had he not been so badly wounded, suspecting him, as he did, of running the ship aground purposely. I tried to persuade him his suspicion was unfounded, and he seemed doubtful ; but this circumstance, taken together with the fact that Murphy is southern born, and left the south at a time when they were pressing him to enter their service, if they had not already enrolled him, makes me somewhat fearful that they may treat him roughly. I left Murphy at the Savannah naval hospital (C. S.) on the 16th of July, since which time I have not heard from him. At that time he had nearly recovered from the severe and dangerous wound he received in the fight ; and up to that time he had received, as had all the patients in that hospital, all the care and kindness due to the sick.

A short time after the ship had got aground we were ordered to get ready to start for the nearest port, Bula. We were taken in boats to this fort, remained there a few hours, and then the wounded of both sides, together with the few remaining officers of the *Water Witch*, were removed in ambulances to Savannah, where we arrived about dark. I offered to take professional charge of my wounded. The offer was accepted on condition of my giving my parole not to attempt to escape while having charge. My patients were accordingly placed under my care at a hospital called the Savannah naval hospital, under the charge of Surgeon Jeffery, Confederate States navy, formerly of our navy. This hospital was devoid of some of the luxuries which may be found in northern hospitals, but was airy and comfortable, and the patients there received every care and comfort which the somewhat limited resources of the country well admitted. I myself was treated with gentlemanly consideration by Doctor Jeffery and the assistant surgeons, as well as by the numerous rebel officers who frequently called there. It was the expectation of Doctor Jeffery, as well as my own, that I would have the freedom of the city within certain prudent limits ; but Flag-Officer Hunter, seeing me out on my second stroll, sent orders that I must thereafter be confined to the limits of the hospital grounds.

I took an early opportunity to endeavor to establish my status as entitled to be released and returned to our lines, according to usage in the case of medical officers. Flag-Officer Hunter, who claimed me as his prisoner, thought that I

was mistaken in this view of my rights, but expressed himself as somewhat uncertain on the point, and readily promised to comply with my request that he would write to his government for instructions in relation to my case. At length, on the 6th of July, not having heard from Hunter on the subject, I myself addressed a communication to Secretary Mallory (C. S.) on the subject, as follows :

" SIR : Having become your prisoner by the capture of the *Water Witch* on the 3d ultimo, I respectfully request that, as a surgeon in the United States naval service, I may be released from confinement, and may be returned to our lines, in accordance with what I understand to be the usage existing between the United States and Confederate States, respectively.

" Very respectfully, your obedient servant,

" W. H. PIERSON,

" *Acting Assistant Surgeon, U. S. N.*

" Hon. S. R. MALLORY,

" *Secretary of Confederate States Navy.*"

This I enclosed in the following note to Hunter :

" SIR : I respectfully request that you will forward the enclosed communication to the secretary of your navy.

" Respectfully, &c.,

" W. H. PIERSON,

" *Acting Assistant Surgeon, U. S. N.*

" Flag-Officer W. W. HUNTER, C. S. N."

I heard nothing from Hunter till the 16th of July, when orders arrived from him to send me to prison quarters. Thereupon I addressed a note to Hunter, as follows :

" SIR : I am informed that you have given orders to send me to your prison quarters. At the time that you paroled me, I understood that I was to remain here until you should have heard from Secretary Mallory in relation to me and my status as a surgeon in the United States naval service, and that you would inform me as soon as you had heard.

" I respectfully request that you will now inform me whether you have heard or not ; and if you have heard, what you have heard from Secretary Mallory concerning me. I will also feel much obliged to you if you will inform me by letter whether or no you have forwarded my communication addressed to Secretary Mallory on the 6th instant, and enclosed in a note to you on the 6th or 7th instant, with the request that you would forward it.

" Respectfully, your obedient servant,

" W. H. PIERSON,

" *Acting Assistant Surgeon, U. S. N.*

" Flag-Officer W. W. HUNTER."

The reply was as follows :

" SAVANNAH, *July 17, 1864.*

" I have received your note of this day. In reply, I have to inform you that I am instructed by the honorable Secretary of the Navy as follows, viz : ' When the services of Assistant Surgeon Pierson, United States navy, are no longer needed with the wounded officers and men in the hospital, he will be turned over to the proper military authorities to be treated as other prisoners of war.'

" Respectfully,

" W. W. HUNTER, *Flag-Officer, &c.*

" Assistant Surgeon W. H. PIERSON, U. S. N."

The same day I was sent, in company with Lieutenant Commander Pendergrast, towards Macon, Georgia, where we arrived next morning. On entering Camp Oglethorpe, near Macon, we were searched by the prison officials and relieved of our money and jewelry. A receipt was given for the money, which receipt was good for the amount in exchange for eatables at the sutler's, within the stockade; only that for United States government money these chivalrous officers of the confederacy did not allow us as large a premium as was gladly paid by outside parties, who would give us from five to seven dollars in confederate notes for one of United States notes, and sixteen to twenty-two for one of gold.

I had taken the precaution to conceal most of my money, leaving exposed only what I thought sufficient for a bait, and so lost nothing in this way; but a number of officers told me, after we had been sent off to Charleston, that they had failed to secure the balance remaining due to them on leaving Macon, although they had applied for it both at Macon and repeatedly afterwards.

A number of army officers, who were confined with me, told me that they had been robbed of most of their clothing and all of their money and jewelry before reaching these nice prison quarters. Some of the Water Witch's officers, too, lost a part of their personal property at the time of her capture; but I am not aware that anything was taken openly, and I know the naval officers promised us that our private property would be respected.

I was sent to Bula with the first boat, in charge of a number of the most severely wounded, and had permission to take with me all my effects, which were packed in two pretty large boxes: one containing clothing, &c., the other my papers and books, official and private, including my commission. But finding that it would incommode the wounded to take both boxes, I took the one with clothing, and received the promise of rebel officers that the other would be forwarded to me. I never saw the second box or its contents afterwards, though I applied to Flag-Officer Hunter for it, giving him a particular description of its contents, by which they might be easily identified, and that officer promised, in a very polite manner, to have the things searched for and, if possible, returned to me. One of the officers, who was in a position to know, afterwards told me that if it was any consolation for me to know it, he could assure me that the Savannah ladies were amusing themselves with my private correspondence, and he had very little doubt that my official books and papers, as well as some of my private books, had found their way to the office of his excellency Flag-Officer Hunter.

With regard to our fare while at Macon: our daily ration consisted of corn meal unbolted, about a pint; rice, a table-spoonful; a little miserable, sometimes maggoty bacon, (we called it soap grease;) a little, *very* little, salt, and a moderate supply of poor molasses.

We were told by the guard, to console us, that this ration was the same as they got themselves, and I think it likely enough that they told the truth. I know that while at Savannah I tabled with the rebel surgeons in the hospital, and that during all my stay there, nearly six weeks, we had coffee never, tea only five or six times, butter about as often, and to the credit of the surgeons be it said, that while they denied themselves the luxury of tea at \$30 to \$40 per pound, they had it furnished to our wounded, and generally fed them better than they fed themselves. Afterwards, at Charleston, our rations were somewhat better, the meal being bolted, and wheat flour and fresh beef being issued occasionally. At Macon, as well as at Charleston, we had the opportunity to buy of sutlers within our quarters. At Macon the rebel medical authorities sent a request to us, the United States surgeons, that we would take medical charge of our sick there, telling us at the same time that our compliance would release three of their medical officers for duty elsewhere. We suspected that they had a plan for mingling a good many of their sick and wounded with a

few of ours, (there were but few sick at the time,) and so getting the practical use of us for their own benefit, while yet holding us as prisoners of war in violation of the usage of civilized states. We held a meeting to consider the case, and, on my motion, returned the following for an answer to their proposition :

“ We, the undersigned, United States medical officers, now held as prisoners of war at Camp Oglethorpe, near the city of Macon, Georgia, in public meeting assembled, have unanimously resolved that, inasmuch as we consider our rights as medical officers to be violated by the fact of our imprisonment, we decline rendering any professional services until our liberty is restored, or unless circumstances may require of us to take professional charge of our *fellow prisoners as an act of humanity.*”

This answer excited their wrath, and they threatened to force us to comply. We suggested they would have a happy time forcing the medical profession to do professional service. They gave up the point and retained their own surgeons. Afterwards, when there seemed to be some real need of our aid for the benefit of our own wounded who were brought into Macon, a sufficient number of us volunteered and rendered our aid, putting the service on the score of humanity, as we had provided.

The prisoners at Macon were removed in detachments of six hundred and less to Savannah and Charleston. I was sent in a company of three hundred, which included all the medical officers at that time prisoners in Macon. We travelled in box cars. Arrived at Charleston, we were at first stowed away uncomfortably close in a large, strong building, formerly used as a city prison and workhouse. It is built in regular prison style, with its little cells and great iron gratings, and its long and dreary-looking corridors. The place was badly supplied with water, the yard was small, and the accommodations for cooking poor and scanty.

The surgical authorities at Charleston expressed themselves surprised that we should have been sent there as prisoners of war, and promised to exert themselves in our behalf. They appear to have kept their promise to some purpose, for we were soon transferred to pleasant quarters, (the house previously occupied by General Seymour and staff.) and after a brief residence there, we, *i. e.*, the surgeons, with a few chaplains—we, who had been held and “treated as other prisoners of war,” now find ourselves under the old flag again, and that, as we understand it, without conditions of any kind. We returned by flag-of-truce boat on Saturday, the 3d instant. * * * *

Very respectfully, your most obedient servant,

W. H. PIERSON,

Acting Assistant Surgeon, U. S. N.

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron.

Detailed report of Lieutenant Commander Pendergrast.

WASHINGTON, D. C., October 22, 1864.

SIR : In conformity with the desire expressed in my official report of June, 1864, to make a full statement of the capture of the United States steamer *Water Witch*, I have the honor to submit the following :

On the morning of June 3, 1864, about 3 a. m., we were attacked by the enemy in seven (7) launches, containing, according to the rebel accounts, one hundred and forty (140) officers and men of the rebel navy. Owing to the darkness of the night and the carelessness of the officer of the deck, Acting Master's Mate E. D. W. Parsons, the boats were allowed to approach within

thirty (30) yards of us before the alarm was given, which was done in such a slight manner as to have but little effect in assembling the men at quarters. On hearing a noise, I sprang up the companion-way and inquired of the officer of the deck "what is the matter," but received no reply, except from the rebels, who were shouting the word "rebels," "rebels." I immediately gave the order to slip and start the engines ahead, and send everybody on deck, and then jumped to my state-room to get my arms and some clothing. Upon regaining the deck, while making my way to the hurricane deck, I was struck by a cutlass on the head and rendered insensible. Upon recovering my faculties I went on the hurricane deck and rang the bell to go ahead on the engine, in hopes of swamping the boats of the enemy. The engine made half a revolution and then stopped for some unaccountable reason. Soon after ringing the bell I fell on the deck from loss of blood. During this time all of the officers, with the exception of the engineers and Acting Master's Mate Parsons, who, I believe, left the deck and went below without being relieved, were fighting with great bravery and success upon the quarter deck, not only keeping the enemy from boarding, but dropping three out of four boats that attacked us aft astern, two of which were so much cut up as to be unable to return to the attack, but drifted helpless until they reached the enemy's batteries at Beaulieu, while the fourth boat made but few efforts to board. Of the number that gained our decks, but one succeeded in reaching the engine-room. A few of the men, with Coast Pilot R. B. K. Murphy, were fighting the enemy forward, but were soon wounded and rendered unfit for action by loss of blood. The enemy then meeting no resistance was able to gain our deck, and after securing the hatches, poured aft in such numbers as to soon overpower the few officers left engaged in repelling the enemy on the quarter deck.

The men seemed paralyzed with fear, and remained under the hurricane deck without giving the officers the least support, though they were ordered out by Acting Assistant Paymaster Billings and Acting Ensign Hill. I found it impossible to discover the whereabouts of all the men, owing to the darkness, and there was but little opportunity for the officers to give many orders, as all were engaged in combat the moment they reached the deck, and continued to fight until struck down.

I regret to say the watch below evinced no desire to come on deck and defend the ship. Had the crew but emulated the noble example shown them by their officers, the result would have been far different.

I am at a loss to explain the behavior of the men, unless they were dissatisfied with being detained over the term of their enlistment, as nearly all of them were. I had already sent home for discharge twenty (20) of my best men, by order of Rear-Admiral J. A. Dahlgren, leaving me short in my crew; also two (2) watch officers (an acting master and acting ensign) had been detached from me, as well as an acting master's mate, rendering it necessary for me to order the acting master's mates to stand watch alone.

I regret to say that the engineers acted in the most cowardly manner. They were the only officers who surrendered, and that to one man. Had they obeyed my orders to work the engine, the enemy would have been unable to board us; but, so far from fighting the rebels, they surrendered at the first summons, and thereby lost the ship.

While a prisoner of war, Acting First Assistant Engineer Samuel Genther has conducted himself in the most disgraceful manner, having openly declared that, as he considered himself no longer an officer in the United States navy, he did not fight, and that the rebels ought not to hold him as a prisoner of war. And while confined in Macon, Georgia, he made the same statement to Colonel George C. Gibbs, commanding prisoners, asking to be released from confinement on those grounds. That the enemy paid dearly for their victory, their long list of killed and wounded will evince, numbering thirty-two (32) officers and

men: among their killed, their commanding officer, Lieutenant Pelot, and the only pilot they had to depend upon for the Savannah river.

Soon after the capture of the vessel, she was run up into Green Island sound, where she ran aground; and when the last of the officers left her, she had only eighteen (18) inches of water under her.

Late the same evening she was got off by lightening her, and succeeded in getting under the guns of Beaulieu battery. The officers and crew were then sent to Savannah. The wounded were well taken care of at the naval hospital at that place. The remainder were sent to Macon and Andersonville, Georgia.

Notwithstanding the defeat which I have sustained, I cannot close this report without recommending to the kind consideration of the department the gallant conduct of those officers and men who so bravely defended their ship. To C. W. Buck, acting master; Acting Ensign Charles Hill; Acting Ensign A. D. Stover; Acting Assistant Paymaster L. G. Billings; Acting Master's Mate C. P. Weston; Coast Pilot R. B. K. Murphy; Henry Williams, captain of hold; John Williams, captain of after guard; John Parker, gunner's mate; and Jarvis T. Hazelton, cockswain, I am indebted for a cordial support in the defence of the ship; and though every one of them was wounded, and many of them threatened with instant death unless they would say that they surrendered, I am proud to say that not one of them disgraced himself by doing so.

The enemy, with the aid of a greatly superior force, assisted by the neglect of duty on the part of the officer of the deck, and by the questionable conduct of the engineer, was enabled to take possession of the ship, but she was never surrendered to them.

I have the honor to be, very respectfully, your obedient servant,

AUSTIN PENDERGRAST,
Lieutenant Commander, U. S. Navy.

HON. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Master Charles W. Buck.

BALTIMORE, *October 23, 1864.*

SIR: I have the honor to report my arrival here and release (on parole) from imprisonment by the rebel authorities of the southern States. I was captured June 3, 1864, in Ossabaw sound, Georgia, and was executive officer of the United States steamer *Water Witch*.

It becomes my duty to report that, at the time of capture, the *Water Witch* was in good order, and everything ready for action at a moment's notice. On the evening previous to our capture (as was the daily custom) the crew were inspected at quarters, the batteries cast loose and ship prepared for action, all the guns were loaded, and extra charges and projectiles for each gun were at hand in spare chests. At 8 p. m. I examined the buoy-rope, (on the cable,) shackle, and pin, saw hammer and chain-punch convenient, and all ready and easy to slip at a moment's warning. I gave the customary night orders to the officer of the deck, and made the evening report to the commander.

As near as I can judge, on the morning of June 3, between the hours of one and two o'clock, I was aroused from sleep by yells alongside and the springing of the rattle; heard the yelling plainly, (my air-port being open,) and think the yells awoke me before I heard the rattle. I immediately sprang out of my berth, slipped on pants and slippers, snatched up side-arms, and rushed on deck with the other officers. When I reached the deck, it was so very dark with sharp lightning as to render it almost impossible to distinguish one individual from another, but I could see persons climbing over the rails and boarding

nettings, and knew by the discharging of small-arms, yelling and cries of surrender, that some of the enemy were already on board. I heard Lieutenant Commander Pendergrast give the order, "Call all hands to repel boarders," "slip the chain and start the engine." Before I could get ten feet from the companion-way my passage was stopped, and a general hand-to-hand fight going on, in which I could distinguish the voices of Paymaster Billings and Ensign Stover. I fired all six charges from my revolver at those on deck and attempting to board, and believe every shot took deadly effect. I could not get forward of the wardroom skylight, but seeing boarding on the port guard, I attempted to train the howitzer on the boat—some one tried to assist me, (I think the paymaster,) but at that time I was struck or pushed down, and lost cutlass and pistol. Recovering, I again made the attempt, when I was felled senseless by a heavy blow on the forehead, and on recovering my senses I found myself on the poop-deck aft, with hands pinioned behind, and sentry over me. The officers in the wardroom were all quickly on deck, but it was impossible for them to get to their stations or rally their men, as the enemy were already on board, and each one was obliged to defend himself. I heard none say that they surrendered, nor any cry for quarter, and believe all who were engaged fought bravely and desperately until cut down or overpowered by superior numbers.

It is impossible for me to say what part, if any, our men took in the action; but with the exception of Jeremiah Sills, colored, landsman, who was killed; Jarvis Hazelton, cockswain; and John Williams, second captain after guard, who were on the look-outs; Henry Williams, captain of hold, and John Parker, gunner's mate, who were wounded; and Henry Hill, quartermaster, who captured a confederate and secured him in the pilot-house, I do not believe any of the others took any part at all. The officer of the deck, Acting Master's Mate E. D. W. Parsons, neglected giving the proper signal to call all hands to repel boarders, both before and after the order had been given by the commander, as also the order to slip the cable. I did not see or hear him on deck after the first alarm was given. The engine was started and made one or two revolutions after the order was given by the commander, and then stopped without orders; if it had been kept in motion we would have sunk or capsized every boat belonging to the enemy—evidence of which we have even from their own reports; and although the cable was not slipped, (according to orders,) the ship would have gained sufficient headway to have parted it.

I most confidently assert that if we had been allowed one minute longer to get on deck, and rally the men, it would have been impossible for the enemy to board us; and with such odds and circumstances against us, as well as the fact of our being short of three officers and some men, the ship was bravely and gallantly defended by the few who were engaged in the combat, as a comparison of the casualties on both sides will prove, as well as the acknowledgment of the enemy through the public prints. Since my capture I have been moved about several times from one place to another; occupying barracks, jails, work-houses, hospitals, open enclosures, and lastly, the notorious Libby prison, at Richmond.

My privations and sufferings have been considerable, but that of our enlisted men is beyond description.

Very respectfully, &c.,

CHARLES W. BUCK,
Acting Master, United States Navy.

Hon. GIDEON WELLES,
Secretary of the Navy.

UNION PRISONERS PLACED UNDER FIRE AT CHARLESTON.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, S. C., June 17, 1864.

SIR: On the 16th I received from General Schimmelfennig, commanding the district, the enclosed paper from the United States officers now held as prisoners by the rebels in the jail at Columbia, and directed the paymaster of the fleet to forward the amount.

General Schimmelfennig also sent me a copy of a communication from the rebel General Ripley, and his own letter enclosing this to General Foster. Copies are enclosed, and also a copy of my reply to General Schimmelfennig.

This barbarous threat only evinces the desperate condition of the ruffians who make it, and will, I trust, meet the retribution it deserves.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

Correspondence on the subject.

HEADQUARTERS NORTHERN DISTRICT, DEP'T OF THE SOUTH,
Folly Island, S. C., June 16, 1864.

ADMIRAL: I have the honor to transmit herewith a communication to the commander of the South Atlantic blockading squadron from Lieutenant Commander E. P. Williams, received by flag of truce from the enemy.

I avail myself of this opportunity to enclose a copy of a communication from Brigadier General Ripley, of the confederate army, and also a copy of my report to Major General Foster, commanding the department.

By the same flag of truce I received a Richmond paper of the 10th instant. Beyond the statement that General Grant had changed his base of operations from the White House to the James river, and effected a junction with General Butler, it contained no news of importance. Some anxiety was felt in Richmond for the safety of Petersburg, that city having been entered by our cavalry, who were afterwards driven out.

An Augusta paper of the 9th instant contained no news of interest in regard to General Sherman's movements.

I should be very much obliged if you would permit me to retain the deserters who were sent from the fleet on shore for the present. They will be kept on Morris island subject to your orders.

I have the honor to be, very respectfully, your obedient servant,

A. SCHIMMELFENNIG,

Brigadier General, Commanding District.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

RICHMOND JAIL,
Columbia, S. C., May 10, 1864.

SIR: I have the honor to request, for the comfort of the naval prisoners held here, that eight hundred and forty dollars (\$840) in gold may be forwarded to me for distribution, as follows:

Lieutenant Commander E. P. Williams.....	\$100
Lieutenant G. C. Remey.....	100
Lieutenant S. W. Preston.....	100
Lieutenant E. T. Brower.....	50
Ensign B. H. Porter.....	100
Acting Assistant Paymaster G. W. Burkett.....	50
Acting Ensign E. G. Dayton.....	100
Acting Ensign M. W. Tillson.....	40
Acting Ensign George Anderson.....	25
Acting Ensign Wm. B. Arrants.....	25
Third Assistant Engineer J. H. Harmony.....	50
Acting Master's Mate C. S. McCarty.....	50
Acting Master C. P. Hovey.....	50

Very respectfully, your obedient servant,

E. P. WILLIAMS,
Lieutenant Commander and Senior Officer.

Commodore S. C. ROWAN,
Commanding S. A. B. Squadron, off Charleston, S. C.

FLAG-SHIP PHILADELPHIA,
Off Morris Island, S. C., June 16, 1864.

GENERAL: Yours of to-day is just received. There is no gold at this post, but only in the Wabash, at Port Royal. It will be sent for and transmitted to you, if you will be so good as to have it forwarded to our comrades by the same channel as their letter reached you.

In regard to the hint from the rebel general concerning the United States officers, I can only say that Charleston is a fortified place where arms of all kinds are collected; where iron-clads are being built in full view; where torpedoes and other base means of unrecognized warfare are made, and whence they issue.

Hitherto the rebels have never sent prisoners from other parts to be confined in Charleston; they have not even retained those who were captured here, but have sent them away. It is an unusual proceeding, therefore, to bring these prisoners here now, and can have only one purpose—to prevent us from firing at the city. It is absurd to convey the idea that these prisoners are thus put on no worse terms than their women and children; these can leave the city if they choose to do so; whereas these prisoners cannot leave, and are thus to be exposed to the peril of their lives for no other object than to deprive us of a right of war; for Charleston is not only a place of arms, but is the sight of powerful batteries, and forms part in the system of defence of the harbor.

Shall you not fire at their batteries? If our iron-clads ever confront them, shall they not fire at them?

Wherefore the confinement of our comrades of any rank under the fire of our own cannon, when such is not only needless but unusual, can only be viewed as another of those violations of civilized warfare which have so often disgraced even rebellion, and deserve the execration of all mankind. Rebeldom may

furnish precedent for this, but it is shocking to every sense of humanity, and will no doubt meet the retribution it merits.

It is said the authorities of Charleston have been guilty of disinterring the remains of one of my officers, mortally wounded at Sumter, and removing them to a potter's field; the precedent for which horrible villany they no doubt find in the proceedings of their leaders at Richmond. I doubt not their full *inclination* to pursue this or any other infamous course to obtain their ends, but I do not believe they dare do it. The whole world would cry out against the cowardly brutes who would expose unfortunate and defenceless prisoners to death from the cannon of their own friends.

I am also of the opinion that General Jones and General Ripley will be fully entitled to be hanged, if they are taken, for being guilty of the intent and threat to murder.

It is most probable that your fire has inflicted greater injury lately than hitherto upon some of their military operations. We should not be bragged or bullied out of any success in crushing the rebellion.

Please not to trouble yourself to return the deserters to whom you refer.

You will oblige me by forwarding the enclosed note from Mrs. Meade to her son, Lieutenant Meade, of this squadron, now a prisoner at Richland jail, Columbia.

I am, general, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Com'dg S. A. B. Squadron.

Brigadier General A. SCHIMMELFENNIG,

Commanding Northern District.

HEADQUARTERS NORTHERN DISTRICT, DEP'T OF THE SOUTH,

Folly Island, South Carolina, June 15, 1864.

CAPTAIN: I have the honor to report that yesterday evening I received by flag of truce a letter from General Johnson to the major general commanding department, a letter from General Ripley to myself, which I respectfully annex, and several private letters by the same means.

My only answer to General Ripley, until orders from the major general commanding are received, has been and will be a continuation of the usual fire on the city, with a constant change of direction, to avoid if possible the design of the enemy to bring their prisoners under fire.

The officer who received the flag of truce reports to me that the confederate officers, in order to get an immediate answer, stated they would wait, knowing General Foster to be present in the district.

Charleston must be considered "a place of arms." It contains a large arsenal, military foundries, &c., and has already furnished three iron-clads to the enemy. It is our duty to destroy these resources.

In reference to the women and children of the bombarded city, I therefore can only say the same situation occurs whenever a weak and strong party are at war; and the practice of exposing prisoners of war to the fire of the attacking force is as old as the fact that weak and wicked parties must fall under the blows of justice.

I may be allowed here to state that the act which the enemy has now committed he has threatened ever since the first shell exploded in the city, over nine months ago, and it is therefore fair to suppose some special reason now to exist for the fulfilment of his threat, although I can find no reason other than his desperate situation.

In my opinion the endeavor of the enemy to force us to give up the bom-

bardment should be the reason for its continuation. At the same time, as a means to force him to give up his barbarous practices, the simple fact of retaliation can be made effectual, as I have as many places where his shells fall as he has in Charleston where mine fall. I also think that the United States can furnish as large a number of confederate generals and field officers as they can procure of ours.

From the fact of the enemy's being so anxious for an immediate answer, I am led to believe the whole thing a ruse, or at least only a threat not yet carried out.

I have the honor to be, very respectfully, your obedient servant,

A. SCHIMMELFENNIG,

Brigadier General, Commanding District.

Captain W. L. M. BURGER,

A. A. G., Department of the South.

HEADQUARTERS, FIRST MILITARY DISTRICT,
Dep't of S. C., Ga., and Fla., Charleston, June 13, 1864.

GENERAL: I have the honor to enclose, for transmission to the commanding general of the United States forces on this coast, a letter from Major Samuel Jones, commanding this department. The letter informs him that five generals and forty-five field officers of the federal army, prisoners, have been ordered to be confined in Charleston. These officers have been placed in my charge, and will be provided with commodious quarters in a part of the city occupied by non-combatants, the majority of whom are women and children.

It is proper that you should know, however, that the portion of the city in which they are located is, and has been for some time, exposed day and night to the fire of your guns.

Very respectfully, your obedient servant,

R. S. RIPLEY,

Brigadier General, Commanding.

General SCHIMMELFENNIG,

Com'dg U. S. Forces, Morris and Folly Islands, &c., &c.

Additional report of Rear-Admiral Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, June 19, 1864.

SIR: I enclose a Charleston Mercury, of the 14th, brought to me by a person who represents himself as an escaped prisoner. The department will perceive, by the article which I have marked, that the threat conveyed by the rebel commander here to General Schimmelfennig has been put in course of execution.

It is incredible that any one calling himself a man should resort to the infamous act of thus exposing the lives of his captives—unable to defend themselves or to leave this doomed city—in order to shield themselves. Such a barbarous policy will not serve to lessen the indignation of our soldiers, or their preference for death in battle rather than by such atrocious measures.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Com'dg S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

[From the Charleston Tri-weekly Mercury.—Editorial.]

TUESDAY, *June* 14, 1864.

For some time it has been known that a batch of Yankee prisoners, comprising the highest in rank now in our hands, were soon to be brought hither to share the pleasures of the bombardment. They accordingly arrived here on Sunday. We give a list of their names and rank :

Brigadier General Seymour, Brigadier General Wessels, Brigadier General Scammon, Brigadier General Shaler, Brigadier General Hickman, Colonel T. G. Grover, Colonel R. Hawkins, Colonel R. Harrismon, Colonel J. H. Lehman, Colonel O. H. Legrange, Colonel W. C. Lee, Colonel R. White, Colonel H. C. Bolinger, Colonel H. L. Brown, Colonel E. L. Dana, Colonel E. Fardell, Lieutenant Colonel E. S. Hays, Lieutenant Colonel N. B. Hunter, Lieutenant Colonel F. N. Higginbotham, Lieutenant Colonel G. C. Joslin, Lieutenant Colonel W. E. McMakin, Lieutenant Colonel D. Miles, Lieutenant Colonel W. C. Maxwell, Lieutenant Colonel J. D. Mayhew, Lieutenant Colonel S. Morfitt, Lieutenant Colonel E. Alcott, Lieutenant Colonel J. Potsley, Lieutenant Colonel A. F. Rogers, Lieutenant Colonel J. H. Burnham, Lieutenant Colonel C. B. Baldwin, Lieutenant Colonel W. G. Bartholimer, Lieutenant Colonel W. R. Cook, Lieutenant Colonel C. J. Dickerson, Lieutenant Colonel J. T. Fellows, Lieutenant Colonel G. A. Fairbanks, Lieutenant Colonel W. Glenn, Lieutenant Colonel T. P. Spofford, Lieutenant Colonel W. W. Stewart, Lieutenant Colonel F. W. Swift, Lieutenant Colonel A. W. Taylor, Lieutenant Colonel W. P. Lascelle, Major C. H. Bures, Major W. F. Baker, Major E. W. Bates, Major J. F. Clarke, Major D. A. Carpenter, Major W. Crandall, Major H. D. Grant, Major J. Hall, Major J. N. Johnson.

These prisoners, we understand, will be furnished with comfortable quarters in that portion of the city most exposed to the enemy's fire. The commanding officer on Morris island will be duly notified of the fact of their presence in the shelled district, and if his batteries still continue their wanton and barbarous work, it will be at the peril of the captive officers.

COMBINED NAVY AND ARMY DEMONSTRATION AGAINST THE REBEL WORKS NEAR CHARLESTON.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Stono River, S. C., near Mr. Paul Grimal's House, July 11, 1864.

SIR: On the 20th of June I received the department's communication stating that the rebels were preparing for a simultaneous move on the blockade inside and outside, in order to cover the exit of a large quantity of cotton.

The next day I sent the Sonoma and Nipsic as outside cruisers, to cover the blockade south of Port Royal where it was weakest, and where the chief effort was to be made. I also left Charleston for Port Royal, in order to confer with General Foster, and devise some means for counteracting the designs of the rebels. The general preferred to cut the railroad between Charleston and Savannah, as a preliminary, in order to prevent the concentration of the rebel forces. Some days were required to collect the troops, and on the night of the 1st of July General Foster left Port Royal, and I also with the monitor Montauk. The plan of General Foster, which I received from him, was as follows :

"General Schimmelfennig, will land at Legareville with one thousand men, Friday night, July 1, and will also land two thousand men on Cole's island on the same night, and front Secessionville. General Hatch will land at Seabrook at the same time with four thousand men, and will be at the ferry, near Rantaul's bridge, on Saturday night to demonstrate against the city and Fort Pemberton on Sunday and perhaps Monday. General Birney will go into North Edisto, and, as high as possible, land to destroy railroad.

"The navy will enter Stono Saturday morning and previous night to co-operate with General Schimmelfennig, as far as line from Battery Pringle to Secessionville. One or two gunboats will ascend North Edisto and co-operate with General Birney to insure his landing. This is a demonstration only, but may be converted into a real attack after consultation between General Foster and Admiral Dahlgren.

"If General Schimmelfennig notifies the naval officer in Stono that he intends to assault the works in front of him, all the disposable naval force is to assist him, and as often as he repeats the assault."

On the second day of July, as soon as the tide served, the monitors Lehigh and Montauk crossed the Stono bar. Besides these, the naval force here consisted of the Pawnee, McDonough, and Racer.

General Schimmelfennig had occupied ground in front of Cole's island early in the morning of the 2d, and the McDonough (Captain Phythian) opened on Battery Pringle and contiguous works. I ascended the Stono in the Montauk (Captain Fillebrown) as soon as she crossed the bar, but in the darkness of the night it was impossible to judge if we had reached an effective range, and the channel became so narrow that the pilot was reluctant to proceed, the vessel not having a foot of water under her bottom, and several efforts to go further indicated that the monitor would ground with a falling tide.

Next day the vessels were in position, opened on the rebel batteries and swept the ground in front of General Schimmelfennig's position, where he believed the rebels were making disposition for an assault on him. Meanwhile I learned that an attempt to carry Battery Simkins on the extreme right had failed signally. And in the evening General Foster arrived from Edisto, where the column under General Birney had also been withdrawn without having produced any effect. I had sent the Dai Ching, (Captain Chaplin,) Wamsutta, (Captain Lee,) and Geranium, (Acting Master Montell,) to assist; but the latter only was able to advance far enough to come in contact with a rebel battery, which was done very handsomely. Meanwhile General Hatch had landed on the southern extremity of John's island and marched across it so as to form the left of our position at this place, General Schimmelfennig being on the right and the navy in the centre. I proposed to land guns and plant a battery on the John's island bank of the Stono, which, backed by the two monitors, would silence the line of works which bar our progress across James's island.

Tuesday afternoon General Foster, General Hatch, and myself landed and rode up along the southern bank of the Stono, where we made a close examination of the rebel works on the Stono. The engineer officer, however, after a careful scrutiny, pronounced the works too strong for our force. At this time General Hatch's force occupied ground a mile or two to the left of our locality. Meanwhile the two monitors were in position so as to reach Battery Pringle, which they did, sweeping round from that across the space between the rebel works and General Schimmelfennig's. The Pawnee, the McDonough, and the two mortar schooners, Racer and Para, maintained a steady fire in the same direction, and with good effect, as the annexed letter of the general shows. Their practice was exceedingly good, though it was necessarily too limited to exert any decided effect on the works themselves.

On Friday General Foster with General Hatch came on board and decided

that the rebel force in front, and in connexion with their works, was too large to render further serious efforts profitable, and, therefore, the troops would be withdrawn from John's island.

On Saturday (9th) the rebels made a stubborn assault on our advance on John's island and repeated it, but were repulsed with loss, in which, I am told, the black soldiers did very well. During the night of the 9th the embarkation of the troops in the transports was begun, and by Sunday at 2 p. m. all of our men were withdrawn from John's island. General Foster left about noon for Port Royal. The vessels were, however, kept in position until Monday daylight, in order to give any of our stragglers an opportunity of escaping.

I beg leave to mention the excellent service rendered by the chief of staff, Captain Bradford; the junior officers of the staff were also active and useful, Lieutenant M. L. Johnson, Ensigns E. J. Dickman, J. C. Pegram, and C. H. Craven.

The different vessels were ably handled by their several commanders. Commander G. B. Balch, Lieutenant Commanders Alexander A. Semmes, T. Scott Fillebrown, A. W. Johnson, R. L. Phythian; Acting Masters Alvin Phinney and Edward G. Furber. Chief Pilot W. Haffords was useful as usual.

The only casualties were from a shot which struck the Montauk, taking off the leg of James Norton, (cockswain,) and wounding John C. Patterson (ordinary seaman,) so that amputation may be necessary.

I enclose copy of Captain Johnson's report.

I have the honor to be, very respectfully, your obedient servant,
J. A. DAHLGREN,

Rear-Admiral Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

Letter of acknowledgment from General Schimmelfennig.

HEADQUARTERS NORTHERN DISTRICT, DEP'T OF THE SOUTH,
James's Island, South Carolina, July 6, 1864.

ADMIRAL: I take pleasure in informing you of the excellent practice by your gunboats and monitors on Stono river yesterday. They drove the enemy out of his rifle-pits, and prevented him from erecting an earthwork which he had commenced. As I shall probably have to occupy that line again before long, this fire of your monitors will undoubtedly save many lives on our side, for which I desire to express to them my thanks.

From all the information I have along my line, it seems to me that the re-enforcements which the enemy has received are small. The enemy has moved either the whole or a part of the 1st regiment South Carolina infantry from Sullivan's Island on to my front. They are well drilled as heavy artillery.

From the intercepted despatches of the enemy I learn that he is very nervous in regard to Simpkins and Johnson, expecting another attack every moment, and asking the rebel commodore for re-enforcements and boats to guard his front.

According to orders received from the major general commanding department, Forts Putnam and Strong have again opened fire on Sumter.

I have the honor to be, very respectfully, your obedient servant,
A. SCHIMMELFENNIG,

Brigadier General, Commanding District.

Admiral DAHLGREN,
Commanding S. A. B. Squadron.

Casualties on the Montauk.

UNITED STATES IRON-CLAD MONTAUK,

Stono River, South Carolina, July 9, 1864.

ADMIRAL: I regret to inform you that, in engaging battery Pringle this afternoon, James Norton (cockswain) was so seriously wounded by a shot from the enemy as to render the amputation of his left leg necessary; John C. Patterson, ordinary seaman, was also severely injured in the left leg by the same shot.

The deck on the port side near the turret was struck twice, and a portion of the wood work beneath splintered.

The enemy appeared in small force in the old earthwork below battery Pringle and cheered the effects of the rebel shot. They fired on the monitor with musketry, but were dispersed by a few rounds of grape and canister.

I am, respectfully, your obedient servant,

A. W. JOHNSON,

Lieutenant Commander, Commanding Montauk.

Rear-Admiral J. A. DAHLGREN, U. S. N.,

Commanding S. A. B. Fleet, Flag-Steamer Philadelphia.

UNITED STATES IRON-CLAD MONTAUK,

Up Stono River, South Carolina, July 10, 1864.

SIR: I have to report that, on the 9th instant, at 6 p. m., while the United States steamer Montauk was in action with Battery Pringle, the following casualties occurred:

James Norton, seaman, lacerated and contused wound of the left leg, rendering amputation necessary; John C. Patterson, ordinary seaman, lacerated and contused wound of the left leg, produced by a solid shot from the enemy.

It affords me pleasure to acknowledge the valuable assistance of Passed Assistant Surgeon Nelson, of the Pawnee, and Assistant Surgeon Plant, of the Lehigh.

Very respectfully,

HENRY C. ECKSTEIN,

Assistant Surgeon.

A. W. JOHNSON,

Lieutenant Commander, Commanding.

EXPEDITION TO MCINTOSH COUNTY, GEORGIA.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, South Carolina, August 8, 1864.

SIR: I forward to the department two reports of very creditable excursions into the rebel territory.

These clearly exhibit how entirely the country is denuded of its fighting men. Of 26 persons picked up at a country meeting, but few were between the ages of 20 and 50, &c. * * *

I have the honor to be, &c.,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

GIDEON WELLES,

Secretary of the Navy.

Report of Commander George M. Colvocoresses.

UNITED STATES SLOOP-OF-WAR SARATOGA,
Doboy Sound, Georgia, August 6, 1864.

SIR : I have the honor to submit the following report of an expedition which left the Saratoga, the ship under my command, on the evening of the second instant:

Object of expedition.

It was to surprise and capture the male inhabitants, who had been ordered to meet at the court-house of McIntosh county, Georgia, on the third day of August for the purpose of forming themselves into a coast guard, which order I had read in the Savannah Republican of the twenty-seventh of July, 1864.

Personnel of the expedition.

It consisted of myself, Acting Ensign Edward Rogers, Acting Ensign George O. Fabens, Boatswain Philip J. Miller, Acting Master's Mates William A. Stennard and Thomas Dalton, Acting Captain's Clerk John W. McReynolds, and one hundred and seven sailors and marines, making a total of one hundred and fifteen persons, including Dr. Winthrop Butler, who accompanied the expedition as surgeon.

Our departure from the ship and landing on the main land.

The expedition left the ship on Tuesday, August 2, 4.40 p. m., in seven boats, and reached the main land shortly after 9 o'clock p. m. The night was very favorable to our design, there being no moon by which the enemy could discover our movements as we approached the landing.

March and arrival of the expedition at the court-house.

As soon as the expedition was landed I sent all the boats back to the ship, with an order to the executive officer to let them meet me the next day at the landing, called the ridge, some seven miles distant from the first landing, but nearer the ship.

The expedition was then formed into a line, and Acting Master's Mate Stannard, with five men, sent ahead as skirmishers. The expedition being now ready to move forward, we began our march. We did not meet with any person or see any house until twelve o'clock, when the skirmishers fell back to the line, and Mr. Stannard reported a dwelling-house ahead. We passed it as silently as possible in order not to awake the inmates, and in a few minutes after we found ourselves on the main road leading to Savannah. We proceeded on this road until we came to a bridge, when the expedition halted, and I directed Mr. Miller and seven men to take charge of the bridge and capture every one who should attempt to pass over it, coming from the direction of the court-house, and also to burn the bridge at 11 o'clock in the day, which I calculated would be about the hour the meeting at the court-house would take place, and thereby not only prevent any one's escaping in that direction on our making the intended assault, but prevent likewise an attack on our rear from some three hundred cavalry, which I had been informed were encamped a few miles beyond the bridge.

Having thus disposed of Mr. Miller and his command, the expedition resumed its march, and on reaching the road which led to the court-house I divided my

forces, giving Mr. Rogers one-half, with which he marched on to the right of the court-house, while with the other half I proceeded to the left of the court-house. When we arrived abreast of the building we all took to the neighboring woods, and there remained concealed until the proper time for making the attack should arrive, which was the same that had been fixed on for firing the bridge left in charge of Mr. Miller.

When the signal for attacking was made, we immediately charged at a double-quick and completely surrounded the meeting, and all who composed it were captured, except three who succeeded in making their escape. By this time Mr. Miller and his command had arrived, bringing with him eleven men whom he had captured near the bridge; he also brought a number of horses and buggies. There being no prospect, after the bridge was set on fire, of our taking any more prisoners, I gave the order, on the arrival of Mr. Miller, for the expedition to again form in line, and placing the prisoners in the centre we started to return to the ship.

When about half way we captured three more men who were on their way to the meeting. As we proceeded I caused every bridge we crossed to be destroyed to prevent pursuit; I also burnt the large encampment which stood near the road leading to Darien, and which was to have been occupied by the force now being raised to defend the coast.

The expedition arrived safely at the ridge at sunset; but as my order in regard to the boats had been misunderstood, we did not reach the ship until about noon next day.

The following is a summary of what the expedition accomplished:

We took twenty-six prisoners, twenty-two horses and buggies, destroyed two bridges, and burnt a large encampment which the enemy greatly needed for the protection of his forces; and we did this in broad daylight, and fifteen miles from our boats, without losing a single life or meeting with any unpleasant accident.

You will perceive, sir, on examining the descriptive list of these prisoners, that several of them held, at the time of their capture, important civil offices.

It affords me great satisfaction to close this report with the acknowledgment that I am much indebted for the success of the enterprise to the officers and men under my command; the behavior of both throughout was truly admirable.

Very respectfully, your obedient servant,

GEO. M. COLVOCORESSES,

Commander, U. S. Navy.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

DESTRUCTION OF SALT WORKS NEAR BACK RIVER.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,

Port Royal Harbor, S. C., August 8, 1864.

SIR: I enclose herewith a report from Captain Swann, commanding the United States steamer Potomska, giving an account of a raid in which he succeeded in destroying an extensive rebel salt works, in the course of which his small force had a sharp skirmish with the rebels, in which he lost one man killed and four wounded,

The object of the expedition was, however, entirely accomplished, and there is every reason to believe that the rebels were punished severely by the fire from our boats.

Captain Swann speaks very highly of the Spencer rifles, with which his men were armed.

I sent a steamer to bring up the wounded, and commended Captain Swann for the handsome manner in which the affair was executed.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Volunteer Lieutenant R. P. Swann.

UNITED STATES STEAMER POTOMSKA,

July 30, 1864.

SIR: I have the honor to report the destruction of two salt works on a creek leading out of Back river, six miles from its mouth. One of the works contained twelve pans and the other six. The pans were the largest I have ever seen, and the masonry very substantial.

I started from the ship at 2 this a. m., and landed at the first work just before daylight. I destroyed the pans so effectually that not one of them will hold water. I burned all the buildings, destroyed 150 bushels of salt, and broke up all the wagons. I took six contrabands employed in the works. The pans were three-fourths of an inch thick, and it took me so long to destroy them that I was not ready to return to the ship until 9.30 a. m. The water in the creek was then very low and the swamp was from five to six feet above the gunwales of the boats, the creek at the time not being more than ten feet wide, and the water so shoal that in places we were forced to drag the boats through. At 10 a. m., when we had proceeded one-half mile, we were fired on by the enemy from the marsh bordering the creek, and at the distance of about ten yards. I had my first and third cutters, commanding the expedition myself in the third cutter, with a crew of six men. I was followed by the first cutter, commanded by my executive officer, Acting Ensign Andrew Curtis, with eleven men. Their first volley was most effective, wounding three men in my boat, one mortally, (since died,) and two severely. There were two wounded by the same volley in the first cutter. Our arms, the Spencer rifle, saved us all from destruction, as the rapidity with which we fired caused the enemy to lie low, and their firing was, after the first fire, very wild. The sails of the first cutter were pierced by fourteen balls, and there are five in her hull. The third cutter was struck in hull and sails several times. We fought them three-quarters of an hour, some of the time up to our knees in mud, trying to land and capture them, and some of the time in the water, with the boats for a breastwork. The mud was so soft that we found it impossible to land and fight them, but the raking fire we kept up on them, firing at the smoke of their guns, drove them off. We could hear the cries of their wounded, and several were shot while retreating. None of our wounded made any noise. I cannot sufficiently commend the conduct of my executive officer, Andrew Curtis, and his coolness and bravery under the galling fire to which we were subjected deserves the notice of the department. The men behaved beautifully, and one of them in my boat, Charles Sylvester, when wounded severely, the ball entering his shoulder and coming out of his back, said, "it was nothing but a flesh wound", and fought until we had driven the enemy back, he bleeding profusely all the while. Mr. Curtis speaks very highly of the conduct of Luther M. Millington, paymaster's

steward. All the wounded are doing well, and the damage done to the enemy will more than compensate for our loss. I enclose a list of casualties. We expended 200 rounds of ammunition.

I am, sir, very respectfully, your obedient servant,

R. P. SWANN,

Acting Volunteer Lieutenant, Com'dg U. S. Steamer Potomska.

Report of casualties.

JULY 31, 1864.

SIR: I have to report five men wounded in the expedition of July 30, 1864, namely, Henry W. Briggs, mortally, a minnie ball striking him about four inches to the left of the second lumbar vertebræ, passing directly through the body, lodging beneath the skin on the right of the epigastric region—he died about 9 o'clock p. m., from internal hemorrhage; Charles E. Sylvester, seriously, the ball striking directly over the insertion of the deltoid muscle, passing out directly over the inferior angle of the scapula; James Butler, not seriously, a buck-shot wound under the eye; Edward Merk, slightly, on hip, and Albert R. Dibble, slightly, on thigh.

Respectfully,

CHARLES C. WILLIAMS,

Surgeon's Steward, in charge.

Captain R. P. SWANN.

DESTRUCTION OF SALT WORKS.

FLAG-STEAMER HARVEST MOON,

Charleston Roads, August 23, 1864.

SIR: It gives me pleasure to inform the department that Captain Colvocoresses has executed another descent into the rebel territory and captured a lieutenant and twenty-eight privates of company F, 3d South Carolina cavalry, dispersed the remainder, captured their arms and equipments, burned the encampment, destroyed two large salt works, captured six overseers and seventy-one slaves, destroyed the bridge on the main road to Savannah, and captured a mail, &c.

The activity and skill thus manifested by Captain Colvocoresses is entitled to the highest commendation, and I shall soon give him another and wider field for his labors.

I have the honor to be, very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

EXPEDITION UP THE WHITE OAK RIVER.

Report of Acting Master W. T. Gillespie.

UNITED STATES STEAMER BRAZILIERA,

St. Simon's Sound, Georgia, October 20, 1864.

SIR: On the night of the 13th instant I went in charge of an expedition up the White Oak river, with two boats from my vessel and one from the

Mary Sanford. We succeeded in securing fifty negroes belonging to J. Morrison, a planter. During the time two of my men in some manner became detached from me. I waited and sent two officers to search for them as long as I considered it prudent. I then proceeded with the boats to the Mary Sanford, who was lying at Penneman's Mills, Saltillo river, and while proceeding up the river the rebels fired on the steamer, killing Peter Collins, my pilot. On the 15th I returned to the bark. On the 17th Edward Sheridan, one of the men, returned and reported Charles Thompson, the other man, a prisoner in the hands of the confederates. The cause of this misfortune was in these two men having found some liquor, when Thompson became intoxicated and went back to the house after plunder. Sheridan made the best of his way to the vessel in a canoe he found on the marshes.

I have the honor to be, very respectfully, your obedient servant,

W. T. GILLESPIE,
Acting Master, Commanding.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron.

Report of Acting Master Z. Kempton.

UNITED STATES STEAMER MARY SANFORD,
St. Andrew's Sound, Georgia, October 16, 1864.

SIR : I respectfully report going up the Big Saltillo river with my command, on the evening of the 13th instant, drove the pickets from Penneman's Mills, and anchored for the night at that place, to wait for the return of Acting Master Gillespie, commanding the United States bark Braziliera, who had gone up the White Oak river with two boats and twenty men of his command, and one boat, two officers and ten men from this vessel, to take the negroes from Captain John Morrison's plantation, who were harvesting corn at that place for the confederate soldiers stationed in that neighborhood.

Captain Gillespie returned in safety to this vessel on the morning of the 14th instant, bringing with him all the negroes from the Morrison plantation, forty-seven in number.

Having learned that there was a large quantity of corn and rice stored at the town of Jefferson-ton, on the river, twelve miles above Penneman's Mills, in transit to Savannah, for the confederate government, taking with me Captain Gillespie, his pilot, men and boats, at 2.30 p. m. got under way and proceeded up the river. While passing Yellow Bluff was fired upon by a company of cavalry that was secreted behind trees and in the grass. They were driven from their hiding place in five minutes with canister and shrapnell, and as they were not over two hundred yards from our guns, they must have been punished severely. I regret to state that the fourth shot fired at us instantly killed Peter Collins, our pilot, the ball passing through his body near the heart. The killing of Mr. Collins is the only casualty that happened during the fire of the enemy. We passed above the bluff about a mile. Having lost our pilot, I was obliged to abandon further proceedings and return down the river. While passing Yellow Bluff the enemy did not show themselves. We anchored for the night at the mouth of White Oak river.

On the morning of the 15th instant we returned down the river, and round to St. Simon's, landed the contrabands at that place, and buried the corpse of Mr. Collins in due form. Mr. Collins was a brave officer and died at his post. His death is very much lamented by the officers and crew of the United States steamer Braziliera and this vessel.

My officers, men and myself are all anxious for a pilot, so that we can raid on these rivers when an opportunity offers.

Very respectfully, your obedient servant,

Z. KEMPTON,

Acting Master, Commanding.

Rear-Admiral JOHN A. DAHLGREN,

Commanding S. A. B. Squadron.

CAPTURE OF OFFICERS AND SEAMEN OF THE UNITED STATES STEAMER PERRY.

Report of Rear-Admiral J. A. Dahlgren.

FLAG-SHIP PHILADELPHIA,

Off Morris Island, December 17, 1863.

SIR: I enclose herewith a report from Acting Master Gregory, commanding brig Perry, from which the department will perceive that three officers and twelve seaman of that vessel were captured by the rebels on December 5.

It appears from the report that this misfortune was owing to disobedience of orders on the part of the officer commanding the boats.

On the previous occasion, when the Ward landed a party to search for water and lost ten out of nineteen, I sent the Perry there expressly in order that the rebels might have a more powerful vessel to deal with, and I hoped a more experienced officer in command.

These blunders are very annoying, and yet I do not like to discourage enterprise and dash on the part of our officers and men; better to suffer from the excess than the deficiencies of these qualities.

At the same time, in the present instance, the officer of the boat stands charged with disobedience of orders, and if he were in my power he should surely answer for it.

Enclosed is the printed order which the department directed in consequence of the Ward's losing some men.

I have directed the Perry to be relieved by the Mangham, and if, on the arrival here of the former, an inquiry is found to be proper, it will be ordered.

Very respectfully, your obedient servant,

J. A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

P. S.—Since writing the above, the Perry has arrived here, and from the captain's personal explanation the result seems to me most inexcusable.

The alleged disobedience of orders by the officers exonerates the commander of the brig.

Report of Acting Master S. B. Gregory.

UNITED STATES BRIG PERRY,

Off Morrill's Inlet, S. C., December 15, 1863.

SIR: It becomes my painful duty to report the loss of three of my officers and twelve men, on the 5th of December, under the following circumstances:

A vessel being fitted up for the purpose of running the blockade, and fearing that she might escape in the night, and avoid me by hugging the beach in shoal water, I determined to destroy her if I could. I despatched two boats for that purpose.

After shelling around the schooner, I ordered them to the beach, under the cover of our guns; instructed Mr. Arrants, acting ensign, to send one person to see if the way was clear, and if so, to forward one or two more to set fire to her, and the rest to remain in the boats to afford a retreat for the two or three on shore; but to my surprise he landed all but two of the crew of the first cutter, and in less than three minutes the cavalry rushed down and surrounded them and cut off their retreat. They attacked the boats, but our first shell scattered them, they harming no one in the boats. After some hand-to-hand fighting, our men surrendered, there being more than sixty in number of the cavalry; my precious son, a lad of seventeen years of age, was among the number captured. I cannot conceive how Acting Ensign Arrants made so great a mistake.

Very respectfully, your obedient servant,

SAMUEL B. GREGORY,
Acting Master, Commanding.

Rear-Admiral J. A. DAHLGREN,
*Commanding S. A. B. Squadron,
Flag-Steamer Philadelphia, off Morris Island, S. C.*

The following is a list of the killed, wounded, or prisoners, on the expedition of December 5, 1863:

1. William B. Arrants, acting ensign and sailingmaster.
2. George Anderson, acting ensign and sailingmaster.
3. George W. Burkett, acting assistant paymaster.
4. John P. Reinhardt, cockswain.
5. John Pinkham, cockswain.
6. Conrad Horse, seaman.
7. Albert Williamson, seaman.
8. James Davis, seaman.
9. William Henderson, seaman.
10. Michael Lawton, seaman.
11. Michael Tobin, seaman.
12. Peter Keefe, seaman.
13. Samuel B. Gregory, landsman.
14. William McDowell, landsman.
15. George A. Brimsmaid, landsman.

[order.]

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, S. C., December 14, 1863.

The Navy Department "disapproves" of officers and men staying from their "vessels, with or without permission," resulting "in their capture." It is therefore expressly forbidden in this squadron, and commanding officers will use such stringent measures to correct this evil as will suppress it.

Respectfully,

JOHN A. DAHLGREN,
Rear-Admiral, Commanding S. A. B. Squadron.

OPERATIONS IN MURRILL'S INLET

Report of Rear-Admiral J. A. Dahlgren.

FLAG-STEAMER PHILADELPHIA,
Off Morris Island, January 5, 1864.

SIR: Under date of December 17 I informed the department of the capture of a boat's crew from the Perry, and enclosed the report of the commanding officer, Acting Master Gregory.

I also stated that the Perry had been relieved by another vessel, as I was not satisfied with the account given by Acting Master Gregory.

There is little more to be learned than what appears from the report already enclosed. Under the circumstances, it was a blundering affair—without judgment on the part of the commanding officer, and aggravated by the alleged disobedience of the officer sent ashore in charge of the party.

Captain Gregory never stated to me that any further occurrences took place, but rumor induced me to make further inquiries, and the answers returned are enclosed, (E and F.)

As regards the alleged murder of one of the Perry's boat's crew, it seems to be derived from some contrabands who escaped subsequently from the inlet.

On examination I do not learn that any one of this party witnessed the murder, or saw the man, or had seen any person that had done so; but that a boy had a cap and stockings which were said to have been taken by some one else from our man, and that he told this to a man ashore, who told it to my informant.

If such an outrage has been perpetrated, it will be known satisfactorily from some of the boat's crew captured, and suitable measures taken to punish it.

After the Perry returned here, and I became acquainted with the principal facts of the mishap to her boat's crew, I directed Captain Green to repair to the inlet with the steamers Nipsic, Sanford, Daffodil, and bark Allen. 100 marines were embarked in these vessels, and additional boats, whose crews swelled the landing force to about two hundred and fifty men, with two boat howitzers.

The vessels left here late on the 29th ultimo, and arrived near the inlet next day in the afternoon, when they were joined by the schooner Mangham. That evening the wind began to freshen from northward and eastward, increasing through the night, with considerable sea. The next day the weather wore an appearance so unsettled that Captain Green felt compelled to abandon any attempt to disembark; he therefore directed the Allen to return to her station off Charleston, and the Mangham to the inlet, as before.

With the three steamers he sought anchorage some twenty miles below, where he made suitable disposition for the launches, and ordered the Nipsic to return and destroy the schooner, which had been one of the objects of my instructions to Captain Green.

This done, the vessels returned to this station, where they arrived on the 2d January.

In pursuance of orders, Captain Spotts returned to Murrill's inlet, which he reached on the 1st January, and opened fire from the heavy guns of the Nipsic, to scour the woods and also to destroy the schooner, which proving ineffectual by reason of intervening sand-hills, dispositions were made to land. Thirty marines, under Lieutenant Fagan, were put ashore and deployed as skirmishers across the spit, while a launch, with a howitzer, took position to enfilade any advance on their front by the rebel cavalry.

Thus covered, the seamen landed with a boat howitzer on its field-carriage, and opened on the schooner in the inlet. At the fifth round she took fire, and, a valuable cargo of turpentine, was soon in one blaze. The party then re-

turned to the Nipsic. It had been placed in charge of the executive officer, Acting Master Churchill, who carried out his orders very creditably. Lieutenant Fagan, of the marine corps, Acting Ensigns Green and Taylor, and Acting Master's Mates Orcutt and Kitching, also performed their parts well. Previously thirteen contrabands had escaped to the Mangham.

I trust this correction will serve to moderate any gratification which the rebels may have derived from the capture of our boat's crew.

I have the honor to be, very respectfully, your obedient servant,

JOHN A. DAHLGREN,

Rear-Admiral, Commanding S. A. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

P. S.—I herewith enclose reports of Captain Green, Commander Spotts, and Acting Masters Collins and Gregory, marked A, B, C, D.

A.

Report of Captain J. F. Green.

UNITED STATES STEAM-SLOOP CANANDAIGUA,

Off Charleston, S. C., January 4, 1864.

SIR: In obedience to your instructions, I left this anchorage, on the 29th ultimo, in the steamer Mary Sanford, accompanied by the steamer Nipsic, steam-tug Daffodil, and bark Ethan Allen, and proceeded to, and arrived on the following afternoon at, an anchorage distant about fifteen miles from Murrill's inlet, and was joined there by the schooner George Mangham.

Preparations were immediately made for disembarking in force at daylight the following morning for the purpose of accomplishing, so far as practicable, the object of the expedition, agreeably to your instructions. At sunset the weather appeared unsettled and somewhat threatening. The wind began to freshen from the northward and eastward, and a heavy swell to make from the southward and eastward. The wind and swell continued to increase during the night, and to such a degree until 4 o'clock the following morning as to endanger the safety of the launches in tow of the Mary Sanford and Nipsic. One of the launches broke adrift and was recovered with considerable difficulty. Soon after the recovery of the launch the wind and swell began to abate, but the weather still presented an unsettled appearance; and as the launches and also the men necessarily stationed in them to keep them free of water would, in my opinion, be jeopardized, if not lost, should heavy weather prevail for any length of time, I was reluctantly compelled to abandon any attempt to disembark in force, as contemplated, and to secure the safety of the launches by seeking a safe anchorage or harbor, and afterwards to carry out your instructions as far as lay in my power.

Accordingly I directed the Ethan Allen to return to her anchorage, near Rattlesnake shoal, and with the remaining vessels of the expedition, excepting the schooner Mangham, which had returned to her station off the inlet the night previous, proceeded to, and arrived early in the afternoon of the 31st ultimo at, an anchorage to the northward, and about ten miles distant from Georgetown light-house.

Here I directed the launches which the Nipsic had in tow to be transferred to the tug, and the removal of the boat howitzers from the launches to the Mary Sanford and Nipsic, and ordered Commander Spotts to proceed the next morning to Murrill's inlet and destroy a schooner known to be in the inlet, loaded and ready to run the blockade.

Commander Spotts skilfully and successfully executed the order, as will appear from his report, a copy of which is herewith enclosed, and rejoined the *Mary Sanford* and tug Friday night, the 1st instant, at their anchorage, from whence the three vessels returned to Charleston, arriving about noon on Saturday.

Very respectfully, your obedient servant,

J. F. GREEN, *Captain.*

Rear-Admiral J. A. DAHLGREN,

Commanding S. A. B. Squadron, Off Morris Island, S. C.

B.

Report of Commander J. H. Spotts.

UNITED STATES STEAMER NIPSIC,
Off Murrill's Inlet, S. C., January 1, 1864.

SIR: In obedience to your orders, I proceeded to this place and delivered to the United States schooner *George Mangham* twenty-six of her crew.

I discovered the schooner designated by you lying inside the inlet, and opened fire upon her, but did not succeed in setting her on fire in consequence of a sand-spit which concealed her hull. I therefore fitted out an expedition, under command of Acting Master Churchill, executive officer of this ship, consisting of two launches, with howitzers, and forty men, and two cutters, with thirty marines; landed one howitzer on the spit, in charge of Acting Ensign Taylor, of the South Carolina, and marines, under command of Lieutenant Fagan, of the marines; opened fire on the schooner at three hundred yards with howitzer, and the fifth shell set her on fire. The schooner and cargo, which consisted of turpentine, were entirely consumed. The expedition was ably commanded and designs executed by Acting Master Churchill, assisted by Lieutenant Fagan, of marines, Acting Ensign Green, Acting Ensign Taylor, of the South Carolina, and Acting Master's Mates Orcutt and Kitching.

Very respectfully, your obedient servant,

J. H. SPOTTS, *Commander.*

Captain JOSEPH F. GREEN,

Commanding United States Steamer Canandaigua.

C.

Report of Acting Master John Collins, jr.

UNITED STATES SCHOONER GEORGE MANGHAM,
Murrill's Inlet, S. C., December 30, 1863.

SIR: I have the honor to report that at four o'clock this morning a boat was observed making for this vessel from the shore, and upon being hailed it was discovered to contain thirteen contrabands, who had last night effected their escape from slavery, and including among their number four females and one infant, all of whom are now on board this schooner well cared for. They imparted considerable information respecting this locality and the saltworks now in progress, which, if correct, must prove of value.

They furthermore state that a schooner is now within the inlet, loaded with a cargo of turpentine, awaiting an opportunity to evade the blockade, and proceed

to Nassau; also that four companies of soldiers, principally cavalry, are engaged hereabout in the protection of these salt manufactories, and in patrolling the beach.

I have the honor to be, very respectfully, your obedient servant,

JOHN COLLINS, JR.,
Acting Master, Commanding.

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

D.

Reports of Acting Master S. B. Gregory.

UNITED STATES BRIG PERRY,
Off Morris Island, January 4, 1864.

SIR: Your letter of the 3d instant has been received, asking information in regard to the capture and hanging of a colored man belonging to this vessel at Murrill's inlet.

In reply, I beg leave to state that there was a colored man captured belonging to the boat's crew, but I have no evidence that he was hung. All that I have heard in regard to him was a rumor, coming from the United States steamer Nipsic, that he was hung immediately after capture.

Very respectfully, your obedient servant,

SAMUEL B. GREGORY,
Acting Master, Commanding.

Rear-Admiral J. A. DAHLGREN,
Commanding S. A. B. Squadron, off Morris Island, S. C.

P. S.—The colored man's name was George Brimsmaid.

E.

UNITED STATES BRIG PERRY,
Off Morris Island, S. C., December 30, 1863.

SIR: I have the honor to acknowledge the receipt of your communication of the 29th ultimo. In answer, would observe that my report on the loss of a boat's crew at Murrill's inlet contained all the particulars which took place on that occasion. That on the afternoon of the 15th, being the first favorable opportunity to land, I sent on shore a flag of truce for the purpose of ascertaining if any of my men were killed, and if so, how many; also who were wounded; also if any were uninjured. The commander of the forces at first declined to answer the questions, but did send me word that my son and Ensign Anderson were uninjured; that there were three wounded, one mortally; that they would be treated as well as their own soldiers; at the same time assuring the officer in charge that a flag of truce would always be respected.

Very respectfully, your obedient servant,

SAMUEL B. GREGORY,
Acting Master, Commanding.

Rear-Admiral J. A. DAHLGREN,
Com'dg S. A. B. Squadron, Flag-Steamer Philadelphia.

F.

UNITED STATES BRIG PERRY,
Off Morris Island, January 4, 1864.

SIR: George Brimsmaid, captured at Murrill's inlet, was a colored man

belonging to New London, Connecticut; shipped as landsman on board the North Carolina, September 24, 1863; was transferred to this vessel from there October 29, 1863; aged twenty-three years. Had been interrogated as to whether he was a slave, and he said he never had been one. He had no arms when captured.

Very respectfully, your obedient servant,

SAMUEL B. GREGORY,
Acting Master, Commanding.

Rear-Admiral JOHN A. DAHLGREN,
Commanding S. A. B. Squadron.

Report of Acting Ensign George Anderson.

WASHINGTON, October 22, 1864.

SIR: I have the honor to report that on the 5th of December, 1863, I landed on Magnolia beach, near Murrell's inlet, S. C., with two boats and 22 men from the United States brig Perry, accompanied by Acting Ensign W. B. Arrants, Acting Assistant Paymaster George W. Burkett, and Master's Mate John McDonald, of that vessel.

Before leaving the ship, we received verbal orders from Acting Master Samuel B. Gregory, commanding the Perry, to take with us George Brimsmaid (colored landsman,) to land on Magnolia beach, and to send him ahead unarmed as a scout; if no rebels were reported in the vicinity, to proceed across to Murrell's inlet, leaving the boats in charge of Acting Master's Mate John McDonald, to set fire to the schooner Cecilia, of Nassau, N. P., and to destroy all picket stations that we might come across. We were further instructed to signal the Perry in case we were attacked by the enemy, in order that she might co-operate with and cover us by her guns. After landing on the beach and forming my men, we proceeded to some high drifts within sight of the ship and boats on the beach, where I posted Landsman Samuel B. Gregory, jr., with the signal flag, and instructed him how and when to use it. We then started for the schooner in Murrell's inlet, and had only proceeded a short distance, when Gregory, the signal man, was discovered running towards us, crying out that the enemy's cavalry were approaching from the southward, he in the mean time having made no use whatever of the signal flag. I took the flag from him and endeavored to signal the ship, but before I could do so we were charged by a company of cavalry and forced to retreat to a hummock at the foot of one of the sand-hills; another company of cavalry at the same time made an unsuccessful charge upon the boats. Unfortunately, the brig was at the time lying head on to the beach, so that her guns could not be brought to bear. On being attacked in the rear by the company which had charged upon the boats, I deemed it expedient, after a brisk resistance, to surrender.

Our loss was five wounded—three slightly: Acting Assistant Paymaster George W. Burkett, John Reinhart, cockswain, Conrad Horse, seaman, slightly, since recovered; John Pinkham and James Pobin, seriously; John Pinkham, after our surrender still lying on the ground, unable to rise from the effects of his wounds, was ordered by one of the rebel captains to get up. On replying that he could not, the captain shot him with his revolver, inflicting a wound from which he died a short time after.

The enemy's loss was one killed and three wounded, in addition to one horse killed and one wounded. After arriving at the enemy's camp in the woods, George Brimsmaid, colored landsman, was taken from our party by two of the rebel cavalymen and a man in citizen's dress; one of the rebels was seen to strike Brimsmaid over the head with his sabre. As they were taking him through

the camp, a few minutes later, we heard a loud yell, and immediatly after the report of two guns. The two rebels who took Brimsmaid soon returned, and stated that they had hung, and then shot him; this fact was afterwards affirmed to us by several officers of the command, which consisted of two companies of the 5th and 21st Georgia cavalry, under command of Captains Harrison and Bowers.

Most respectfully, &c.,

GEORGE ANDERSON,
Acting Ensign, United States Navy.

Hon. GIDEON WELLES,
Secretary of the Navy.

List of officers and men captured from United States brig Perry at Murrell's inlet, South Carolina, December 5, 1863.

Acting Ensign George Anderson; Acting Ensign W. B. Arrants; Acting Assistant Paymaster George W. Burkett; Cockswain John P. Reinhart; Cockswain John Pinkham, dead, Georgetown, North Carolina; *seaman, Conrad Horse; seaman, William Henderson, dead, Columbia, North Carolina, July 10, 1864; *seaman, Michael Lawton; *seaman, James Davis; seaman, Peter Keefe, leg amputated May 28, 1864; seaman, Michael Tobin, dead, Andersonville, Georgia; *landsman, William McDowell; *landsman, Samuel B. Gregory, jr.; George B. Brimsmaid, colored landsman, hung at Murrell's inlet, South Carolina.

*Left at Richland prison, Columbia, North Carolina.

EASTERN GULF SQUADRON.

DESTRUCTION OF SALT-WORKS IN ST. ANDREW'S SOUND, FLORIDA, &c.

*Reports of Acting Rear-Admiral T. Bailey.*UNITED STATES FLAG-SHIP SAN JACINTO,
Key West, December 28, 1863.

SIR: I have the gratification of reporting a very important service performed by the blockading force in St. Andrew's sound, under the command of Acting Master William R. Browne, in destroying a very extensive and valuable quantity of salt-works, both at Lake Ocola and St. Andrew's bay. The circumstances are as follows:

On December 2 a boat was despatched from the bark *Restless*, then lying at St. Andrew's sound, to Lake Ocola, some twenty miles to the westward, where Acting Ensign J. J. Russell landed with his men and marched some five miles inland to Kent's salt-works, consisting of three different establishments, and utterly destroyed them. There were six steamboat boilers at this place, cut in half lengthwise, and seven kettles, made expressly for the purpose, each holding three hundred gallons. They were in the practice of turning out 130 bushels of salt daily. Besides destroying these boilers, a large quantity of salt was thrown into the lake. Two large flatboats and six ox carts were demolished, and seventeen prisoners were taken, who were paroled and released, as the boat was too small to bring them away.

On the 10th of December Acting Ensign Edwin Cressy arrived at St. Andrew's sound, from the East Pass of Santa Rosa's sound, with the stern-wheel steamer *Bloomer* and her tender, the sloop *Caroline*, having heard of the expedition to Lake Ocola, and placed his command at the disposal of Acting Master Browne, for more extensive operations near St. Andrew's. Accordingly, three officers and forty-eight men were sent from the *Restless* to the *Bloomer*, and she proceeded to West bay, where the rebel government's salt-works were first destroyed, which produced 400 bushels daily. At this place there were twenty-seven buildings, twenty-two large boilers, and some 200 kettles, averaging 200 gallons each, all of which were destroyed, together with 2,000 bushels of salt, and some storehouses containing three months' provisions. The whole was estimated at half a million dollars. From this point the expedition proceeded down the bay, destroying private salt-works, which lined each side for a distance of seven miles, to the number of one hundred and ninety-eight different establishments, averaging two boilers and two kettles each, together with large quantities of salt. Five hundred and seven kettles were dug up and rendered useless, and over three hundred buildings were destroyed, together with twenty-seven wagons and five large flat-boats. The entire damage to the enemy is estimated by Acting Master Browne at \$3,000,000. Thirty-one contrabands, employed at these works, gladly availed themselves of this opportunity to escape, and were of great service in pointing out the places where the kettles were buried for concealment.

In the mean time, while these operations were going on, Acting Master Browne got under way in the bark *Restless*, and ran up to within one hundred yards of the town of St. Andrew's, which had been reported to him by deserters as being occupied only by a military force for the last ten months, and commenced shell-

ing the place and some soldiery, who made a speedy retreat to the woods. Selecting the weathermost houses for a target, the town was fired by the third shell, and thirty-two houses were soon reduced to ashes. No resistance was offered to our people throughout the affair.

Acting Master Browne speaks in high terms of Acting Ensign James J. Russell and Charles N. Hicks and the forty-eight men from the *Restless*, as also of Acting Ensign Edwin Cressy and the six men belonging to the *Bloomer*, for the prompt manner in which they carried out his orders.

Respectfully,

THEODORUS BAILEY,

Acting Rear-Admiral, Commanding Eastern Squadron

Hon. GIDEON WELLES,

Secretary of the Navy.

UNITED STATES FLAG-SHIP SAN JACINTO,

Key West, January 27, 1864.

SIR: It affords me pleasure to report to the department that the promise made by Acting Master William R. Browne, commanding bark *Restless*, at the conclusion of his last report concerning the destruction of extensive salt-works in the vicinity of St. Andrew's bay—namely, that he would complete the work so handsomely begun—appears to have been kept. He reports that he went on board the stern-wheel steamer *Bloomer*, with two officers and forty-seven men belonging to the *Restless*, and proceeded up the bay against very unfavorable circumstances, of darkness, wind and tide, some ten miles above St. Andrew's, where his force was landed, and destroyed some 90 additional salt-works, together with all the boilers, kettles and buildings attached to them; whereupon the enemy commenced the destruction of some 200 more, which were in advance of our party, and thus saved us from all further trouble, except skirting along the bay for the distance of 15 miles, to make sure that the work of destruction had been well performed by them. Deserters from Captains Anderson's and Robinson's companies reported subsequently that both officers and men had broken up and gone home, as the destruction of the salt-works, which they were ordered to guard, had been so complete; and six of them have enlisted in the navy, after taking the oath of allegiance.

Acting Master Browne again speaks in terms of commendation of the officers and men engaged in this service, including Acting Ensign Cressy and the five men composing the crew of the steamer *Bloomer*.

Respectfully,

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

UNITED STATES FLAG-SHIP SAN JACINTO,

Key West, January 30, 1864.

SIR: It gives me pleasure to report—more, however, as an evidence of the zeal and efficiency manifested by this squadron, than on account of the importance of the achievement—that some salt-works in the vicinity of St. Joseph's bay have been destroyed by the bark *Pursuit*, under the command of Acting

Volunteer Lieutenant Randall. One establishment, consisting of six kettles, of 150 gallons each, and another consisting of three boilers set in masonry, together with all the buildings and apparatus attached, are reported as having been entirely demolished, and rendered useless to the enemy.

Respectfully,

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

DESTRUCTION OF BLOCKADE RUNNERS.

Report of Acting Rear-Admiral Theodorus Bailey.

UNITED STATES FLAG-SHIP SAN JACINTO,

Key West, December 28, 1863.

SIR: It gives me great pleasure to call the attention of the department to a very important service performed by the schooner Fox, a tender of the San Jacinto, under the command of Acting Master George Ashbury. The circumstances are as follows:

On the 20th of December a steamer was discovered in the mouth of the Suwanee river, apparently at anchor or aground. The Fox immediately beat up towards her, until, when within three quarters of a mile of the steamer, she grounded in eight and a half feet of water, and opened fire upon her with the howitzers, at the same time sending an armed boat in to capture the steamer. An attempt was made to intimidate our people, by mounting a piece of stove-pipe on a chair to represent a fore-castle gun, and a log of wood on a camp stool for a stern gun; but this device of the enemy failed in its object, and Acting Ensign Marcellus Jackson boarded the steamer, from which everybody had made their escape to the shore.

She proved to be a side-wheel steamer, painted lead-color, with black smoke-stack, two masts, and a walking-beam engine. Neither cargo, personal effects, papers, nor anything to indicate her name, were found on board; but from the description, she is supposed to have been the Little Lily, formerly the Nan-Nan, and before that the Flushing. The water was found running rapidly into the engine-room. None of our people were competent to stop the leak, or work the engine. The channel was exceedingly intricate and narrow, and night was rapidly coming on. Under these circumstances, Acting Ensign Jackson set fire to the vessel, agreeably to orders from Acting Master Ashbury, and, in returning to the Fox, pulled up all the stakes by which the channel was marked out, for about $1\frac{1}{2}$ mile. * * * * *

Again, on December 24, a vessel was discovered by the Fox standing in for the Suwanee river, and after a chase of two hours, and the firing of several shell, she was hove to. Being ordered by Mr. Ashbury to send a boat on board, the stranger put his helm up, with the evident intention of running the Fox down, and came down upon the starboard quarter, carrying away the boat davits, but doing little other damage, as the Fox was immediately kept away. While his vessel was paying off, Mr. Ashbury directed a rifle shot to be fired for the purpose of intimidation, but a heavy sea was running at the time, and the bullet took effect on the captain of the strange vessel, who was at the wheel, passing through his leg, but without touching an artery. The vessel was then boarded, and proved to be the British schooner Edwin, from Havana, bound to the Suwanee river, with a cargo of lead and salt, and was accordingly seized as a prize.

In addition to these achievements, I would remind the department that the *Fox* was one of the three tenders which assisted the Honduras in capturing the British steamer *Mail*.

Respectfully,

THEODORUS BAILEY,
Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

Additional report of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP DALE,
Key West, February 4, 1864.

SIR: Referring to my communication dated December 28, 1863, (numbered 392,) I have to inform the department that the steamer, the destruction of which by the United States schooner *Fox* is therein detailed, was the *Powerful*, and not the *Nan-Nan*, (or *Little Lily*,) as I had surmised.

Lieutenant Commander McDougal has since visited the wreck and destroyed the machinery, which the rebels were preparing to take away.

I trust that the department will see fit to notice by promotion the service performed by Acting Master Ashbury in destroying the steamer.

Very respectfully, your obedient servant,

THEODORUS BAILEY,
Commanding E. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

ARMY AND NAVY MOVEMENTS IN SOUTHERN FLORIDA.

Report of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP DALE,
Key West, December 17, 1863.

SIR: At the request of Brigadier General D. P. Woodbury, commanding district of Key West, &c., I have this day detached Acting Master's Mate Henry A. Crane from duty on board the sloop (tender) *Rosalie*, and ordered him to report to General Woodbury, for such temporary duty, connected with the army, as he may be pleased to direct. The general commanding this district is organizing a company of refugee rangers, to co-operate with some of the troops under his command, in preventing the supplies of cattle from being sent to the rebel army from the region about Tampa, amounting to some 1,500 or 2,000 a week; and it is thought that Mr. Crane's experience in military matters will be of great service on the expedition, and that his popularity among the Union men and disgusted rebels of Florida will secure many recruits. General Woodbury proposes, in case these anticipations are justified, to appoint Mr. Crane the captain of this company of refugee rangers, subject to the approval of the War Department.

Mr. Crane has already rendered valuable services to us in various expeditions against the enemy, and has been commended for zeal, skill, and bravery in action.

Respectfully,

THEODORUS BAILEY,
Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

Additional reports of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP DALE,
Key West, January 6, 1864.

SIR: Referring to my letter (No. 385) of December 17, I have to report that (Brigadier General Woodbury having completed his arrangements for going up the coast with a view to preventing any further supply of cattle to the rebel army from southern Florida) the steamer Honduras was, at his request, placed at his disposal, to convey and assist the expedition. General Woodbury went in the Honduras, to direct the operations in person; one company of the 47th regiment Pennsylvania volunteers accompanied him in the quartermaster's schooner Matchless, and more than thirty of the refugee rangers had already preceded him to Charlotte's harbor, where large numbers of recruits were confidently expected to join them from the main land.

The general left yesterday, and will establish his force at Fort Myers, about twelve miles from the mouth of the Chattahoochee river, for the present. Should his expectation of the re-enforcements likely to join him from the surrounding country prove correct, he will be able to push his operations on to Tampa, and occupy that place.

In the mean time the Honduras and other vessels on the blockade have orders to assist and co-operate with this expectation, to the extent of their ability, and I am prepared to render such assistance as may be needed.

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

UNITED STATES FLAG-SHIP SAN JACINTO,
Key West, January 19, 1864.

SIR: Referring to my letter (No. 9) of the 6th instant, relative to the expedition to the vicinity of Charlotte's harbor, under the personal direction of Brigadier General Woodbury, I have to report the return of the Honduras, with the general on board, after having established a military post at Fort Myers, on the Chattahoochee river. As yet, however, the expectation of receiving recruits for the refugee rangers from the surrounding country has not been justified by the event, for not only had a month passed, at our latest advices, without any accession to their force, but six of those already enlisted had deserted to the enemy, and had combined with them to attack our men. In spite of these circumstances, which occurred before the general arrived there with a company of the 47th regiment Pennsylvania volunteers, and in view of the fact that this defection appears to have been arranged among the deserters, before leaving this place, I am not prepared to say that our hopes of rousing the country to violent opposition against the burden and oppression of rebel rule are wholly unreasonable; but I am inclined to the opinion that the disaffected population of that region will require the support of a much larger force than can possibly be spared from here in order to induce them to incur the risk of joining us in sufficient numbers to produce any important results. From three to five thousand men, embarked in steamers of light draught, would undoubtedly insure to us the possession of the whole peninsula; but in the mean time the project will be thoroughly tested with the means at our disposal.

Respectfully,

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy.

DESTRUCTION OF THE REBEL STEAMER NAN-NAN.

UNITED STATES STEAMER NITA,
Cedar Keys, Florida, February 26, 1864.

SIR: I have the honor to report, that at daylight on the morning of February 24, while at anchor off the West Pass of the Suwanee river, I discovered a steamer in the East Pass bound out. I immediately started in pursuit, going around the intervening shoals with the ship and sending both my boats across. In the excitement she got ashore, and threw overboard about sixty bales of cotton to lighten her. The tide was ebbing, and seeing escape impossible, the officers and crew abandoned her at 7.20 a. m. At 7.25 I perceived that she was on fire, and in five minutes she was one solid sheet of flame from bow to stern.

At 8 a. m. the boats arrived alongside her, but could not board on account of the intense heat. About the same time I anchored in 5½ feet water and recalled the boats and commenced collecting the floating cotton. At 1 p. m. a boat from the Sagamore arrived alongside, and the officer in charge offered assistance. Considering the cotton all safe, being nearly all rafted together and anchored, and having anchored the steamer, I did not accept his offer.

I waited only for the ebb tide to tow the cotton alongside. At 5.45 p. m. the boats arrived alongside with the cotton. At 7.30 p. m. it was all on board and stowed. I am informed by a refugee that the steamer destroyed was the Nan-Nan, and that she was commanded by William (alias Barney) Pennington.

She came down to the West Pass three times, but finding it closely blockaded she returned, and finally concluded to attempt the East Pass. On the 22d I saw her come down within about two miles of the mouth of the river, and after watching us for a few hours she returned again. She was armed with a six-pounder field-piece and plenty of ammunition; a quantity of canister and shot was visible in the bottom of the vessel. I send you one of the canister.

The barrels and rammers of a quantity of muskets were also taken from the wreck. I am informed that she fired on the United States schooner Sea Bird a short time since.

She was a side-wheel, walking-beam iron steamer, with two masts, two flag-staffs, and one smoke-stack, and her engine is marked "Morgan Iron Works, New York, 1860." * * * * *

Very respectfully, your obedient servant,

R. B. SMITH,

Acting Volunteer Lieutenant, Commanding.

Acting Rear-Admiral T. BAILEY,

Commanding E. G. B. Squadron.

DESTRUCTION OF SALT-WORKS NEAR ST. MARK'S, FLORIDA.

Report of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP DALE,
Key West, March 6, 1864.

SIR: I have the honor to report that two expeditions have recently been fitted out from the Tahoma for the destruction of extensive salt-works, the property of the rebel government, in the neighborhood of St. Mark's, Florida.

The first expedition left the ship on the morning of February 17, in two detachments—one under command of Acting Master E. C. Weeks, and the other in charge of Acting Ensign J. G. Koehler. The salt-works being some

seven miles in extent, the first detachment commenced at one end of the line, the other at the other. A day and a night of unremitting labor were spent in the work of destruction, when the expedition returned safely to the vessel, having marched through swamps and dense woods a distance of forty-five miles, and successfully accomplished the object of the undertaking.

On the 27th, a week later, a second expedition was planned and carried through with equal success, the object being to destroy some government works at Goose creek, some ten miles distant. The party was in this case also in charge of Acting Master Weeks, and the works to be destroyed were under the protection of a rebel cavalry company, whose pickets the expedition succeeded in eluding. Twelve prisoners were brought off—one the captain of an infantry company, raised for coast service.

The works destroyed by these two expeditions produced for the confederates twenty-four hundred bushels of salt per diem. I enclose herewith Lieutenant Harmony's list, forwarded to me, of the articles captured and destroyed.

Very respectfully, your obedient servant,

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg. E. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

List of government property destroyed and captured, belonging to the rebel government, by boat's crew and refugees, on February 17, 18, and 19, 1864

390 salt kettles, average capacity 100 gallons; 52 sheet-iron boilers, average capacity 900 gallons; 170 furnaces, made of bricks and stone; 150 pumps, well and aqueduct; 55 storehouses, used for storage, salt, &c.; 165 houses and shanties; 60 sheds and stables; 6,000 bushels of salt in barrel; a large number of axes, shovels, and hoes; 1 carpenter's shop, with tools, &c.; 1 fishing-house; 600 bushels of corn; 350 cords of wood.

Captured: 5 large wagons; 18 mules and sets of harness; 2,500 pounds of bacon; 2 fine horses, saddles, and bridles; about 1,000 head of cattle; and one prisoner, G. R. Paul, government agent.

All the articles captured I gave to the refugees, as they were of no use to us. The estimated value of the above property to the rebels cannot be less than \$2,000,000; that is the value put upon it by the most intelligent refugees.

List of articles and property destroyed on Goose creek by boats' crews from the United States steamer Tahoma, February 26 and 27, 1864.

2,000 bushels salt, in barrels and bins; 3 corn cribs, containing about 1,000 bushels; large quantity of hay and fodder; blacksmith's shop and tools; carpenter's shop and tools; about one hundred store and other houses, stables, &c.; 165 kettles and pans, average capacity 100 gallons; 43 large boilers, of about 800 gallons capacity each; 98 well-constructed brick furnaces; 9 wagons and carts; 20 sets mule harness.

EXPEDITION AGAINST SALT-WORKS ON WEST BAY.

Report of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP DALE,

Key West, March 8, 1864.

SIR: I have the honor to enclose herewith the reports of Acting Volunteer Lieutenant W. R. Browne, giving the details of two expeditions lately sent from

the United States bark *Restless*, to destroy certain newly-erected salt-works, the property, as he states, of the rebel government. The object of the expeditions was, in each instance, successfully accomplished.

I am, very respectfully, your obedient servant,

T. BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Acting Master W. R. Browne.

UNITED STATES BARK *RESTLESS*,
St. Andrew's Bay, Florida, February 17, 1864.

SIR: I have the honor to make the following report:

Learning that the rebels had erected new government salt-works on West Bay, on the site of the old salt-works, destroyed by us in December, and that they had a force of fifty, armed and stationed there for protection, I fitted out the first cutter, manned with thirteen men, under charge of Acting Ensign James J. Russel, with orders to proceed up the gulf coast twenty miles and march inland seven miles to the salt-works and attack them in the rear, while Acting Ensign Henry Eason, with ten men, in command of the second cutter, would proceed by the inside passage and attack them in the front at the same time.

The expedition was entirely successful, the works being abandoned upon the appearance of our men. Messrs. Russell's and Eason's parties joined at the appointed time and immediately proceeded in the destruction of everything connected with the manufactories, consisting of twenty-six sheet-iron boilers, averaging 881 gallons, and nineteen kettles, averaging 200 gallons, making an aggregate of 26,706 gallons, which cost in Montgomery \$5 50 per gallon. These boilers and kettles were cut up or broken to pieces. Some 600 bushels of salt were thrown into the bay, all the chimneys and furnaces hauled down, and everything rendered completely useless for further operations.

Seven slaves fled to us for protection, and assisted in the destruction of this establishment, which had only been in operation ten days.

This work covered a space of half a square mile, the boilers and kettles alone costing \$146,880.

Our party returned to the ship next day, bringing seven contrabands and six shot guns.

You will please find enclosed a drawing of the boilers and kettles.

Very respectfully, your obedient servant,

W. R. BROWNE,

Acting Master, Commanding.

Acting Rear-Admiral THEODORUS BAILEY,

Commanding E. G. B. Squadron.

Additional report of Acting Master W. R. Browne.

UNITED STATES BARK *RESTLESS*,
St. Andrew's Bay, Florida, February 19, 1864.

SIR: I have the honor of making the following report:

Having gained information that a large barge would leave the Wetappo river on or about the 18th instant for East bay, with all the material on board neces-

sary for erecting a large salt-work, and on her return intending to bring back a cargo of salt, (her capacity 1,500 bushels,) I fitted out the second cutter with eleven men, under charge of Acting Ensign Henry Eason, and gig with seven men, under charge of Master's Mate F. Grant, to effect her capture on her passage down, and with orders, if after waiting five days and not seeing the barge, to land and destroy all the salt-works in the vicinity.

According to my instructions, the boats left the ship at 8 p. m., the 17th instant, and proceeded to a bayou on the southwest side of East bay, selected as a place of ambush, and which the barge must necessarily pass. After lying in wait the appointed time and seeing no appearance of the barge, the men were landed and destroyed all the works at hand, fifteen in number, among which were some of the largest government salt-works ever erected in Florida, the whole of which were successfully destroyed, consisting of five large steamboat boilers and twenty-three kettles, together with sixteen log houses, one flat-boat, a large quantity of salt, vats, tanks, and other materials connected with the manufacture of this article. After destroying the above they returned to the ship, bringing with them six contrabands found at this place.

Very respectfully, your obedient servant,

W. R. BROWNE,

Acting Master, Commanding.

Acting Rear-Admiral THEODORUS BAILEY,

Commanding E. G. B. Squadron, Key West, Florida.

EXPEDITIONS TO HARASS THE ENEMY.

Report of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP SAN JACINTO,

Key West, April 21, 1864.

SIR: Acting Volunteer Lieutenant William R. Browne, commanding the bark *Restless*, at St. Andrew's sound, reports the result of two more expeditions made under his orders to harass the enemy in that vicinity.

The first consisted of eight refugees in a dug-out canoe, who ascended the Wetappo river, some twenty miles, to White Bluffs, and there destroyed about two thousand bushels of salt, brought away the sacks, and captured a barge thirty-six feet long, eleven feet beam, and three feet deep, sloop-rigged and decked, which he is fitting up with a howitzer for further operations. A heavy rain had fortunately driven the cavalry guard away from the place for shelter, so that no resistance was offered. Twenty-three refugees were brought off.

The other expedition consisted of twenty-two men in the boats of the *Restless*, who proceeded up East bay during another heavy rain-storm, which had again sent the guard to look for shelter. They succeeded in destroying two government salt-works with three hundred bushels of salt, and about the same quantity of corn and meal, without opposition, and brought off one contraband.

Acting Volunteer Lieutenant Browne reports that there are five companies of rebel troops in that vicinity to guard the salt-works, and that these works are rebuilt as fast as he destroys them.

Respectfully,

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Captain T. P. Greene.

HEADQUARTERS EASTERN GULF BLOCKADING SQUADRON,

Key West, August 8, 1864.

SIR: Information has been received at these headquarters of a series of successful boat expeditions from the United States bark J. L. Davis, Acting Master W. N. Griswold commanding, on the station at Tampa Bay.

The first was made on the 11th of July, and resulted in the destruction of some salt-works belonging to strong secessionists of Tampa, Messrs. Haygood & Carter. They had been employed by the rebel authorities for some time, and were fitted with pumps, vats, and eight boilers, and produced about one hundred and fifty bushels of salt per day.

The second was made on the sixteenth ultimo to the factory of another strong rebel named McCloud, containing four boilers, with all the appliances, tools, &c., necessary for the business, all of which were destroyed.

The third expedition was made on the 2d, 3d, and 4th of August by the tender schooner Stonewall, attached to the J. L. Davis, and commanded by Acting Master Henry B. Carter, the commanding officer of the Davis, with his gig's crew of six men, accompanying. Proceeding up the Manatee river to the town of the same name, a large saw and grist mill, with its steam engine and fixtures, was completely destroyed. Learning here that about three miles up the river was a sugar-mill belonging to Jefferson Davis, of Richmond, the party ascended the river and found an establishment which made last year over fifteen hundred hogsheads of sugar, of which two-thirds was sold to the rebel commissary department. After breaking as much of the machinery as was possible with the force at hand, loaded shells were placed in various parts of the engine, and the building fired. The shells exploded and the factory was burned to the ground.

These expeditions, without loss of life or limb, show a very commendable spirit on the part of the officers and men. Mr. Griswold particularly commends the conduct of Acting Master Carter as highly creditable and pleasing.

Respectfully,

THEO. P. GREENE,

Captain, Com'dg East Gulf Blockading Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

EXPEDITION TO CAPTURE UNITED STATES STEAMER ADELA FRUSTRATED.
CAPTURE OF REBEL NAVY MATERIALS, &c.

Report of Acting Rear-Admiral T. Bailey.

UNITED STATES FLAG-SHIP DALE,

Key West, May 28, 1864.

SIR: I enclose herewith copies of reports from Acting Volunteer Lieutenant W. Budd, commanding the United States steamer Somerset, detailing the particulars of an expedition by which he succeeded in completely thwarting the designs of an armed force of the enemy, led by officers of the rebel navy, who had made every preparation to attempt the capture of the United States steamer Adela, but who were altogether forestalled by the action of Captain Budd, which turned the tables upon them, capturing their boats, rifles, cutlasses, ammunition, grappling irons, medicines, signal flags, haversacks, and six of their seven boats, together with seven prisoners: Andrew McCormick, sergeant, Napoleon Terry and Louis Gay, privates, company F, Bonneau's battalion; Joseph Sire, captain

after-guard, rebel steamer Chattahoochie; Thomas McLean, Anthony Murray, and James Anderson, citizens of Apalachicola and scouts for party.

I send these prisoners north by the Bermuda to be delivered to the commandant of the navy yard at Philadelphia. I enclose also certain papers, the property of Passed Midshipman S. C. Blane, rebel navy. One of them, a communication from the rebel Secretary Mallory, shows that they have adopted our system of drafting men from the army into the navy.

Very respectfully,

THEODORUS BAILEY,

Acting Rear-Admiral, Com'dg E. G. B. Squadron.

Hon GIDEON WELLES,

Secretary of the Navy.

Report of Acting Lieutenant William Budd.

UNITED STATES STEAMER SOMERSET,

West Pass, St. George's Sound, May 16, 1864.

SIR: I have the honor to report, that on the night of the 12th instant I sent the light-draught boats of this vessel and of the United States schooner Chambers to land a detachment of troops under command of Lieutenant Hunter, 110th New York volunteers, a few miles below the town of Apalachicola. After landing the troops the officer in charge of the boats (Acting Ensign E. H. Smith) was instructed to proceed slowly along shore, so as to be in communication with them during their march and approach to the town, in the rear of which the whole force was to arrive at daybreak. Taking two launches from this ship, I arrived in front of the place about the same time, and discovered a force of about seventy or eighty of the enemy attempting to embark in boats from the upper end of the wharves. The rapid approach of the first launch caused them to abandon that project and retreat through the town, which movement was hastened by a couple of shells from our howitzer. They passed within a short distance of a portion of our troops under Lieutenant Hunter, who unfortunately thought that they were part of his command, and permitted them to gain and escape by the up-river road without molestation. We followed them about two miles, but the density of the undergrowth and number of paths leading through the woods in all directions rendering any further pursuit unwise and futile, we returned to the boats.

Ascertaining that the commanding officer of the expedition (George W. Gift, lieutenant Confederate States navy) was on the sound with about thirty men, I despatched my boats and troops after him, but the swiftness of his boat and the approach of night enabled him to escape, having been chased by our first launch, under command of Acting Ensign C. H. Brantingham, who captured one of his small boats and three of his party. The forces of the enemy consisted of about one hundred men, commanded by the following officers:

Lieutenant Commanding George W. Gift, Confederate States navy.

Passed Midshipman S. P. Blane, Confederate States navy.

Passed Midshipman H. L. Vaughn, Confederate States navy.

Passed Midshipman G. W. Sparks, Confederate States navy.

Passed Midshipman W. S. Hogue, Confederate States navy.

Passed Midshipman G. T. Scharf, Confederate States navy.

Assistant Paymaster M. T. Sothern, Confederate States navy.

Assistant Surgeon M. Ford, Confederate States navy.

First Assistant Engineer L. Campbell, Confederate States navy.

Third Assistant Engineer A. D. Blane, Confederate States navy.

Master's Mate C. Frazer, Confederate States navy.

Volunteers on the expedition: Colonel D. P. Holland, aid to the governor of Florida; Surgeon Cherry, first Georgia regulars; A. G. Sparks, signal officer; and Captain Blunt, Bonneau's officer.

Their object was the capture of the United States steamer Adela, intending, in the event of being successful, to carry her into Mobile or burn her. Their boats were fitted completely with muffled oars, paddles, grapnels, and incendiary materials, and they had been lurking in the vicinity of the United States steamer Adela for a day or two previous to their dispersion by the force under my command. We captured six of their boats, (all they had except one,) four prisoners, a quantity of small arms, (rifles, cutlasses, &c.,) one thousand rounds of ammunition, all their compasses, signal flags, blankets, haversacks, medical stores, &c. They abandoned everything and ran like sheep, without firing a shot. Had it not been for the unfortunate mistake of the officer in command of our troops, we should have captured or destroyed the entire force.

Very respectfully, your obedient servant,

W. BUDD,

Acting Vol. Lieut., Com'dg U. S. Steamer Somerset.

Acting Rear-Admiral THEODORUS BAILEY,

Commanding E. G. B. Squadron.

List of prisoners captured.

Andrew McCormick, sergeant, company F, Rouneau's battalion; Napoleon Terry, private, company F, Bonneau's battalion; Louis Gay, private, company F, Bonneau's battalion; Joseph Sire, Captain A. Guard, Confederate States steamer Chattahoochie.

The last named of the above evidently intended to desert, and lingered behind for us to capture him. The boats (having first appraised them) and medical stores I have turned over to the officer in command of the United States troops on St. Vincent's, and have taken his receipt for the same. The balance of the captured articles have been put into the different departments of this ship for use and issue. I enclose diary of Passed Midshipman S. P. Blane, Confederate States navy, (who was second in command,) and other papers.

Very respectfully, your obedient servant,

W. BUDD,

Acting Vol. Lieut., Com'dg U. S. Steamer Somerset.

Additional report of Acting Volunteer Lieutenant W. Budd.

UNITED STATES STEAMER SOMERSET,
West Pass, St. George's Sound, May 21, 1864.

SIR: I send down by the United States steamer Honduras, as prisoners, Thomas McLean, Anthony Murray, and James Anderson, citizens of Apalachicola. These men were engaged in active co-operation with the enemy when captured. McLean enacted the role of a scout or spy. Mistaking our troops for those of the enemy, he gave them information respecting my force and position in front of the town on the morning of the 13th instant. Murray and Anderson were acting as scouts for Gift, keeping open his communications and supplying him with provisions when he was absent from the main body of his command. When taken, they were carrying soldiers from the islands back to the main. Heretofore all of them have enjoyed immunity from us as citizens.

Their local knowledge makes them dangerous to us and very useful to the enemy; for the latter they act as scouts, spies, and pilots, and in this case they were caught in the act. They pretend to have been forced into Gift's service, but I know them well, and earnestly request that they will not be permitted to return to Apalachicola.

Very respectfully, your obedient servant,

W. BUDD,

Acting Vol. Lieut., Com'dg U. S. Steamer Somerset.

Acting Rear-Admiral THEODORUS BAILEY,

Commanding E. G. B. Squadron.

EXPEDITION UP THE SUWANEE RIVER.

Report of Lieutenant Commander Charles E. Fleming.

UNITED STATES STEAMER SAGAMORE,

Off Cedar Keys, Florida, July 12, 1864.

SIR: I have the honor to inform the department that on the 6th ultimo I sent the launch from this vessel and two boats from the steamer Clyde, with twenty-four men and four officers, on an expedition up the Suwanee river, to seize some cotton I learned the rebels were making use of for the purpose of constructing breastworks on that river. On the 7th the expedition reached the place, about thirty-eight miles up, in the vicinity of Clay's landing, and demolished the breastworks by bringing away the cotton, ninety-four bales, principally sea-island, which I send this day to the prize court at Key West, in charge of Acting Ensign Louis R. Chester, the officer in charge of the expedition. Mr. Chester conducted it in a manner to be commended, and returned his force with no casualties. The behavior of the officers and men who accompanied him was, as usual, everything that could be desired.

Very respectfully, your obedient servant,

CHAS. E. FLEMING,

Lieutenant Commander, Commanding.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington City, D. C.

DESTRUCTION OF SALT WORKS AT ST. ANDREW'S BAY.

Report of Acting Rear-Admiral C. K. Stribling.

HEADQUARTERS E. G. BLOCKADING SQUADRON,

Key West, October 20, 1864.

SIR: Reports received this day from Acting Volunteer Lieutenant W. P. Randall, commanding United States bark Restless, on blockade duty at St. Andrew's bay, Florida, contain details of a successful expedition, on the 5th and 6th instant, by boats from that vessel, under command of Acting Ensign Henry Eason. It resulted in the destruction of 50 boilers for salt making, 500 to 1,000 gallons each; 90 kettles for salt making, 65 to 200 gallons each; 300 bushels of salt; 31 wagons and several large carts; 500 cords of wood; 150 buildings, dwelling-houses for the employés, and sheds, storehouses, &c., besides other damage.

All this was the property of the confederates; and although it is probable that

they may again be rebuilt, it is certain that a severe blow has been struck at the rebel forces in Georgia.

In consideration of the intelligence, energy, and judgment displayed in this expedition, I respectfully recommend that Acting Ensign Henry Eason be promoted to be an acting master.

Very respectfully, your obedient servant,

C. K. STRIBLING,
Acting Rear-Admiral, Commanding.

Hon. GIDEON WELLES,
Secretary of the Navy.

WESTERN GULF SQUADRON.

OPERATIONS IN MOBILE BAY—CAPTURE OF FORTS, &c.

RECONNOISSANCE OF FORTS MORGAN AND GAINES—DEFENCES OF MOBILE BAY.

*Report of Rear-Admiral D. G. Farragut.*UNITED STATES FLAG-SHIP HARTFORD,
New Orleans, January 22, 1864.

SIR: On the morning of the 20th instant I made a reconnoissance of Forts Morgan and Gaines. I went in over the bar in the gunboat Octorara, Lieutenant Commander Lowe, taking the Itasca in company as a precaution against accident. We passed up to Land island, and laid abreast of the light-house on it. The day was uncommonly fine, and the air very clear. We were distant from the forts three (3) and three and a half ($3\frac{1}{2}$) miles, and could see everything distinctly, so that it was easy to verify the statements of the refugee McIntosh, in respect to the number of guns visible on the bastions of the fort. I could count the guns and the men who stood by them; could see the piles that had been driven across from Fort Gaines to the channel opposite Fort Morgan—the object of which is to force the ships to keep as close as possible to the latter. There were no vessels in the bay except one transport steamer.

I am satisfied that if I had one iron-clad at this time, I could destroy their whole force in the bay, and reduce the forts at my leisure, by co-operation with our land forces—say five thousand men. We must have about two thousand and five hundred men in the rear of each fort, to make regular approaches by land, and to prevent the garrison's receiving supplies and re-enforcements; the fleet to run the batteries, and fight the flotilla in the bay. But without iron-clads, we should not be able to fight the enemy's vessels of that class with much prospect of success, as the latter would lie on the flats, where our ships could not go to destroy them. Wooden vessels can do nothing with them unless by getting within one hundred or two hundred yards, so as to ram them or pour in a broadside.

I am told by Mr. Shock, the fleet engineer, that two of the iron-clads now being constructed at St. Louis are finished, and that three or four ought to be by this time. If I could get these, I would attack them at once.

The rebel iron-clad Nashville, I am told by a refugee, will not be ready before March; and he says that Buchanan made a speech to his men, saying that as soon as she is finished, he will raise the blockade, &c. It is depressing to see how easily false reports circulate out here, and in what a state of alarm the community is kept by the most absurd rumors. If the department could get one or two of the iron-clads down here, it would put an end to this state of things, and restore confidence to the people of the ports now in our possession.

I feel no apprehension about Buchanan's raising the blockade of Mobile; but with such a force as he has in the bay, it would be unwise to take in our wooden vessels without the means of fighting the enemy on an equal footing. By reference to the chart, you will see how small a space there is for the ships to manœuvre.

I beg to urge upon the department the necessity of expediting the departure of the Brooklyn and Galena, as it is always indispensable to keep a force on the blockade sufficient to allow one of the ships to go to Pensacola for coaling or for repairs, as the case may be.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

Letter of Captain Jenkins transmitting statement of the defences of Mobile bay.

UNITED STATES STEAM-SLOOP RICHMOND,
Blockade off Mobile, January 15, 1864.

SIR: I transmit herewith, for your information, a detailed statement of the vessels and armament, forts and their armament, and of all the defensive and offensive means of the rebels, in the bay, harbor, &c., of Mobile.

The information embraced in this statement is in such strict accordance with that obtained through our sources at different times, that I am inclined to consider it reliable.

I am, very respectfully,

THORNTON A. JENKINS,
Captain and Senior Officer, off Mobile.

Commodore H. H. BELL,
Commanding W. G. B. Squadron pro tem., New Orleans, La.

UNITED STATES STEAM-SLOOP RICHMOND,
Blockade off Mobile, January 15, 1864.

The following statement in regard to rebel vessels and works in and about Mobile bay, harbor, and city, has been furnished by a mechanic belonging to the State of New Hampshire, who was at the south when the rebellion broke out, and took work as a mechanic at Mobile on half wages to escape conscription. That is his story. He got (recently) a short respite to visit his father, who is somewhere in Alabama or Florida, when he succeeded in getting inside of our lines at Pensacola. He is now on board the gunboat Octorara, Lieutenant Commander W. W. Low, to whom I am indebted for this statement. This man claims to have been employed, among other things, in preparing and filling torpedoes and iron-plating iron-clads.

THORNTON A. JENKINS,
Captain and Senior Officer.

Statement of the defences of Mobile Bay.

Armament of steamer Morgan: 1 63 cwt. 8-inch gun; 9 57 cwt. 32-pounder guns.

Steamer Gaines: 8 57 cwt. 32-pounder guns.

Steamer Selma, (late Florida:) 2 9-inch Dahlgren guns; 1 8-inch rifle gun.

Steam ram Tennessee: 235 feet in length; has casemate plated with iron, 2 inches by 10 inches, three plates in thickness. Speed $7\frac{1}{2}$ knots on trial trip

without armament, stores or provisions on board. May not be ready for some weeks yet. Is intended to mount 4 10-inch columbiads of 16,000 pounds; 2 7½-inch Brooks rifles, 19,000 pounds.

NOTE — Information received yesterday from a fugitive at Pensacola is, that the Tennessee is on Dog River bar on her way to the bay, and that the camels made to float her over have to be made larger. T. A. J.

Steam ram Baltic: Was a tow-boat; is mailed with railroad iron laid edge-wise, countersunk and bolted with rivet heads and nuts and screws in board. This vessel is condemned as unfit for service. Mounts 1 42 pounder gun; 2 32-pounder guns of 57 cwt.; 2 12-pounder howitzers.

Ram Tuscaloosa: Is plated with iron like that on the Tennessee, 2 inches by 10 inches, but only two plates thick; will steam but about 3½ knots. Mounts 1 Brooks rifle of 6 inches, weighing 14,000 pounds; 4 32-pounders of 42 cwt.

Ram Huntsville: Is similar in every respect to the Tuscaloosa, and mounts 1 Brooks rifle of 6 inches, weighing 14,000 pounds; 4 32-pounders of 42 cwt.

There are also in the bay 5 floating turrets, covered with railroad iron, mounted on an octagonal-shaped scow, with 1 8-inch columbiad mounted on a circle; they have motive power; are intended to be moored in the channel way, but cannot withstand the shock of an 8-inch shell.

The steamer Morgan has a small black wheel-house on the platform forward of the paddle-boxes. The Gaines has nothing of the kind.

From the end of the piles that cross the flats from Fort Gaines (about three months ago) thirty torpedoes were laid down on line bearing SE. by compass across the main ship channel; they are shaped like a can-buoy, with a chamber in each and 75 pounds of powder. They are anchored with Manilla rope, with about the third of a bar of railroad iron 2½ inches. A number of them broke adrift and floated up the bay.

At Cedar Point there is an earthwork, reported to mount 4 rifled 32-pounders of 7,000 pounds weight.

At the mouth of Spanish river there is a battery clad with railroad iron, mounting six (6) rifled 10-inch columbiads.

At the mouth of Tensas river and at the head of the bay near Mobile there are five (5) batteries.

The fortifications in the rear of Mobile are very strong, with a ditch 30 feet wide and a strong redoubt every four or five hundred yards.

Fort Morgan mounts: On bastion No. 1, NE., 2 32-pounders weighing 7,000 pounds; 1 24-pounder, rifled, which throws Read and Skate's shot and shell shaped like Minie balls.

East curtain: 3 10-inch sea-coast mortars; 1 32-pounder, weighing 7,000 pounds.

Bastion No. 2, E.S.E., 1 10-inch columbiad of 14,000 pounds; 2 32-pounder rifles of 7,000 pounds.

Bastion No. 3: 2 32-pounders, rifled, of 7,000 pounds; 1 10-inch columbiad of 16,000 pounds.

South curtain: 2 24-pounders, rifled, of 11,000 pounds, and throwing 68-pounder projectiles; 1 10-inch columbiad of 14,000 pounds.

Bastion No. 4: 1 24-pounder rifle; 1 10-inch columbiad of 16,000 pounds; 2 32-pounders, rifled, of 7,000 pounds.

West curtain, facing channel: 2 Blakely (guns from England,) weighing between 11,000 and 12,000 pounds, throwing a shell of 160 pounds, and a shot of 169 pounds, with a charge of 14 pounds of powder; 3 10-inch columbiads of 16,000 pounds.

Bastion No. 5: 2 32-pounder guns, smooth bore.

North curtain: 1 8-inch smooth bore.

Flank casemate guns: On each flank of each bastion are 2 24-pounder howitzers, making 20 flank casemate guns.

Within the fort, in the centre of terreplaine, is a citadel having ten sides, loop-holed for musketry, and quarters on each side for 100 men, constructed of brick, four feet thick.

Light-house battery : 11 32-pounder guns of 7,000 pounds, smooth bore. At Grant's Pass, on the site of the old light-house, there is an earthwork very strong, mounting 1 100-pounder rifle gun ; 1 64-pounder rifle gun ; 2 32-pounder smooth bore.

Fort Gaines mounts 1 10-inch columbiad weighing from 14,000 to 18,000 pounds ; 14 32-pounders, smooth bore ; 1 32-pounder rifled ; 5 24-pounder siege pieces.

Note by Captain Jenkins.

The Boston, which has been lengthened 25 feet and converted into a rebel privateer, is not embraced in the foregoing statement, as he said he thought she had left on a cruise. This vessel appeared to be fast, (when seen in the bay,) with two guns, and I have every reason to believe is now awaiting a good opportunity to run out.

The person who has furnished the foregoing statement gave a full account to the officer of the army commanding at Pensacola, who no doubt communicated it to General Banks. The description of the land embankments around Fort Morgan not embraced in this statement are well worth examining.

THORNTON A. JENKINS.

There is at least one fast steam-tug in the bay seen daily almost. *This says there is one there.*

T. A. J.

SHELLING OF FORT POWELL.

FLAG-SHIP HARTFORD,
Off Ship Island, February 28, 1864.

SIR : I have been shelling Fort Powell, on Shell island, in Grant's Pass, Mississippi sound, during the past week, but have made but little impression upon it, as we cannot approach nearer than four thousand yards, and then we got hard aground in the Calhoun, drawing only eight and a half feet. It required two steamers besides her own power to get her off. This I did because I saw the wind hauling around to the northward, which blows the water out of the sound, and I feared we might be kept there a week or longer before the water would rise sufficiently to enable us to get off.

The enemy, at the time, were throwing their shot three-fourths of a mile over and beyond us. The ammunition of the vessel being nearly all expended, and fearing I might not receive a supply in less than two days, I hauled all the vessels out where they could float. The weather became thick, and has continued so for the last two days. I have now received a fresh supply of ammunition, and will recommence the work to-morrow, the 29th ; but I have no hope of reducing the fort, as the steamers lie on the opposite side of it, to take the people on board if necessary, or to relieve the garrison.

We cannot get within eight hundred yards in the small boats, so as to assault it, but it assists General Sherman, by keeping up the idea of an attack upon Mobile, which is looked for hourly by the confederates. Would that it was true ; now is the propitious time.

The Tennessee is at Mobile getting the camels under her, and if their intention is to get her over Dog River bar, which I doubt, she will have to take the chances of being destroyed in doing so.

If we had only two or three thousand troops to make their approaches on the peninsulas, the ships will run in, I think, easily. We might have done it long since, but General Banks is ordered to be ready to move in concert with General Sherman, and of course is not willing to risk being out of place at the moment he is called upon to march.

After the Tennessee gets over Dog River bar, it would be imprudent to go in without an iron-clad, as I before stated, because she could lie in shoal water, where our ships could not get at her, and could knock our vessels to pieces; but if we go in before she gets over the bar, our gunboats will destroy her on the bar if she attempts to cross with camels.

I am ready the moment the army will act with me, but there is no doing anything with forts so long as their back-doors are open; besides which, my communication must be open for supplies, which cannot be done without troops to cut off all their forts from the land communication with Mobile.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

APPEARANCE OF THE RAM TENNESSEE.—SILENCING FORT POWELL.

FLAG-SHIP HARTFORD,

Off Ship Island, March 1, 1864.

SIR: In my last despatch, No. 33, I informed you that the ram Tennessee, in Mobile bay, had not yet crossed Dog River bar, but to-day, to our great surprise, she appeared in full view in the bay, opposite Grant's Pass, where I was at the time, having been at work all day yesterday shelling Fort Powell.

I do not know what impression we made upon the fort. They opened upon our mortar-boats with five heavy rifled 100-pounder guns, and struck the John Griffith four times in succession.

We silenced the fort in one hour and a quarter, and they did not again open fire, but kept their flag flying until after sunset, when we ceased firing.

This morning at 7 a. m. we perceived three gunboats and two iron-clads lying near the fort; about one hour afterwards the Tennessee made her appearance, coming down the bay. The wind freshened and she came to an anchor.

Since 11 a. m. it has been blowing a gale from the north-northwest. As soon as I was satisfied that she was really the Tennessee, I came down to join the Hartford, and will be off Mobile as soon as the weather moderates.

Unless she fails in some particular, I fear that with the present force they have inside, it will be much more difficult for us to take Mobile with our wooden vessels, than it would have been one week ago.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

THREATENED ATTACK BY THE REBEL RAM TENNESSEE, &c.

FLAG-SHIP HARTFORD, WEST GULF BLOCKADING SQUADRON,

Pensacola, May 9, 1864.

SIR: All the late accounts from Mobile agree in representing Buchanan as making great exertions to get camels large enough to float the ram Tennessee

over Dog River bar, and no doubt is felt of his success, and the public mind in the rebel States is in such a state of excitement in consequence of the disaster of General Banks, and the success of the rebel rams in North Carolina, that they say he will be compelled to come out and attack us with his whole force, which, as I have before informed the department, consists of seven (7) vessels, four (4) iron-clads and three (3) wooden gunboats, besides the Nashville, which is finished with the exception of the plating. She is a fac simile of the Tennessee.

The Tennessee is plated with six-inch iron, and armed with six Brooks rifles of 6 and 7-inch calibre.

The Tuscaloosa and Huntsville are plated with four-inch iron.

The other boats all have one or two Brooks rifles of from 100 pounds to 150 pounds, and the rest of their battery IX-inch guns.

The Morgan, Gaines, and Selma are much the same as our gunboats, perhaps better, armed for long fighting; but if they come outside, that will not serve them. Thus you perceive that I am in hourly expectation of being attacked by almost an equal number of vessels, iron-clad against wooden vessels, and a most unequal contest it will be, as the Tennessee is represented as impervious to all their experiments at Mobile, so that our only hope is to run her down, which we shall certainly do all in our power to accomplish; but should we be unsuccessful, the panic in this part of the country will be beyond all control. They will imagine that New Orleans and Pensacola must fall.

New Orleans is well defended; the forts have each two XV-inch guns, and at range that, I think, would destroy any vessel; but *this place has not a gun* that would hurt a four-inch plated vessel at the distance the forts will be compelled to fire at them—X-inch shell guns are the heaviest they have, and only (4) four of them, all on different bastions. One iron-clad in Pensacola would be worth all the forts under the present circumstances. Their iron-clads would be afraid to come out to threaten New Orleans or Pensacola. If New Orleans, one iron-clad would be on his trail up the river; if Pensacola, she would probably have an overmatch in the iron-clad's XV-inch guns, and which, if placed between the forts, would lessen the distance to be fired at one-half.

I fully understand and appreciate my situation. The experience I had of the fight between the Arkansas and Admiral Davis's vessels, on the Mississippi, showed plainly how unequal the contest is between iron-clads and wooden vessels in loss of life, unless you succeed in destroying the iron-clad. I therefore deeply regret that the department has not been able to give us ONE of the many iron-clads that are off Charleston, and on the Mississippi. I have always looked for the latter, but it appears that it takes us twice as long to build an iron-clad as any one else. It looks as if the contractors and the fates were against us. While the rebels are bending their whole energies to the war, our people are expecting the war to close by default; and if they do not awake to a sense of their danger soon, it will be so.

But be assured, sir, that the navy will do its duty, let the issue come when it may, or I am greatly deceived.

I think you have many ready and willing to make any sacrifice their country can require of them.

All I ask of them is *to do their whole duty*; the result belongs to God.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

FALLING BACK OF THE ARMY.—RAM TENNESSEE AND GUNBOATS.

FLAG-SHIP HARTFORD, WEST GULF BLOCKADING SQUADRON,

Off Mobile Bar, May 25, 1864.

SIR: My mail from New Orleans this morning is very discouraging. Our army is not only falling back to that most demoralizing of places, New Orleans, but I am informed by Lieutenant Commander Cook, at Matagorda, that General Banks has ordered Matagorda to be abandoned, and the forts and earthworks to be destroyed. The general is in New Orleans; the army said to be at Morganzia, just above Port Hudson, on the western shore.

I ran in shore yesterday, and took a good look at the iron-clad Tennessee. She flies the blue flag of Admiral Buchanan. She has four ports of a side, out of which she fights, I understand from the refugees, four 7-inch Brooks rifles, and 2 10-inch columbiads. She has a torpedo fixture on the bow. Their four iron-clads and three wooden gunboats make quite a formidable appearance.

I see by the rebel papers, Buchanan is advertised to raise the blockade as soon as he is ready. As I have before informed the department, if I had the military force to place on the isthmus and on Dauphin island, say three thousand men, and one or two iron-clads, I would not hesitate to run in and attack him; but if I was to run in, and in so doing get my vessels crippled, it would be in his power to retire to the shoal water with his iron-clads, (in fact all their vessels draw much less water than ours,) and thus destroy us without our being able to get at him. But if he takes the offensive and comes out of port, I hope to be able to contend with him.

The department has not yet responded to my call for the iron-clads in the Mississippi, which I was led to believe were intended for this squadron.

I am placing heavy iron cutters on the bows of my vessels, and shall also have torpedoes to place me on an equality with my enemy, if he comes outside. No doubt he will have the advantage of me inside, as they are planting them every day; we can see them distinctly when at work.

Torpedoes are not so agreeable when used on both sides; therefore I have reluctantly brought myself to it.

I have always deemed it unworthy of a chivalrous nation, but it does not do to give your enemy such a decided superiority over you.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CONDITION OF AFFAIRS IN MOBILE BAY.

FLAG-SHIP HARTFORD, WEST GULF BLOCKADING SQUADRON,

Off Mobile, June 4, 1864.

SIR: As the Admiral has arrived here on her way north, I avail myself of the opportunity to inform the department that we are in *statu quo*. Admiral Buchanan is lying at Fort Morgan, in the Tennessee, and refugees report "that they are getting the Nashville over Dog River bar, and that there are two other iron-clads which have come down from Selma within a few days;" that it is not true that Admiral Buchanan intends to leave Mobile bay—he only intends to destroy Farragut's fleet.

It has been heretofore stated that New Orleans was their main object, but I enclose the testimony of the last refugees.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

BARRANCAS, *June 2, 1864.*

Statement of James Nicoll, an alien from Liverpool, England, who came in to-day from Mobile *via* Bon Secour bay :

Left Mobile last Sunday morning, and Bon Secour bay yesterday evening.

There are in Mobile bay, over the Dog River bar, the Tennessee, Baltic, Tuscaloosa and Huntsville, iron-clad rams, and the wooden gunboats Selma, Morgan and Gaines. The Nashville was not yet over the bar, but she had already the camels under her, and she must be over by this time; her bow, stern, and pilot-house are only partly ironed.

There are two more rams at Mobile not yet plated, and one just completed at Selma, and aground above Mobile. There are also at Mobile, near the dry-docks, four iron-plated floating batteries, one of them sunk.

DEFENCES OF MOBILE BAY WILL BE ATTACKED ON ARRIVAL OF THE MONITORS.

FLAG-SHIP HARTFORD, WEST GULF BLOCKADING SQUADRON,

Off Mobile, July 26, 1864.

SIR: By the timely arrival of the coal-ship New England, I have been able to fill up the vessels of the blockade, and am all prepared for the attack the moment the two monitors arrive from New Orleans, which Commodore Palmer writes me will be about the 29th or 30th.

The Manhattan is under Sand island with vessels to look out for her, and the moment the other two and the army arrive, I will commence. My great wants will be coal, and also ice for the sick and wounded; I think we have every arrangement made for the latter. The fleet surgeon has been untiring in getting things prepared at Pensacola, and the army and sanitary commission have been very accommodating to us.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

CAPTURE OF REBEL PICKET GUARD NEAR FORT MORGAN.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, WEST GULF BLOCKADING SQUADRON,

Off Mobile, August 4, 1864.

SIR: I beg to bring to the attention of the department the gallantry of a little party landed from the Oneida, while on picket duty off the peninsula, about five miles from Fort Morgan, on the night of the 22d ultimo.

Lieutenant Cotton and Acting Ensign John L. Hall were landed, to lie in ambush for the picket guard, (which Commander T. H. Stevens, of the *Oneida*, had seen pass up and down the beach frequently during his tour of duty in that locality,) and if sufficiently strong, to attack and capture them, and the ship would send to their assistance. They had not been in ambush more than an hour before a horseman came along; the party rushed out and captured him, and they then compelled him to lead them to his picket. Mr. Hall took charge of the party and followed on for three or four miles, surprised and captured a lieutenant and four soldiers. Although the act was somewhat imprudent, it was nevertheless a bold one, and as he succeeded, I think Mr. Hall fairly entitled to the favorable consideration of the department, and I most respectfully recommend him for promotion to the grade of acting master.

Enclosed Nos. 1 and 2 are the reports of Commander Stevens and Lieutenant Cotton.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander T. H. Stevens.

UNITED STATES STEAM-SLOOP ONEIDA,

Off Pensacola, July 23, 1864.

SIR: The time being propitious, I landed a party of ten men from this vessel, nearly abreast of our picket station, for the purpose of capturing the cavalry patrol of the enemy, which for several nights we had observed from the vessel passing up and down the beach. The party was in charge of Lieutenant C. S. Cotton, of this vessel, and Acting Ensign J. L. Hall. The instructions were to land and secrete themselves in the woods, sending the boat back to the *Oneida*. The expedition resulted in the capture of the entire picket cavalry camp of the enemy, who were established some four miles to the eastward of our position, with the exception of one man, who escaped. A lieutenant and four privates, belonging to the 7th Alabama cavalry, with their arms, horses and accoutrements, were taken; subsequently the horses were released. The prisoners I have to-day delivered, according to your instructions, to the provost marshal of this place. In connexion with the execution of the affair, I desire to bring to your notice the good conduct of both men and officers. Lieutenant Cotton speaks in warm terms of the gallantry and judgment displayed by Acting Ensign Hall upon the occasion.

Enclosed please receive report of Lieutenant Cotton.

I have the honor to be your obedient servant,

T. H. STEVENS, *Commander.*

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

Report of Lieutenant Chas. S. Cotton.

UNITED STATES STEAMER ONEIDA,

Off Pensacola, July 23, 1864.

SIR: In obedience to your orders, I landed, with Acting Ensign John L. Hall and ten men of this ship, a short distance to the eastward of this ship's position on the night of the 22d instant.

We secreted ourselves in a commanding position a short distance from the beach, and after having lain in ambush about an hour, were rewarded by the capture of a patrol coming from the westward, arms, horse and accoutrements. From information gained from this prisoner I deemed it proper and expedient to detach a party of men under Mr. Hall to surprise and capture the patrol camp situated some three miles to the eastward, and accordingly did so, sending the prisoner as a guide. I remained with the balance and smaller portion of the party to watch the movements of the patrols a short distance to the westward, and, if possible, to capture them. About two a. m. Mr. Hall and men returned, having been rewarded by the capture of a lieutenant and three privates, arms, horses, accoutrements, camp equipage, &c.

At 2.30 a. m. I returned to the ship with the party, prisoners, arms, and ammunition.

It gives me great pleasure to recommend to your notice the creditable and gallant manner in which Mr. Hall executed his duty, and also the commendable conduct of the men. The results of the expedition were: Captured one lieutenant and four privates of the 7th Alabama cavalry, arms and ammunition, five horses with their equipments complete, and all the camp equipage and stores. The sentry who was on post at the time Mr. Hall made his descent on the camp made his escape in the woods, and gave the information of our presence to the enemy.

I am, sir, very respectfully, your obedient servant,

CHAS. S. COTTON,

Lieutenant United States Navy.

Commander THOS. H. STEVENS,

Commanding U. S. Steamer Oneida, Mobile Blockade.

ATTACK ON THE DEFENCES OF MOBILE.

Report of Rear-Admiral Farragut.

FLAG-SHIP HARTFORD.

Mobile Bay, August 5, 1864.

SIR: I have the honor to report to the department that this morning I entered Mobile bay, passing between Forts Morgan and Gaines, and encountering the rebel ram Tennessee and gunboats of the enemy, namely, Selma, Morgan, and Gaines.

The attacking fleet was under way by forty-five minutes past five a. m., in the following order: The Brooklyn, with the Octorara on her port side; Hartford, with the Metacomet; Richmond, with the Port Royal; Lackawanna, with the Seminole; Monongahela, with the Tecumseh; Ossipee, with the Itasca, and the Oneida with the Galena.

On the starboard of the fleet was the proper position of the monitors or iron-clads. The wind was light from the southwest, and the sky cloudy, with very little sun. Fort Morgan opened upon us at ten minutes past seven o'clock, and soon after this the action became lively. As we steamed up the main ship channel there was some difficulty ahead, and the Hartford passed on ahead of the Brooklyn. At forty minutes past seven the monitor Tecumseh was struck by a torpedo and sunk, going down very rapidly, and carrying down with her all the officers and crew, with the exception of the pilot and eight or ten men, who were saved by a boat that I sent from the Metacomet, which was alongside of me.

The Hartford had passed the forts before eight o'clock, and finding myself raked by the rebel gunboats, I ordered the Metacomet to cast off and go in pursuit of them, one of which—the Selma—she succeeded in capturing.

All the vessels had passed the forts by half past eight, but the rebel ram Tennessee was still apparently uninjured in our rear.

Signal was at once made to all the fleet to turn again and attack the ram, not only with guns, but with orders to run her down at full speed. The Monongahela was the first that struck her, and though she may have injured her badly, yet she did not succeed in disabling her. The Lackawanna also struck her, but ineffectually. The flag-ship gave her a severe shock with her bow, and as she passed poured her whole port broadside into her of solid nine-inch shot and thirteen pounds of powder, at a distance of not more than twelve feet. The iron-clads were closing upon her, and the Hartford and the rest of the fleet were bearing down upon her, when, at ten a. m., she surrendered. The rest of the rebel fleet—namely, the Morgan and Gaines—succeeded in getting back under the protection of Fort Morgan. This terminated the action of the day.

Admiral Buchanan sent me his sword, being himself badly wounded with a compound fracture of the leg, which it is supposed will have to be amputated.

Having had many of my own men wounded, and the surgeon of the Tennessee being very desirous to have Admiral Buchanan removed to the hospital, I sent a flag of truce to the commanding officer of Fort Morgan, Brigadier General Richard L. Page, to say that if he would allow the wounded of the fleet, as well as their own, to be taken to Pensacola, where they can be better cared for than here, I would send out one of our vessels, provided she would be permitted to return, bringing back nothing she did not take out.

General Page consented, and the Metacomet was despatched.

The list of casualties on our part, as far as ascertained, is as follows :

Flag-ship Hartford—nineteen killed, twenty-three wounded.

Brooklyn—Nine killed, twenty-two wounded.

Lackawanna—Four killed, two wounded.

Oneida—Seven killed, twenty-three wounded.

Monongahela—Six wounded.

Metacomet—One killed, two wounded.

Ossipee—One killed, seven wounded.

Galena—One wounded.

Richmond—Two wounded.

In all, forty-one killed and eighty-eight wounded.

On the rebel ram Tennessee were captured twenty officers and about one hundred and seventy men. The following is a list of the officers: Admiral F. Buchanan; Commander James D. Johnson; Lieutenants Wm. D. Bradford, A. P. Wharton, E. J. McDennert; Masters J. R. De Moley, H. W. Perron; Fleet-Surgeon R. C. Bowles; Engineers G. D. Leneng, J. O'Connell, John Hays, O. Benson, W. B. Patterson; Paymaster's Clerk J. H. Conen; Master's Mates W. A. Forrest, Beebe, and R. M. Carter; Boatswain John McCudie; Gunner H. S. Smith.

On the Selma were taken ninety officers and men. Of the officers I have only heard the names of two, namely Commander Peter U. Murphy and Lieutenant J. H. Comstock. The latter was killed.

I will send a detailed despatch by the first opportunity.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy.

List of killed and wounded on board United States steamer Hartford in the action with the rebel Fort Morgan and fleet, August 5, 1864.

Killed—David Morrow, quarter-gunner; Wm. Osgood, ordinary seaman; Thos. e, ordinary seaman; Benjamin Harper, seaman; Wm. Clark, boy; Charles

Schaffer, seaman; Frank Stillwell, nurse; George Walker, landsman; John C. Scott, ordinary seaman; Thomas Wilde, ordinary seaman; Wm. Smith, boy; Wm. Andrews, captain after-guard; Frederick Munsell, captain after-guard; Lewis McLane, landsman; Peter Duncan, landsman; — Smith, fireman; Thomas Baines, fireman; Thomas Stanton, fireman; — Cannel, fireman. Total, nineteen.

Wounded—Lieutenant Adams, slightly; Acting Third Assistant Engineer McEwan, amputation of arm; Acting Master's Mate R. P. Herrick, slightly; Acting Ensign W. H. Heginbotham, severely, (since dead;) Wilder Venner, landsman, leg; Adolphus Pulle, seaman, severe flesh wounds, leg; Hiram Elder, seaman, right leg; R. Dumphery, coal-heaver, both arms; Wm. Thompson, ordinary seaman, one leg; E. Johnson, boy, contusion, side; Walter Lloyd, boy, leg; M. Forbes, captain mizzen-top, contusion, side; Wm. Stanley, seaman, contusion on leg; C. Stevenson, boy, contusion; F. Campbell, seaman, contusion; Wm. Doyle, boy, contusion, side; Auguste Simmons, landsman; Peter Pitts, boy; Michel Fayal, landsman; David Ortin; Wm. Trask, left leg; Charles Dennis, both arms; Thomas O'Connell, right hand off. Total, twenty three.

Congratulatory letter to Rear-Admiral Farragut.

NAVY DEPARTMENT,
Washington, August 15, 1864.

SIR: Your despatch of the 5th instant, stating that you had, on the morning of that day, entered Mobile bay, passing between Forts Morgan and Gaines, and encountering and overcoming the rebel fleet, I had the satisfaction to receive this day. Some preliminary account of your operations had previously reached us through rebel channels.

Again it is my pleasure and my duty to congratulate you and your brave associates on an achievement unequalled in our service by any other commander, and only surpassed by that unparalleled naval triumph of the squadron under your command in the spring of 1862, when, proceeding up the Mississippi, you passed Forts Jackson and St. Philip, and, overcoming all obstructions, captured New Orleans, and restored unobstructed navigation to the commercial emporium of the great central valley of the Union.

The bay of Mobile was not only fortified and guarded by forts and batteries on shore, and by submerged obstructions, but the rebels had also collected there a formidable fleet, commanded by their highest naval officer—a former captain in the Union navy—who, false to the government and the Union, had deserted his country in the hour of peril, and levelled his guns against the flag which it was his duty to have defended. The possession of Mobile bay, which you have acquired, will close the illicit traffic which has been carried on by running the blockade in that part of the Gulf, and gives point and value to the success you have achieved.

Great results in war are seldom obtained without great risks, and it was not expected that the possession of the harbor of Mobile would be secured without disaster. The loss of the gallant Craven and his brave companions, with the Tecumseh, (a vessel that was invulnerable to the guns of Fort Morgan,) by a concealed torpedo, was a casualty against which no human foresight could guard. While the nation awards cheerful honors to the living, she will ever hold in grateful remembrance the memory of the gallant and lamented dead, who perilled their lives for their country and died in her cause.

To you and the brave officers and sailors of your squadron, who participated in this great achievement, the department tenders its thanks and those of the government and country.

Very respectfully, &c.

GIDEON WELLES,
Secretary of the Navy.

Rear-Admiral DAVID G. FARRAGUT,
Com'dg West Gulf Blockading Squadron, Mobile bay.

Despatch of Rear-Admiral Farragut acknowledging receipt of department's congratulatory letter.

No. 392.] FLAG-SHIP HARTFORD, W. G. BLOCKADING SQUADRON,
Mobile Bay, September 4, 1864.

SIR: I have the honor to acknowledge the receipt of your communication of the 15th ultimo, in which you are pleased to express the thanks of the department and the government at the successful entrance into Mobile bay by the fleet under my command, and the capture and destruction of the iron-clads of the enemy under the command of Admiral Buchanan.

He, though a rebel and a traitor to the government that had raised and educated him, had always been considered one of its ablest officers, and no one knew him better or appreciated his capacity more highly than myself, and, I may add, felt more proud of overcoming him in such a contest, if for no other reason than to prove to the world that ramming and sinking a helpless frigate at her anchor is a very different affair from ramming steamers when handled by officers of good capacity.

In this engagement the Tennessee ran at our entire line of fourteen vessels, and yet never succeeded in striking one, but, on the contrary, she was herself struck in succession by the Monongahela, the Lackawanna, the Hartford, and the Ossipee. All the injuries she inflicted were with her guns. As a ram she did us no harm whatever.

The department will please accept my thanks for its congratulatory letter. I have directed it to be read at muster on all the ships in my squadron, and I know well that it will be as gratefully appreciated by every officer and man in this fleet as it is by,

Very respectfully, your obedient servant.

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.
Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

SURRENDER OF FORT POWELL.

Report of Rear-Admiral Farragut.

FLAG-SHIP HARTFORD, WEST GULF BLOCKADING SQUADRON,
Mobile Bay, August 8, 1864.

SIR: I have the honor to inform the department that Fort Powell was evacuated on the night of the fifth instant. The rebels blew up much of the fort, but we took all of the guns, and those of the best quality, a list of which will

be forwarded. We took some covered barges also from Fort Powell and Cedar Point, which do us good service as a workshop. The fleet engineer and fleet paymaster came in the Stockdale, with iron, &c., for the repairs of our vessel.

On the afternoon of the sixth the Chickasaw went down and shelled Fort Gaines, and on the morning of the seventh I received a communication from Colonel Anderson, commanding the fort, offering to surrender to the fleet, asking the best conditions. I immediately sent for General Granger, and in the evening had Colonel Anderson and Major Browne on board, and the agreement was signed by all parties.

At seven a. m., August 8, Fleet Captain Drayton, on the part of the navy, and Colonel Myer, on the part of the army, proceeded to the fort to carry out the stipulations of the agreement, and at forty-five minutes past nine the fort surrendered, and the stars and stripes were hoisted on the staff amid the cheers of the fleet. Enclosed herewith are copies of the letters of Colonel Anderson and the reply of General Granger and myself, marked Nos. 1 and 2, respectively.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Letter from Colonel Anderson to Rear-Admiral Farragut.

HEADQUARTERS, FORT GAINES, August 7, 1864.

TO ADMIRAL FARRAGUT,

Commanding Naval Forces off Dauphin Island:

Feeling my inability to maintain my present position longer than you may see fit to open upon me with the fleet, and feeling also the uselessness of entailing upon ourselves further destruction of life, I have the honor to propose the surrender of fort Gaines, its garrison, stores, &c.

I trust to your magnanimity for obtaining honorable terms, which I respectfully request that you will transmit to me, and allow me sufficient time to consider them and return an answer.

This communication will be handed to you by Major W. R. Browne.

I am, sir, very respectfully, your obedient servant,

C. D. ANDERSON,

Colonel, Commanding.

Joint letter from Rear-Admiral Farragut and Major General Granger to Colonel Anderson.

FLAG-SHIP HARTFORD,

Mobile Bay, August 7, 1864.

SIR: In accordance with the proposal made in your letter of this morning for the surrender of Fort Gaines, I have to say that, after communicating with General Granger, in command of our forces on Dauphin island, the only offers we can make are—

First. The unconditional surrender of yourself and the garrison of Fort Gaines, with all of the public property within its limits.

Second. The treatment which is in conformity with the custom of the most civilized nations towards prisoners of war.

Third. Private property, with the exception of arms, will be respected.

This communication will be handed you by Fleet Captain P. Drayton and Colonel Mayer of the United States army, who fully understand the views of General Granger and myself.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral.

G. GRANGER,
Major General United States Army.

Colonel C. D. ANDERSON.
Commanding Fort Gaines.

ATTACK ON THE DEFENCES OF MOBILE.

Detailed report of Rear-Admiral D. G. Farragut.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 12, 1864.

SIR: I had the honor to forward to the department, on the evening of the 5th instant, a report of my *entree* into Mobile bay on the morning of that day, and which, though brief, contained all the principal facts of the attack.

Notwithstanding the loss of life, particularly on this ship, and the terrible disaster to the *Tecumseh*, the result of the fight was a glorious victory, and I have reason to feel proud of the officers, seamen, and marines of the squadron under my command, for it has never fallen to the lot of an officer to be thus situated and thus sustained. Regular discipline will bring men to any amount of endurance, but there is a natural fear of hidden dangers, particularly when so awfully destructive of human life as the torpedo, which requires more than discipline to overcome.

Preliminary to a report of the action of the fifth, I desire to call the attention of the department to the previous steps taken in consultation with Generals Canby and Granger. On the 8th of July I had an interview with these officers on board the *Hartford*, on the subject of an attack upon Forts Morgan and Gaines, at which it was agreed that General Canby would send all the troops he could spare to co-operate with the fleet. Circumstances soon obliged General Canby to inform me that he could not despatch a sufficient number to invest both forts, and, in reply, I suggested that Gaines should be the first invested, engaging to have a force in the sound ready to protect the landing of the army on Dauphin island, in the rear of that fort, and I assigned Lieutenant Commander De Krafft, of the *Conemaugh*, to that duty.

On the 1st instant General Granger visited me again on the *Hartford*. In the mean time the *Tecumseh* had arrived at Pensacola, and Captain Craven had informed me that he would be ready in four days for any service. We therefore fixed upon the fourth of August as the day for the landing of the troops and my entrance into the bay, but owing to delays mentioned in Captain Jenkins's communication to me the *Tecumseh* was not ready. General Granger, however, to my mortification, was up to time, and the troops actually landed on Dauphin island.

As subsequent events proved, the delay turned to our advantage, as the rebels were busily engaged during the 4th in throwing troops and supplies into Fort Gaines, all of which were captured a few days afterward.

The *Tecumseh* arrived on the evening of the fourth, and everything being propitious, I proceeded to the attack on the following morning.

As mentioned in my previous despatch, the vessels outside the bar, which were designed to participate in the engagement, were all under way by forty min-

utes past five in the morning, in the following order, two abreast, and lashed together: Brooklyn, Captain James Alden, with the Octorara, Lieutenant Commander C. H. Green, on the port side; Hartford, Captain Percival Drayton, with the Metacomet, Lieutenant Commander J. E. Jouett; Richmond, Captain T. A. Jenkins, with the Port Royal, Lieutenant Commander B. Gherardi; Lackawanna, Captain J. B. Marchand, with the Seminole, Commander E. Donaldson; Monongahela, Commander J. H. Strong, with the Kennebec, Lieutenant Commander W. P. McCann; Ossipee, Commander W. E. Le Roy, with the Itasca, Lieutenant Commander George Brown; Oneida, Commander J. R. M. Mullany, with the Galena, Lieutenant Commander C. H. Wells. The iron-clads—Tecumseh, Commander T. A. M. Craven; the Manhattan, Commander J. W. A. Nicholson; the Winnebago, Commander T. H. Stevens; and the Chickasaw, Lieutenant Commander G. H. Perkins—were already inside the bar, and had been ordered to take up their positions on the starboard side of the wooden ships, or between them and Fort Morgan, for the double purpose of keeping down the fire from the water battery and the parapet guns of the fort, as well as to attack the ram Tennessee as soon as the fort was passed.

It was only at the urgent request of the captains and commanding officers that I yielded to the Brooklyn being the leading ship of the line, as she had four chase guns and an ingenious arrangement for picking up torpedoes, and because, in their judgment, the flag-ship ought not to be too much exposed. This I believe to be an error; for, apart from the fact that exposure is one of the penalties of rank in the navy, it will always be the aim of the enemy to destroy the flag-ship, and, as will appear in the sequel, such attempt was very persistently made, but Providence did not permit it to be successful.

The attacking fleet steamed steadily up the main ship-channel, the Tecumseh firing the first shot at forty-seven minutes past six o'clock. At six minutes past seven the fort opened upon us, and was replied to by a gun from the Brooklyn, and immediately after the action became general.

It was soon apparent that there was some difficulty ahead. The Brooklyn, for some cause which I did not then clearly understand, but which has since been explained by Captain Alden in his report, arrested the advance of the whole fleet, while, at the same time, the guns of the fort were playing with great effect upon that vessel and the Hartford. A moment after I saw the Tecumseh, struck by a torpedo, disappear almost instantaneously beneath the waves, carrying with her her gallant commander and nearly all her crew. I determined at once, as I had originally intended, to take the lead; and after ordering the Metacomet to send a boat to save, if possible, any of the perishing crew, I dashed ahead with the Hartford, and the ships followed on, their officers believing that they were going to a noble death with their commander-in-chief.

I steamed through between the buoys, where the torpedoes were supposed to have been sunk. These buoys had been previously examined by my flag-lieutenant, J. Crittenden Watson, in several nightly reconnoissances. Though he had not been able to discover the sunken torpedoes, yet we had been assured by refugees, deserters, and others, of their existence, but believing that, from their having been some time in the water they were probably innocuous, I determined to take the chance of their explosion.

From the moment I turned to the northwestward, to clear the middle ground, we were enabled to keep such a broadside fire upon the batteries of Fort Morgan that their guns did us comparatively little injury.

Just after we passed the fort, which was about ten minutes before eight o'clock, the ram Tennessee dashed out at this ship, as had been expected, and in anticipation of which I had ordered the monitors on our starboard side. I took no further notice of her than to return her fire.

The rebel gunboats Morgan, Gaines, and Selma were ahead, and the latter

particularly annoyed us with a raking fire, which our guns could not return. At two minutes after eight o'clock I ordered the *Metacomet* to cast off and go in pursuit of the *Selma*. Captain Jouett was after her in a moment, and in an hour's time he had her as a prize. She was commanded by P. V. Murphy, formerly of the United States navy. He was wounded in the wrist, his executive officer, Lieutenant Comstock, and eight of the crew, killed, and seven or eight wounded. Lieutenant Commander Jouett's conduct during the whole affair commands my warmest commendations. The *Morgan* and *Gaines* succeeded in escaping under the protection of the guns of Fort Morgan, which would have been prevented had the other gunboats been as prompt in their movements as the *Metacomet*; the want of pilots, however, I believe, was the principal difficulty. The *Gaines* was so injured by our fire that she had to be run ashore, where she was subsequently destroyed, but the *Morgan* escaped to Mobile during the night, though she was chased and fired upon by our cruisers.

Having passed the forts and dispersed the enemy's gunboats, I had ordered most of the vessels to anchor, when I perceived the ram *Tennessee* standing up for this ship. This was at forty-five minutes past eight. I was not long in comprehending his intentions to be the destruction of the flag-ship. The monitors, and such of the wooden vessels as I thought best adapted for the purpose, were immediately ordered to attack the ram, not only with their guns, but bows on at full speed, and then began one of the fiercest naval combats on record.

The *Monongahela*, Commander Strong, was the first vessel that struck her, and in doing so carried away his own iron prow, together with the cutwater, without apparently doing her adversary much injury. The *Lackawanna*, Captain Marchand, was the next vessel to strike her, which she did at full speed; but though her stem was cut and crushed to the plank ends for the distance of three feet above the water's edge to five feet below, the only perceptible effect on the ram was to give her a heavy list.

The *Hartford* was the third vessel which struck her, but, as the *Tennessee* quickly shifted her helm, the blow was a glancing one, and, as she rasped along our side, we poured our whole port broadside of nine-inch solid shot within ten feet of her casement.

The monitors worked slowly, but delivered their fire as opportunity offered. The *Chickasaw* succeeded in getting under her stern, and a fifteen-inch shot from the *Manhattan* broke through her iron plating and heavy wooden backing, though the missile itself did not enter the vessel.

Immediately after the collision with the flag-ship, I directed Captain Drayton to bear down for the ram again. He was doing so at full speed when, unfortunately, the *Lackawanna* ran into the *Hartford* just forward of the mizzenmast, cutting her down to within two feet of the water's edge. We soon got clear again, however, and were fast approaching our adversary, when she struck her colors and run up the white flag.

She was at this time sore beset; the *Chickasaw* was pounding away at her stern, the *Ossipee* was approaching her at full speed, and the *Monongahela*, *Lackawanna*, and this ship were bearing down upon her, determined upon her destruction. Her smoke-stack had been shot away, her steering chains were gone, compelling a resort to her relieving tackles, and several of her port shutters were jammed. Indeed, from the time the *Hartford* struck her, until her surrender, she never fired a gun. As the *Ossipee*, Commander Le Roy, was about to strike her, she hoisted the white flag, and that vessel immediately stopped her engine, though not in time to avoid a glancing blow.

During this contest with the rebel gunboats and the ram *Tennessee*, and which terminated by her surrender at ten o'clock, we lost many more men than from the fire of the batteries of Fort Morgan.

Admiral Buchanan was wounded in the leg; two or three of his men were killed, and five or six wounded. Commander Johnston, formerly of the United

States navy, was in command of the Tennessee, and came on board the flagship, to surrender his sword, and that of Admiral Buchanan. The surgeon, Doctor Conrad, came with him, stated the condition of the admiral, and wished to know what was to be done with him. Fleet Surgeon Palmer, who was on board the Hartford during the action, commiserating the sufferings of the wounded, suggested that those of both sides be sent to Pensacola, where they could be properly cared for. I therefore addressed a note to Brigadier-General R. L. Page, commanding Fort Morgan, informing him that Admiral Buchanan and others of the Tennessee had been wounded, and desiring to know whether he would permit one of our vessels, under a flag of truce, to convey them, with or without our wounded, to Pensacola, on the understanding that the vessel should take out none but the wounded, and bring nothing back that she did not take out. This was acceded to by General Page, and the Metacomet proceeded on this mission of humanity.

I enclose herewith the correspondence with that officer, (marked numbers, one, two, three, and four.) I forward also the reports (marked numbers five, six, seven, eight, nine, ten, eleven, twelve, thirteen, fourteen, fifteen, sixteen, seventeen, eighteen, nineteen, twenty, and twenty-one) of the commanding officers of the vessels who participated in the action, and who will no doubt call attention to the conduct of such individuals as most distinguished themselves.

As I had an elevated position in the main rigging near the top, I was able to overlook not only the deck of the Hartford, but the other vessels of the fleet. I witnessed the terrible effects of the enemy's shot, and the good conduct of the men at their guns, and although no doubt their hearts sickened, as mine did, when their shipmates were struck down beside them, yet there was not a moment's hesitation to lay their comrades aside, and spring again to their deadly work.

Our little consort, the Metacomet, was also under my immediate eye during the whole action up to the moment I ordered her to cast off in pursuit of the Selma. The coolness and promptness of Lieutenant Commander Jouett throughout merit high praise; his whole conduct was worthy of his reputation.

In this connexion I must not omit to call the attention of the department to the conduct of Acting Ensign Henry C. Nields, of the Metacomet, who had charge of the boat sent from that vessel when the Tecumseh sunk. He took her in under one of the most galling fires I ever saw, and succeeded in rescuing from death ten of her crew, within six hundred yards of the fort. I would respectfully recommend his advancement. The commanding officers of all the vessels who took part in the action deserve my warmest commendations, not only for the untiring zeal with which they had prepared their ships for the contest, but for their skill and daring in carrying out my orders during the engagement. With the exception of the momentary arrest of the fleet when the Hartford passed ahead, and to which I have already adverted, the order of battle was preserved, and the ships followed each other in close order past the batteries of Fort Morgan, and in comparative safety too, with the exception of the Oneida. Her boilers were penetrated by a shot from the fort, which completely disabled her, but her consort, the Galena, firmly fastened to her side, brought her safely through, showing clearly the wisdom of the precaution of carrying the vessels in two abreast. Commander Mullany, who had solicited eagerly to take part in the action, was severely wounded, losing his left arm.

In the encounter with the ram the commanding officers obeyed with alacrity the order to run her down, and without hesitation exposed their ships to destruction to destroy the enemy.

Our iron-clads, from their slow speed and bad steering, had some difficulty in getting into and maintaining their position in line as we passed the fort, and, in the subsequent encounter with the Tennessee, from the same causes were not as effective as could have been desired, but I cannot give too much praise to

Lieutenant Commander Perkins, who, though he had orders from the department to return north, volunteered to take command of the Chickasaw, and did his duty nobly.

The Winnebago was commanded by Commander T. H. Stevens, who volunteered for that position. His vessel steers very badly, and neither of his turrets will work, which compelled him to turn his vessel every time to get a shot, so that he could not fire very often, but he did the best under the circumstances.

The Manhattan appeared to work well, though she moved slowly. Commander Nicholson delivered his fire deliberately, and, as before stated, with one of his fifteen-inch shot broke through the armor of the Tennessee, with its wooden backing, though the shot itself did not enter the vessel. No other shot broke through the armor, though many of her plates were started, and several of her port-shutters jammed by the fire from the different ships.

The Hartford, my flag-ship, was commanded by Captain Percival Drayton, who exhibited throughout that coolness and ability for which he has been long known to his brother officers. But I must speak of that officer in a double capacity. He is the fleet-captain of my squadron, and one of more determined energy, untiring devotion to duty, and zeal for the service, tempered by great calmness, I do not think adorns any navy. I desire to call your attention to this officer, though well aware that in thus speaking of his high qualities I am only communicating officially to the department that which it knew full well before. To him, and to my staff in their respective positions, I am indebted for the detail of my fleet.

Lieutenant J. Crittenden Watson, my flag-lieutenant, has been brought to your notice in former despatches. During the action he was on the poop attending to the signals, and performed his duties, as might be expected, thoroughly. He is a scion worthy the noble stock he sprang from, and I commend him to your attention.

My secretary, Mr. McKinley, and Acting Ensign H. H. Brownell, were also on the poop, the latter taking notes of the action, a duty which he performed with coolness and accuracy.

Two other acting ensigns of my staff, Mr. Bogart and Mr. Heginbotham, were on duty in the powder division, and, as the reports will show, exhibited zeal and ability. The latter, I regret to add, was severely wounded by a raking shot from the Tennessee when we collided with that vessel, and died a few hours after. Mr. Heginbotham was a young married man, and has left a widow and one child, whom I commend to the kindness of the department.

Lieutenant A. R. Yates, of the Augusta, acted as an additional aid to me on board the Hartford, and was very efficient in the transmission of orders. I have given him the command temporarily of the captured steamer Selma.

The last of my staff, and to whom I would call the attention of the department, is not the least in importance. I mean Pilot Martin Freeman. He has been my great reliance in all difficulties in his line of duty. During the action he was in the main-top piloting the ships into the bay. He was cool and brave throughout, never losing his self-possession. This man was captured early in the war in a fine fishing-smack which he owned, and though he protested that he had no interest in the war, and only asked for the privilege of fishing for the fleet, yet his services were too valuable to the captors as a pilot not to be secured. He was appointed a first-class pilot, and has served us with zeal and fidelity, and has lost his vessel, which went to pieces on Ship island. I commend him to the department.

It gives me pleasure to refer to several officers who volunteered to take any situation where they might be useful, some of whom were on their way north, either by orders of the department or condemned by medical survey. The reports of the different commanders will show how they conducted themselves.

IN SENATE
January 11, 1894
REPORT
OF THE
COMMISSIONER OF THE LAND OFFICE
IN RESPONSE TO A RESOLUTION PASSED BY THE SENATE
MAY 1, 1893
ALBANY:
J. B. LIPPINCOTT & CO. PRINTERS.
1894.

I have already mentioned Lieutenant Commander Perkins of the Chickasaw, and Lieutenant Yates of the Augusta. Acting Volunteer Lieutenant William Hamilton, late commanding officer of the Augusta Dinsmore, had been invalided by medical survey, but he eagerly offered his services on board the iron-clad Chickasaw, having had much experience in our monitors. Acting Volunteer Lieutenant P. Giraud, another experienced officer in iron-clads, asked to go in on one of these vessels, but as they were all well supplied with officers, I permitted him to go in on the Ossipee, under Commander Le Roy. After the action he was given temporary charge of the ram Tennessee.

Before closing this report, there is one other officer of my squadron of whom I feel bound to speak, Captain T. A. Jenkins, of the Richmond, who was formerly my chief of staff, not because of his having held that position, but because he never forgets to do his duty to the government, and takes now the same interest in the fleet as when he stood in that relation to me. He is also the commanding officer of the second division of my squadron, and, as such, has shown ability and the most untiring zeal. He carries out the spirit of one of Lord Collingwood's best sayings: "Not to be afraid of doing too much; those who are, seldom do as much they ought." When in Pensacola he spent days on the bar placing the buoys in the best position, was always looking after the interests of the service, and keeping the vessels from being detained one moment longer in port than was necessary. The gallant Craven told me only the night before the action in which he lost his life: "I regret, admiral, that I have detained you; but had it not been for Captain Jenkins, God knows when I should have been here. When your order came I had not received an ounce of coal."

I feel I should not be doing my duty did I not call the attention of the department to an officer who has performed all his various duties with so much zeal and fidelity.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Commanding W. G. Blockading Squadron.

HON. GIDEON WELLES,

Secretary of the Navy.

I enclose herewith my General Orders, Nos. 10 and 12, (marked twenty-two and twenty-three,) issued before the action, and General Orders, Nos. 12 and 13, (marked twenty-four and twenty-five,) issued after the engagement.

Letter from Rear-Admiral Farragut to Brigadier General R. L. Page.

FLAG-SHIP HARTFORD, August 5, 1864.

SIR: Admiral Buchanan is severely wounded, having lost his leg. There are, in addition, four or five others of the crew of the Tennessee who require more comfortable quarters than we can give them in the fleet. Will the commanding officer at Fort Morgan permit a vessel to take them to our hospital at Pensacola, with or without our own wounded?—the understanding being that the flag-of-truce vessel takes nothing whatever but the wounded, and brings nothing back that she did not take out, and my honor is given for the above time.

Very respectfully,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Brigadier General R. L. PAGE,

Commanding Fort Morgan.

Letter from Brigadier General R. L. Page to Rear-Admiral D. G. Farragut.

HEADQUARTERS THIRD BRIGADE, D. G.,
Fort Morgan, Alabama, August 5, 1864.

SIR: Your communication of this date is received. I am much obliged for the information regarding Admiral Buchanan.

Your request relative to the wounded of the Tennessee, and also those of your own command, being taken to Pensacola, will be permitted under a flag of truce, and to return on the conditions you propose.

I would be glad if Admiral Buchanan, having lost a leg, be permitted, under parole, to go to Mobile, where he can receive earlier and more prompt attention.

If the latter request is granted please inform me, and I will have a boat from town to take him up.

Very respectfully,

R. L. PAGE,
Brigadier General, Commanding.

Rear-Admiral DAVID G. FARRAGUT,
Commanding W. G. B. Squadron, Mobile Bay.

Letter from Rear-Admiral Farragut to Brigadier General R. L. Page.

FLAG-SHIP HARTFORD,
Mobile Bay, August 5, 1864.

SIR: In reply to your note of this date, I would say that it is altogether out of the question that I should permit Admiral Buchanan to be sent to Mobile, but I will send him to Pensacola, where he will receive the same comforts as our own wounded, which I apprehend are as good as they could be at Mobile.

It was simply as an act of humanity that I made the proposition I did to-day. I would be glad to bury my dead on shore; but if there is any objection to it, they can have a sailor's grave in the deep, honored by the heartfelt sighs of their shipmates.

Very respectfully,

D. G. FARRAGUT,
Rear-Admiral, Commanding.

Brigadier General R. L. PAGE,
Commanding Fort Morgan.

Letter from Brigadier General R. L. Page to Rear-Admiral D. G. Farragut.

FORT MORGAN, August 6, 1864.

SIR: Your note of the fifth received. There is no objection to your burying your dead on shore. When they arrive near the wharf here, a point will be designated for the burial.

Very respectfully, your obedient servant,

R. L. PAGE,
Brigadier General C. S. A.

Rear-Admiral D. G. FARRAGUT,
Commanding U. S. Naval Forces, Mobile Bay.

Report of Captain Percival Drayton.

FLAG-SHIP HARTFORD,

Mobile Bay, August 6, 1864.

SIR: I have the honor to offer the following report of the part which this vessel took in the action of yesterday :

According to previous arrangement, the Metacomet lashed alongside of us at half past four a. m., and at half past five we got under way, following the Brooklyn, which led the line. After some little delay, which was required to allow of all the vessels getting into position, we moved on in the direction of Fort Morgan, which opened on us at about two miles distance at six minutes past seven. The enemy's fire was at once answered by our bow hundred-pounder rifle, the only gun that could be brought to bear, until about half past seven, when we commenced firing the broadside guns with great rapidity, which was continued as long as they could be of use. About thirty-five minutes past seven I heard the cry that a monitor was sinking, and looking on the starboard bow, saw the turret of the Tecumseh just disappearing under the water, where an instant before I had seen this noble vessel pushing on gallantly in a straight line to attack the enemy's ram Tennessee, which had apparently moved out to give her an opportunity.

As our boats could not be lowered, by your direction one was sent which was towing astern of the Metacomet, the vessel lashed to us.

The rapidity of our fire, together with the smoke, so completely disordered the enemy's aim that we passed the fort with no great injury or loss of life, a shell which came through the side and exploded a little abaft the mainmast, killing and wounding a large portion of number seven gun's crew, being the only one that caused much destruction. As we, however, were getting by the shore batteries, we came directly under the fire of the gunboats Selma, Morgan, and Gaines, and the ram Tennessee, and being only able to direct our fire on one of them at a time, the shots from the others were delivered with great deliberation and consequent effect, a single shot having killed ten and wounded five men at numbers one and two guns.

The Tennessee also followed us for some distance, throwing an occasional shot, but finding that she did not come up, and we being now a mile ahead of the remainder of the fleet, she turned and ran down to them, not wishing, I suppose, to be entirely cut off from Fort Morgan.

At this time, by your order, the Metacomet was cast off and directed to chase the Selma, which, keeping on our bow, had annoyed us excessively with her three stern guns, which we could not answer, owing to our rifle gun-carriage having been destroyed by a shell.

She was just sheering off as the Metacomet was loosed from us, and being followed into shallow water was overtaken and captured by the latter vessel, after an exciting running fight of an hour.

The other two gunboats, the Morgan and Gaines, also got into shallow water, and not being followed by any of our light-draught vessels, escaped to Fort Morgan, where one was run ashore and afterward burned, and the other, the Morgan, got into Mobile during the night by keeping close in shore.

The fight appearing to be now over, we anchored and made signal to the fleet to do the same, supposing that as the Tennessee had got under Fort Morgan she would remain there, when a quarter of an hour later it was reported that she had come out and was steering toward us. I could not, however, believe in such temerity at first, but its truth becoming soon evident, by your order I commenced heaving up the anchor, and should have slipped had it not been for the jamming of a shackle-pin; but the ship was soon under way again, steering for the ram, which we struck with great force, although not on her beam, as

she turned toward us as we approached. After striking we dropped close alongside, and delivered our broadside of solid nine-inch shot with thirteen pounds of powder, at a distance of perhaps not more than eight feet from her side, as I believe, however, from subsequent observation, without doing any injury. The ram at the time had only two guns in broadside.

One missed fire several times, as we could distinctly hear; the shell from the other passed through our berth deck and exploded just inside, killing and wounding a number of men, and the pieces broke through the spar and berth decks, even going through the launch and into the hold where were the wounded.

We then stood off, and were making another circuit to run into the ram again, when in mid career the Lackawanna struck us a little forward of the mizzen-mast, cutting us completely down to within two feet of the water. This caused a detention of perhaps five minutes; but finding that we were not sinking, the ship was, by your order, pointed again for the ram, and we were going for her at full speed, when it was observed that a white flag was flying.

This ended the action, and at ten minutes past ten we had again anchored at about four miles distant from Fort Morgan. I have now only to speak of the officers and crew.

To Lieutenant Commander Kimberly, the executive officer, I am indebted, not only for the fine example of coolness and self-possession which he set to those around him, but also for the excellent condition to which he had brought everything belonging to the fighting department of the ship, in consequence of which there was no confusion anywhere, even when, from the terrible slaughter at some of the guns, it might have been looked for.

All did their duty, but I cannot but mention Lieutenants Tyson and Adams and Ensign Whiting, to whose example and exertions it was in great measure owing, no doubt, that the great loss of some of the guns was not followed by confusion or delay in repairing damages. Acting Master's Mate Tinelli, who took charge of the third division after Lieutenant Adams was wounded, is spoken of to me very highly. Acting Assistant Engineer McEwan is also strongly noticed in the report of Chief Engineer Williamson. He lost his right arm while busily employed on the berth deck, where he was stationed, in assisting and comforting the wounded. He is spoken of by his superiors as most competent to fill the position of third assistant engineer in the regular service, for which I would beg you to recommend him to the Hon. Secretary of the Navy.

The last shell fired at us (that from the ram) killed my clerk, Ensign W. H. Heginbotham. Although this was the first time he had been in action, nothing, I am told, could exceed the coolness and zeal with which he performed his duties in the powder division, and I feel his loss most seriously, as his general intelligence and many amiable qualities had made him almost necessary to me.

I must also thank Lieutenant A. B. Yates, a volunteer from the United States steamship Augusta, who acted as an aid both to you and myself, and was to me most useful.

The two after-guns were entirely manned by marines, who, under the direction of Captain Charles Heywood, performed most efficient service.

Thanks to the unremitting supervision of Chief Engineer Williamson, all had been so thoroughly prepared in his department that nothing was required of the engines during the day which they could not perfectly perform.

The devoted attention of Fleet Surgeon Palmer, Surgeon Lansdale, and Assistant Surgeon Commons to our wounded was beyond praise, and it was owing to their skill and untiring exertions that the large number of des-

perately wounded were prepared by eight o'clock in the evening for removal to the hospital at Pensacola, for which place they left at daylight on the following morning in the *Metacomet*, under a flag of truce.

Boatswain Dixon was nearly knocked overboard by a splinter, but absented himself from the deck only long enough to have his wounds dressed, when he returned to his duties.

Acting Master's Mate Herrick, while superintending the passage of powder and shell on the berth deck, was very seriously wounded by a piece of shell which entirely disabled him at the time, and may, I am afraid, prove very serious. Up to this time his conduct and bearing are spoken of by the commanding officer of the division in the highest praise.

I must also thank Lieutenant Watson, your flag-lieutenant, who, besides attending most faithfully to the signals, found time to assist me on several occasions when it was important to give directions, in detail, about the firing.

Of the crew I can scarcely say too much. They were, most of them, persons who had never been in action, and yet I cannot hear of a case where any one attempted to leave his quarters, or showed anything but the sternest determination to fight it out. There might, perhaps, have been a little excuse had such a disposition been exhibited, when it is considered that a great part of four guns' crews were at different times swept away almost entirely by as many shells. In every case, however, the killed and wounded were quietly removed; the injury at the guns made good, and in a few moments, except from the traces of blood, nothing could lead one to suppose that anything out of the ordinary routine had happened.

In conclusion, I request that you will recommend to the honorable Secretary of the Navy, for the medal of honor, the men whose names accompany this in a separate report. They well deserve the distinction.

Very respectfully,

P. DRAYTON, *Captain.*

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron.

With this report I enclose those of the executive officer, the officers of divisions, and of the gunner, carpenter, and sailmaker, and I beg leave to heartily indorse all that is said in them about the officers and men of their respective commands.

I would also beg leave to say, that although there was very considerable loss of life in the powder division, thanks to the good arrangements and example of Ensign Dana, who was in charge of it, there was no confusion. He was also greatly assisted in the after part of the division by Sailmaker T. C. Herbert, whose example tended much to give confidence to those around him; he is a most deserving officer. Gunner J. L. Staples and Carpenter George E. Burcham also deserve notice for their strict attention to duty.

Very respectfully, your obedient servant,

P. DRAYTON, *Captain.*

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron.

UNITED STATES FLAG-SHIP HARTFORD,

Mobile Bay, August 8, 1864.

SIR: Agreeably to your order, I submit the following reports of the passage of this ship by Forts Morgan and Gaines, and our engagement with the

ram Tennessee, (iron-clad,) and with the gunboats Selma, Gaines, and Morgan.

On the morning of the fifth, called all hands at three a. m., stowed hammocks, and gave the people an early breakfast, hove into twenty fathoms of chain, and prepared to receive the United States steamer Metacomet alongside. At daylight the Metacomet came on our port side and made fast, our battery on that side, having been run in for that purpose.

Hove up our anchor, and at forty minutes past five a. m. stood in to take our position astern of the Brooklyn, which ship was slowly standing in for the bar, followed by the Hartford. Lashed our anchors to the bows, and secured the chains with extra stoppers, beat to quarters, and cleared ship for action. A few minutes after seven o'clock Fort Morgan opened upon us, and continued firing until the fleet had passed.

We commenced and continued to fire with our starboard hundred-pounder Parrott on the topgallant forecastle, until our starboard broadside could bear, which was not, however, until we got nearly abreast of the fort, when we opened with our twelve nine-inch guns loaded with ten-second shell. We now fired rapidly, and as we approached used five-second shell and shrapnell, with fuzes cut at two seconds, which had the effect to drive the enemy from their water batteries and parapet guns whilst we were abreast of the fort. The Brooklyn now having stopped and commenced backing, the Hartford went ahead and led the fleet until we anchored up the bay.

After passing the Brooklyn, the rebel ram and gunboats paid their individual attention to this ship, taking position ahead and on our starboard bow, and with their heavy guns raking us, we not being able to bring any guns to bear on them except those mounted on the topgallant forecastle. We continued, however, to advance, they preserving their position until we got some distance from Fort Morgan, when the rebel ram went back to attack our ships astern. The three gunboats, however, still stuck by us. We had now so altered our course as to bring them to bear on our starboard bow and beam, and opened on them with the starboard broadside; we now were on a footing with them, and delivered our fire with effect on all three, they edging off and increasing their distance, but still keeping up a hot fire, from which we suffered very much. This part of the action had now lasted some thirty minutes, most of the time their fire raking us, cutting down our men at the guns fearfully, and damaging gun-carriages and material, when the Metacomet cast off and pursued. The enemy by this time having been pretty well handled, hauled off, separated—the Gaines and Morgan making for the fort, and the Selma falling a prize to the Metacomet. Our ships now having come up, we steamed up the bay and anchored with fifteen fathoms of chain in three and a quarter fathoms of water, when the ram was seen approaching; hove up our anchor, went to quarters, and stood down for the enemy; endeavoring to strike her, but our anchor hanging from the hawse-pipe sheered us off from the ram, so that the ships passed, the port sides grazing each other; depressed our port guns and fired with thirteen pounds of powder and solid shot. After passing, put our helm hard a-starboard, to come around for another but, the ship, however, making a larger circle in getting around; approached near to our own ships that were bound down for the rebel ram; one of them, the Lackawanna, struck us on the starboard side abaft the main chains, knocking two of our ports into one, capsized a nine-inch gun, carried away the gig and davits and starboard M. S. M. backstays, also cutting us down to within two feet of the water. We cleared, and stood down for the ram, which had turned and was running away without a smoke-stack, followed by our iron-clads, the Ossipee and other ships. When we were nearly up to the enemy she hoisted the white flag and surrendered; this ship turned back a short distance and anchored.

The conduct of the crew was splendid, and their enthusiasm was unbounded, notwithstanding the raking fire that we suffered. When men fell, others filled

the gaps, until almost two entire crews had been swept away. Nothing could be more noble than the spirit displayed by our wounded and dying, who cheered and smiled in their agony, seemingly contented at the sacrifice of their lives for the victory vouchsafed to their country. Such men are our heroes.

The officers, one and all, did their whole duty, and, in a measure, to their exertions and example may be attributed the unflinching conduct of those they so well instructed, drilled, and commanded. Conspicuous was Ensign Whiting, who worked the forecastle guns under the most trying circumstances and under the most scathing fire. Mr. Dixon, our boatswain; William McEwan, acting assistant engineer; Mr. Herrick, acting master's mate; Acting Ensigns Bogart and Heginbotham, deserve praise for their coolness and assistance in the powder division, which was at one time a perfect slaughter-house.

Lieutenant Yates, of the United States steamer *Augusta*, and Acting Ensign Marthon, of the United States steamer *Tennessee*, who volunteered for the fight, also deserve praise for their very valuable services.

Appended are the reports of the divisional officers, whose mention of particular acts of men under their immediate command will enable you to recommend the men mentioned to notice; also the reports of the several officers in charge of the different departments, and of the damages sustained therein.

Very respectfully,

L. A. KIMBERLY,

Lieutenant Commander and Executive Officer.

Captain P. DRAYTON,

Commanding United States Steamer Hartford.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: I respectfully submit the following report of the conduct of the officers and men in the first division during the engagement of yesterday:

Acting Ensign W. H. Whiting, in charge of the forecastle guns, deserves special mention for his gallantry in serving and working both one-hundred-pounder rifles under the most trying circumstances.

The three captains of guns, Henry Clark, Peter W. Stanley, and William H. Wright, displayed an amount of courage and coolness which I have rarely seen equalled. But the two men of whom I wish particularly to speak are Charles Melville and Thomas Fitzpatrick. A rifle shell burst between the two forward nine-inch guns, killing and wounding fifteen men. Charles Melville was among the wounded, and was taken down with the rest to the surgeon, but came on deck almost immediately, and although scarcely able to stand, refused to go below, and worked at the gun during the remainder of the action. Thomas Fitzpatrick, captain of No. 1 gun, was struck several times in the face by splinters, and had his gun disabled by a shell. In a few minutes he had his gun in working order again, with new truck, breeching, side-tackle, &c., his wounded below, the dead clear, and was fighting his gun as before, setting a splendid example to the remainder of his crew. His conduct came particularly under my notice, and during the entire action was distinguished for coolness and bravery.

The first division had thirteen killed and ten wounded.

Very respectfully, your obedient servant,

HERBERT B. TYSON,

Lieutenant, Commanding First Division.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: I respectfully submit the following report of the conduct of the second division during the engagement of yesterday, the 5th, with Fort Morgan and the rebel gunboats and ram Tennessee. But a few moments elapsed after the drum beat to quarters before every man was at his station, the guns cast loose, and ready for action. Every man seemed determined to do his duty, which he did faithfully, not a man shrinking. Where all did their duty so well, it is hard to discriminate; still it gives me pleasure to mention a few who were the most conspicuous.

Acting Master's Mate William H. Childs displayed great courage in assisting me in the division; the captains of the guns, Charles Lake, cockswain; Joseph Perry, quartermaster; James Smith, captain mizzen-top; the second captains, James Bennett, seaman; Owen Holland, second captain mizzen-top; and Samuel McFall, captain after-guard, showed an example of coolness, energy, and bravery which stimulated those less brave than themselves, and reflected credit upon themselves. The loaders and spongers, Beonth Diggings, ordinary seaman, Augustus Pauly, seaman, Charles Davidson, captain forecastle, Henry Wright, ordinary seaman, and Robert Emerson, landsman, did nobly, and I am proud to have such men under my command; the quarter-gunner, David Morrow, was killed. The battery constituting the second division is in perfect order—not a gun injured.

I am, respectfully, your obedient servant,

GEORGE MUNDY,

Acting Volunteer Lieutenant, Comd'g Second Division.

Lieut. Commander L. A. KIMBERLY,

Executive Officer U. S. Flag-Ship Hartford.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: I have the honor to submit the following report of the conduct of the officers and men of the third division during the engagement of yesterday with Fort Morgan, the rebel gunboats, and the ram.

When the drum beat to quarters every man was at his station instantly and the guns cleared for action. We were unable to bring our guns to bear until nearly abreast of the fort. We then fired with ten-inch shell and forty degrees of elevation. The fire was kept up with great rapidity, using five-inch shell and decreasing the elevation as we neared the fort. When abreast of it two rounds of shrapnell cut for two-inch were fired by us. As we passed ahead of the Brooklyn two shell struck by No. 7 gun, disabling the crew; but one man escaped uninjured on the right side of that gun. Another shell followed in a few seconds, wounding the captain of No. 7, three men at No. 8, and myself. Four men were killed and nine wounded in all, and by those three shell. The gun captains behaved splendidly—Forbes, Ingersoll, Pinto. Wm. E. Stanley, shellman of No. 8 gun, continued to pass shell after being wounded, till compelled by loss of blood to go below; he deserves especial mention. Every man did his duty in the most gallant manner. I am proud to have had command of so brave a set of men. Acting Master's Mate J. J. Tinelli I cannot fail to mention. He behaved with great gallantry, encouraging the men by his example, and served the guns of the division with great spirit against the rebel gunboats and ram after I was sent below.

I am, sir, very respectfully, your obedient servant,

LA RUE P. ADAMS,

Lieutenant, Commanding Third Division.

Lieut. Commander L. A. KIMBERLY,

Executive Officer, Commanding Flag-Ship Hartford.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: I have the honor to submit to you a report of the conduct of the officers and men of the master's division during the engagement yesterday with Fort Morgan, the rebel gunboats, and the ram Tennessee. I have great pleasure in mentioning Acting Master's Mate G. R. Avery, who assisted in covering the ship during the entire action, for the great coolness he displayed in his, a responsible, position. John McFarland, captain forecandle, James Wood, quartermaster, Joseph Cassier, seaman, and James Reddington, landsman, deserve especial mention for their marked composure. They were at the wheel, and obeyed every order promptly and correctly. Henry Williams, boatswain's mate, served the twelve-pounder howitzer in the maintop with courage and great judgment. I had not the power of witnessing the conduct of the remaining men of this division, namely, those of the signal corps and carpenter's gang, but from the officers commanding those departments I have learned that one and all deserve the greatest praise.

Respectfully submitted.

GEORGE B. GLIDDEN,
Ensign, Commanding Master's Division.

Lieut. Commander L. A. KIMBERLY,
Executive Officer, Hartford.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: I submit the following report of the conduct of the officers and men of the powder division during the engagement of the fifth.

Acting Ensign Bogart exhibited much coolness and presence of mind.

Acting Master's Mate R. P. Herrick deserves especial mention, for until seriously wounded he performed his duties with great coolness and spirit. Acting Ensign W. H. Heginbotham also deserves special mention for his coolness and bravery. He performed his duties in the most exemplary manner until he received his death-wound.

The few men I had on deck passing powder acted with great coolness, and at no time were there any signs of shrinking or fear. Nelson, (ship's cook,) John Wallington, (landsman,) and Mellage, (paymaster's steward,) deserve special mention.

Seven of the forward part of the division were wounded and three of them killed; most of the wounds were mortal.

I am, sir, very respectfully, your obedient servant,

WILLIAM STARR DANA,
In charge of Powder Division.

Lieut. Commander L. A. KIMBERLY,
United States Flag-Ship Hartford.

In addition to the above, I would call attention to the conduct of Sailmaker T. C. Herbert, whose conduct and cool courage is spoken of as most remarkable.

P. DRAYTON, *Captain.*

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: The conduct of the officers and men belonging to the engineer's department was characterized by coolness and energy during the engagement of yes-

terday. Their duties were performed as if nothing extraordinary was going on.

Acting Third Assistant Engineer William G. McEwan deserves special mention for the prompt and efficient manner in which he attended to getting the wounded below, near his station at the berth-deck hose, and he continued to do so until near the close of the action, when he lost his right arm.

The following men deserve to be noticed :

Thomas Walkley, first class fireman, for his coolness and attention to duties, although frequently covered with splinters.

James R. Garrison, coal-heaver, had his great toe shot off, but dressed his wound himself and then returned to his station, where he remained until badly wounded in the chest.

Thomas O'Connel was sick and hardly able to work, but went to his station, and remained until his right hand was shot away.

William Caffrey, second class fireman, and Joseph Fallen, second class fireman, were inclined to skulk, and required to be compelled to assist the wounded.

The loss in the engineer's department was three men killed and three men wounded.

I am, respectfully, your obedient servant,

THOMAS WILLIAMSON,
Chief Engineer, U. S. Navy.

Lieut. Commander L. A. KIMBERLY,
Executive Officer, U. S. Flag-Ship Hartford.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 8, 1864.

SIR : I respectfully beg leave to report the damage received by this ship in the hull, spars, &c., during the action of August 5, 1864, with the rebel Fort Morgan, the water batteries, rebel ram Tennessee, and rebel fleet, namely :

No. 1. Solid shot cut through starboard head-rail, starboard bow-chock, and crushed side-tackle block of port rifle gun on forecastle.

No. 2. Shell came over starboard bow, struck axletree, fore-transom, and truck of port rifle on forecastle, and started bow-chock, head-rail, and water-rail.

No. 3. Shell cut through starboard lower boom, hammock rail and netting, cut main topmast-stay half, then struck after part of foremast two feet above the partner's scoring, scarring starboard side of mast and piercing galley-funnel, where it exploded.

No. 4. Shell struck the forward part of No. 2 gun port, cutting away top timber, bulwarks, and port sill, struck starboard sheet cable-bit, crushing the iron plating and collar, then exploded, scarring the deck between Nos. 1, 2 and 3 guns.

No. 5. Shell struck outer planking six inches above the water-line between Nos. 2 and 3 guns, cut through timbers, ceiling, and water-way on berth deck, struck foremast, scored in the depth of five inches eighteen inches below the spar-deck partners, carrying away after part of port sheet cable-bits, part of spar-deck beam and knee on port side, and after diagonal knee and fastening started.

No. 6. Shell struck starboard chain armor two feet below the gunwale, between Nos. 5 and 6 guns, cut through outer plank and timber and lodged in deck knee.

No. 7. Solid shot struck chain armor, cut through armor, pierced outer plank and timber, and lodged in spar-deck beam.

No. 8. Solid shot struck starboard chain armor four inches above the water-line, under No. 6 gun, cut through armor, pierced outer planking, and lodged in timber

No. 9. Struck chain armor on the water-line between Nos. 8 and 9 guns, cut through armor, and pierced the outer plank.

No. 10. Two hundred-pound rifle shell struck aft of the armor, two feet above the water-line, under No. 9 gun, pierced outer plank, crushing four timbers and two streaks of ceiling, breaking down the fore-and-aft bulkhead of the starboard steerage, cutting in two the between-deck stanchion under wardroom hatch beam, passed into the chief engineer's room on the port side of wardroom, and dropped on a lounge without exploding.

No. 11. Solid shot struck gunwale streak, between Nos. 8 and 9 guns, pierced through gunwale, top timber, and bulwarks, struck capstan, crushing the pawls, casting, and gear, splitting engine-room, hatch combing, and capstan bed.

No. 12. Struck the spare spars in the main chains, breaking in two the main and mizzen topgallant and mizzen royal yards, crushed through the main rail and hammock netting, passed over to the port side, and went through bulwarks, top timbers, outer planks, and sentry board abaft the port gangway.

No. 13. Shell passed over between fore and main mast, struck inner hammock rail on port side, cut through netting and outer hammock rail, breaking a hole in third cutter.

No. 14. Shell—150-pounder—fired from the ram Tennessee while alongside, the muzzles of her guns touching our port side; the shell struck the outer planking on the port side, pierced through the timbers and ceiling inside, exploded on the berth deck, fragments of the shell going through the streaks of plank on the spar deck, through the launch, first and second cutters; portions of the shell also went through the deck plank and hatches on the berth deck, and dropped into the hold, scarring spar deck beams and deck frame below fore and main hatches from port side to starboard.

No. 15. Shell struck grub beam on forecastle, crushed the upper edge, and glanced overboard.

No. 16. Conical shot or shell struck the band on starboard side of mainmast eighteen feet from the partners, pierced through the mast band, and buried its length in the mast.

No. 17. Shot struck the forward starboard quarter of the mainmast sixteen feet above the partners, scoring one and a half inch.

No. 18. Shell struck collar of fore-stay, shattering trussle-tree, forward lower cross-tree, heel of fore-topmast, and lodged in forward nut of trussle-tree.

No. 19. Shell struck port side of main top, crushed a hole in deck of top, and glanced overboard.

No. 20. Shot through smoke-pipe.

In the collision with the rebel ram the port-head pump was crushed in two feet below the water-line. The copper on the stem and port bow was peeled off by the iron plating of the ram.

The ship received considerable damage by being run into by the Lackawanna. She crushed in the after part of the main channel, broke two of the main chains and spar crane with the spars that were stowed, namely, spare main and mizzen topgallant and mizzen royal yards, the main rail, hammock rails, netting, bulwarks, top timbers, outer planking; timbers and ceiling, from gunwale down to two feet of the water-line, were crushed in and broken on the starboard side, abaft the main rigging, from the after side of No 10 gun port to the forward side of No. 11 gun port. The deck knees, diagonal and hanging, are broken, the iron diagonal braces are badly bent in-board, the spar deck beams and deck plank moved to starboard; abreast of the fracture the water-way is cut in two. It is necessary to calk a large portion of the quarter deck. The gig-davits were broken; also her keel and planking.

Very respectfully, your obedient servant,

GEORGE E. BURCHAM, *Carpenter.*

Captain P. DRAYTON,

Commanding United States Steamer Hartford.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

SIR: In obedience to your order of the sixth instant, I respectfully submit the following report of damages to the rigging of this ship during an engagement with the enemy in Mobile bay, August 5, 1864, namely:

After-shroud of fore rigging shot away, and one collar of the fore stay shot away; also the lower boom topping lift and fall and port fore brace; also port and starboard jib sheets; also port and starboard fore-topsail braces; main topmast-stay stranded; also main topmast staysail halliards and main topsail halliards and starboard after main topmast backstay stranded and main lift shot away; also port and starboard cross-jack braces shot away, and two starboard main topmast backstay screws carried away.

Very respectfully,

ROBERT DIXON,
Boatswain, United States Navy.

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 8, 1864.

SIR: In obedience to orders, I respectfully report the damage sustained in the gunner's department of this ship and the amount of ammunition expended in the action on the fifth of August with the rebel forts and fleet to be as follows, namely:

The port 100-pounder rifle gun-carriage struck twice and completely shattered; No. 19 gun-carriage, starboard side, struck by shell, splintering right bracket, breaking bracket bolt, and knocking rear dumb-truck out of place; No. 29 gun-carriage, starboard side, scarred by shell bursting and having port truck broken to pieces; No. 10 nine-inch gun-carriage injured by being upset when in collision with Lackawanna; three roller handspikes broken, and four ordinary handspikes broken, three nine-inch gun-tackles carried away, one 100-pounder rifle side-tackle block shattered, one 100-pounder breeching and one nine-inch breeching cut with shot, one nine-inch bristle sponge shot away, two rammers, nine-inch, broken.

Number of rounds expended in action.

POWDER.

Ninety-five charges, thirteen pounds, nine-inch, or one thousand two hundred and thirty-five pounds of powder.

Ninety-two charges, ten pounds, nine-inch, or nine hundred and twenty pounds of powder.

Twenty-seven charges, ten pounds, 100-pounder rifle, or two hundred and seventy pounds of powder.

SHELL.

Seventy-seven shell, five second, nine-inch.

Fifty-five shell, ten second, nine-inch.

Eighteen shell, 100-pounder rifle, concussion.

Three shell, 100-pounder rifle Parrott, percussion.

Seven shell, twelve-pounder heavy howitzer.

Six shell, twelve-pounder light howitzer.

SHRAPNELL.

Nine shrapnell, nine-inch.

SOLID SHOT.

Thirty-three shot, nine-inch.

Six shot, 100-pounder rifle, chilled ends.

Very respectfully,

JOHN L. STAPLES,
Gunner, United States Navy.

Report of Captain T. A. Jenkins.

UNITED STATES STEAMSHIP RICHMOND,
Mobile Bay, August 5, 1864.

SIR: It is my agreeable duty to report that the officers and crew of this ship have, without exception, shown an unsurpassed zeal in preparing this ship for battle, and a coolness and courage in conflict with the enemy, that has won my admiration and thanks.

I have the honor to be, very respectfully, your obedient servant,
THORNTON A. JENKINS, *Captain.*

Rear-Admiral D. G. FARRAGUT,
Com'dg W. G. B. Squadron, Flag-Ship Hartford, Mobile Bay.

UNITED STATES STEAMER RICHMOND,
Mobile Bay, August 5, 1864.

SIR: I have the honor and very great pleasure to report that in the action this forenoon with the batteries at Fort Morgan and the rebel ram Tennessee this ship has received no serious damage, and there were no persons killed. Two men were wounded, but not seriously, and the ship struck a number of times in the hull and rigging.

I am, very respectfully, your obedient servant,
THORNTON A. JENKINS, *Captain.*

Rear-Admiral D. G. FARRAGUT,
Com'dg W. G. B. Squadron, Flag-Ship Hartford.

UNITED STATES STEAMSHIP RICHMOND,
Mobile Bay, August 8, 1864.

SIR: I have the honor respectfully to submit the following report of the ammunition expended in the attack on the morning of the fifteenth instant upon Fort Morgan and its water batteries, and subsequently upon rebel iron-clad casemated steamer Tennessee, namely: In approaching toward and steaming from Fort Morgan and batteries—

- (40) Forty ten-second fuze nine-inch shell.
- (30) Thirty fifteen-second fuze nine-inch shell.

ABREAST OF THE FORT AND BATTERIES.

- 60 nine-inch shell with five-second fuzes.
- 16 one-hundred pounder rifle concussion shell.
- 9 one-hundred pounder solid shot.
- 14 thirty-pounder concussion shell.
- 2 thirty-pounder solid shot.
- 5 twelve-pounder howitzers (heavy) shell from maintop into the water battery.
- 10 twelve-pounder howitzer (light) shell from foretop into the water battery.
- 4 twelve-pounder howitzer (light) shrapnell from foretop into the water battery.

IRON-CLAD TENNESSEE.

- 1 nine-inch solid shot, with thirteen-pound charge, fired at the rebel iron-clad Tennessee, at the distance of about four hundred yards.
- 32 solid shot, with thirteen-pound charge, fired at the rebel iron-clad Tennessee, at distances varying from fifty to two hundred yards, and embracing a period of about twenty minutes' time.
- 155 ten-pound charges, expended for nine-inch and one-hundred pounder rifle guns.
- 30 three and a quarter pound charges for thirty-pounder rifle.
- 33 thirteen-pound charges.

The exact number of rifled musket-shots fired into the Tennessee's ports is not known.

I am, very respectfully, your obedient servant,

THORNTON A. JENKINS, *Captain.*

Rear-Admiral D. G. FARRAGUT,

Commander-in-Chief W. G. Squadron.

Report of Captain J. B. Marchand.

UNITED STATES STEAM-SLOOP LACKAWANNA,

Mobile Bay, August 5, 1864.

SIR : I have the honor to report that about sunrise to-day this ship was gotten under way, and the Seminole lashed on the port side. Our position being in the centre of the line of battle, we crossed the bar, and following close on the leading vessels, stood up the channel, and as soon as our guns could be brought to bear, a fire was opened on Fort Morgan with shells, and continued until passing it, when the Seminole was cast off.

Soon after the fleet had passed the middle ground, the rebel iron-clad Tennessee commenced approaching with the design of attacking our vessels, and in obedience to your signal, I started under the heaviest headway to run her down, and succeeded in striking her at right angles at the after-end of the casemate.

The concussion was great, but the effect on her was only a heavy list, whilst our stern was cut and crushed to the plank ends for a distance of three feet above the water's edge to five feet below, and causing a considerable leak in forward storeroom and peak. Fortunately our yards and topmasts were down, otherwise they, in all probability, would have been carried away by the concussion, which caused the ship to rebound and the stern of the Tennessee to recede. Some panic must have existed on board the enemy, as they fired but two guns through our bows. After striking, the two swung head and stern alongside of

each other, and as our guns have been pivoted for the opposite side, we succeeded in discharging but one nine-inch shell, that struck one of the enemy's port shutters, which was distant about twelve feet, destroying it, and driving some of the fragments into her casemate. A few of the enemy were seen through their ports, who were using most opprobrious language. Our marines opened upon them with muskets; even a spittoon and a holy-stone were thrown at them from our deck, which drove them away. Upon separating from the Tennessee, our helm was put hard over to make another attempt at running the enemy down, but our great length, and the shallowness of the water, caused us to turn so slowly that we had not got round until again amongst our fleet, and, unfortunately, we collided with the flag-ship, which was running toward the Tennessee, although every exertion was used to prevent it by backing. By this accident two of the quarter-deck ports of the Hartford were knocked into one, without this ship sustaining any injury. After the collision with the flag-ship, I again started to run down the Tennessee, but, whilst still at a distance, she surrendered to our fleet.

Our loss throughout the day was four killed and thirty-five wounded.

Herewith I send the reports of the surgeon, engineer, and board of officers on the injuries and expenditures.

Under no circumstances could more coolness and bravery have been shown by the crew.

I cannot express my deep feeling for the undaunted courage and aid given me by all the officers.

Second Lieutenant Hiram Adams, of the army signal corps, with two assistants, were on board, and great credit is due them for their promptness in transmitting signals.

Very respectfully, your obedient servant,

J. B. MARCHAND, *Captain.*

Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES STEAM-SLOOP LACKAWANNA,

Mobile Bay, August 7, 1864.

SIR: In the report made of the part taken by the Lackawanna in passing the forts and entering Mobile bay, on the fifth instant, I inadvertently omitted to state that Commander Edward Donaldson, commanding the Seminole, which was lashed alongside of this ship, rendered most efficient service by his coolness and judgment in piloting both vessels until passing Fort Morgan, the regular pilot being sick.

My additional thanks are due him and all his officers and men for volunteering to aid in manning the guns of the Lackawanna, and the continuous fire which they kept up whilst their guns could bear upon the enemy.

Very respectfully, your obedient servant,

J. B. MARCHAND, *Captain.*

Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES STEAM-SLOOP LACKAWANNA,

Mobile Bay, August 6, 1864.

SIR: In obedience to your order of the fifth instant, we, the undersigned have held a strict and careful survey on this ship, and find the damages here with stated to have resulted from the action of the fifth instant.

That there are five shot-soles through hull of ship, two of which are eighteen inches above water-line, and damages resulting therefrom are as follows: timber, planking, and ceiling badly cut up; spirketing in wake of fore-rigging, and on each side of ship, shot away; port forward hammock netting-rail shot away, and panel-work much injured; port sheet cable-bit splintered the entire length, and iron casing completely shattered; two stanchions of fore fife-rail entirely shot away, also a quarter of foremast and after-part, and eighteen inches above deck; water-closets and bulkheads broken down; several hatch gratings much injured, and port swinging boom broken in two.

Between decks we find stanchion, two carlings, hanging knee, water-pipe connecting with condenser, and jackstay shot away; several spar-deck beams, coal shoot, starboard sheet cable-bit, bulkheads and doors to fire-room, and forward officers' quarters badly injured with fragments of shell; dispensary very much shattered; berth-deck ladder and two awning stanchions (the latter being placed below for security) broken in two; berth-deck planking, directly forward of galley and under platform, also much injured with fragments of shell.

The damages sustained by running down the rebel iron-clad ram Tennessee are as follows:

The head and cutwater badly injured; the stem, for distance of eighteen feet, and up to wood ends, completely gone; that portion of it comprised between the water-line and draught-mark eight forced in, causing the planking for distance of several feet to be wrenched from fastening, the ends of which, exposed considerably, and leaving that portion of the bow in a much exposed condition. Not having the means for examining below the draught-mark eight, we are therefore unable to arrive at the extent of injury received below that mark.

We also find the rigging damaged to the following extent: bobstays and port bowsprit shroud carried away; main-stay, after-shroud of port fore rigging and screw, boat davit and spanker boom topping lifts, and two nine-inch double blocks shot away.

Very respectfully, your obedient servants,

FELIX McCURLEY,

Acting Master.

JOHN H. ALLEN,

Acting Master.

THOMAS KELLY,

Acting Boatswain.

FRANCIS A. STANLEY,

Acting Carpenter's Mate.

Captain J. B. MARCHAND,

Commanding U. S. Steamship Lackawanna.

UNITED STATES STEAMSHIP LACKAWANNA,

Mobile Bay, August 5, 1864.

SIR: I have the honor to report that the engines, boilers, and appurtenances thereto of this ship are apparently in good working order, though derangements may subsequently become visible, of which we have now no knowledge.

The severe concussion, consequent upon the heavy blow dealt the rebel ram Tennessee by this vessel, under full headway, may have thrown the engines out of line, or strained the boilers and braces.

Our bunkers being full of coal, we cannot of course speak decidedly with reference to the staying of the boilers.

Very respectfully,

JAMES W. WHITTAKER,

First Assistant Engineer.

Captain J. B. MARCHAND, *Commanding U. S. Steamship Lackawanna.*

UNITED STATES STEAMSHIP LACKAWANNA,
Mobile Bay, August 5, 1864.

SIR: In obedience to your order of the fifth instant, we have held a strict and careful survey of the amount of ordnance stores used and injured in passing the forts, and beg leave to submit the following report:

We find the rear hurter, strap, band, and tackle-blocks of Parrott's one hundred and fifty pounder rifle, (number twelve,) carried away by a shot entering starboard bow, and the following amount of ordnance, equipment, and stores:

Twenty twenty-pound charges of powder, twelve sixteen-pound charges of powder, twenty-eight fifteen-pound charges of powder, three thirteen-pound charges of powder, twenty-nine ten-pound charges of powder, thirteen four-pound charges of powder, eight boarding pikes, four cutlass scabbards, three battle-axe scabbards, two division boxes, six waist belts, four Enfield rifle bayonets, six Enfield rifles, two navy revolvers, four percussion primer boxes, (tin,) three battle-axes, four brass padlocks, three percussion-cap boxes, (tin,) two pistol frogs, forty musket-ball cartridges, eleven eleven-inch solid shot, one hundred and twenty percussion primers, nine nine-inch solid shot, thirty Enfield rifle-ball cartridges, five one hundred and fifty pounder Parrott solid shot, (long,) seventy revolver percussion caps, thirty-seven eleven-inch shell, filled, and fuzeed five seconds; twenty friction primers, twenty-three nine-inch shell, filled, and fuzeed five seconds; sixty pistol-ball cartridges, seven one hundred and fifty pounder Parrott shell, filled, and fuzeed five seconds; thirteen fifty-pounder Hotchkiss shell, filled, and fuzeed five seconds; two cutlasses, (Ames,) two hundred musket percussion caps, three cutlass scabbards, seven Parrott rings for time fuzes; seven metal time fuzes, five seconds; six eleven-inch selvagee wads, eight nine-inch selvagee wads, two nine-inch passing boxes.

Very respectfully, your obedient servants,

S. A. McCARTY,
Lieutenant, United States Navy.
 G. H. WADLEIGH,
Ensign.

JOHN G. FOSTER,
Gunner, United States Navy.

Captain J. B. MARCHAND,
Commanding United States Ship Lackawanna.

Report of Captain James Alden.

UNITED STATES SHIP BROOKLYN,
Mobile Bay, August 6, 1864.

SIR: I have the honor to submit the following report of the part that this ship took in the action of yesterday with Fort Morgan and the rebel ram and gunboats.

In accordance with your instructions and by signal, at fifteen minutes past five we got under way, with the Octorara lashed on our port side, and proceeded towards the bar of Mobile entrance. After some little delay in waiting for the ships to form into line, and for the iron-clads to precede us, we steamed ahead and passed up the channel toward Fort Morgan, being the leading ship, closely followed by the admiral and the rest of the fleet in line of battle. At fifteen minutes past six, when about one and a half mile from the fort, the enemy opened fire upon us, which was immediately returned with bow-chasers, (our two one hundred-pounder Parrotts.) The action then commenced, the fire of the enemy being almost entirely directed at the wooden vessels, their ram Tennessee and gunboats soon joining in the fight.

The starboard battery was opened on the fort as soon as the guns could be brought to bear. Our progress up the channel was slow, owing to our carrying, as directed, low steam, and the very deliberate movements of our iron-clads which occupied the channel close ahead of us. When we had arrived abreast of the fort, by a rapid and timely fire of grape their several batteries were almost entirely silenced.

At this juncture I observed the ill-fated *Tecumseh*, which was then about three hundred yards ahead of us, and on our starboard bow, careen violently over, and sink almost instantaneously. Sunk by a torpedo! Assassination in its worst form! A glorious though terrible end for our noble friends, the intrepid pioneers of that death-strewn path! Immortal fame is theirs! Peace to their manes! We were now somewhat inside of the fort, when shoal water was reported, and at the same time, as the smoke cleared up a little, a row of suspicious looking buoys was discovered directly under our bows. While we were in the act of backing to clear them, our gallant admiral passed us and took the lead. Getting headway again as soon as possible, we pushed up the channel at full speed in his wake, when the rebel ram was discovered making for the flag-ship, and at the same time throwing shot and shell at us, which inflicted considerable damage at and above the water-line forward. The rebel gunboats having now taken shelter in shoal water, I cast off the *Octorara* from alongside, and directed her to close in and assist the other gunboats in their attack upon them. The *Hartford* having steamed past the ram, with her broadside playing vigorously upon him, continuing our course at full speed, and exchanging broadsides as we could bring our guns to bear, she missed us, and just passed clear of our stern only a few yards distant; we then gave her some parting blows with our sixty-pounder Parrott from the poop. At fifty minutes past eight anchored near the flag-ship, about five miles above the fort, the rebel gunboats firing a few shots at us at long range as we passed up. At about 9 a. m. the *Tennessee* was discovered standing for the fleet, and we, in company with the flag-ship and several other vessels, made toward him, firing solid shot from our bow-chasers. When within a short distance the *Chickasaw* crossed our bows and prevented our ramming him. As soon as the ram was clear of the last-named vessel he made directly at us; put our helm a-port and made at him with full speed, but seeing our torpedo-catcher hanging under the bows, and thinking it was a real torpedo, (as an officer belonging to her has since told me,) he put his helm hard up and avoided us, giving some heavy shots in passing. Our shot—solid nine-inch, with thirteen pounds of powder—struck him repeatedly, but without any material effect, except one, which, as it is believed, carried away his smoke-stack. We then turned to try it again, but the iron-clads had fairly engaged her, and shortly afterward she surrendered.

The fleet here came to near the former anchorage.

The surgeon's list of killed and wounded, together with the forward officers' report of injuries done to the ship by the enemy's shot, and the number of projectiles expended, &c., are herewith enclosed.

Lieutenant Commander Lull, the executive officer, has, at my request, made a statement of some very interesting incidents, giving a list of men who most distinguished themselves during the action, which I take great pleasure in forwarding, with a hearty approval of it, and the suggestions it contains.

It will be seen that we have fifty-four casualties on board—eleven killed, and forty-three wounded; many of the latter, I am happy to say, are slight. The list will not appear large when it is considered that we were nearly two hours under fire. Among the others, we have to regret the loss of an officer, Acting Master's Mate William H. Cook, who was killed while bravely doing his duty, having already been wounded.

By the carpenter's report it will be seen that the hull has received extensive and serious injuries, having been struck twenty-three times. Our mainmast is

ruined, having been shot through and through the centre, three times between the catharpins and the deck, the shot-holes being about equidistant from each other. Shot struck the other spars seven times, injuring same badly. The boatswain's report shows the rigging to have been struck and cut in twenty-nine places, making an aggregate of some fifty-nine hits in the hull, rigging, and spars.

The number of projectiles expended is one hundred and eighty-three.

In conclusion, I must beg leave to state that, as far as I can learn, every one did his duty nobly and well; and while the officers generally would seem to deserve some especial mention, I must, from the nature of circumstances, confine my notice to those on whom devolved the more important duty of controlling and fighting the ship.

To my executive officer, Lieutenant Commander E. P. Lull, my thanks are especially due, not only for his cool, steady bearing in the fight, but also for the efficient training of the crew, which have been together now less than three months, but displayed in the action the steadiness of veterans, fighting their guns almost as coolly as if they were at an ordinary exercise. Lieutenant Thomas L. Swann, the ordnance officer, had everything ready, and the working of his department was admirable; he was principally occupied during the action with the bow-chasers. The other division officers—Captain Houston, of the marines, Lieutenant Charles F. Blake, Ensigns Cassel and Sigsbee, with their assistants, Master's Mates Duncan and Stevens—fought their guns nobly and well.

The powder division, under Acting Ensign Utter, could not have been conducted better.

Chief Engineer Kellogg's department worked beautifully.

Doctor Maulsby was fully prepared for the wounded, and extended to those unfortunates all the solicitude and care that a generous nature could dictate.

Ensign Pendleton, my aid and signal officer, afforded me great assistance, being always prompt and active in his duties.

To our pilot, Mr. Christopher Lawrence, great credit is due for the handsome manner he piloted the ship.

I ought to mention, before closing this report, that I was particularly pleased with the cheerful bearing and aid afforded me by Captain E. A. Denicke, of the army signal corps, in watching and pointing out the effect of our shot in the batteries and upon the rebel ram and gunboats.

In accordance with your directions, I also send a separate report in regard to those men who were most conspicuous for good conduct and gallantry in the action. It is taken mostly from the report of Lieutenant Commander Lull, the executive officer.

Congratulating you upon the handsome result of the day, I remain, very respectfully, your obedient servant,

JAMES ALDEN, *Captain.*

Rear-Admiral D. G. FARRAGUT,

Com'dg W. G. Blockading Fleet, Flag-Ship Hartford.

UNITED STATES STEAMER BROOKLYN,
Mobile Bay, August 6, 1864.

SIR: In accordance with your instructions, I herewith append a list of the crew who most distinguished themselves for gallantry and good conduct during the action with Fort Morgan and the rebel ram and gunboats. Feeling satisfied that they have earned that justly prized distinction, the "medal of honor," I trust the department will confer it upon them.

J. Henry Dennig, sergeant of marines; Michael Hudson, sergeant of marines; William M. Smith and Miles M. Oviatt, corporals of marines, for their conspicuous good conduct at their guns.

Barnett Kenna, quartermaster, and William Halsted, cockswain, coolness, bravery, and skill in the working of their guns. Their conduct was particularly meritorious.

Joseph Brown, quartermaster, and Joseph Irlane, seaman, stationed at the wheel, behaved with great coolness and bravery, sending the other two men who were stationed with them to replace men disabled at the guns.

Edward Price, cockswain, great coolness and bravery under fire; his gun became disabled by the sponge breaking, leaving the head in the gun; he proceeded to clear it by pouring down powder into the vent and blowing the sponge-head out.

Alexander Mack, captain of top, activity, zeal, and skill displayed in handling his gun, as well as great courage; he was also severely wounded.

William Nichols, quartermaster, perfect coolness and dexterity in handling his gun; always sure of his aim before he would consent to fire.

Nicholas Irwin, seaman; John Cooper, cockswain; John Brown, captain of fore-castle; and John Irwin, cockswain, very conspicuous for bravery, skill, coolness, and activity at their guns.

William Blagden, ship's cook; William Madden, coal-heaver; James Machon, boy; William H. Brown, landsman; James Mifflin, engineer's cook, conspicuous for bravery, performing their duty in the powder division, at a point where the ship was riddled very much, and in the immediate vicinity of the shell-whips, which were twice cleared of men by bursting shells. Brown was also wounded.

James E. Sterling, (coal-heaver,) bravery in remaining at his post when wounded, and passing shell until struck down a second time and completely disabled.

Richard Dennis (boatswain's mate) and Samuel W. Davis displayed much courage, bravery, and coolness—the first in operating the torpedo-catcher, and assisting in working the bow-chaser, and the latter in acting as a look-out for torpedoes and other obstructions.

Samuel Todd, (quartermaster,) conspicuous coolness at the commencement.

I am, sir, very respectfully, your obedient servant,

JAMES ALDEN, *Captain.*

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES STEAMER BROOKLYN,

Mobile Bay, August 6, 1864.

SIR: The accompanying reports of the boatswain, gunner, and carpenter, of the damages sustained by this ship, and of the ammunition expended during our action of yesterday with the rebel forts and gunboats, and with the ram Tennessee, are respectfully forwarded:

The sailmaker, being one of the wounded, is not able to make a report, but the damages in his department are a number of cloths cut in the port-head of the fore-topsail, and considerable injury to the hammock cloths fore and aft.

One of the shots mentioned by the carpenter as wounding the rail of the top-gallant fore-castle struck directly under the breast of the bow, and had its force not been nearly spent, as is supposed, by its having previously passed through some of the wood work of the iron-clad Chickasaw, it must inevitably have disabled the gun.

In the vicinity of number four port, on the starboard side, in the space of about eight feet square, five shot or shells passed through the side, and one shell struck the sheet-anchor which was stowed above this port, breaking the shank. The lower fluke is also broken off. The gun was entirely disabled.

Acting Master's Mate Cook and three men were killed, and Lieutenant Blake and six men wounded. A shell which exploded on the berth deck forward killed or wounded every man at the two shell-whips, and those who were passing shell between them, also carrying away one whip.

Acting Ensign Utter, and his assistant, Sailmaker Brayton, rigged another whip and stationed new men to man it, and just as they were recommencing work a second shell exploded again, clearing away every man, this time including Mr. Brayton among the wounded, and depriving us of the services of an active and very efficient officer.

Mr. Baker, the paymaster's clerk, performed very good service in the powder division, taking voluntary charge of the after-shell whip, at which no officer was stationed, owing to our being short of officers. Our chain-cable, ranged up and down the starboard side, saved our boilers from one shot, and the sand-bags upon the berth deck saved them from one if not two more.

The ship's company behaved remarkably well, so much so as to make it difficult to specify even conspicuous conduct without making a rather large list; but I beg to call your especial attention to the following cases mentioned by the division officers, many of which also fell under my own observation, and to request that you will recommend them for the "medal of honor:"

J. Henry Dennig, sergeant of marines, Michael Hudson, sergeant of marines, and William M. Smith and Miles M. Oviatt, corporals of marines, for conspicuous good conduct at their guns.

Barnett Kenna, quartermaster, and William Halsted, cockswain, coolness, bravery, and skill in working their guns. Their conduct was particularly meritorious.

Joseph Brown, quartermaster, and Joseph Irlane, seaman, stationed at the wheel, behaved with great coolness and bravery, sending the other two men who were stationed with them to replace men disabled at the guns.

Edward Price, cockswain, great coolness and bravery under fire; his gun became disabled by the sponge breaking, leaving the head in the gun; he proceeded to clear it by pouring down powder into the vent and blowing the sponge-head out.

Alexander Mack, captain of top, remarkable coolness and courage, was wounded and sent below, but immediately returned and took charge of his gun; remained until he was again wounded twice and entirely disabled.

William Robinson, captain of top, activity, zeal, and skill displayed in handling his gun, as well as great courage.

William Nichols, quartermaster, perfect coolness and dexterity in handling his gun; always sure of his aim before he would consent to fire.

Nicholas Irwin, seaman, John Cooper, cockswain, John Brown, captain of forecastle, and John Irwin, cockswain, very conspicuous for bravery, skill, coolness, and activity at their guns.

William Blagden, ship's cook, William Madden, coal-heaver, James Machon, boy, William H. Brown, landsman, and James Mifflin, engineer's cook, conspicuous for bravery, performing their duty in the powder division, at a point where the ship was riddled very much, and in the immediate vicinity of the shell whips, which were twice cleared of men by bursting shells.

James E. Sterling, coal-heaver, bravery in remaining at his post when wounded, and passing shell until struck down a second time and completely disabled.

Richard Dennis, boatswain's mate, and Samuel W. Davis displayed much

courage and coolness—the first in operating the torpedo-catcher, and assisting in working of the bow-chaser, and the latter in acting as a lookout for torpedoes and other obstructions.

Samuel Todd, quartermaster, conspicuous coolness at the commencement.

We have found upon our decks and extracted from the wood work over eleven hundred pounds of iron, in the shape of eight, nine, and ten inch solid shot of rifle bolts—shells and fragments of shells—all thrown at us by the enemy, a large amount, as being at very close quarters, nearly all their shot passed through and through us.

I have the honor to be your obedient servant,

EDWARD P. LULL,

Lieutenant Commander and Executive Officer.

Captain JAMES ALDEN,

Commanding U. S. Steamer Brooklyn.

UNITED STATES STEAMER BROOKLYN,

Mobile Bay, August 5, 1864.

SIR: I have the honor to report the following as the damages inflicted upon this ship during our engagement of to-day with the rebel Fort Morgan and the rebel gunboats.

1. Shot carried away a portion of the rail on topgallant forecastle directly under the breast of bow gun.
2. Shot passed directly through the stem about one foot from water's edge.
3. Passed through the side, just under the bridle-port, struck the deck above upon the opposite side, and shows in the water-way above.
4. Passed through the side just at the copper's edge, or little abaft the bridle-port. Entered the storeroom, destroying a hanging knee, and wounding a beam; did much damage to fixtures of storeroom; struck the opposite side, but did not penetrate.
5. Passed through side just forward of and under number two port, and struck the galley.
6. Passed through the side on berth deck, abreast of galley, destroying hanging knee.
7. Passed through the side diagonally about two feet above berth deck, passed out through opposite side.
8. Through side abreast fore-hatch, destroying an air-port and a berth deck hanging knee; entered fireman's wash-room, arrested by sand-bags.
9. Under after-ports of fore-channels, through side, destroying a berth deck, hanging-knee, and a force-pump, wounded berth deck, cut starboard chain.
10. Four feet abaft number nine, passed through side, destroying an air-port and two berth deck hanging knees.
11. Passed through the side and exploded in the dispensary, doing considerable damage.
12. Passed through side, through deck in second assistant engineer's room, and into main hold, doing much damage.
13. Through side, cutting main rail, just abaft number two port.
14. On the same level, through side about four feet abaft number thirteen.
15. Struck and broke starboard sheet-anchor beak. Cut main rail just over number four port, passed through bottom of the launch, and destroyed forward shore of launch.
16. Through side just under number fifteen, cutting through spar deck water-way, and carrying away the starboard truck of gun number three.
17. Carried away flue of sheet-anchor. Cut through main rail, destroyed after-shore of launch, and struck the breech at number five gun port.

18. Passed through hammock netting starboard side, just abaft number eight port, and passed out through opposite side.

19. Plunging shot passed through port-hammock netting just forward of break of poop.

20. Wounded top of hammock rail on starboard side between numbers eight and nine ports, passed out through hammock netting on port side.

21. Followed same course of twenty a few feet further aft.

22. A ricochet shot struck poop-deck, crushed it down together with beam underneath, and ricocheted overboard. This shot killed two marines, carrying one overboard with it.

23, 24, 25. Three shots passed through the mainmast, ruining the mast; number twenty-five also cut the brass band on starboard quarter of main yard, wounding the yard.

26. Apparently a fragment of shell entered the mainmast.

27. Wounded jib-boom.

28. Passed along fore-topsail yard, destroyed port yard-arm.

29. A raking shot from ram Tennessee struck and passed along port side under the rail.

30. Carried away torpedo-catcher. A shot passed through the dingey. A plank was started in the barge, supposed to have been by a splinter.

Respectfully submitted.

R. G. THOMAS, *Carpenter.*

Lieut. Commander EDWARD P. LULL,

Executive Officer.

UNITED STATES STEAMER BROOKLYN.

Inside Mobile Bay, August 6, 1864.

SIR: I respectfully beg to report the damages sustained in the ordnance department of this ship during the engagement of the 5th instant, as follows, namely:

One 9-inch gun-carriage entirely destroyed; one 100-pounder elevating screw destroyed; one 100-pounder lock destroyed; one 60-pounder lock destroyed; one 9-inch breech-sight, brass damaged; one 9-inch breech-sight, brass destroyed; one 9-inch gun-carriage slightly damaged; six 9-inch side-tackles destroyed; two 9-inch rammers destroyed; two 9-inch sponges destroyed; one 9-inch rolling handspike destroyed; one 9-inch ladle; one 100-pounder ladle.

I am, sir, most respectfully, your obedient servant,

JOHN QUEREDO, *Acting Gunner.*

UNITED STATES STEAMER BROOKLYN,

Mobile Bay, August 5, 1864.

SIR: In obedience to your order, I respectfully submit the following report of damages done to rigging during the action of the 5th instant, with Fort Morgan, rebel ram Tennessee, and gunboats Selma, Morgan, and Gaines, having made a careful examination of the same.

Jib and flying jib, martingale-stays, and back-stays, shot away.

Port cat-block shot away, also three deck-stoppers. Fore-rigging, two shrouds starboard, and one port shot away; one shroud shot away in two places; two deadeyes starboard fore-rigging shot away; starboard fore-topsail halliards shot away; port fore-brace shot away; port fore-topsail brace and block shot away; starboard sheet-anchor shank broke, and flue shot off; port main-stay shot away; main rigging six shrouds shot away, four starboard and two port; one deadeye port main rigging shot away.

Main lift and brace shot away.

Main topsail clewlines and buntlines shot away.

Main topmast rigging stranded.

One shroud, mizzen-rigging, shot away. One lanyard port mizzen-rigging shot away.

Starboard cross-tack and mizzen-topsail brace shot away.

A shot passed through the topgallant and royal rigging barricaded in the sick bay, and lodged in the port water-ways.

Starboard sheet-chain shot away.

No doubt a great deal of the gear is cut, but how much cannot be ascertained until broken out. Also the starboard bow-chain shot away.

Very respectfully,

CHARLES A. BRAGDON,
Boatswain, United States Navy.

Lieut. Com. EDWARD P. LULL,
Executive Officer U. S. Steamer Brooklyn.

UNITED STATES STEAMER BROOKLYN,
Inside Mobile Bay, August 6, 1864.

SIR: I respectfully report the expenditure of ordnance stores in this ship during the engagement of the 5th instant, as follows, namely:

One hundred 10-pound charges, (IX-inch;) thirty-two 13-pound charges, (IX-inch;) thirty-seven 10-pound charges, (100-pounder;) fourteen 6-pound charges, (60-pounder;) fifty 5" shell, (IX-inch;) twenty-five 10" shell, (IX-inch;) twenty stands of grape, (IX-inch;) thirty-seven solid shot, (IX-inch;) twenty-five solid shot, (100-pounder;) twelve shell, Tico's concussion, (100-pounder;) twelve solid shot, (60-pounder;) two shell, Tico's concussion, (60-pounder.)

I am, sir, most respectfully, your obedient servant,

JOHN QUEVEDO, *Acting Gunner.*

Report of Commander J. H. Strong.

UNITED STATES STEAMER MONONGAHELA,
Mobile Bay, August 6, 1864.

SIR: I have the honor to report the part taken by this ship under my command in the action of yesterday, in passing the Mobile forts, &c.

At half past five a. m. got under way in obedience to signal, took my station in the line, and prepared for action.

At ten minutes past seven the action was commenced by the first gun being fired from the fort. After passing the forts I saw the rebel ram Tennessee head in for the line. I then sheered out of the line to run into her, at the same time ordering full speed as fast as possible. I struck her fair, and swinging round poured in a broadside of solid 11-inch shot, which apparently had but little, if any, effect upon her. Soon after, signal was made to my ship to again run into her. I did so, and was about to try it the third time, when she surrendered to the fleet.

During the action my officers and men, without exception, behaved in the most gallant manner. It would be impossible to make any distinction where all did everything that could have been desired.

I would here mention that a volunteer crew from the United States steamer Kennebec, in charge of Acting Ensign Ellis, came on board and manned one of my thirty-two pounder broadside guns during the engagement with Fort Morgan. Their conduct during the action was gallant, and met with my entire approbation.

I regret to say that my first lieutenant, Mr. Prentiss, lost a leg in the action, and that fears are entertained for his life.

Enclosed I send you the executive officer's report of the expenditure of ammunition and the damages sustained, also the surgeon's and engineer's reports.

Very respectfully, your most obedient servant,

J. H. STRONG, *Commander.*

Rear-Admiral D. G. FARRAGUT,

Commanding West Gulf Blockading Squadron.,

United States Steam Flag Ship Hartford Mobile Bay.

UNITED STATES STEAMER MONONGAHELA,

Mobile Bay, August 5, 1864.

SIR: I have the honor to report the following injuries sustained by this vessel during the action of to-day with Fort Morgan and the rebel fleet inside:

In twice attempting to run down the rebel iron-clad ram Tennessee, our iron prow was entirely carried away, together with the cutwater. The but ends of the planking on both bows are started from the stem and badly shattered, the port ones considerably sprung off.

Two 6-inch rifle-shell from the ram entered our starboard bow; one between the planking and cutwater, grazing the perpendicular, striking the under side of the breast-hook, ricochetting, passing through the boatswain's storeroom, and striking the berth deck, where it lodged without exploding; the other entered about twelve feet further aft, and exploded on the berth deck, slightly wounding three men, breaking an 11-inch scraper and an 11-inch worm, and bending a stanchion near the galley. A 6-inch rifle-shell exploded underneath the No. 1 pivot port, raking up the side in ten or fifteen places, many of the pieces remaining in the side. One six-inch solid shot entered abreast No. 2 pivot port, passing through the boatswain's room, starboard side, berth deck, paymaster's issuing room, port side, and lodging in the outer planking, springing off one but about eight inches. One 10-inch shot or shell came in our starboard gangway, carrying away headboard of starboard quarter deck hammock netting, grazing top-rail and mainmast, and passing through port side under main channels. Pieces of the headboard were driven through the fire-room ventilators. Lieutenant Prentiss and two men were wounded by this shot.

In the rigging, fore-peak halliards, end of main-stay, and port-ridge rope shot away.

I also report the following expenditure of ammunition:

Seventeen shells, (150-pounder rifle;) six solid shot, (150-pounder rifle;) eight solid shot, (11-inch;) seven shrapnell, (11-inch;) twenty-five shells, (11-inch;) four canister, (11-inch;) seven grape, (11-inch;) forty-seven shells, (32-pounder;) three solid shot, (32-pounder;) forty-seven shells, (12-pounder rifle howitzer;) one hundred and seventy percussion primers; twenty-three cartridges, (150-pounder rifle,) 16 pounds; eight cartridges, (11-inch,) 20 pounds; forty-three cartridges, (11-inch,) 15 pounds; fifty cartridges, (32-pounder,) 9 pounds; forty-seven cartridges, (12-pounder rifle howitzer;) four shells, (24-pounder howitzer.)

The slide of starboard 24-pounder howitzer was found to be rotten, and after the first few rounds was rendered totally unfit for use. With this exception the battery is in as good condition for service as before the action.

Very respectfully, &c.,

O. A. BATCHELLER,
Lieutenant and Executive Officer.

Commander J. H. STRONG,
Commanding Monongahela.

UNITED STATES STEAMER MONONGAHELA,
Mobile Bay, August 5, 1864.

SIR: I have to report that during the engagement with the enemy to-day we received no damage in the engineer's department, with the exception of a shot through fire-room ventilator and one through the smoke-pipe.

At the time we ran into the rebel iron-clad Tennessee the engines were making sixty-two revolutions per minute, with thirty pounds steam and throttle-valve wide open.

The engines worked well, and every engineer, fireman, and coal-heaver performed their respective duties in a highly satisfactory manner.

Respectfully, your obedient servant,

G. F. KUTZ, *Chief Engineer.*

Commander J. H. STRONG,
Commanding U. S. Steamer Monongahela.

UNITED STATES STEAMER MONONGAHELA,
Mobile Bay, August 10, 1864.

SIR: The following persons, wounded in the action of the 5th instant, were sent to the naval hospital at Pensacola:

Lieutenant R. Prentiss, both legs; left one amputated.

Michael Smith, boy, scalp.

William Feeney, private marine, contusions.

I am, respectfully,

DAVID KINDLEBERGER,
Surgeon, United States Navy.

Commander JAMES H. STRONG,
Commanding U. S. Steamer Monongahela.

Report of Commander William E. Le Roy.

UNITED STATES STEAM-SLOOP OSSIPEE.

ADMIRAL: I have the honor to report that in passing the forts, and in the attack upon the iron-clad Tennessee, this ship was struck four times in the hull and several times in the rigging, fortunately without disabling the ship. Our stem is somewhat injured by running against the Tennessee. Our casualties I am pleased to report as small. When about running down the Tennessee she displayed a white flag, but not in time to prevent my colliding with her having been so disabled by the fire of the fleet and unable longer to continue

the contest, and I was fortunate in receiving her surrender from Commander Johnston, her commander—Admiral Buchanan being wounded—a prize to the fleet under your command.

I am, sir, very respectfully, your obedient servant,

WM. E. LE ROY, *Commander.*

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron, Mobile Bay.

UNITED STATES STEAMER OSSIPEE,

Mobile Bay, August 6, 1864.

ADMIRAL: In my report of the part this ship took in the passage of Fort Morgan yesterday, I neglected to allude to the efficient manner in which Lieutenant Commander George W. Brown, with the Itasca lashed alongside of me, performed his duty of piloting both vessels, &c.

I am, sir, very respectfully, your obedient servant,

WM. E. LE ROY, *Commander.*

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron, Mobile Bay.

UNITED STATES STEAMER OSSIPEE,

Mobile Bay, August 6, 1864.

SIR: I have the honor to submit the following report of damages received by this vessel in the late engagement with Fort Morgan and the rebel ram Tennessee:

Part of fore-foot gone, occasioned by collision with the Tennessee. One shot, a 130-pounder, passed through forward starboard section port and ship's side, destroying a knee in the boatswain's room, also carrying away the bulkheads of same and issuing room. Another shot passed through ship's side and starboard forward coal-bunker. One shot passed through the chain armor, first forward of starboard gangway at water's edge, through ship's side and starboard coal-bunker, landing in port coal-bunker, passing within three inches of the steam-pipe. Also a shot-hole through ship's side and water-ways, under the starboard main channels; the shot carried away one chain-plate and badly splintered the water-ways. The shot that passed through the chain armor and coal-bunker is a 10-inch columbiad.

Very respectfully,

J. A. HOWELL,

Lieutenant and Executive Officer.

Commander W. E. LE ROY,

Commanding United States Steam-Sloop Ossipee.

UNITED STATES STEAMER OSSIPEE,

Mobile Bay, August 6, 1864.

SIR: I have the honor to enclose the accompanying reports of injuries sustained by this ship in the engagement of yesterday, as also of the amount of ammunition expended. In addition to my report of yesterday, I would state, all under my command showed such zeal and energy that it would be invidious to select any one as more deserving than another.

I am, sir, very respectfully, your obedient servant,

WILLIAM E. LE ROY, *Commander.*

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron, Mobile Bay.

UNITED STATES STEAMER OSSIPEE,
Mobile Bay, August 6, 1864.

SIR: I respectfully report that the damages done to the rigging on board this vessel on the 5th instant were as follows:

Starboard fore-stay shot away, also three strands of the port fore-stay.

Very respectfully,

ANDREW MILNE,
Boatswain United States Navy.

Commander WILLIAM E. LE ROY,
Commanding United States Steam-Sloop Ossipee.

UNITED STATES STEAMER OSSIPEE,
Mobile Bay, August 6, 1864.

SIR: I would most respectfully submit the following report of the expenditures of ammunition and projectiles while engaging the rebel forts and vessels of war by this ship, August 5, 1864:

Shells, five seconds, thirty; ten seconds, six; fifteen seconds, two; twenty seconds, seven; percussion, thirty-two. Solid shots, 11-inch, four; 100-pounder, two; 32-pounder, six; hollow shots, 30-pounder, four. Powder, number seven cannon, three hundred and sixty-five pounds; ordinary powder, three hundred and fifty-four pounds.

Very respectfully,

JOHN Q. ADAMS, Gunner.

Commander WM. E. LE ROY, Commanding.

Report of Commander E. Donaldson.

UNITED STATES STEAMER SEMINOLE,
Mobile Bay, August 7, 1864.

SIR: In obedience to your order for passing the forts, on the 5th instant, at half past five a. m., we went alongside, and made fast on the port side of the Lackawanna, and took our designated station in the line, and am happy to say we had no casualties on board.

The hull of the ship was not struck at all. One strand of the port mainstay was cut by a fragment of a shell.

At fifteen minutes past eight a. m. we cast off from the Lackawanna, and at fifteen minutes past eight a. m. came to anchor. At half past nine a. m., seeing the rebel ram Tennessee approaching us, we slipped to avoid her, and at fifteen minutes past ten a. m. returned to our anchorage, after having delivered two broadsides at her, at a distance of about one thousand yards. I am happy to say that all the officers and crew behaved with the utmost coolness.

Respectfully, &c.,

EDWARD DONALDSON, Commander.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron, Mobile Bay, Ala.

UNITED STATES STEAMER SEMINOLE,
Mobile Bay, August 6, 1864.

SIR: I have to report that, in passing the fort yesterday, we met with no casualties in killed or wounded. One shot from the water battery cut one strand of our mainstay, which is the only injury done the ship or rigging.

Respectfully, your obedient servant,

EDWARD DONALDSON, *Commander.*

Rear-Admiral D. G. FARRAGUT,
*Commanding W. G. Blockading Squadron,
United States Flag-Ship Hartford, Mobile Bay, Alabama.*

UNITED STATES STEAMER SEMINOLE,
Mobile Bay August 6, 1864.

SIR: The following is a report of expenditure of ammunition on board this vessel in the engagement of yesterday:

Five ten-second 11-inch shell; four 32-pounder solid shot; sixteen 30-pounder Parrott rifle shell; two 30-pounder Parrott rifle shot; five 15-pound charges; four 6-pound charges; 18 $\frac{3}{4}$ -pound charges.

Respectfully, your obedient servant,

EDWARD DONALDSON, *Commander.*

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron, Mobile Bay, Ala.

Report of Commander T. H. Stevens.

UNITED STATES MONITOR WINNEBAGO,
Mobile Bay, August 6, 1864.

SIR: I have the honor to report that, according to instructions, this vessel yesterday, at half past five a. m., got under way from her anchorage, near Sand island, and proceeded up the bay for the purpose of attacking the enemy. At seven took station between Fort Morgan and the wooden vessels of the fleet in line of battle. At fifteen minutes past seven opened fire on the fort, the enemy firing rapidly. At eight the United States monitor Tecumseh was blown up and sunk by a torpedo, when within about a cable length of us, and shortly after the following men, having been saved from the wreck, were brought on board in a boat belonging to the Metacomet:

Acting Ensign John B. Zellick, Quartermaster William Roberts, Quartermaster Chauncey P. Dean. Seamen: George Major, James McDonald. Ordinary seamen: James Burnes, Charles Packard, James Lands, William Tidder. Coal-passer: William West.

At half past eight passed Fort Morgan, and steamed slowly up the bay. At ten minutes past nine the after-turret broke down. At fifteen minutes past nine received order from flag-ship to attack the rebel ram Tennessee, which surrendered at forty-five minutes past nine. Anchored with the fleet at forty-five minutes past ten in the lower fleet anchorage of Mobile bay.

Enclosed please receive engineer's report of the condition of the turrets, and the gunner's account of ammunition expended.

The Winnebago was struck nineteen times, three of the shot having penetrated the deck near the after turret.

I have to report no casualties. The officers and men conducted themselves well; and to Acting Volunteer Lieutenant W. T. Shankland, First Assistant Engineer John Purdy, who volunteered for this vessel, and the pilot, William H. Wroten, I am indebted for valuable assistance.

I have the honor to remain your obedient servant,

T. H. STEVENS, *Commander.*

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES STEAMER WINNEBAGO,

Mobile Bay, August 5, 1864.

SIR: I have the honor to inform you that the following is a correct list of ordnance stores expended whilst engaging the rebel batteries and fleet: Fifty-two eleven-inch charges, fifteen pounds each; two eleven-inch charges, twenty-five pounds each; six eleven-inch shell, five seconds each; twelve eleven-inch shell, ten seconds each; fourteen eleven-inch shrapnell, five seconds each; six stands of grape; two stands of canister; fourteen eleven-inch solid shot, ordinary steel; two eleven-inch solid shot, ordinary steel.

I am, sir, very respectfully, your obedient servant,

ROBERT SHERMAN,

Acting Gunner.

Commander THOMAS STEVENS, U. S. N.,

Com'dg United States Steamer Winnnebago.

Report of Commander J. W. A. Nicholson.

UNITED STATES STEAMER MANHATTAN,

Mobile Bay, August 6, 1864.

SIR: I have the honor to make the following report of the part taken by this ship in the action of the 5th instant with Fort Morgan and the rebel iron-clad Tennessee:

At five minutes past seven a. m. I opened on the fort, but owing to the dense smoke from the guns our firing was necessarily very slow.

After passing Fort Morgan, I devoted my attention entirely to the rebel iron-clad, firing my guns slowly and with great precision.

At forty-five minutes past nine I obtained a raking position under his stern, and fired a solid shot, which struck him on the port quarter, carrying away his steering gear.

At fifty-seven minutes past nine, when on the point of firing from the same position, he hauled down his colors and surrendered.

I fired at the Tennessee six times, namely, one shell, two solid and three cored shot.

I am satisfied that most, if not all, the serious damage she has sustained was caused by the fifteen-inch shot from this vessel.

This ship was struck by the enemy's shot nine times, causing no material damage; but of this I will make a separate report.

No person was injured on board. Officers and men all did their duty; but I especially recommend Acting Ensign John B. Trott, who was stationed at the wheel steering the ship himself, for the admirable manner in which he performed

his duty. Also Acting Master Robert B. Ely, for the manner in which he worked his guns. Both of these gentlemen, I think, are worthy of being advanced a grade in the service.

One of the fifteen-inch carriages is temporarily disabled by the breaking of some bolts.

I am, very respectfully, your obedient servant,

J. W. A. NICHOLSON,

Commander.

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron, Mobile Bay, Ala.

UNITED STATES IRON-CLAD MANHATTAN,

Mobile Bay, Alabama, August 8, 1864.

SIR: Of the six fifteen-inch projectiles fired from this vessel at the rebel iron-clad Tennessee, I claim four as having struck, doing most of the real injuries that she has sustained, namely: First, one shot on port beam, going entirely through the armor, and crushing the wood backing, making a hole completely through the vessel; second, one shot near the first, but higher up and further forward, making a deep indentation, and then glancing over the ship; third, a shell striking her stern port shutter, disabling it, so that the gun could not be used; fourth, a shot striking her stern, ripping up the deck plating, carrying away her steering gear, and then striking her armor at the angle of the port quarter, crushing it and starting the wood backing through to the inside.

I am, very respectfully, your obedient servant,

J. W. A. NICHOLSON,

Commander.

Rear-Admiral D. G. FARRAGUT, U. S. N.,

Com'dg W. G. B. Squadron, Mobile Bay, Ala.

UNITED STATES IRON-CLAD MANHATTAN,

Mobile Bay, August 5, 1864.

SIR: I have the honor to report the following as the expenditures of ammunition in the action of to-day with rebel Fort Morgan and the rebel iron-clad Tennessee: Four fifteen-inch shell; three fuzes—three and a half, seven, and ten seconds; three fifteen-inch solid shot; four fifteen-inch cored shot; four fifteen-inch charges, thirty-five pounds; four fifteen-inch charges, fifty pounds; three fifteen-inch charges, sixty pounds.

Respectfully, your obedient servant,

C. M. SCHOONMAKER,

Lieutenant and Executive Officer.

Commander J. W. A. NICHOLSON, U. S. N.,

Commanding Manhattan.

UNITED STATES IRON-CLAD MANHATTAN,

Mobile Bay, August 5, 1864.

SIR: I have the honor to report the following damages sustained by this ship in action of to-day with the rebel Fort Morgan and the rebel iron-clad Tennessee:

Turret.—One two and a quarter inch indentation from conical steel-pointed shot, four feet from deck; one seven-eighth inch indentation from glancing shot, two feet from deck; one seven-eighth inch indentation just above base ring; outside, three rivet-heads knocked off and seven started; base ring separated slightly.

Pilot-house.—One and a quarter inch indentation from conical shot, four feet three inches from base; outside, one rivet-head knocked off and two started; inside, one rivet-head knocked off and two started.

Armor.—Struck by glancing shot on starboard quarter, a few feet forward of propeller and ten inches below the deck; separated armor-plates slightly for five feet; a shot passed through both quarters of one boat, and through the gunwale of the other; one ventilator-stay was shot away; ventilator dented by a fragment of shell; a shot passed through boiler-iron around rim of turret; the carriage of port fifteen-inch gun was disabled by the recoil, carrying away six bolt-heads, securing composition plates.

Respectfully your obedient servant,

C. M. SCHOONMAKER,

Lieutenant and Executive Officer.

Commander J. W. A. NICHOLSON,

Commanding United States Steamer Manhattan.

UNITED STATES STEAMER MANHATTAN,

August 5, 1864.

SIR: I respectfully submit the following report of the working of the machinery of this vessel during the action to-day.

Though having been tested severely during the chase of the rebel ram Tennessee, everything worked well, and is now ready for service at any moment.

Very respectfully, your obedient servant,

CHARLES L. CARTY,

Acting Chief Engineer.

Commander J. W. A. NICHOLSON,

Commanding United States Steamer Manhattan.

Report of Lieutenant Commander C. H. Wells.

UNITED STATES STEAMER GALENA,

Mobile Bay, Ala., August 6, 1864.

SIR: I herewith report to you the part which this steamer took in passing Forts Morgan and Gaines yesterday.

Before leaving the anchorage off Mobile bar the Galena was lashed to the port side of the Oneida, according to your diagram of line of battle furnished, and occupied the rear of the line. Fort Morgan began firing at five minutes past seven a. m., when the Oneida replied, and was followed by this vessel at twenty-five minutes past seven with the one-hundred pounder rifle on the fore-castle, which took effect in the fort. When abreast and within four hundred yards of it, Captain Mullany, of the Oneida, was wounded badly in the arm and leg, and the steering apparatus of his vessel was shot away, which was shortly afterwards followed by the explosion of one of her boilers, caused by a heavy shot striking it; and this rendered it necessary for the Galena to tow the Oneida by Forts Morgan and Gaines under a severe raking fire from the former, which was accomplished by fifteen minutes past nine.

Both vessels were repeatedly struck, but the Oneida, from having been on the starboard side of this steamer, suffered severely, losing a number of men

killed, and having a number wounded. Her captain, J. R. M. Mullany, under the most trying circumstances, displayed the utmost courage and gallantry while passing through a terrific fire, and only left the deck when he had been severely wounded. His executive officer, Lieutenant Huntington, cheerfully carried out my orders after the disability of Captain Mullany, and distinguished himself by his coolness and bravery.

I take pleasure in bringing to your notice the executive officer of this vessel, Acting Volunteer Lieutenant C. W. Wilson, who faithfully carried out my orders in passing Fort Morgan, as well as in the exhibition of coolness and bravery. Acting Master D. C. Kells, Acting Ensign Pease and Miner, and Acting Master's Mates Tuttle and Delano, I would also recommend to your favorable notice for their good conduct under the fire of the enemy.

Mr. Buehler, first assistant engineer and acting chief, managed the engineer's department in a highly creditable manner, in which he was sustained by the Assistant Engineers Greenleaf, Scott, Burns, and Weecker.

Acting Assistant Paymaster Kitchen and Lesley G. Morrow, captain's clerk, remained on deck during the action, and contributed their parts to my entire satisfaction. Acting Assistant Surgeon George P. Wright not only attended to our three cases of wounded, (one mortally,) but gave his professional services to the Oneida, to several of their wounded who came on board of this steamer.

The crew manifested the utmost courage throughout the affair, which will always reflect creditably upon you and the navy of the United States.

Very respectfully, your obedient servant,

C. H. WELLS,

Lieutenant Commanding, United States Navy.

Rear-Admiral D. G. FARRAGUT,

Com'dg W. G. B. Squadron, United States Flag-Ship Hartford.

UNITED STATES STEAMER GALENA,
Mobile Bay, August 6, 1864.

SIR: I herewith enclose the following list of damages this steamer sustained in passing Forts Morgan and Gaines, between the hours of seven and ten on the morning of the fifth.

One ten-inch shot in starboard bow; one ten-inch shot in starboard waist, abaft plank sheer; one ten-inch shot through smoke-stack, above bridge; one shot through gig; one shot through cutter; mizzen-stay cut away; one shot cutting away boat-davit; one shot striking one-hundred pounder rifle; two stands of grape cut away; port boarding nettings cut by raking fire; cut up rails of topgallant forecastle; cutting rammers and spongers of bow-pivot; mizzen rigging cut away by a stand of grape; chain and running rigging badly cut up.

Very respectfully, your obedient servant,

C. H. WELLS,

Lieutenant Commanding, United States Navy.

Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

Report of Lieutenant Commander J. E. Jouett.

UNITED STATES STEAMER METACOMET,
Bay of Mobile, August 8, 1864.

SIR: Agreeably to your order of the seventh instant, I have the honor to make the following report of the successful passage of the forts and the capture or dispersion of the rebel fleet inside the bay.

At half past four a. m. of the fifth I ran alongside of the Hartford and lashed on her port side. At fifty minutes after six the Tecumseh hoisted her colors and fired a gun. Fort Morgan replied. In a short time the action became general between the fort, iron-clads, Brooklyn, Hartford, and Richmond. At this time the rebel fleet took their stations across the channel, delivering a raking fire upon our line. Thirty-five minutes past seven, amidst the hottest of the fire, the Tecumseh was blown up. I immediately sent a boat to her assistance in charge of Acting Ensign H. C. Nields, who pulled to the spot, when she sank, and succeeded in saving one acting ensign, eight men, and a pilot. It is unnecessary for me to comment upon what he did; you know the situation under which he gallantly performed this duty; he delivered the men to the Winnebago, and then joined the Oneida, and asked for some duty. When the Oneida anchored, he rejoined me up the bay. At forty minutes past seven the Brooklyn backed down the line, when the Hartford shot ahead, leading the fleet in past the forts. At this time a shell from the rebel gunboat Selma passed through this vessel into the forward storeroom, killing one man and wounding another, and setting the ship on fire. By prompt action on the part of Acting Ensign G. E. Wing, in charge of powder division, we succeeded in extinguishing it. At five minutes past eight cast off from the Hartford and steamed for the three rebel gunboats, who were annoying the fleet by a raking fire. They steamed up the bay, engaging us with their stern guns, of which they had three each. At half past eight the Gaines retreated under cover of the fort in a crippled condition. At nine the Morgan hauled off to starboard, and at ten minutes past nine the Selma struck her flag to this ship. I immediately despatched a boat, in charge of Acting Master N. M. Dyre, to take charge of the prize, and to send her captain and first lieutenant on board. He hoisted the American flag, and reported Captain Murphy wounded and first lieutenant killed. He transferred fifty of her crew to this vessel, and at fifty minutes past nine Captain P. V. Murphy came on board and surrendered his sword and vessel. She had five killed and ten wounded, including the Captain, two of whom have since died. The dead and wounded were attended to. The remainder of her crew and officers were sent to the Port Royal. Put engineers and firemen on board and steamed to the fleet, reporting the capture of the confederate steamer Selma, which vessel mounted two nine-inch Dahlgren smooth bore, one six and a half inch rifle, and one eight and a half inch smooth bore, all on pivot, with a crew, all told, of ninety-four men. I am much indebted to the executive officer, H. J. Sleeper, for his cool, prompt, and officer-like conduct; he is a valuable officer. For the efficient handling of the vessel, I am much indebted to Acting Master N. M. Dyre, who had permission to go north on leave, but volunteered to remain to assist in the attack upon the forts. Acting Ensign John White was cool and deliberate, working his rifle gun with good effect. Acting Master's Mates Goodwin and Miller performed their duties with promptness and zeal, making good shots with their nine-inch guns. Acting Third Assistant Engineer King, who was much exposed at the engine-bell, never failed to pull the proper bell; and to the efficient arrangement of the engineer department and the prompt answer to the bells, I am indebted to First Assistant Engineer Atkin. The gunner, Mr. Lamen, attended in both shell-rooms and magazines, forward and aft, and kept the guns more than supplied. I cannot close this long report without calling your attention to Assistant Surgeon Payne, of this vessel. By his report we had one killed and two wounded. That evening there were placed on board this vessel some sixty badly wounded officers and men, to be conveyed to Pensacola. He was untiring in his attention, watching and tending them at all times. He deserves especial mention for his

great and successful exertions. This ship was struck eleven times, doing but little damage; shots mostly above the hull.

I herewith submit the reports of the executive officer and surgeon.

I am, very respectfully, your obedient servant,

JAMES E. JOUETT,
Lieutenant Commander.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron.

Ammunition consumed on board the United States steamer Metacomet, August 5, 1864.

Twenty-five charges powder, (ten pounds,) one-hundred pounder; fifteen shell, percussion, one-hundred pounder; ten shell, long five-second, one-hundred pounder; twenty charges powder, (ten pounds,) nine-inch gun; five shell, five-second, nine-inch gun; ten shell, ten-second, nine-inch gun; five shot, grape, nine-inch gun; two shot, solid, nine-inch gun; six shot, solid, (thirty-two pounds;) one hundred primers, cannon; five charges powder, (one pound,) howitzer; five shell, percussion, howitzer; five fixed ammunition, howitzer; four shrapnell, howitzer; two shell, fixed ammunition, howitzer.

I do certify that the above is a correct statement of the ammunition consumed on the fifth day of August, 1864.

Very respectfully,

JAMES LAMEN,
Acting Gunner.

Report of damages sustained by the United States steamer Metacomet during the engagement of the fifth instant.

One shell through starboard bow, exploding in the storeroom; one shell on port bow; one shot through foremast, cutting two forward shrouds, port side; one cutting off heads of fire-room ventilators; one through smoke-stack; one through escape-pipe; two bursting in starboard paddle-box; one through top of after pilot-house; one cutting mainsail in two; one striking and bending the after quarter davit.

Very respectfully,

HENRY J. SLEEPER,
Executive Officer.

Report of Lieutenant Commander B. Gherardi.

UNITED STATES STEAMER PORT ROYAL,
Mobile Bay, August 7, 1864.

SIR: I have the honor to inform you that on the morning of the fifth instant I took my position on the port side of the United States steamer Richmond, as her consort. I was able to open fire but twice—once as the rebel iron-clad Tennessee passed down the line; the second time as we kept away on a north-west course, I was able to bring the 10-inch pivot gun to bear on Fort Morgan, and the rifled guns to bear on Fort Gaines.

I am, very respectfully, your obedient servant,

BANCROFT GHERARDI,
Lieutenant Commander.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron.

Report of Lieutenant Commander C. H. Greene.

UNITED STATES STEAMER OCTORARA,
Mobile Bay, August 6, 1864.

SIR: I have the honor to forward to you the various reports of damages and casualties on board.

I bear cheerful testimony to the good conduct of officers and men; part of the latter volunteered to work one of the Brooklyn's guns, and although I have not yet heard of them from Captain Alden, I have every reason to believe they bore their part well.

To Acting Volunteer Lieutenant Urann, executive officer, I am much indebted for his zeal and efforts in having the ship ready to go under fire.

Acting Master Billings, a volunteer from the Vincennes, kept his post faithfully, and though quite severely hurt, still remained.

To Acting Master Young, Acting Ensigns Dodge and McEntee, my thanks are due for their steadiness and promptness at their quarters.

The engineer department, under the charge of Mr. Shipman, acting chief engineer, was well attended to, and his subordinates' conduct met my approbation.

To Assistant Surgeon Dodge and Paymaster Pynchon, and in fact all, I tender my hearty thanks.

Very respectfully, your obedient servant,

C. H. GREENE,
Lieutenant Commander.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron.

UNITED STATES STEAMER OCTORARA,
Mobile Bay, August 5, 1864.

SIR: In obedience to your order of this day, I have the honor to submit the following report of damages done this ship by shot in passing the fort this morning. They are as follows:

One shot in starboard bow, entering just in wake of 100-pounder rifle; one on port bow abreast of foremast; one through each paddle-box, two in foremast, one through smoke-stack, and one in mainmast, cutting two shrouds of main rigging; one through the gig alongside; one cut one shroud on starboard side; one cut one shroud on port side; one cut pennant tackle on starboard side; one cut vang falls on starboard side; one struck and carried away awning frame on the stem, and went through ensign; one struck wheel on hurricane deck; one through boat on davit forward; one cut shroud on port side forward; one shot in forward part of forward guard starboard side; one through foresail.

Ammunition expended: Eight 10-pound charges for 100-pounder Parrott, and eight solid shot for 100-pounder.

Most respectfully, your obedient servant,

WILLIAM D. URANN,
Acting Volunteer Lieutenant and Executive Officer.

Lieut. Commander C. H. GREENE.

UNITED STATES STEAMER OCTORARA,
Mobile Bay, August 5, 1864.

SIR: In obedience to your order of this day, I have the honor to submit the following report of damages done to the engineer department of this vessel dur-

ing the action of the morning. They are as follows, namely: three shots through the starboard wheel, carrying away a portion of three inner rings and three arms; one shot through the smoke-pipe of boilers, about twenty feet above the hurricane deck.

Most respectfully, your obedient servant,

WILLIAM W. C. SHIPMAN,

Acting First Assistant Engineer, in charge.

Lieut. Commander C. H. GREENE.

UNITED STATES STEAMER OCTORARA,

Mobile Bay, August 5, 1864.

SIR: The following is the amount of shot and ammunition expended in passing the fort this morning:

Eight 10-pound charges for 100-pounder rifle; eight shot for 100-pounder rifle.

Respectfully, yours, &c.,

WILLIAM D. URANN,

Acting Volunteer Lieutenant and Executive Officer.

Lieut. Commander C. H. GREENE.

Report of Lieutenant Commander W. P. McCann.

UNITED STATES STEAMER KENNEBEC,

Mobile Bay, August 6, 1864.

SIR: I have the honor to submit the enclosed reports of casualties, injuries sustained, and of ammunition expended on board of this vessel during the action with Forts Morgan and Gaines and the rebel flotilla, and while pursuing the rebel gunboat Morgan toward Dog River bar.

The officers and crew of the Kennebec performed their duties gallantly under the enemy's fire. When lashed alongside the Monongahela, I sent Acting Ensign J. D. Ellis, in charge of a gun's crew, to work a gun there, under the observation of Captain Strong, where he acted nobly.

I beg leave to call your attention to the good conduct of Acting Ensign H. E. Tinkham, who, when seriously wounded by the explosion of a shell from the rebel ram Tennessee, and when the vessel was supposed to be on fire, refused to leave his station. It affords me pleasure to bring to your favorable notice Acting Volunteer Lieutenant Edward Baker, the executive officer, Acting Ensign J. J. Butler, and Second Assistant Engineer L. W. Robinson. Acting Assistant Surgeon George W. Hatch rendered the most prompt assistance to the wounded. The crew fully sustained the proud reputation of the American sailor for courage and bravery.

Very respectfully, your obedient servant,

W. P. McCANN,

Lieutenant Commander, Commanding the Kennebec.

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES GUNBOAT KENNEBEC,

Mobile Bay, August 6, 1864.

SIR: The following are the injuries sustained by this vessel in the action of the fifth instant.

One shot on starboard quarter, demolishing mooring chock, and passing through main rail in port side, also injured deck.

A shell from rebel ram Tennessee exploded in ship's side, below spurketing, causing the following damage:

Double iron chain stops broken, horizontal knee-stay torn away, four deck planks broken and partially blown away, two side planks broken; water-way and side timber broken and partially blown away; bulwarks and hammock rail broken; six planks on berth deck broken; two planks on port bow injured by collision with ram, which vessel left her boat across our bow, and iron davit on our port anchor.

Very respectfully, your obedient servant,

EDWARD BAKER,

Acting Volunteer Lieutenant, Executive Officer.

Lieut. Commander WM. P. McCANN,

Commanding United States Steamer Kennebec.

UNITED STATES STEAMER KENNEBEC,

Mobile Bay, August 6, 1864.

SIR: The following is the amount of ammunition expended by this vessel in the action of the fifth instant, namely:

Eight 11-inch shells, twenty-five 20-pound rifle shells. Powder: Two 20-pound 11-inch charges; six 15-pound 11-inch charges; twenty-five 2-pound charges for rifle; thirty-three cannon primers. Total rounds, thirty-three.

Very respectfully, your obedient servant,

H. E. TINKHAM,

Acting Ensign, in charge of ordnance.

Lieut. Commander WM. P. McCANN,

Commanding United States Steamer Kennebec, Mobile Bay.

Report of Lieutenant Commander George Brown.

UNITED STATES STEAMSHIP ITASCA,

Mobile Bay, August 6, 1864.

ADMIRAL: I have the honor to make the following report of the part taken by this vessel in the engagement of the fifth instant:

In obedience to your orders, this vessel was secured on the port side of the Ossipee, to aid her should she become disabled.

After having passed Fort Morgan, I cast off from the Ossipee, and started under sail and a full head of steam in pursuit of the rebel gunboats Morgan and Selma, that were being engaged by the Metacomet; but before I came within range the Morgan had succeeded in getting in such a position that I could not cut off her retreat toward Fort Morgan, and the Selma had struck her flag to the Metacomet.

I take pleasure in testifying to the spirited willingness and desire manifested by all under my command to take a more active part in the engagement, but the duty assigned us prevented us from using our guns in passing Fort Morgan, except for the purpose of increasing the density of smoke.

I am happy to be able to report that no casualties occurred.

The vessel was struck once in the mainmast.

I am, sir, very respectfully, your obedient servant,

GEORGE BROWN,

Lieutenant Commander.

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

Report of Lieutenant Commander G. H. Perkins.

UNITED STATES MONITOR CHICKASAW,
Mobile Bay, August 7, 1864.

SIR: I have the honor to submit the following report:

At six a. m., on Friday, August 5, in obedience to orders, I got under way, and took my position in the rear of the Winnebago, on the right of the line. I passed the forts with the rest of the fleet, firing as rapidly as possible.

Afterwards, in obedience to orders, I attacked the rebel ram Tennessee, following her up closely, shooting away her smoke-stack, and firing solid shot at her till her flag was hauled down and a white flag raised. Her steering gear being shot away, I took her in tow and brought her to anchor near the Hartford. In the afternoon of the same day I again got under way, and brought a large barge, the Ingomar, out from under the guns of Fort Powell, exchanging several shot, and being struck three times.

On the morning of the sixth I proceeded again to Fort Powell, which I found deserted and blown up. I towed out another barge.

In the afternoon I advanced and shelled Fort Gaines.

Too much praise cannot be given to all the officers and men for their coolness and efficiency under fire, and their endurance while at quarters.

I would mention, in particular, Acting Volunteer Lieutenant William Hamilton, the executive officer, who, when on his way home, condemned by medical survey, volunteered for this vessel. I owe much to him for his energy in fitting out the vessel, and for his gallantry and coolness during the fight. Acting Master E. D. Percy, who also volunteered for the vessel, and commanded the guns in the after turret, and Gunner John A. McDonald, who commanded the forward turret, deserve especial mention for the skill and rapidity with which they fought their batteries. Chief Boatswain's Mate Andrew Jones and Master-at-arms James Seanor, who, although their time was out, volunteered for the fight from the Vincennes, are entitled to honorable mention.

During the entire action the vessel was struck a number of times, the smoke-stack was shot almost entirely away, and one shot penetrated the deck on the starboard bow. No serious injury was suffered, and there were no casualties among officers or men.

I enclose the report of ammunition expended.

Respectfully, your obedient servant,

G. H. PERKINS, *Lieutenant Commander.*

Rear-Admiral D. G. FARRAGUT,
Flag-Ship Hartford.

UNITED STATES STEAMSHIP MONITOR CHICKASAW,
August 7, 1864.

SIR: I have the honor to report the following expenditures of ordnance and ordnance stores in the engagement of the 5th and 6th of August:

Shell expended upon Fort Morgan, seventy-five five-second; fifteen-pound charges, seventy-five. Shot, steel, expended upon ram Tennessee, four; shot, cast-iron, forty-eight; twenty-pound charges, fifty two. Shell expended upon Fort Powell, twenty-five five-second; fifteen-pound charges, twenty-five. Shell expended upon Fort Gaines, fifteen five-second; sixteen ten-second; fifteen-pound charges, thirty-one; percussion primers expended, one hundred and ninety; lock-strings expended, two; sponges, two; rammers, one.

Very respectfully,

JOHN A. McDONALD, *Gunner.*

Lieut. Com'd'r. G. H. PERKINS,
Com'dg U. S. Steam Monitor Chickasaw.

Report of Lieutenant Charles L. Huntington.

UNITED STATES STEAM-SLOOP ONEIDA,
Mobile Bay, August 6, 1864.

SIR: Commander Mullany having been seriously wounded, it devolves upon me to make a report of the part taken by the Oneida in the engagement with Fort Morgan and the enemy's vessels on the fifth instant.

I have but few data to guide me, Mr. Ebbetts, the captain's clerk, having been required below after Commander Mullany received his wound.

About half past three a. m. our consort, the Galena, came alongside, and we proceeded to lash the ships together.

At ten minutes past four we got under way, in obedience to signal, and took our station in line as per diagram furnished to the commanding officers.

At five minutes past seven a. m. Fort Morgan opened fire, and at fifteen minutes past seven we opened with the thirty-pounder Parrott from our topgallant forecastle; the Galena also firing with her one hundred-pounder Parrott rifle.

At twenty-five minutes past seven we commenced firing fifteen-second and ten-second shell from the eleven-inch pivot guns. At forty-five minutes past seven opened with our entire starboard broadside with five-second shell, also firing two-second eleven-inch shrapnell when abreast the fort. As the Oneida was the sternmost of the line, we had a good opportunity to observe the effects of the grape fired by the vessels ahead, and, it appearing to fall in the water, it was determined to use only five-second shell and shrapnell with short fuze.

Fort Morgan fired very vigorously upon us, and sustaining as we did for a while the fire of all its guns, the damages to the ship are very severe. At fifty minutes past seven a seven-inch rifle shell passed through the chain armor and the ship's side at the water-line into the starboard boiler, exploding there. Nearly the whole watch below of firemen and coal-heavers were scalded to death, or disabled by the escaping steam. This accident caused only a very temporary excitement on the part of the guns' crews near the fire-room and engine-room hatches, and the guns were gallantly served and fired while the steam was escaping. About this time also a seven-inch rifle shell entered at the water-line, exploded in the cabin, cutting both wheel-ropes; the relieving tackles were immediately manned and worked very promptly and skilfully under the supervision of Alexander Love, boatswain's mate.

Observing the enemy's iron-clad ram Tennessee to be approaching us, the guns were ordered to be loaded with increased charge of powder and solid shot. She passed alongside of us not more than two hundred yards distant, attempting to discharge her guns. Fortunately the primers failed to explode the charges in the guns three times, and she only succeeded in giving us one shot, which struck the after eleven-inch pivot gun on the chase.

Both train-tackles and one out-tackle of the forward eleven-inch gun having at this time been shot away, and the carriage of number five eight-inch gun having been disabled, we were only able to fire the after eleven-inch gun. The shot from this gun struck the ram.

The ram passing astern, delivered two raking fires into us, one of which disabled the twelve-pound howitzer on the poop, severely wounding Commander Mullany; the effect of the other one I am unable to state, but think the only damage from it was to our rigging.

The command of the ship now devolved upon me, and the management of the two vessels upon Lieutenant Commander Wells, of the Galena.

The battery was gallantly served while passing the forts, but the enemy raked us several times after our guns could not be brought to bear.

In passing the fort we received a shell forward on the berth deck which exploded, knocking out a dead-light on the port side, starting a fire on the top of

the magazine. Owing to the presence of mind of Acting Ensign Hall, commanding the powder division, and Gunner William Parker, the fire was promptly extinguished, and the supply of powder was as rapid as ever before.

At thirty-five minutes past eight signal was made that the captain was wounded, and also that our boiler was disabled; not being answered from the flag-ship, hauled down signals. About a quarter past nine repeated signals, and they were not answered, but signal was made from the flag-ship to run down at full speed the enemy's principal vessel. Answered the signal, but I am sure the admiral understands we could not obey it; we had no speed.

At ten o'clock a. m. the Itasca, Lieutenant Commander Brown, took us in tow and carried us to an anchorage. At eleven anchored in three and a quarter fathoms water, with thirty fathoms of chain, ready for slipping.

The officers and crew of the Oneida are proud to have served in your fleet, and they are proud of their gallant commander, J. R. M. Mullany, who gave us all so noble an example of unflinching courage and heroism. His coolness in action could not possibly have been surpassed. Having scarcely become acquainted with Commander Mullany, he having only been on board two days, the highest compliment that can be paid him is the confidence and spirit with which the crew went into action.

Too much praise cannot be awarded to Lieutenant C. S. Cotton, Lieutenant E. N. Kellogg, and Acting Ensign John Sears, commanding gun divisions, for the admirable examples of courage they afforded their men, and for their skill in directing the fire of the guns.

The conduct of Acting Ensign Charles V. Gridley (regular) is beyond all praise. He had charge of the master's division, and assisted in conning the ship from the topgallant forecastle.

Acting Ensign Hall's conduct has been previously mentioned. His duties were performed in the most satisfactory manner, and, under Almighty God, we probably owe to his presence of mind at the time of the fire on the berth deck the safety of the ship.

Acting Master's Mates Ed. Bird, Daniel Clark, and John Devereaux behaved courageously. Gunner Wm. Parker and Boatswain Hallowell Dickinson merit mention for their good conduct.

I leave it to Chief Engineer W. H. Hunt to speak of the officers and men under his immediate supervision, but must speak of him personally in this report. He was cool and collected during the whole affair, and his gallantry was particularly apparent at the time of the accident to our starboard boiler. Mr. Hunt was scalded severely in both arms.

Surgeon John Y. Taylor had a severe task imposed upon him, but his whole duty by the wounded was done quietly and skilfully. Medical assistance was offered from the Galena; it was accepted, and Acting Assistant Surgeon George P. Wright came on board, for which we owe him our thanks. At the time that our boiler was exploded, five of our wounded went on board the Galena; four subsequently returned—the other was suffering much pain, and remained on board until transferred to the Metacomet.

The safety of the ship after the explosion depended upon the Galena. That we are here quietly at anchor attests how nobly Lieutenant Commander Clark H. Wells stood by us.

Assistant Paymaster George R. Martin assisted the surgeon materially. He also superintended putting out a fire that broke out in the cabin. Paymaster's Clerk W. P. Treadwell rendered great service in passing orders to the bell, until he was required below to assist in caring for the wounded. He was quite badly scalded himself. Mr. George A. Ebbetts, captain's clerk, behaved splendidly. He was knocked down at the same time that Captain Mullany was

wounded. Whenever he could be spared from below, after this accident, he cheerfully rendered assistance in carrying orders.

The pilot, Mr. John V. Grivet, served part of the time on board the *Galena*, and part of the time on board this ship. That part of his conduct which came under my observation merits praise.

For the crew, they stood to their guns most nobly. Many deserve mention, but I shall only name those that came under my own observation. James Sheridan, quartermaster, captain of the after eleven-inch gun, was wounded in several places, but remained at his gun until the firing ceased, when he supplied the place of the signal quartermaster, who had been injured by a fall. Sheridan is very intelligent, understands the rudiments of navigation and the use of the sextant, and I recommend him to your favorable notice. John E. Jones, quartermaster, stationed at the wheel, was also wounded. After the wheel-ropes were shot away, he went on the poop to assist at the signals, and remained there until ordered to reeve new wheel-ropes. Wm. Gardner, seaman, behaved so coolly under fire as to draw my particular attention to him. John Preston, landsman, though severely wounded, remained at his gun until obliged to go to the surgeon. He reported himself slightly hurt, assisted in taking care of the wounded below, and wanted to return to his station on deck. On examination it was found that he was wounded quite severely in both eyes. Wm. Newland, ordinary seaman, first loader of after eleven-inch gun, behaved splendidly; he has been distinguished on board for his good conduct and faithful discharge of all his duties. David Nailor, landsman, powder-boy at the thirty-pounder Parrott rifle, had his passing-box knocked overboard out of his hand. The passing-box fell into one of the *Galena's* boats, which was right under our bow; Nailor jumped overboard, recovered his box and returned to his station. Charles Wooram, ordinary seaman, acting as an aid to the executive officer, distinguished himself by his cool courage; he carried orders intelligently and correctly. Thos. Kendrick, cockswain, a volunteer from the *Bienville*, attracted my attention by his excellent conduct.

The marines conducted themselves with the usual distinguished gallantry of their corps. Sergeant James S. Roantree is particularly deserving of notice.

We are grateful to Almighty God for his protection.

Enclosed are the reports of damages in the different departments of the ship.

Very respectfully, your obedient servant,

CHAS. L. HUNTINGTON,

Lieutenant, United States Navy.

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES STEAM-SLOOP ONEIDA,

Mobile Bay, Alabama, August 6, 1864.

SIR: I beg leave to submit the following report of damages sustained in the engineer's department of this ship in her passage by Fort Morgan on the morning of the fifth instant.

A seven-inch Brooke's rifle projectile penetrated the forward out-board end of the starboard boiler, about eight inches above upper tube sheet, carrying away the entire sheet through which it entered, and, exploding inside the boiler, inflicted serious damage to the entire forward end of the same, destroying all the angle-iron and the fore and aft braces thereto attached, starting the tube sheets and all the tubes in the two forward tube boxes. Two of the heaviest fragments of the shell were driven through the front of the boiler, destroying the upper man-hole plate, the entire sheet to which it was attached, and starting the riveting of the adjoining sheets.

As soon as it was practicable, after this accident, the nature and extent of

the damages were ascertained, the connexion between the two boilers immediately shut off, and the engines operated with the remaining boiler.

I regret to state that through this accident to the starboard boiler First Assistant Engineer R. H. Fitch and six of the firemen and coal-heavers on watch below at the time, were seriously scalded by the hot water and escaping steam.

In its present condition the boiler is totally unfit for use. No further damages were sustained in this department. I cannot close this report without adverting to the coolness, zeal, and intrepidity displayed by the officers and men in general under my supervision.

Too much praise cannot be accorded to First Assistant Engineer R. A. Fitch, who, at the time of the injury to the boiler, displayed the utmost courage and coolness, remaining at his station in the execution of his duties until he was so badly scalded by the escaping steam as to be rendered almost helpless.

I desire also to refer in terms of the highest commendation to the conduct of Acting Third Assistant Engineer Nicholas Dillon, who, after the disabling of Mr. Fitch, rendered me invaluable assistance in discovering the nature of damages, and making the requisite provision for working the engines with the remaining boiler.

Very respectfully, your obedient servant,

WILLIAM H. HUNT,
Chief Engineer.

Lieutenant CHAS. L. HUNTINGTON,
Commanding United States Steamer Oneida.

UNITED STATES STEAM-SLOOP ONEIDA,
Mobile Bay, August 6, 1864.

SIR: The following is a report of the damages in the master's department of this ship during the action of yesterday, namely:

One set wheel-ropes cut by shell; one tell-tale compass damaged; one Mobile bay chart damaged; one spy-glass badly damaged; one binnacle lamp lost overboard; two wardroom chairs broken by shell; one lead and line lost overboard; two sets signal halliards cut by shell; fifteen fathoms stream chain on fire-room hatch cut by shot; twelve fathoms starboard bower chain on ship's side cut by shell; seven fathoms sheet chain on engine-room hatch cut by shot; all cabin furniture destroyed entirely or badly damaged; one six-inch hawser cut badly.

Very respectfully,

E. N. KELLOGG,
Lieutenant, in charge of Master's Department.

Lieutenant C. L. HUNTINGTON,
Senior Officer on Board.

UNITED STATES SHIP ONEIDA,
Mobile Bay, August 6, 1864.

SIR: I respectfully submit the following report of damages and injuries sustained in the gunner's department of this ship in the action of yesterday:

No. 3 gun—forward eleven-inch pivot; one in-tackle carried away by shot, one out-tackle carried away by shot.

No. 4 gun—eight-inch broadside; one side-tackle carried away by shot, one train-tackle carried away by shot.

No. 5 gun—eight-inch broadside; carriage badly damaged, breast-piece shot away, brackets on left side of carriage badly injured.

Shell-crane and tackle at fore hatch broken by shot; one rammer knocked

overboard; one handspike broken; two boring bits broken; one priming wire broken.

No. 6 gun—after eleven-inch pivot; chase of gun dented and cracked by shot; brackets on right side of carriage badly splintered and dented by expansion band of a shell striking them and remaining in them, fracturing the breeching also, making it unsafe for use; twelve-pounder howitzer boat-carriage disabled.

Very respectfully,

WILLIAM PARKER, *Gunner.*

Lieutenant CHARLES L. HUNTINGTON,

Executive Officer, United States Steamer Oneida.

UNITED STATES STEAMER ONEIDA,

Mobile Bay, August 5, 1864.

SIR: I respectfully beg leave to submit the following report of injuries received by this ship in her rigging during the action of this day:

Starboard fore trysail vang shot away; port bowsprit guy shot away; three shrouds of starboard main rigging injured by shot; (one cut in two,) starboard main topmast backstay cut; mizzen-stay shot away; main spencer brail shot away; topping-lift of whale boat's davits shot away; awning ridge rope, starboard side, shot away; spanker brails shot away.

Very respectfully,

HALLOWELL DICKINSON,

Boatswain.

Lieutenant CHARLES L. HUNTINGTON,

Executive Officer, United States Steamer Oneida.

UNITED STATES STEAM-SLOOP ONEIDA,

Mobile Bay, August 6, 1864.

SIR: The following is a list of casualties in the carpenter's department of this ship during the engagement of the 5th of August:

All the berths, bulkheads, and furniture in the cabin a total wreck, caused by the explosion of a seven-inch shell which entered at the water-line. One seven-inch rifle shell passed through the chain-armor and ship's side at the water-line, entered the starboard boiler, and then exploded. One eight-inch solid shot entered the mainmast, doing serious damage, and remains there yet. One shot through ash-shoot, through combings of fire-room, and out through port side.

Fore topmast slightly wounded by piece of shell; spanker-gaff in like manner.

Shot through starboard bow, below spar deck, across berth deck, out through port bow.

Two raking shots from aft struck the topgallant forecastle, one passing out through starboard bow, one out through port bow.

First cutter damaged by a piece of shell; second cutter and whale-boat badly smashed.

Very respectfully, your obedient servant,

CHARLES L. HUNTINGTON,

Lieutenant and Executive Officer.

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

UNITED STATES STEAMSHIP ONEIDA,
Mobile Bay, August 6, 1864.

SIR: The following is a list of casualties in the sailmaker's department during the engagement of the 5th of August:

Shot-holes in foresail, fore-staysail, and mainsail; spanker badly cut by shot; wind-sails for fire-room and engine-room rendered unfit for use; several shot-holes in hammock cloths.

Very respectfully, your obedient servant,

CHARLES L. HUNTINGTON,
Lieutenant and Senior Officer on board.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. Squadron.

UNITED STATES STEAM-SLOOP ONEIDA,
Mobile Bay, August 6, 1864.

SIR: I respectfully submit the following report of the expenditures of ammunition, &c., on board this ship in the action of yesterday:

Four hundred and sixty-five pounds of powder in thirty-one bags of fifteen pounds each; twenty pounds of powder in one bag of twenty pounds; forty-five pounds of powder in five bags of nine pounds each; one hundred and eighty-four pounds of powder in twenty-three bags of eight pounds each; eighty-four pounds of powder in twenty-four bags of three and a half pounds each; two solid shot, eleven-inch; three shrapnell, eleven inch; six shells, eleven-inch, fifteen-second; fourteen shells, eleven-inch, ten-second; seven shells, eleven-inch, five-second; eight shells, eight inch, ten-second; nine shells, eight-inch, fifteen-second; nine shells, eight-inch, five-second; two solid shot; eight shells, rifle, thirty-pounder, five-second; five shells, rifle, thirty-pounder, ten-second; seven shells, rifle, thirty-pounder, fifteen-second; four solid shot; one shrapnell, twenty-four-pounder howitzer; three shrapnell, twelve-pounder howitzers; two canister, twelve-pounder howitzer; sixty cannon primers; twenty-four friction primers.

Very respectfully, your obedient servant,

WILLIAM PARKER, *Gunner.*

Lieutenant CHAS. L. HUNTINGTON,
Commanding United States Steamship Oneida.

Forwarded, though I am confident that more shrapnell and less ten-second hell were fired.

Respectfully, your obedient servant,

CHARLES L. HUNTINGTON,
Lieutenant United States Navy.

General Orders of Rear-Admiral Farragut, Nos. 10, 11, 12, and 13.

[General Order No. 10.]

UNITED STATES FLAG-SHIP HARTFORD,
Off Mobile Bay, July 12, 1864.

Strip your vessels and prepare for the conflict. Send down all your superfluous spars and rigging. Trice up or remove the whiskers. Put up the splinter-nets on the starboard side, and barricade the wheel and steersmen with

sails and hammocks. Lay chains or sand-bags on the deck over the machinery, to resist a plunging fire. Hang the sheet-chains over the side, or make any other arrangement for security that your ingenuity may suggest. Land your starboard boats, or lower and tow them on the port side, and lower the port boats down to the water's edge. Place a leadsman and the pilot in the port-quarter boat, or the one most convenient to the commander.

The vessels will run past the forts in couples, lashed side by side, as hereinafter designated. The flag-ship will lead, and steer from Sand island N. by E. by compass, until abreast of Fort Morgan; then N. W., half N., until past the Middle Ground; then N. by W.; and the others, as designated in the drawing, will follow in due order, until ordered to anchor; but the bow and quarter line must be preserved, to give the chase-guns a fair range; and each vessel must be kept astern of the broadside of the next ahead. Each vessel will keep a very little on the starboard quarter of his next ahead, and when abreast of the fort, will keep directly astern, and as we pass the fort will take the same distance on the port-quarter of the next ahead, to enable the stern-guns to fire clear of the next vessel astern.

It will be the object of the admiral to get as close to the fort as possible before opening fire; the ship, however, will open fire the moment the enemy opens upon us, with their chase and other guns, as fast as they can be brought to bear. Use short fuzes for the shell and shrapnell, and as soon as within three or four hundred yards, give the grape. It is understood that heretofore we have fired too high; but with grape-shot, it is necessary to elevate a little above the object, as grape will dribble from the muzzle of the gun. If one or more of the vessels be disabled, their partners must carry them through, if possible; but if they cannot, then the next astern must render the required assistance; but as the admiral contemplates moving with the flood-tide, it will only require sufficiently power to keep the crippled vessels in the channel.

Vessels that can, must place guns upon the poop and topgallant forecastle, and in the tops on the starboard side. Should the enemy fire grape, they will remove the men from the topgallant forecastle and poop to the guns below, until out of grape range.

The howitzers must keep up a constant fire from the time they can reach with shrapnell until out of its range.

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

[General Order No. 11.]

FLAG-SHIP HARTFORD,
Mobile Bay, July 29, 1864.

Should any vessel be disabled to such a degree that her consort is unable to keep her in her station, she will drop out of line to the westward, and not embarrass the vessels next astern by attempting to regain her station. Should she repair damages so as to be able to re-enter the line of battle, she will take her station in the rear as close to the last vessel as possible.

So soon as the vessels have passed the fort and kept away northwest, they can cast off the gunboats at the discretion of the senior officer of the two vessels, and allow them to proceed up the bay to cut off the enemy's gunboats that may be attempting to escape up to Mobile. There are certain black buoys placed by the enemy from the piles on the west side of the channel across it towards Fort Morgan. It being understood that there are torpedoes and other obstructions between the buoys, the vessels will take care to pass eastward of the easternmost buoy, which is clear of all obstructions.

So soon as the vessels arrive opposite the end of the piles, it will be best to stop the propeller of the ship, and let her drift the distance past by her headway and the tide; and those having side-wheel gunboats will continue on by the aid of their paddle-wheels, which are not likely to foul with the enemy's drag-ropes.

D. G. FARRAGUT,
Rear-Admiral.

[General Order No. 12.]

UNITED STATES FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

The admiral returns thanks to the officers and crews of the vessels of the fleet for their gallant conduct during the fight of yesterday.

It has never been his good fortune to see men do their duty with more courage and cheerfulness; for, although they knew that the enemy was prepared with all devilish means for our destruction, and though they witnessed the almost instantaneous annihilation of our gallant companions in the *Tecumseh* by a torpedo, and the slaughter of their friends, messmates, and gunmates on our decks, still there were no evidences of hesitation in following their commander-in-chief through the line of torpedoes and obstructions, of which we knew nothing, except from the exaggerations of the enemy, who had given out "That we should all be blown up as certainly as we attempted to enter."

For this noble and implicit confidence in their leader he heartily thanks them.

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

[General Order No 13.]

FLAG-SHIP HARTFORD,
Mobile Bay, August 7, 1864.

The admiral desires the fleet to return thanks to Almighty God for the signal victory over the enemy on the morning of the 5th instant.

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Letter from Rear-Admiral Farragut, transmitting additional report of Captain T. A. Jenkins.

FLAG-SHIP HARTFORD,
Mobile Bay, August 17, 1864

SIR: I have the honor to forward herewith an additional report of Captain Jenkins, in connexion with the engagement of the 5th instant, which was not received in time to accompany my detailed despatch No. 343.

Lieutenant Commander Gherardi's conduct is referred to in this report in high terms.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

HON. GIDEON WELLES,
Secretary of the Navy.

Additional report of Captain T. A. Jenkins.

UNITED STATES STEAMSHIP RICHMOND,
Inside of Mobile Bay, August 5, 1864.

SIR: I have the honor to report, that, in obedience to your general order and plan of battle for attacking Fort Morgan and the rebel fleet, Lieutenant Commander Bancroft Gherardi, commanding the United States steamer Port Royal, reported himself with his vessel to me, ready for action a little before daylight this morning.

The Port Royal was lashed on the port side of this vessel, with her stern pivot gun sufficiently far aft of the quarter of this ship to enable it to be used against the enemy as effectively as one of my own broadside guns.

To Lieutenant Commander Gherardi I am greatly indebted for his cool and courageous conduct, from the moment the attack commenced to the time that his vessel was cast off by my order to go in chase of the enemy's three wooden gunboats, the Morgan, Gaines, and Selma.

My orders on board of this ship to the helmsman, and to the officer stationed at the engine-bell, were repeated by him on board of his own vessel, and the soundings passed from his vessel to this with a coolness and clearness of voice that could not but excite my admiration.

The after pivot gun of the Port Royal (the only one that could be brought to bear upon the enemy's batteries from that vessel) was worked most effectively.

I am, very respectfully, your obedient servant,

THORNTON A. JENKINS,
Captain.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron, inside of Mobile Bay.

ter from Rear-Admiral Farragut, transmitting report of survey on the rebel ram Tennessee.

FLAG-SHIP HARTFORD,
West Gulf Blockading Squadron, August 16, 1864.

SIR: I have the honor to inform the department that on the 6th instant I ordered a survey to be made of the hull, armor, &c., of the iron-clad Tennessee, and I herewith submit the report, (order of survey and report marked Nos. 1 and 2,) as well as a sectional view of the vessel made by Second Assistant Engineer J. DeGraff, of this ship, and a drawing in water-colors by Second Assistant Engineer Robert Weir, of the Richmond.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of survey on the rebel ram Tennessee.

FLAG-SHIP HARTFORD,
Mobile Bay, August 6, 1864.

GENTLEMEN: You will please make a strict and careful survey on the rebel iron-clad steamer Tennessee, captured in the engagement of yesterday, describing her hull, armor, machinery, armament, ammunition, the injuries to the vessel by shot, and those received when struck by the Monongahela, Lackawanna, and Hartford.

You will also state the repairs necessary to be made to put her again in serviceable condition, and the general internal arrangement of the vessel for light and ventilation, reporting to me in duplicate.

Very respectfully,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Captain T. A. JENKINS.

Captain JAMES ALDEN,

Commander W. E. LE ROY.

Chief Engineer THOMAS WILLIAMSON.

UNITED STATES STEAM-SLOOP RICHMOND,

Inside of Mobile Bay, August 13, 1864.

SIR: In obedience to your order of the 6th instant, hereunto appended, we have the honor respectfully to report that we have made a strict and careful survey of the iron-clad casemated steamer Tennessee, captured from the rebels in the engagement in this bay, on the morning of the 5th instant, by the fleet under your command, and submit as follows, namely:

DESCRIPTION OF TENNESSEE'S HULL.

The hull of the vessel appears to be exceedingly strongly built in every part, the materials being oak and yellow pine, with iron fastenings. Length from stem to stern on deck, two hundred and nine feet. Greatest breadth of beam on deck, forty-eight feet. Mean average draught of water, about fourteen feet.

The deck is covered fore and aft with wrought-iron plates two inches thick.

The sides of the vessel are protected by an overhang, sponsoned, and covered with two layers of two-inch wrought iron.

This overhang extends about six feet below the water-line.

The sides of the vessel below the deck are believed to be eight feet thick, and the distance from the knuckle, or outside of the overhang on deck, to the base of the casemate on either side, is ten feet.

The vessel is provided with a strong beak or prow, which projects about two feet under water, formed by the continuation of the sponsoning, and covered with wrought-iron plates.

CASEMATE.

The casemate of the vessel is very strongly built. It is seventy-eight feet eight inches long, and twenty-eight feet nine inches wide inside, the sides of the vessel extending ten feet from it on either side at the greatest breadth of beam.

The framing consists of heavy yellow pine beams, thirteen inches thick, and placed close together vertically. Outside planking of yellow pine, five and a half inches thick, laid on horizontally, and outside of this horizontal planking there is a layer of oak timber four inches thick, bolted on vertically, upon which the iron plating is secured.

The plating or armor of the casemate forward is six inches thick, consisting of three two-inch iron plates, of about six inches wide each, and abaft and on the sides five inches thick, consisting of two two-inch and one one-inch iron plates of the same width.

The yellow pine framing of the casemate is planked over inside with two and a half inch oak timber laid on diagonally.

The whole of the armor plating is fastened with through-bolts, one and a quarter inch diameter, with washers and nuts inside.

The casemate is covered on top with wrought-iron gratings, composed of bars two inches thick and six inches wide, laid flat, and supported on wooden beams twelve inches square, and about five feet distant from each other. Some of these gratings are hinged and fitted to open from the inside.

There are ten gun-ports in the casemate—two in the broadside, on either side, three forward and three aft.

The forward and after ports, to port and starboard, are placed so as to enable the forward and after pivot guns to be used as broadside guns. The directly forward and after ports are on a line with the keel.

The ports are elongated and made just wide enough for the entrance of the muzzle of the guns in training, and only high enough to allow a moderate elevation and depression of the gun.

The wooden backing is cut away on each side of the ports inside of the casemate, to allow the guns to be trained about one point forward and aft. The gun-ports are covered with wrought-iron sliding plates or shutters five inches thick; those for the four broadside guns are fitted in slides. The sliding plates or shutters for the pivot-guns are pivoted on the edge, with one bolt that can be knocked out, detaching the shutter, if necessary, and are worked by a combination of racks and pinions.

ARMAMENT.

The armament of the Tennessee consists of six rifled guns, called by the rebels Brooks's rifles.

The two pivot guns are 7½-inch bore, and the four broadside guns are 6-inch bore. These guns are reinforced abaft by two wrought-iron bands, two inches thick, respectively. Weight of projectiles ninety-five pounds and one hundred and ten pounds solid shot.

The pivot guns are fitted on wooden slides, with a rack let into them. On an arm attached to the carriage there is a pinion for running out the gun, and by raising the arm the rack is thrown out of gear to allow the gun to recoil.

The arrangements for working the battery, and the implements and machinery employed, appear to be very good.

QUARTERS FOR OFFICERS AND CREW.

The cabin is large and comfortable for an iron-clad vessel.

The wardroom is situated immediately over the engine, and is open to it, and although sufficiently commodious, we are of opinion that it would be impossible for officers or others to preserve their health or to live there comfortably for any considerable length of time, in the absence of a better and more perfect ventilation than is at present provided.

The quarters of the crew are excellent, and exceedingly comfortable for an iron-clad vessel of her description. These quarters consist of a roomy berth deck, with rooms fitted up on either side for the junior officers.

The berth deck communicates with the casemate by means of a large hatch, and is provided with two large ventilators through the deck, outside of the casemate.

When in port, and in moderately smooth sea, it is believed that the berth deck will be found to be sufficiently well ventilated to insure a reasonable degree of comfort to the crew; but when the ventilators are unshipped, it is believed that the one blower now on board (and which is also used for forcing the fires) is not sufficient to produce a proper circulation of fresh air.

The steering arrangements appear to be very defective, and the accommodations for the pilot and helmsman bad. These defects can, however, be easily remedied and at a small cost.

MACHINERY.

The machinery of the vessel consists of two geared non-condensing engines. Cylinders twenty-four inches diameter and seven feet stroke, with poppet-valves arranged as is the usual mode on board of western river steamers.

These engines were taken out of the river steamer called the Alonzo Child.

They are placed fore and aft in the vessel, geared to an idler shaft by spur gearing with wooden teeth, and from the idler shaft to the propeller shaft by bevel cast-iron gear.

BOILERS.

There are four horizontal flue-boilers, twenty-four feet long, placed side by side, with one furnace under the whole of them; the products of combustion returning through the flues are delivered into one smoke-pipe.

The engine and fire rooms are insufferably hot and very badly ventilated.

INJURIES RECEIVED IN THE ACTION.

The injuries to the casemate of the Tennessee from shot are very considerable. On its after-side nearly all the plating is started; one bolt driven in; several nuts knocked off inside; gun-carriage of the after pivot gun damaged, and the steering rod or chain cut near that gun. There are unmistakable marks on the after part of the casemate of not less than nine eleven-inch solid shot having struck within the space of a few square feet in the immediate vicinity of that port. On the port side of the casemate the armor is also badly damaged from shot. On that side, nearly amidships of the casemate, and between the two broadside guns, a fifteen-inch solid shot knocked a hole through the armor and backing, leaving on the inside an undetached mass of oak and pine splinters, about three by four feet, and projecting inside of the casemate about two feet from the side. This is the only shot that penetrated the wooden backing of the casemate, although there are numerous places on the inside, giving evidence of the effect of the shot.

There are visible between forty and fifty indentations and marks of shot on the hull, deck, and casemate, varying from very severe to slight; nine of the deepest indentations on the after part of the casemate, (evidently being eleven-inch shot,) and the marks of about thirty of other calibres on different parts of the vessel.

There are also a few other marks, being, however, merely scratches or slight indentations of the plating.

The smoke-stack was shot away, although it is not improbable the heavy ramming by the Monongahela, Lackawanna, and Hartford, had previously prepared it for its fall.

Three of the wrought-iron port shutters or slides were so much damaged by shot as to prevent the firing of the guns.

There are no external visible marks or evidences of injury inflicted upon the hull of the Tennessee by the severe ramming by the Monongahela, Lackawanna, and Hartford; but inasmuch as the decks leak badly, and when there is a moderate sea running in the bay, her reported usual leakage of three inches an hour being now increased to five or six inches an hour, it is fairly to be inferred that the increased leakage is caused by the concussion of the vessels.

The Tennessee is in a state to do good service now.

To restore her to the state of efficiency in which she was when she went into the action with this fleet on the fifth instant, it will be necessary to overhaul much of the iron plating on the port and after sides of the casemate, and replace some of it.

The iron gun-port slides or shutters, which were damaged, must be either removed or repaired.

A new smoke-stack is required, and additional ventilators should be fitted.

Blowers are required to produce proper ventilation in the engine-room and on the berth deck.

When these small repairs and additions shall have been made, the iron-clad Tennessee will be a most formidable vessel for harbor and river service, and for operating generally in smooth water, both offensively and defensively.

The original of this report is accompanied by sectional views of the Tennessee and a sketch showing the effect of shot on the outside.

We are, very respectfully, your obedient servants,

THORNTON A. JENKINS, *Captain.*

JAMES ALDEN, *Captain.*

WILLIAM E. LEROY, *Commander.*

T. WILLIAMSON, *Chief Engineer.*

Rear-Admiral D. G. FARRAGUT,

Com'dg W. G. B. Squadron, U. S. Flag-Ship Hartford.

Letter from Rear-Admiral Farragut, transmitting additional reports of Captains Drayton, Jenkins, and Marchand.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

Mobile Bay, August 22, 1864.

SIR : I have the honor to forward herewith the reports of Captain Drayton, of the Hartford, Captain Jenkins, of the Richmond, and Captain Marchand, of the Lackawanna, (marked Nos. 1, 2, and 3,) calling the attention of the department to such of the petty officers and crew of their respective ships as particularly distinguished themselves in the action of the 5th instant, entitling them to special notice.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Captain P. Drayton.

FLAG-SHIP HARTFORD,

Mobile Bay, August 9, 1864.

SIR : I beg leave to call your attention to the conduct of the following petty officers and others of this vessel, during the action of the 5th instant, which I think entitles them to the medal of honor.

1. Thomas Fitzpatrick, cockswain, was captain of No. 1 gun. His gun was almost disabled by the bursting of a shell, which destroyed much of the material and killed seven men, besides wounding several others, and among them himself. Notwithstanding this, he had the killed and wounded quietly removed, replaced the breeching, side-tackle and truck, &c., which had been cut to pieces, got a crew, and in a little while was firing the gun again as usual. I recommend that, in addition to the medal, he be made a master's mate.

2. Charles Melville, ordinary seaman. This man, a loader at the same gun, was severely wounded by a piece of the shell. He was taken below, but would not remain there, and although scarcely able to stand, performed his duty until the end of the action.

3. William E. Stanley, shellman at No. 8 gun, was severely wounded, but refused to go below, and continued to perform his duties until at length he became so weak from loss of blood as to be unable to stand.

4. William Pelham, landsman. When the crew of the gun to which he belonged was entirely broken up, owing to the number of its killed and wounded, he assisted to remove the latter below, and then immediately returned, and, without any direction to do so, took his place at the adjoining gun, where a vacancy existed, and continued to perform his duties there most faithfully for the remainder of the action.

5. John McFarlan, captain of fore-castle, was at the wheel, which has been his station in all of the previous fights of this ship. As on every other occasion, he displayed the utmost coolness and intelligence throughout the action. When the Lackawanna ran into us, and for a moment there was every appearance of the men at the wheel being crushed, he never left his station, nor ceased for an instant to attend strictly to his duties. This evidence of coolness and self-possession, together with his good conduct in the other battles of the Hartford, I hope will entitle him to the medal.

6. James R. Garrison, coal-heaver, had one of his great toes shot off; but, without leaving his station at the shell whip, bound up the wound, and remained at work until again severely wounded.

7. Thomas O'Connell, coal-heaver. Although on the sick list and quite unwell, he went to his station at the shell whip, where he remained until his right hand was shot away.

8. Wilson Brown, landsman, was stationed at the shell whip on the berth deck. A man was killed on the ladder above him, and thrown with such violence against Brown as to knock him into the hold, where he lay for a short time senseless, but, on recovering, he immediately returned to his station, though, besides himself, only one of the original six belonging there had escaped.

9. John Lamson, landsman, was one of the six men stationed at the shell whip on the berth deck; a shell killed or wounded the whole number. Lamson was wounded in the leg, and thrown with great violence against the side of the ship, but as soon as he recovered himself, although begged to go below, he refused, and went back to the shell whip, where he remained during the action.

10. George Melage, paymaster's steward, although quite badly hurt by splinters, refused to leave his station, and performed very efficient service until the end of the action.

Very respectfully, your obedient servant,

P. DRAYTON, *Captain.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Captain T. A. Jenkins.

UNITED STATES STEAM-SHIP RICHMOND,
Inside of Mobile Bay, August 10, 1864.

SIR: In my report of the fifth instant I expressed my great admiration of and thanks for, the cool and courageous conduct of every officer and of every man serving on board of this ship in the terrible conflict with the rebel batteries at Fort Morgan, the iron-clad Tennessee, and gunboats Selma, Morgan, and Gaines, on the morning of that day.

I consider it, however, but an act of plain and simple duty on my part to go further now, and respectfully invite your attention, and that of the department through you, to the highly meritorious conduct of the under-mentioned petty officers and seamen on board of this ship, who exhibited on that memorable

occasion, and in conflict with the rebels previously, a will and determination, and set an example to their shipmates and messmates worthy, in my opinion, of the highest commendation.

1. William Densmore (chief boatswain's mate) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He has been in the naval service twelve years; was on board the sloop-of-war St. Louis, blockading off Pensacola and the head of the passes of the Mississippi until the expiration of his term of service in 1861; reshipped the same year, and joined the Brooklyn; was in the actions with Forts Jackson and St. Philip, and with the rebel iron-clads and gunboats below New Orleans; was in the action with the Chalmette batteries; present at the surrender of New Orleans; and on board the Brooklyn in the attacks upon the batteries below Vicksburg, in 1862. Joined the Richmond in September, 1863.

2. Adam Duncan (boatswain's mate) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He has been six years in the naval service; was on board the Brooklyn in the actions with Forts Jackson and St. Philip, and with the rebel iron-clads and gunboats below New Orleans; was in the action with the Chalmette batteries; present at the surrender of New Orleans; and on board the Brooklyn in the attack upon the batteries below Vicksburg, in 1862. Joined the Richmond in September, 1863.

3. Charles Deakin (boatswain's mate) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He deserves special notice for his good example and zeal in going to and remaining at his quarters during the whole action, although quite sick. He has been in the naval service six years; was on board the Brooklyn in the actions with Forts Jackson and St. Philip, and with the rebel iron-clads and gunboats below New Orleans; was in the action with the Chalmette batteries; present at the surrender of New Orleans; and on board the Brooklyn in the attack upon the batteries below Vicksburg, in 1862. Joined the Richmond in September, 1863.

4. Cornelius Cronan (chief quartermaster) is recommended for coolness and close attention to duty in looking out for signals, and steering the ship in the action in Mobile bay, on the morning and forenoon of August 5, 1864. He has been in the naval service eight years. Joined the Brooklyn in December, 1861; was in the actions with Forts Jackson and St. Philip, and with the rebel iron-clads and gunboats below New Orleans; was in the action with the Chalmette batteries; present at the surrender of New Orleans; and in the attack on the batteries below Vicksburg, in 1862. Joined the Richmond in September, 1863.

5. William Wells (quartermaster) is recommended for coolness and close attention to duty as leadsman and look-out in the action in Mobile bay on the morning and forenoon of August 5, 1864. Joined the Brooklyn in September, 1861; was in the action with Forts Jackson and St. Philip, and with the rebel iron-clads and gunboats below New Orleans; and on board of the Brooklyn in the attack upon the batteries below Vicksburg, in 1862. He received two wounds in the left leg, and a severe one in the head, in the engagements with Forts Jackson and St. Philip, April 24, 1862, the latter causing "opacity of the cornea, and loss of vision of the right eye," as certified by the surgeon of the Brooklyn. Joined the Richmond in September, 1863.

6. Henry Sharp (seaman) is recommended for coolness and courage as captain of 100-pounder rifle gun on topgallant forecastle in the action in Mobile bay on the morning and forenoon of August 5, 1864. He fought his gun when under the hottest fire from the enemy's batteries, at short-range, with a coolness and effectiveness that won not only the admiration of the commanding

officer of the division, but of all others who had an opportunity to observe him. He has been in the naval service thirty-two years; joined the *Richmond* at Norfolk when first put in commission, twenty-seventh September, 1860. At the expiration of his term of service, in 1863, reshipped for the period of three years. He was in action on board of the *Richmond* with the rebels at the head of the passes of the Mississippi; at the bombardment of Fort McRea at Pensacola, which lasted an entire day, when he received a severe splinter wound in the left hand which permanently disabled two of his fingers, and notwithstanding the severity of the wound, as soon as it was dressed by the surgeon, he returned to his gun without the permission of the surgeon, and persisted in remaining at his quarters, using his right hand, until the action ceased. He was in the actions with Forts Jackson and St. Philip, and with the rebel iron-clads and gunboats below New Orleans; in action with the Chalmette batteries; present at the surrender of New Orleans; fought the batteries of Vicksburg twice; was in the memorable attack on Port Hudson on the fourteenth of March, 1863; was captain of a nine-inch gun in the naval nine-inch gun battery, commanded by Lieutenant Commander Edward Terry, placed in rear of Port Hudson during the siege of that place in 1863; he was also captain of a gun in the naval battery established at Baton Rouge, and commanded by Lieutenant Commander Edward Terry, after the repulse of the army and death of General Williams at that place.

7. Walter B. Smith (ordinary seaman) is recommended for coolness and good conduct at the rifle 100-pounder on the topgallant forecastle, and for musket firing into the gun-ports of the rebel iron-clad *Tennessee*, in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was on board the United States steamer *Hatteras* when that vessel was sunk by the piratical vessel commanded by the notorious Semmes, off Galveston; joined the *Richmond*, after having been exchanged, September 1863; and his conduct on board of the ship has been of the most exemplary kind.

8. George Parks (captain of forecastle) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. He joined the *Richmond* in September, 1860; reshipped October, 1863; was in the actions with Fort McRea; with the rebel vessels at the head of the passes of the Mississippi; in passing Forts Jackson and St. Philip; the Chalmettes; twice before Vicksburg batteries; at Port Hudson; was captain of a gun in the naval nine-inch gun battery at the siege of Port Hudson, and present at the surrender of New Orleans.

9. Thomas Hayes (cockswain) is recommended for coolness and good conduct as captain of No 1 gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was on board the *Brooklyn* in the actions with Forts Jackson and St. Philip, and the iron-clads and gunboats below New Orleans; with the Chalmette battery; batteries below Vicksburg; and was present at the surrender of New Orleans.

10. Lebeus Simkins (cockswain) is recommended for coolness and courage in the action in Mobile bay on the morning and forenoon of August 5, 1864. He joined the *Brooklyn* in January, 1861; was in the actions with Forts Jackson and St. Philip, and the rebel iron-clads and gunboats below New Orleans; Chalmette batteries; batteries below Vicksburg; and present at the surrender of New Orleans. Joined the *Richmond* October, 1863.

11. Oloff Smith (cockswain) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was on board the *Richmond* in the actions with Fort McRea; at the head of the passes of the Mississippi; with the Forts Jackson and St. Philip; the rebel iron-clads and gunboats below New Orleans; the Chalmette batteries; twice with the batteries of Vicksburg in attempting to pass; and at the siege of Port Hudson; and present at the surrender of New Orleans. He has been cockswain on board the *Richmond* for twenty consecutive months.

12. Alexander H. Truett (cockswain) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was in the actions with Forts Jackson and St. Philip; the Chalmette batteries; the rebel iron-clads and gunboats below New Orleans; the batteries below Vicksburg; and was present at the surrender of New Orleans. He was present at and assisted in the capture of the piratical steamer *Miramon* and *Marquis de la Habana*, in March, 1860, near Vera Cruz.

13. Robert Brown (captain of top) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was on board the *Westfield* in the actions with Forts Jackson and St. Philip; the Chalmettes; and present at the surrender of New Orleans; also with the batteries at Vicksburg. Joined the *Richmond* in September, 1863.

14. John H. James (captain of top) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He came off the sick-list at the commencement of the action, went to his quarters, and fought his gun well during the entire action. He was in the actions with Forts Jackson and St. Philip; the rebel iron-clads and gunboats below New Orleans; the Chalmettes; the batteries below Vicksburg; and present at the surrender of New Orleans. Joined the *Richmond* September, 1863.

15. Thomas Cripps (quartermaster) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was in the Brooklyn in the actions with Forts Jackson and St. Philip; the Chalmettes; batteries below Vicksburg; and present at the surrender of New Orleans. Joined the *Richmond* in September, 1863.

16. John Brazell (quartermaster) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was in the Brooklyn in the actions with Forts Jackson and St. Philip; the Chalmettes; batteries below Vicksburg; and present at the surrender of New Orleans. Joined the *Richmond* in September, 1863.

17. James H. Morgan (captain of top) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He joined the *Colorado* in May, 1861; volunteered for the United States steamer *Mississippi*; was in the action with Forts Jackson and St. Philip; the Chalmettes; Vicksburg; Port Hudson; and present at the surrender of New Orleans; was on board the *Ironsides* at Charleston. Joined the *Richmond* in October, 1863.

18. John Smith, second, (captain of top,) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was on board the *Varuna* when she was sunk by the rebel vessels, after having passed Forts Jackson and St. Philip; was transferred to the Brooklyn; and was in the action with the batteries below Vicksburg. He joined the *Richmond* in September, 1863.

19. James B. Chandler (cockswain) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of the 5th of August, 1864. He deserves special notice for having come off the sick-list and going to and remaining at his quarters during the entire action. Joined the Brooklyn in November, 1861; was in the actions with Forts Jackson and St. Philip; the Chalmettes; batteries below Vicksburg; and present at the surrender of New Orleans. Joined the *Richmond* in September, 1863.

20. William Jones (captain of top) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of the fifth of August, 1864. Joined the *Dacotah* in September, 1861, and was on board the *Cumberland* when sunk by the *Merrimack* at Newport News. Joined the *Richmond* in September, 1863.

21. William Doolan (coal-heaver) is recommended for coolness and good conduct, and for refusing to leave his station as shot and shell passer, after having been knocked down and badly wounded in the head by splinters; and upon going to quarters the second time he was found at his station nobly doing his duty in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was in Fort Pickens when it was bombarded by the rebels; was on board the Brooklyn in the actions with Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; the batteries below Vicksburg; and present at the surrender of New Orleans.

22. James Smith, 1st, (captain of fore-castle,) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864.

23. Hugh Hamilton (cockswain) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. Was in the actions with Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; the batteries below Vicksburg; present at the surrender of New Orleans. Joined the Richmond in October, 1863.

24. James McIntosh (captain of top) is recommended for coolness and good conduct in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was present and assisted in the capture of the batteries at Hatteras inlet, and on board the Cumberland when she was sunk by the Merrimack at Newport News. Joined the Richmond in September, 1863.

25. William M. Carr (master-at-arms) is recommended for coolness, energy, and zeal in the action of Mobile bay on the morning and forenoon of August 5, 1864. Volunteered to direct, under the orders of the commander of the division, the passing of shells from the shell-rooms, in addition to his duties connected with the care of lights, which he performed most satisfactorily. Has been master-at-arms on board the Richmond since September, 1860; was in the actions with Fort McRea; at the head of the passes of the Mississippi; Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; Vicksburg; Port Hudson; and present at the surrender of New Orleans.

26. Thomas Atkinson (yeoman) is recommended for coolness and energy in supplying the rifle ammunition, which was under his sole charge, in the action in Mobile bay on the morning and forenoon of August 5, 1864. He was a petty officer on board the United States frigate Congress with me in 1842-'46; was present and assisted in capturing the whole of the Buenos Ayrean fleet by that vessel off Montevideo. Joined the Richmond in September, 1860; was in the actions with Fort McRea; the head of the passes of the Mississippi; Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; Vicksburg; Port Hudson; and at the surrender of New Orleans.

27. David Sprowls (orderly sergeant of marine guard) is recommended for coolness and for setting a good example to the marine guard, working a division of great guns in the action in Mobile bay on the morning and forenoon of August 5, 1864. Joined the Richmond September 27, 1860; was in the actions with Fort McRea; the head of the passes of the Mississippi; Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; Vicksburg; Port Hudson; and present at the surrender of New Orleans. He has been in the service twenty-eight years.

28. Andrew Miller (sergeant of marines) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. Was on board the Brooklyn in the actions with Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; batteries below Vicksburg; and present at the surrender of New Orleans.

29. James Martin (sergeant of marines) is recommended for coolness and good conduct as captain of a gun in the action in Mobile bay on the morning and forenoon of August 5, 1864. Was in the actions with Forts Jackson and St. Philip; the Chalmettes; the rebel iron-clads and gunboats below New Orleans; Vicksburg; Port Hudson; and present at the surrender of New Orleans, on board of the Richmond.

I am, very respectfully, your obedient servant,

THORNTON A. JENKINS,

Captain.

Rear-Admiral D. G. FARRAGUT,

Flag-Ship Hartford, Mobile Bay.

Additional report of Captain J. B. Marchand.

UNITED STATES STEAM-SLOOP LACKAWANNA,

Mobile Bay, August 9, 1864.

SIR: In the action of the fifth instant the following named petty officers, and others of inferior rating, were conspicuous for their energy and bravery, and deserve medals of honor; but under the fourth rule of the general order of the Navy Department, No. 10, dated April 3, 1863, their special signal acts of valor cannot be cited so as to authorize me to recommend their obtaining medals:

1. William Phinney, boatswain's mate, as captain of a gun, showed much presence of mind and coolness in managing it, and the great encouragement he gave the crew.

2. John Smith, captain forecastle, was first captain of a gun, and finding that he could not sufficiently depress his gun when alongside of the rebel iron-clad Tennessee, threw a hand holy-stone into one of the ports at a rebel using abusive language against the crew of the ship.

3. Samuel W. Kinnaird, landsman, set an example to the crew by his presence of mind and cheerfulness that had a beneficial effect.

4. Robert Dougherty, landsman, took the place of the powder-boy at his gun without orders when the powder-boy was disabled; kept up a supply and showed much zeal in his new capacity.

5. Michael Cassidy, landsman, first sponger of a gun, displayed great coolness and exemplary behavior, eliciting the applause of his officers and of the gun's crew.

Very respectfully, your obedient servant,

J. B. MARCHAND, *Captain.*

Admiral D. G. FARRAGUT,

Commanding W. G. Squadron.

UNITED STATES STEAM-SLOOP LACKAWANNA,

Mobile Bay, August 9, 1864.

SIR: I respectfully bring to your attention the following petty officers, &c., of this ship who evinced in the battle of the fifth instant signal acts of bravery which should justly entitle them to medals of honor:

1. George Taylor, armorer, although wounded, went into the shell-room, and with his hands extinguished the fire from a shell exploded over it by the enemy.

2. Lewis Copat, landsman, remained at his gun after he was severely wounded, until relieved by another person, was then taken below, and after reporting to the surgeon, returned to his station at the gun, and resumed his duties till the action was over, and was then carried below.

3. James Ward, quarter-gunner, being wounded and ordered below, would not go, but rendered much aid at one of the guns when the crew was disabled, and subsequently remained in the chains heaving the lead, until nearly in collision with the rebel iron-clad Tennessee.

4. Daniel Whitfield, quartermaster, remarkable coolness as captain of a gun in holding on to the lock-string and waiting for some time whilst alongside of the rebel iron-clad Tennessee, and firing that the shot might enter her port.

5. John M. Burns, seaman, severely wounded and sent below under the surgeon's charge, would not remain unemployed, but assisted the powder division until the action was over.

6. John Edwards, captain of top, second captain of a gun, although wounded, would not, when ordered, go below to the surgeon, but took the place of the first captain during the remainder of the battle.

7. Adam McCulloch, seaman, being wounded, would not leave his quarters although ordered to do so, but remained until the action was over.

Very respectfully, your obedient servant,

J. B. MARCHAND, *Captain.*

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. Squadron.

REPORT OF CASUALTIES IN THE FLEET IN THE ATTACK ON THE DEFENCES
OF MOBILE HARBOR.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD,
Mobile Bay, August 8, 1864.

SIR : In my despatch, number three hundred and thirty-five, written on the evening of the engagement of the fifth instant, the casualties then reported were forty-one killed, and eighty-eight wounded.

More detailed reports, since received, make the casualties fifty-two killed and one hundred and seventy wounded, namely :

	Killed.	Wounded.
Hartford.....	25	28
Brooklyn.....	11	43
Lackawanna.....	4	35
Oneida.....	8	30
Monongahela.....	0	6
Metacomet.....	1	2
Ossipee.....	1	7
Richmond.....	0	2 slightly.
Galena.....	0	1
Octorara.....	1	10
Kennebec.....	1	6

I forward herewith the reports of the surgeons of these vessels, giving the names of the killed and wounded, and the character of the wounds.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

Report of casualties on the United States Ship Hartford.

Osgood, ordinary seaman; Adolphus Pulle, seaman; Thomas Bayne, ordinary seaman; John C. Scott, ordinary seaman; Thomas Stanton, seaman; James Alexander, landsman; Henry Clark, first-class boy; Wm. E. Andrews, captain after-guard; Frederick Munsell, landsman; George Walker, landsman; Thomas Wildes, landsman; George Stillwell, nurse; David Morrow, quarter gunner; Peter Duncan, coal-heaver; Andrew E. Smith, coal-heaver; Francis Campbell, second-class fireman; Charles Stevenson, second-class boy; David Curtin, landsman.

Severely wounded.—Wilder Verner, landsman; M. C. Forbes, captain top; Michael Fanya, landsman; James S. Geddis, landsman; Wm. G. Trask, ordinary seaman; Wm. A. Stanley, seaman; Thomas O'Connel, coal-heaver; James R. Garrison, coal-heaver; E. E. Johnson, first-class boy; George E. Fleke, first-class boy; Charles Dennis, (colored,) landsman; Auguste Simmons, ordinary seaman; William Thompson, 1st, ordinary seaman; Peter Pitts, (colored,) landsman; R. D. Dumphy, coal-heaver; Wm. Doyle, first-class boy; Wm. Eldin, seaman; Walter Lloyd, first-class boy; R. P. Herrick, acting master's mate; Wm. McEwan, acting third assistant engineer.

Slightly wounded.—L. P. Adams, lieutenant; Robert Dixon, boatswain; William A. Donaldson, seaman; George A. Wightman, landsman; Michael English, second-class fireman; James F. Brown, landsman; James Anderson, seaman; Stephen H. Jackson, first-class boy.

Killed, twenty-three; wounded severely and transferred to hospital at Pensacola, twenty; wounded slightly, remaining on board, eight. Total, fifty-one

Respectfully,

P. LANSDALE, *Surgeon.*

Captain P. DRAYTON, U. S. N.,

Com'dg United States Steamer Hartford, Mobile Bay.

Report of casualties on the United States Steamer Brooklyn.

UNITED STATES STEAMER BROOKLYN,

In the Bay of Mobile, August 6, 1864.

SIR: In addition to the list of casualties resulting from the action of the rebel forts and fleet yesterday, I have to report thirteen more to-day, some of which were overlooked in the haste of making out the list, and others failed to report themselves. You will observe this addition of thirteen to the list of wounded makes a total of fifty-four instead of forty-three, the number reported yesterday.

I also submit the name, rate, and remarks in each case.

Killed.—William H. Cook, acting master's mate, splinter wound of both legs and thighs, the left hand carried away; Eli Harwood, captain's cook, left shoulder and arm badly lacerated; John Ryan, landsman, left half of head carried away; Charles B. Seymour, seaman, upper half of head carried away; Thomas Williams, seaman, spine and ribs carried away; Lewis Richards, seaman, back part of chest and head carried away; Michael Murphy, private marine, right leg and half of the pelvis carried away; William Smith, private marine, struck by a shot and knocked overboard; Richard Burke, coal-heaver, back part of chest carried away, and compound fracture of left leg; Anthony Dunn, first-class fireman, abdomen and chest opened by shell; James McDermott, landsman, left side of abdomen carried away.

Wounded.—Charles F. Blake, lieutenant, flesh wound of right leg, slight; Douglass R. Cassell, acting ensign, (in regular navy,) wound of scalp, slight; Daniel C. Brayton, sailmaker, contusion of right forearm, severe; Abraham L. Stephens, acting master's mate, wound of face, slight; Alexander Mack, captain maintop, compound fracture of left hand, severe; Patrick Brierton, landsman, wound in right arm, severe; Francis Prior, ordinary seaman, compound fracture of rib, wound of scalp, dangerous; Rufus Brittell, landsman, left eye destroyed, severe; Patrick Duggin, landsman, fracture of the left leg, severe; John McPherson, seaman, scalp wound and contusion, severe; John Dunn, coal-heaver, left eye destroyed, severe; Charles Steinbeck, ordinary seaman, fracture of skull, severe; Daniel McCarthy, landsman, compound fracture of scapula, severe; George W. Hersey, seaman, flesh wound over hip, severe; Wm. H. Harrison, ordinary seaman, flesh wound in right arm, severe; Thomas Dennison, landsman, wounded over the left eye, severe; Frank Hanson, seaman, contusion of both eyes, severe; Alvin A. Carter, ordinary seaman, fracture of right thigh, severe; George R. Leland, private marine, bolt driven into left thigh, severe. William McCaffrey, seaman, wound over eye, slight; John Bryant, armorer's mate, scalp wound, slight; Roland M. Clark, ordinary seaman, flesh wound in left forearm, slight; William Brown, landsman, splinter wounds in thigh and shoulder, slight; Charles Miner, landsman, contusion of shoulder, slight; Lewis Hareck, ordinary seaman, contusion of right arm and chest, slight; Alexander Degges, landsman, abrasion, slight; Frank Bennett, first-class boy, contusion, slight; Bernard Brown, ordinary seaman, scalp wound, slight; William Robinson, captain foretop, contusion, slight; John Thompson, ordinary seaman, contusion, slight; William H. Brown, landsman, contusion and abrasion, slight; Barclay Redington, coal-heaver, scalp wound, slight; John K. Housel, coal-heaver, contusion and abrasion, slight; William Frick, ordinary seaman, abrasion of side and thigh, slight; John Maxwell, coal-heaver, scalp wound, slight; James Sterling, coal-heaver, contusion of side, slight; John McKennon, ordinary seaman, contusion, slight; Benjamin K. Taylor, landsman, contusion, slight; Isaac B. Larett, seaman, contusion, slight; and James Shea, quarter-gunner, contusion, slight. All these wounds are slight. Patrick McGowan, coal-heaver, wound of left elbow, severe; Joseph Machon, first-class boy, splinter wound and contusion, severe; William McCarren, landsman, contusion of left eye, severe.

Killed, 11; wounded, 43. Total, 54.

Very respectfully, your obedient servant,

GEORGE MAULSBY, *Surgeon*,

Captain J. ALDEN,

Commanding U. S. Steamer Brooklyn.

Report of casualties on the United States Steamer Lackawanna.

UNITED STATES STEAM-SLOOP LACKAWANNA,

Mobile Bay, August 5, 1864.

SIR: I have the honor to report the following list of casualties which have occurred in the action of this day while passing the forts and occupying Mobile bay.

Wounded severely.—J. R. M. Mullany, commander, left arm amputated; R. H. Fitch, first assistant engineer, scalded; Oliver Crommelia, surgeon's steward, scalded; John Peacock, first-class fireman, scalded; William Mitchell, landsman, scalded; John Nelson, landsman, scalded; William Ager, coal-heaver, scalded; William Burtis, first-class fireman, scalded; Samuel Vanasery, coal-heaver, scalded; William Newland, ordinary seaman, flesh wound; John Preston, landsman, eyes; Charles Matthews, landsman.

Wounded slightly.—William H. Hunt, chief engineer, scalded; George A. Ebbets, captain's clerk, contusion; William P. Treadwell, paymaster's clerk, scalded; Peter McKeloye, second-class fireman, scalded; Stephen Dolan, first-class fireman, scalded; John Boyle, coal-heaver, scalded; Moses Jones, coal-

heaver, scalded; John Ralton, landsman, scalded; Edward Thomas, ordinary seaman, scalded; James Sheridan, quartermaster, contusion; John E. Jones, quartermaster, contusion; Henry Binney, quartermaster, contusion; Francis Brown, quarter gunner, contusion; Christian Christeinick, landsman; Roger Sharman, landsman; John Johnson, ordinary seaman; David Johnston, corporal marines; John Kilroy, private marine.

Killed, eight; wounded severely, twelve; wounded slightly, eighteen.

Very respectfully,

JOHN Y. TAYLOR, *Surgeon.*

Lieutenant C. L. HUNTINGTON, U. S. N.,
Commanding U. S. Steamer Oneida.

Report of casualties on the United States steamer Monongahela.

UNITED STATES STEAMER MONONGAHELA,
Mobile Bay, August 5, 1864.

SIR: The following are the casualties on board this ship, resulting from the action to-day with Forts Morgan and Gaines and the rebel rams:

Roderick Prentiss, lieutenant, both legs badly injured by splinters, left one amputated; Michael Smith, boy, severe lacerated wound of scalp by splinters; William Feeney, paymaster, contusion of back and left arm, slight; Holbert Lane, surgeon's steward, wound of scalp, splinter, slight; James Johnston, landsman, wound of head, splinter, not dangerous; Richard Condon, landsman; wound of back, splinter, slight.

I am, very respectfully, your obedient servant,

DAVID KINDLEBERGER,
Surgeon United States Navy.

Commander JAMES H. STRONG, U. S. N.,
Commanding United States Steamer Monongahela.

Report of casualties on the United States steamer Metacomet.

U. S. STEAMER METACOMET, W. G. BLOCKADING SQUADRON,
Mobile Bay, August 8, 1864.

SIR: I have to report that on the morning of the 5th instant, during the engagement while passing the forts and engaging the gunboats, the following casualties occurred:

John Stewart, landsman, killed; Julian J. Butler, ordinary seaman, shell wound; Oliver D. Wolfe, fireman, slightly wounded.

I am, sir, very respectfully, your obedient servant,

E. D. PAYNE,
Assistant Surgeon.

Lieut. Commander JAS. E. JOUETT, *Commanding.*

Report of the casualties on the United States steamer Ossipee.

UNITED STATES STEAM-SLOOP OSSIPEE,
Mobile Bay, August 5, 1864.

SIR: I have the honor to report the following casualties on board this ship during the engagement of this day with the enemy's batteries on shore and afloat:

Lewis Lord, landsman, nape of neck, dangerous; Owen Maines, seaman forearm broken, shoulder-joint, head, and hip contused, since died of wounds, killed; John Harris, quarter gunner, gunshot wound in lower jaw, serious; Thomas Rogers, landsman, contusion of right leg, slight; Henry Johnson, ordinary seaman, splinter wound, slight; James Sweeney, seaman, splinter wound, slight; George Rowe, second-class fireman, splinter wound, slight; Sam Hazard, landsman, splinter wound, slight.

Total—One killed, seven wounded.

Very respectfully, your obedient servant,

B. F. GIBBS, *Surgeon.*

Commander W. E. LEROY,

Com'dg United States Steam-Sloop Ossipee, Mobile Bay.

Report of casualties on the United States steamer Galena.

UNITED STATES STEAMER GALENA,

August 5, 1864.

SIR: I would most respectfully report the following casualty on board this vessel while passing Fort Morgan:

Wounded.—James McCafferty, coal-heaver, scalp wound, with concussion of the brain.

Very respectfully,

GEO. P. WRIGHT,

Acting Assistant Surgeon, U. S. Navy.

Lieut. Commander C. H. WELLS, U. S. N.,

Commanding United States Steamer Galena.

Report of casualties on the United States steamer Octorara.

UNITED STATES STEAMER OCTORARA,

Mobile, Ala., August 5, 1864.

SIR: I have to report the following as a list of casualties occurring this morning while passing Forts Morgan and Gaines, viz:

Killed.—W. H. Davis, seaman, by splinters.

Wounded.—Lieutenant Commanding C. H. Greene, contusion of leg; Acting Ensign Maurice McEntree, contusion of the thigh; Acting Master Henry R. Billings, contusion of face, all from splinters, slight; James McIntosh, cockswain, incised wound of scalp, not severe; John Govard, seaman, lacerated wound of forehead, quite severe; Charles Howard, seaman, contusion of sacrum, slight; William H. Nice, boatswain's mate, severe contusion of right eye; Andrew Crough, quartermaster, contusion of scalp, slight; George Smith, ship's corporal, wound of upper third left arm, quite severe; John Robinson, quartermaster, contusion of left foot, slight.

Killed, one; wounded, ten.

I am, sir, very respectfully, your obedient servant,

EDWARD R. DODGE,

Assistant Surgeon United States Navy.

Lieutenant Commander C. H. GREENE,

Commanding United States Steamer Octorara.

Report of casualties on the United States Steamer Kennebec.

UNITED STATES STEAMER KENNEBEC,
Mobile Bay, August 6, 1864.

SIR: I respectfully report the following casualties in action yesterday morning while passing Fort Morgan, namely:

Daniel Godfrey, coal-heaver, mortally wounded in the abdomen, by fragment of shell from the rebel iron-clad Tennessee, and has since died; Acting Ensign H. E. Tinkham, serious gunshot wounds and contusions of left arm, side, thigh, and leg, by fragments of shell from the rebel ram Tennessee, no fracture; Peter R. Post, landsmen, gunshot wound and fracture of right cheek-bone, serious; Charles Sanders, master-at-arms, slight contusion of lips; J. D. Ireson, captain of the hold, Isaac Fisher, (colored,) first-class boy, and several others, very slight contusions by fragments of shell from the Tennessee, and splinters caused by it; and Kimball Prince, landsman, contusion of right shoulder, slight, by splinter caused by a solid shot from the fort.

Very respectfully,

GEORGE W. HATCH,
Acting Assistant Surgeon United States Navy.

Lieut. Commander W. P. McCANN, U. S. N.,
Commanding United States Steamer Kennebec.

LOSS OF THE UNITED STATES STEAMER PHILIPPI.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD,
Mobile Bay, August 8, 1864.

SIR: I regret to inform the department that after I had passed the forts some time I saw a steamer on fire inside the bay. I soon perceived that it was the Phillippi, and I could not imagine how she came to be set on fire.

I have since received the report of her commanding officer, Acting Master J. T. Seaver, which is herewith enclosed.

The facts appear to be, that Acting Master Seaver, on the evening before the action, asked Fleet-Captain Drayton if he should not follow the squadron into the bay. Captain Drayton told him that that would be a folly, and ordered him to go and deliver the ammunition he had brought from Pensacola on board the Tennessee, and then report to Lieutenant Commander Grafton, senior officer for duty outside. Instead of doing this he followed the fleet in, and was struck with a shot from the fort, when he put his helm a-port and ran her on the bank. After having had two men killed and two wounded he deserted the vessel, leaving his signal-book (boat code) on the quarter deck, where it was found by the enemy, who subsequently boarded the vessel.

* * * * *

The rebel set the vessel on fire, and we have thus lost one of the most efficient vessels in the squadron for all kinds of express duty, and we are sadly in want of just such vessels.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

Report of Acting Master James T. Seaver.

UNITED STATES STEAMER COWSLIP,

August 6, 1864.

SIR: I beg leave to make the following report to you in regard to the loss of the United States steamer Philippi:

At daylight hove up anchor and steamed alongside the Tennessee, and discharged all the ordnance stores and provisions belonging to other vessels; not having orders to report to any one, and the verbal order I received being to discharge the stores into the Tennessee as quick as possible, I did so. Wishing to be of assistance to the fleet in case any vessels were disabled, and knowing the power of my steamer, immediately after the freight was out I dropped off from the Tennessee, got hawsers, lines, &c., all ready to be of assistance in towing any disabled vessel which would need my services. At forty-five minutes past seven stood up the channel for the fleet, keeping as far out of range of the fort as I could judge was necessary to clear the shoal, the quartermaster at the lead from the time of making the bar. At about fifteen minutes past nine, while going ahead slow, the quartermaster gave the cast, a quarter less three, and the steamer immediately struck. I rang three bells and tried to back her off, but she did not stir. I kept backing for ten minutes; had about thirty-five pounds of steam on. The fort then opened fire on us, and, getting our range, every other shell did execution—the second shell or shot, (as it did not explode I could not tell which,) struck the rail about the starboard bow-port, and immediately killed Frank Wilson, landsman. One shot passed through the boiler, entirely disabling us, and another burst in the engine-room. At this time Fort Morgan kept up a constant fire at us, every shell doing more or less execution. The men, while I was forward, many of them rushed aft and commenced cutting the boats' falls. Hearing this, I came aft and ordered them to stop, which they did, and the boats were lowered with safety, but the men crowded in and two of the boats were immediately filled. I put the wounded in one of the boats and sent the dying, in charge of Acting Ensign L. R. Vance, to the Cowslip for assistance.

The deck being full of steam and smoke, and indications of the ship being on fire, and two of my men being wounded and one scalded, and almost every shell, either direct or ricochet, striking the steamer, and the boilers being disabled, and my men, several of them, being almost paralyzed with fear, also the sight of the rebel steamer coming out, and the utter impossibility to save the steamer or resist the enemy, I judged it best to abandon her.

I pulled alongside the Cowslip and Buckthorn, the two vessels being close to each other, and put the wounded on board; both vessels then stood towards the Genesee. I went on board and reported to Captain Grafton; was ordered to put the wounded on board the Tennessee and report to Captain Grafton again, but as the Genesee steamed towards Pelican channel I was forced to remain on the Tennessee. The quartermaster, William H. French, who was wounded in the stomach, died at twenty minutes past seven.

List of casualties.—Frank Wilson, landsman, killed; William H. French, quartermaster, mortally wounded; John Collins, coal-heaver, scalded; and Joseph Boyd, slightly wounded.

The officers were perfectly cool throughout the time while under fire and in leaving the ship.

Very respectfully, your obedient servant,

JAMES T. SEAVER, *Acting Master.*

Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron.

LOSS OF THE MONITOR TECUMSEH.

*Report of Rear-Admiral D. G. Farragut.*FLAG-SHIP HARTFORD, W. G. BLOCKADING SQUADRON,
Mobile Bay, August 27, 1864.

SIR: I have the honor to forward herewith (marked No. 1) a copy of a report made to me by Acting Masters C. F. Langley and Gardner Cottrell, two of the survivors of the iron-clad Tecumseh, and in which are given the names of six men who were saved in the same boat, namely; S. S. Shin, gunner's mate; John Gould, quarter gunner; Frank Commins, seaman; Richard Collins, seamen; and Peter Parks, seaman.

These officers are certainly in error in their statement that a row of buoys stretched from the shore a distance of one to two hundred yards. We now know that the channel adjacent to the shore was entirely clear of torpedoes, and that the latter were placed between the two large buoys, to which I have referred in my reports.

In addition to the persons named in this report as saved, the boat from the Metacomet, under Acting Ensign Nields, rescued Acting Ensign John P. Zetlich, Chauncey V. Dean, quartermaster; William Roberts, quartermaster; James McDonald, seaman; George Major, seaman; James Thorn, seaman; Charles Packard, ordinary seaman; William Fadden, landsman; and William C. West, coal-heaver, with the pilot of the Tecumseh, John Collins.

Four others also swam to the beach and were taken prisoner at Fort Morgan and immediately sent away.

This information was received when communicating by flag of truce with the fort. None of them, we were told, were officers.

Very respectfully, your obedient servant.

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

*Joint report of Acting Masters C. F. Langley and G. Cottrell.*UNITED STATES SHIP POTOMAC,
Pensacola, August 6, 1864.

SIR: Believing that we are the only surviving officers of the United States monitor Tecumseh, we feel it our duty to report the circumstances attending her loss, and of the safety of a boat's crew.

When nearly abreast of Fort Morgan, and about one hundred and fifty yards from the beach, a row of buoys was discovered stretching from the shore, a distance from one to two hundred yards. It being reported to Captain Craven, he immediately gave the vessel full speed, and attempted to pass between two of them. When in their range a torpedo was exploded directly under the turret, blowing a large hole through the bottom of the vessel, through which the water rushed in with great rapidity.

Finding that the vessel was sinking, the order was given to leave our quarters, and from that moment every one used the utmost exertions to clear himself from the wreck.

After being carried down by the vessel several times, we were picked up in a drowning condition by one of our boats, manned by the following men: S. S. Shinn, gunner's mate; John Gould, quarter gunner; Frank Commens, seaman; Richard Collins, seaman; and Peter Parkes, landsman, all of whom are now on board this ship.

Captain Craven was seen in the turret by Mr. Cottrell, just before the vessel sunk, and as he had a life-preserving vest on, we have hopes that he reached the shore.

Not recovering from our exhausted condition until the boat was abreast of the Hartford, and knowing that an attempt to board one of the attacking fleet would cause the loss of her position, we pulled for the Buckthorn, from which vessel we were sent to the Tennessee, and afterwards, by Captain Grafton's order, sent to this ship. There was no opportunity of making a report to Captain Grafton, otherwise it would have been done in person.

Hoping that the course pursued by us will meet your approval, we are, very respectfully, &c.,

C. F. LANGLEY, *Acting Master.*

GARDNER COTTRELL, *Acting Master.*

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron.

RECONNOISSANCE OF MOBILE BAY.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
Mobile Bay, August 16, 1864.

SIR: I have the honor to report to the department that yesterday I made a reconnoissance in the Metacomet, accompanied by the Selma and several gun-boats and light-draught iron-clads, in the vicinity of Mobile, approaching within $3\frac{1}{2}$ miles of the city. We discovered that the rebels had sunk the Nashville, the vessel intended for an iron-clad, across the channel, completely obstructing it, with the addition of a row of piles guarded by forts. Until these obstructions can be removed, there will be no possibility of our reaching Mobile with any of our light draught vessels.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

CAPTURE OF FORT MORGAN.

Report of Rear-Admiral D. C. Farragut.

FLAG-SHIP HARTFORD,
Mobile Bay, August 23, 1864.

SIR: I have the honor to inform the department that on the evening of the twenty-first instant General Granger informed me that his batteries would be ready to open on Fort Morgan at daylight the next morning. I accordingly gave directions for the monitors and the vessels with suitable guns to move up and be ready to open upon it with the army.

I had previously landed four nine-inch guns and placed them in battery, under the command of Lieutenant H. B. Tyson, of the Hartford, and manned them with crews taken from the Hartford, Brooklyn, Richmond, and Lackawanna. They did good service in conjunction with the batteries of the army.

At daylight on the twenty-second the bombardment began from the shore batteries, the monitors and ships inside the bay and outside, and a more magnificent fire I think has rarely been kept up for twenty-four hours.

At half past eight p. m. the citadel took fire, and the general ordered the near

batteries to redouble their fire. At six this morning an explosion took place in the fort, and at half past six the white flag was displayed on the fort. I immediately sent Fleet-Captain Drayton to meet General Granger to arrange the terms for the surrender of the fort. These were, that the fort, its garrison, and all public property should be surrendered unconditionally, at two o'clock to-day, to the army and navy forces of the United States. These terms were agreed to by Brigadier General Richard L. Page, formerly a commander in the navy.

I shall send the garrison officers and men at once to New Orleans.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral.

Hon. GIDEON WELLES,
Secretary of the Navy.

Additional report of Rear-Admiral Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
Mobile Bay, August 25, 1864.

SIR: I had the honor, in my despatch, No. 366, to report to the department that Fort Morgan had surrendered on the twenty-third instant to the army and navy, though at the time that despatch was written and mailed the ceremony of surrender had not actually taken place.

The correspondence preliminary to that event is herewith forwarded, (marked Nos. 1, 2, 3, and 4,) and the department will perceive that the terms of capitulation were the same as in the case of Fort Gaines. General Page endeavored to obtain more favorable terms, but without success.

I regret to state that, after the assembling of the rebel officers at the appointed hour (2 p. m.) for the surrender, outside the fort, it was discovered, on an examination of the interior, that most of the guns were spiked, and many of the gun-carriages wantonly injured, and arms, ammunition, provisions, &c., destroyed, and that there was every reason to believe that this had been done after the white flag had been raised. It was also discovered that General Page and several of his officers had no swords to deliver up, and further, that some of those which were surrendered had been broken.

The whole conduct of the officers of Fort Gaines and Fort Morgan presents such a striking contrast in moral principle that I cannot fail to remark upon it. Colonel Anderson, who commanded the former, finding himself in a position perfectly untenable, and encumbered with a superfluous number of conscripts, many of whom were mere boys, determined to surrender a fort which he could not defend, and in this determination was supported by all his officers save one; but from the moment he hoisted the white flag he scrupulously kept everything intact, and in that condition delivered it over; whilst General Page and his officers, with a childish spitefulness, destroyed the guns which they had said they would defend to the last, but which they never defended at all, and threw away or broke those weapons which they had not the manliness to use against their enemies; for Fort Morgan never fired a gun after the commencement of the bombardment, and the advanced pickets of our army were actually on its glacis.

As before stated, the ceremony of surrender took place at 2 p. m., and that same afternoon all the garrison were sent to New Orleans in the United States steamers Tennessee and Bienville, where they arrived safely.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

Letter from Brigadier General R. L. Page to Rear-Admiral Farragut and Major General Granger.

FORT MORGAN, August 23, 1864.

GENTLEMEN: The further sacrifice of life being unnecessary, my sick and wounded suffering and exposed, humanity demands that I ask for terms of capitulation.

Very respectfully, &c.,

R. L. PAGE,
Brigadier General U. S. A.

Rear-Admiral D. G. FARRAGUT, U. S. N.,
Major General GORDON GRANGER, U. S. A.,
Commanding, &c., &c.,

Letter from Major General Granger to Brigadier General Page.

HEADQUARTERS UNITED STATES FORCES,
Mobile Bay, August 23, 1864.

GENERAL: I have notified Admiral Farragut of your desire to capitulate. Until his arrival hostilities will be suspended, when your proposal will be duly considered.

Very respectfully, your obedient servant,

G. GRANGER,
Major General United States Army, Commanding.

Brigadier General R. L. PAGE,
Commanding at Fort Morgan.

Letter from Captain P. Drayton and Brigadier General R. Arnold, on the part, respectively, of Rear-Admiral Farragut and Major General Granger, to Brigadier General Page.

HEADQUARTERS UNITED STATES FORCES,
Mobile Bay, August 23, 1864.

GENERAL: In reply to your communication of this date, received by Captain Taylor, asking for terms of capitulation, we have to say that the only terms we can make are:

1. The unconditional surrender of yourself and the garrison of Fort Morgan, with all of the public property within its limits, and in the same condition that it is now.

2. The treatment which is in conformity with the customs of the most civilized nations toward prisoners of war.

3. Private property, with the exception of arms, will be respected.

Very respectfully, your obedient servants,

P. DRAYTON,
Captain U. S. Navy, on the part of Admiral Farragut,
Commanding Naval Forces.

R. ARNOLD,
Brigadier General U. S. Army, on the part of General Granger,
Commanding United States Forces.

Brigadier General R. L. PAGE,
Commanding Fort Morgan.

Letter from Brigadier General Page to Captain P. Drayton and Brigadier General R. Arnold, acting on the part, respectively, of Admiral Farragut and General Granger.

FORT MORGAN, *August 23, 1864.*

GENTLEMEN: Your conditions in communication of to-day are accepted, but I have still to request that the terms asked with my sick be granted and inserted in the capitulations.

I will be prepared to surrender at two o'clock, and to embark as soon as possible.

Very respectfully, &c.,

R. L. PAGE,
Brigadier General C. S. A.

Captain P. DRAYTON, U. S. N.,
Brigadier General R. ARNOLD, U. S. A.,
*Acting on the part, respectively, of
Admiral Farragut and General Granger.*

Congratulatory letter to Rear-Admiral Farragut.

NAVY DEPARTMENT, *September 5, 1864.*

SIR: Your despatch, numbered 368, is received, informing the department of the capture, on the 23d ultimo, of Fort Morgan. This is the last and most formidable of all the defences erected to command the entrance to the bay of Mobile, and it is a gratification that its capitulation was effected sooner than had been anticipated. I will not, in this communication, stop to comment on the bad faith exhibited in the destruction of the arms and property in the fort after its surrender, which is reprobated by you with just severity; but I desire to congratulate you and your command on a series of achievements which put us in possession of the bay; and, until the integrity of the Union is fully vindicated and established, close all ocean communication with the city of Mobile. In the success which has attended your operations you have illustrated the efficiency and irresistible power of a naval force led by a bold and vigorous mind, and the insufficiency of any batteries to prevent the passage of a fleet thus led and commanded. You have, first on the Mississippi, and recently in the bay of Mobile, demonstrated what had been previously doubted, the ability of naval vessels, properly manned and commanded, to set at defiance the best constructed and most heavily armed fortifications. In these successive victories you have encountered great risks, but the results have vindicated the wisdom of your policy, and the daring valor of our officers and seamen.

I desire that the congratulations which are hereby tendered to yourself, your officers and men, may be extended to the army who have so cordially co-operated with you.

Very respectfully,

GIDEON WELLES,
Secretary of the Navy.

Rear-Admiral D. G. FARRAGUT,
Commanding W. G. B. Squadron, Mobile Bay.

EXPLOSION OF A TORPEDO IN MOBILE BAY.

List of killed and wounded.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

August 29, 1864.

SIR: I regret to report to the department the following casualties resulting from the accidental explosion of a torpedo on the 25th instant:

Killed.—Charles E. Milliken, ordinary seaman, of the United States steamer Seminole.

Mortally wounded and since dead.—John Miller, seaman, Seminole; Robert G. White, seaman, Seminole; George Thompson, seaman, Seminole; Isaac Young, ordinary seaman, Seminole.

Wounded seriously.—Pilot Martin Freeman, of the Hartford; Acting Ensign John White, of the Metacomet, face badly cut and his body bruised; H. J. O'Brien, quartermaster of Metacomet, lost his right arm; William Howard, landsman of Metacomet, lost his right arm; James McDonald, seaman, lost an eye, also of the Metacomet; Charles White, boatswain of Seminole, leg fractured.

Slightly wounded.—Henry Chester, seaman, Seminole; Edward Mann, ordinary seaman, Seminole; Thomas Webster, landsman, Seminole. In all, fourteen, to wit: Killed and mortally wounded, five; wounded seriously, six; wounded slightly, three.

As the department has been advised, the rebels had planted a great number of torpedoes to guard the channel into Mobile bay, leaving only that portion clear which is immediately adjacent to Fort Morgan.

After the surrender I ordered the gradual removal of these obstructions. On the first day five of them were taken up and safely removed to the shore, and of these four were found to be so injured by immersion as to be perfectly harmless, one only being dry. On the second occasion five more were taken up and towed on shore, but becoming entangled with the ropes, the men having grown careless, collected around, and pulling and hauling them different ways, caused the explosion which resulted in the killing and wounding of the men above named.

As it is absolutely necessary to free the channel of these torpedoes, I shall continue to remove them, but as every precaution will be used I do not apprehend any further accident.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

REMOVING TORPEDOES IN MOBILE BAY.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD,

Mobile Bay, September 13, 1864.

SIR: In my despatch, No. 377, I reported to the department that we were engaged in removing the torpedoes in Mobile bay, planted in the main ship channel.

The work is still progressing, and up to the present time twenty-one (21) have been taken up, all of which had been placed between the two buoys referred to in my reports. This part of the channel is now believed to be clear, for

though beyond doubt many more were originally anchored there, report says over one hundred, they have sunk to the bottom.

I am now searching for others between the western buoy and the spiles.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

FIRING UPON THE UNITED STATES STEAMER SEBAGO.

Letter of Rear-Admiral D. G. Farragut transmitting report of Lieutenant Commander W. E. Fitzhugh.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

Mobile bay, October 15, 1864.

SIR: I forward herewith (marked No. 1) a copy of a report by Lieutenant Commander Fitzhugh, of the Sebago, of the circumstances attending the firing upon his vessel on the morning of the 9th instant by the rebels, when stationed at the upper end of the bay as one of the squadron now guarding the immediate approaches to the city of Mobile.

Acting Ensign Charles B. Donance and Edgar A. Miller, landsmen, were killed, and John Gray, captain of forecastle, and Jeremiah Carthey and Christopher McLaughlin, landsmen, were wounded.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Report of Lieutenant Commander W. E. Fitzhugh.

UNITED STATES STEAMER SEBAGO,

Mobile Bay, October 9, 1864.

SIR: I have to report to you that at about 6.30 a m. of this date, while this ship was at an anchor to the southward and westward of Freeman's wharf, the enemy opened fire with a field-piece to the northward of the wharf, his shot falling short of us; went to quarters, and while ascertaining the position of the gun were opened upon by two rifle guns to the southward of the wharf, the shell passing over the ship. Returned the fire with 100-pounder rifle and nine-inch guns, the shell striking over and about the enemy's battery, doing but little damage. The enemy fired about fifteen rifle shells over and about the ship, three of which struck; one, the deck forward in circle for 100-pounder; one, ship's side under starboard main chains; one striking square-sail yard and port forward waist boat.

At 7.30, having fired twenty-three shells, weighed and stood off.

I regret to report the following casualties: Edgar A. Miller, landsman, killed; Charles B. Dorrance, acting ensign, left leg amputated; John Gray, captain forecastle, dangerously wounded in the forehead; Jeremiah Carthey, landsman, slightly wounded in the forehead; Christopher McLaughlin, landsman, wounded in the hand; all the above named were struck by a shell which struck the deck and exploded.

There was no evidence of earthworks where these guns were fired; they were so masked as to make them difficult to be seen. I regret to state since writing the above, the death of Acting Ensign Dorrance.

I am, sir, very respectfully,

W. E. FITZHUGH,
Lieutenant Commander.

Lieut. Com. W. W. Low,
Commanding U. S. S. Octorara, and Senior Officer off Mobile.

MISCELLANEOUS REPORTS.

ATTACK ON A BLOCKADE RUNNER UNDER THE WALLS OF FORT MORGAN.

Report of Commodore H. H. Bell.

UNITED STATES STEAM-SLOOP PENSACOLA,
Off New Orleans, La., October 23, 1863.

SIR: I have the honor to enclose herewith a report from Commodore H. K. Thatcher, commanding off Mobile bar, concerning the bombardment of a blockade runner under the walls of Fort Morgan, in which the Kanawha, Lieutenant Commander W. K. Mayo, was much exposed, and received some damage in her hull.

Very respectfully, sir, your obedient servant,

H. H. BELL,
Commodore, Com'dg W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Commodore H. K. Thatcher.

UNITED STATES SHIP COLORADO,
Off Mobile Bay, October 12, 1863.

SIR: I have to inform you that this morning, as soon as it became light enough to see the beach, a small steamer was discovered aground directly under the guns of Fort Morgan, and a river steamer was apparently trying to assist her off.

The night and morning had been dark and rainy, so much so that objects were not visible a mile. As soon as this little steamer was discovered, Lieutenant Miller, executive officer of this ship, was despatched in the tender Eugenie to reconnoitre, and Lieutenant Commander Mayo, with the Kanawha, (he being the inside vessel,) also got under way for the purpose of attacking, and did so in a very gallant manner; but his guns being of short range compared with those upon the fort, and he was obliged to approach so near the enemy in order to hull him, that he was hulled himself by the fort, receiving an eight-inch solid shot in his starboard side forward of his smoke-stack, which struck the end of one of the main beams which support the deck under her pivot gun, bruising and ragging the beam very much; also displacing two carlins and starting the hanging knee which secured the beam, destroying the contents of the dispensary, and cutting a splinter from the foremast. Fortunately no one was hurt. Lieu-

tenant Commander Mayo, however, kept up a heavy fire upon these vessels, both before and after the accident, driving the tug inside the point for shelter. He did not retire until it became evident that his guns were of too short range to destroy the steamer without a certainty of losing his vessel. In the mean time the little *Eugenie*, under Lieutenant Miller, although covered with shot from the fort, kept up a constant fire from her field howitzers, and retired only with the *Kanawha*. It was believed that the 150-pounders of the *Lackawanna* and the *Genesee* would be able to reach the enemy out of range of their forts, and the attempt was accordingly made; but before they could reach a position to attack, the tug had returned from inside the point, and succeeded in releasing the small steamer (believed to be the *Alice*) from her dangerous position, and towed her into the cove north of Mobile Point, both the *Lackawanna* and *Genesee* firing from their 150-pounders within range, but with what effect we could not learn.

The steamer referred to is about the size of the *Eugenie*—probably upwards of one hundred tons—no spars, except a very short foremast, and, from all appearances, was outward bound when she grounded, and was probably trying to creep along shore during one of the thick, rainy squalls which occurred on the night and morning of the 12th. Her smoke-stack is visible inside, and will be closely watched. She is reported to be flying a Spanish flag.

I have every reason to believe that the greatest possible vigilance is exercised by this blockade, and that the commanders of the vessels now here are in every way worthy of their commands; but in the pitchy darkness which occasionally exist, especially during rainy nights, it is impossible to see a small object, such as a boat of one hundred tons, more than fifty yards.

I am, sir, very respectfully, your obedient servant,

H. K. THATCHER,
Commodore.

Commodore H. H. BELL,
Com'dg West Gulf Blockading Squadron, New Orleans.

CONVOYING OF ARMY TRANSPORTS.

UNITED STATES SHIP *PENSACOLA*,
Off New Orleans, October 23, 1863.

SIR: I have the honor to inform the department that Major General N. P. Banks having expressed to me a wish for a convoy of transports, which he was preparing to send to the Rio Grande with troops to occupy there and at Brazos de Santiago, I found it necessary to withdraw the *Monongahela* for that service from the blockade of Mobile bay.

The convoying vessels will consist of the *Monongahela*, Commander James H. Strong; *Owasco*, Lieutenant Commander E. W. Henry; *Virginia*, Acting Volunteer Lieutenant Charles H. Brown. I could not assemble a more respectable force for that service without too much weakening the forces blockading the several ports within the limits of this command. This remote position of the troops on the Rio Grande will necessitate an increase of naval force in the Gulf, as, at least, three efficient vessels, of a class superior to the gunboats, will be required off Brazos de Santiago, or in its vicinity, for the security of army transports and army supplies going to that port.

Major General Banks himself will accompany the expedition, and is ready to embark his troops and proceed as soon as the storm now raging shall have abated.

The naval vessels convoying the transports cannot cross the bar, there being

not more than eight feet of water, but they may render the troops essential service with their boats and their guns of long range.

The expedition will sail, probably, to-morrow or the day after.

I have the honor to be your obedient servant,

H. H. BELL,

Commodore, Com'dg W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

LANDING OF THE ARMY ON BRAZOS ISLAND.—NAVAL CO-OPERATION.

Report of Commodore H. H. Bell

UNITED STATES STEAM-SLOOP PENSACOLA,

Off New Orleans, La., November 10, 1863.

SIR: I have the honor to report that the division of the army under Major General Banks, which sailed hence on the 27th October, convoyed by the Monongahela, Captain James H. Strong, Owasco, and Virginia, effected a landing without opposition, on the 2d instant, on Brazos island, at Brazos de Santiago, and that a part of the same division was landed at the mouth of the Rio Grande on the following day, 3d instant, by the boats of the Monongahela and Owasco. The surf running high, two of the Owasco's boats were swamped, and two sailors and seven soldiers drowned.

The transports, having been separated in a norther, appear not to have sought the place named for rendezvous, but, after heaving to, proceeded straight for Brazos de Santiago, and begun to land before the arrival of the Monongahela, which vessel and the Owasco alone repaired to the appointed rendezvous, and waited there two days. Captain Strong commends Lieutenant Commander Henry for the skilful management of his vessel, having a transport in tow during the storm.

The troops at Brazos de Santiago had not landed on the main at the time of the departure of the despatch vessel on the 4th.

Please receive copies of the reports of Captain Strong, viz:

No. 1. Report of Captain Strong—arrival of convoy at Brazos de Santiago.

No. 2. Report of Captain Strong—landing of troops at Rio Grande.

I have the honor to be, very respectfully, sir, your obedient servant,

H. H. BELL,

Commodore, Com'dg W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy.

Report of Commander J. H. Strong.

UNITED STATES STEAM-SLOOP MONONGAHELA,

Brazos de Santiago, November 3, 1863.

SIR: I have the honor to report to you that I left the bar on the morning of the 27th, with this ship, the Owasco, and Virginia, to convoy the fleet of army transports, (in obedience to instructions.) All went well till the morning of the 30th, when we were caught by a gale from the north. Signal was made from the general's ship "to heave to," which was done. Soon after the transport Bagley came near with her flag main down. Wore ship to find out her difficulty, and render assistance if necessary; in going round rolled boats under,

filled and dropped a quarter boat, but saved her. This ship cannot carry this battery with safety. Found she could not lay to on account of putting out her fires. She required no assistance. Hove to again about eight miles to the south of the fleet. It was thick and foggy, with a great deal of sea. At daylight no vessels of the fleet in sight; stood for the rendezvous; reached it about 3 p. m. Next day fell in with the Owasco, at the rendezvous, with a disabled steamer in tow. Two transports came in during the day. Remained three days as near as possible to the designated point of meeting, in case of separation, then stood for this place, having the disabled steamer Bagley in tow, and taking with me the vessels that I had met with; found the rest of the fleet here, they not having stopped at the rendezvous. The general sent a steamer back, but she missed us. Found them landing troops, no one being here to oppose them. One small steamer, one schooner, and one launch were lost in the gale, but all hands saved. Lieutenant Commander Henry deserves great credit for the manner in which he handled his vessel in taking the disabled steamer in tow during the gale. The general wishes me to go down to the mouth of the Rio Grande, and land troops there if possible. I shall leave immediately. There are no foreign men-of-war there to-day. A French brig-of-war anchored there yesterday for about an hour, then left. The Virginia injured her rudder head during the gale, but can hold out for the present at any rate.

Very respectfully,

J. H. STRONG, *Commander.*

Commodore H. H. BELL,
Flag-Ship Pensacola, New Orleans.

Additional report of Commander J. H. Strong.

UNITED STATES STEAM-SLOOP MONONGAHELA,
Off Rio Grande, November 4, 1863.

SIR: I have the honor to report to you that I came down here with the troop transport Scott yesterday, at the request of the general, to land the troops if possible, and obtain lighters. After anchoring I sent a boat in with two army officers to obtain information, intending to land the troops if it was practicable. I then sent my boats and the boats of the Owasco to the Scott to be prepared to land when ordered, which was not to be till I had heard from the shore. I then took the last boat that I had, and took Captains Henry and Griffin in with me, to examine the bar. Finding it very rough, I pulled out to several of the vessels to get information if possible. I ascertained there were no troops here. While I was on board of one of these vessels it was reported to me that the boats were going in. The colonel had mistaken his orders and sent them in. Signal was made from my vessel to stop them, and I also would have headed them off, if possible, but was too late. I regret to have to report the swamping of two of the Owasco's boats and the loss of two of her men. As near as I can learn, seven soldiers were lost. My boats all got in safe, but could not get off till this morning. Three of my men are still on shore, but all safe. Two of the Owasco's boats are still on shore, the surf being too high for them to return out yet. The officer sent with the boats from this ship reports that the Mexicans treated them with kindness, and assisted him to get his boats launched. It was reported this morning that the rebels had burned Brownsville last night. The American flag is now flying on the Texan bank of the Rio Grande.

Very respectfully,

J. H. STRONG, *Commander.*

Commodore H. H. BELL,
Flag-Ship Pensacola, New Orleans.

Report of Major General N. P. Banks.

HEADQUARTERS DEPARTMENT OF THE GULF,
Flag-ship McClellan, off Brazos de Santiago, November 3, 1863.

SIR: I have the honor to inform you that we reached Brazos de Santiago on Sunday, (1st November,) and effected a landing on Brazos island at meridian on the 2d, which is now in our possession. We shall move for the Rio Grande as soon as the vessels too deep for the bar can be discharged. On the 30th we encountered a severe gale from the north off Aransas, which scattered somewhat our fleet. The Virginia was disabled, and did not reach the Brazos until late Sunday evening. The Monongahela was separated from us, and has not yet reported. The Owasco arrived this morning, and reports that they have been at the rendezvous for three days. 10 a. m., the Monongahela is now in.

With much respect, your obedient servant,

N. P. BANKS,
Major General, Commanding.

Commodore H. H. BELL,
Commanding Blockading Squadron, New Orleans.

CONDITION OF AFFAIRS AT BROWNSVILLE, TEXAS.

UNITED STATES STEAM-SLOOP PENSACOLA,
New Orleans, La., November 13, 1863.

SIR: I have the honor to inform the department that I have a despatch from Captain Strong, commanding the United States steamer Monongahela, off the Rio Grande, November 10.

Major General Banks was in possession of Brownsville with three thousand men and sixteen pieces of artillery.

General Dana was in command of the mouth of the river; his number of troops are not stated; but more troops and supplies are being forwarded to that point.

The weather has been heavy, and the army has lost several steamers there.

They draw heavily upon us for coals, having no supply of their own in the Gulf, and I am obliged to recognize them.

I have the honor to be your obedient servant,

H. H. BELL,
Commodore, Commanding W. G. B. Squadron pro tem.
 Hon. GIDEON WELLES,
Secretary of the Navy.

RECAPTURE OF THE SCHOONER MARY CAMPBELL.

UNITED STATES STEAM-SLOOP PENSACOLA,
Off New Orleans, La., November 20, 1863.

SIR: I have the honor to report that on the 14th instant Acting Volunteer Lieutenant Commander Smith, United States steamer Bermuda, recaptured schooner Mary Campbell, off Pensacola bar, from a gang of rebels or pirates, who came out of the Perdido river under the notorious James Duke, who captured the steam-tug Boston off the Mississippi some months ago. Two other schooners were in company with the Mary Campbell, bound to Pensacola navy yard for

coals under contract with the army; one of them is supposed to have gone safely into Pensacola bay, and the other was burnt.

I have had no report from Commodore Thatcher, who, by last accounts, had sent a gunboat to look after them and the freebooters at Perdido.

Being uncertain as to the proper disposition of this new class of prisoners, I shall send them to the north by the Bermuda, for the action of the Navy Department. * * * * *

James Duke was not captured.

Very respectfully, your obedient servant,

H. H. BELL,

Commodore, Commanding W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy.

CAPTURE OF A BATTERY AT ARANSAS PASS.—NAVAL CO-OPERATION.

Report of Commodore H. H. Bell.

UNITED STATES STEAM-SLOOP PENSACOLA,

Off New Orleans, La., November 25, 1863.

SIR: I have the honor to report that the battery of three heavy guns at Aransas pass was captured on the 17th instant, by a body of troops under Major General Banks, from the Rio Grande, attended by the United States steam-sloop Monongahela, Commander James H. Strong.

Commander Strong, after assisting in the landing of the troops on Aransas island, steamed ahead and opened an effective fire upon the battery, which shortly hoisted a white flag, and was taken possession of by the troops, who engaged it also.

Major General Banks commends the effective gunnery of the Monongahela.

Please receive enclosed No. 1, Commander Strong's report, and No. 2, letter from Major General Banks.

I have the honor to be, &c.,

H. H. BELL,

Commodore, Commanding W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Commander J. H. Strong.

UNITED STATES STEAM-SLOOP MONONGAHELA,

Off Aransas Pass, Coast of Texas, November 17, 1863.

SIR: I have the honor to report to you that, in compliance with the request of Major General Banks, I left Brazos de Santiago on the evening of the 15th instant, to convoy his fleet of transports, bearing 1,900 troops, to this pass. In the afternoon of the 16th we arrived off Corpus Christi pass, and at sunset began to land troops on the southern end of Mustang island. About twelve hundred men were landed there. I sent men enough on shore to man a two-howitzer battery, under the charge of Acting Ensign H. W. Grinnell. At two this morning got under way and came with the remaining transports to this pass; landed the balance of the troops about four miles below the fortifications, then proceeded up within range and threw fifteen shells into it, making some

beautiful shots, the army advancing on both sides of the island towards the fortifications. At this time the enemy ran up the white flag, and I ceased firing.

The garrison of one hundred men surrendered, and three battery guns and a howitzer, with wagons, ammunition, and over one hundred horses and mules fell into our hands. The army are now in quiet possession of Mustang island, and command the pass.

The general proposes to move upon Pass Cabello in two or three days. He speaks in the highest terms of praise of the officer whom I sent on shore in charge of the howitzer battery, as well as of the men.

The Granite City is here, and I am obliged to detain her for a few days. Her commander will send a Spanish bark, taken off the Rio Grande as a prize, to New Orleans to-morrow. He has a prize schooner which is not considered safe to send, and as she draws but two feet of water, I will put her cargo into the bark, and detain her for General Banks's use.

Very respectfully, your obedient servant,

J. H. STRONG, *Commander.*

Commodore H. H. BELL,

Com'dg W. G. B. Squadron, U. S. Flag-Ship Pensacola.

Report of Major General N. P. Banks.

HEADQUARTERS, DEPARTMENT OF THE GULF,

Flag-Ship McClellan, off Aransas Pass, Texas, November 17, 1863.

COMMODORE: It gives me pleasure to inform you of the capture of the works at Aransas Pass this day. We have in our possession three heavy guns, a lieutenant colonel, nine officers, ninety men, between eighty and ninety horses, a quantity of small arms, and considerable transportation. We arrived at Corpus Christi from Brazos Santiago yesterday about two o'clock p. m., and landed our troops during the night. It was supposed that the Matamoras, which we brought with us from the Rio Grande, would be able to cross the bar, but we found only two feet and a half of water there, which made it impossible, and we were compelled to land our troops upon the coast by means of surf-boats. The landing occupied a greater part of the night. The troops reached Pass Aransas early this morning, taking the enemy completely by surprise. After skirmishing for a couple of hours on the island, and the firing of some most excellent shots from the Monongahela, they surrendered. To-morrow we move against Pass Cabello, where we shall have perhaps a more severe contest. It is important, in reference to our future movements, that there should be one or two gunboats in Bonwick's bay. I hope you will send down one or two as soon as possible. Admiral Porter ought to send some of his gunboats, which were ordered here by the government, to the mouth of the river, around by the coast. I am confident we could get them round safely by means of buoying them, with the assistance of steamers, and watching closely for fair weather. The distance is about forty miles. I wish you would communicate with him upon this subject.

Captain Strong has been of great assistance to us in enabling us to land troops. The artillery practice against the enemy was most effective.

I have the honor to be, &c.,

N. P. BANKS,

Major General, Commanding.

Commodore H. H. BELL,

Commanding W. G. B. Squadron, &c., New Orleans.

Additional report of Commodore H. H. Bell.

UNITED STATES STEAM-SLOOP PENSACOLA,
New Orleans, La., November 27, 1863.

SIR: I had the honor on the 25th instant to forward to the department the report of Commander Strong, United States steam-sloop Monongahela, announcing the capture of a battery of three heavy guns at Aransas Pass, on the 17th instant, by the Monongahela, and a body of troops under Major General Banks.

It was the general's intention to advance against the battery at Pass Cabello (the entrance to Matagorda bay) on the 18th; he had not done so, however, up to the 22d instant, my last advices from that point.

Refugees from Mobile report a small screw steamer, carrying a torpedo of one hundred and fifty pounds of powder over the bow, like that which attacked the Ironsides in Charleston harbor, as ready to come out from Mobile bay to assail the vessels off the bar or inside of Mississippi sound. The commanding officers have been apprised of these reports, and vigilance enjoined upon them.

I have the honor to be, your obedient servant,

H. H. BELL,

Commodore, Commanding W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CONDITION OF AFFAIRS AT PASS CABELLO.—NAVAL CO-OPERATION AT
THE CAPTURE OF ARANSAS.

Report of Commodore H. H. Bell.

UNITED STATES STEAM-SLOOP PENSACOLA,
Off New Orleans, La., December 26, 1863.

SIR: Reports from the blockade commanders announce all quiet. Texas being the scene of military activity at this time, I have the honor to enclose the report (No. 1) of Commander J. H. Strong, United States steamer Monongahela, off Pass Cabello, December 21, which will inform the department of the state of affairs there; also (No 2) copy of official report of Brigadier General Ransom upon the capture of Aransas.

In paragraph 6th he commends Acting Ensign A. W. Grinnell, in command of naval howitzers, for good conduct.

I have the honor to be, your obedient servant.

H. H. BELL,

Commodore, Commanding W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Report of Commander J. H. Strong.

UNITED STATES STEAM-SLOOP MONONGAHELA,
Off Pass Cabello, Texas, December 21, 1863.

SIR: I have the honor to report to you that I returned to this place on the 17th instant, after coaling at Galveston. Immediately on my arrival General Washburn informed me that he had learned that the rebels were collecting at the head of the peninsula, probably to dispute his passage. He wished to

make a reconnoissance, so I gave him the Granite City for that purpose. He went up in her himself, and found only scattering mounted pickets; a few shells dispersed them. The Granite City returned the following day. I have sent the Antona down to Brazos de Santiago, at the general's request, to take one of his staff down for a couple of rifled guns that he requires; she was at the same time directed to look out for blockade runners, but not to go to the Rio Grande. The Granite City is now inside the bar, and to-day gone up the bay inside with the general on board to reconnoitre.

A forward move is not anticipated now for two or three weeks; there are about six thousand troops here now. I shall probably be able to go down to the Rio Grande in this ship in a few days; I am expecting one of the gunboats up from there in a day or two * * * * *

Enclosed I send you a copy of General Ransom's report of the taking of Aransas.

I am, sir, very respectfully, your most obedient servant,

J. H. STRONG, *Commander.*

Commodore H. H. BELL,

Com'dg W. G. B. Squadron, U. S. Flag-Ship Pensacola, New Orleans, La.

Copy of Brigadier General T. E. G. Ransom's official report.

HEADQUARTERS UNITED STATES FORCES,
North end of Mustang Island, Texas, November 18, 1863.

SIR: I have the honor to report that, in obedience to Special Order No. —, dated Headquarters, Department of the Gulf, Brazos de Santiago, Texas, November 15, 1863, I embarked with the 13th and 15th Maine, 20th Iowa infantry, two companies 1st engineers C. D. A., and two boat howitzers, on the transports assigned by Colonel Holabird, assistant quartermaster, leaving orders for the 34th Iowa infantry and the battery which were to arrive from Brownsville to embark on the steamer Warrior and follow the expedition.

At sunset on the 16th instant I disembarked the 13th and 15th Maine and 20th Iowa infantry and the two boat's howitzers, through the surf, near the south end of Mustang island, and at once moved my forces in a northerly direction up the beach, with a strong line of skirmishers in my front. Meeting no enemy I moved rapidly, and by 4 a. m. on the morning of the 17th instant had made 18 miles. I halted at this point, allowed the troops to rest until daylight, and again pushed forward. The enemy's skirmishers made a faint show of resistance about a mile south of their camp, when I deployed the 13th Maine, and advancing in line drove them to their camp on the north end of the island, where the garrison, consisting of nine officers and 89 men, with a battery of three heavy guns, surrendered to me without resistance and unconditionally. I at once placed Colonel Dyer, 15th Maine infantry, in command of the post, and made provision for the care of the prisoners and captured stores, which consisted chiefly of three heavy guns, the small arms of the prisoners, one schooner and ten small boats, all in fair condition. I herewith forward descriptive list of the prisoners and schedule of captured property. There are about 140 horses and mules and 125 head of cattle on the island. Scarcity of forage has compelled me to let them run at large and subsist on the scanty growth of grass on the island. Colonel H. D. Washburn, 18th Indiana infantry, commanding the troops on the steamer St. Mary's, disembarked a portion of his troops, 18th Indiana, at the south end of the island, and the remainder (8th Indiana) near the north end of the island, and by a forced march reached

me at this point, about two hours after the surrender. After my forced march of 22 miles up the beach, my command was completely exhausted and footsore. Both officers and men are entitled to great credit for their perseverance and zeal in accomplishing the march, and dragging the artillery by hand with them.

The co-operation of the United States naval forces under Commander James H. Strong, in the *Monongahela*, merits and receives my entire approbation. He advanced soon after daylight and searched for the enemy's works, making excellent practice with his guns, bursting 11-inch shells (as I afterwards ascertained) in the enemy's camp. The conduct of the naval party of Acting Ensign H. W. Grinnell and ten seamen from the *Monongahela*, in charge of two howitzers, on landing and accompanying the expedition from Corpus Christi Pass, was of the most satisfactory character. Captain L. P. Griffin, naval aid to General Banks, afforded me much valuable assistance and advice. The sailing of the fleet was under his direction, and the plan of landing through the surf was adopted through his advice.

I desire particularly to make honorable mention of Colonel Isaac Dyer, commanding 15th Maine infantry, and Lieutenant Colonel Hasselton, 13th Maine infantry, who were untiring in their efforts to encourage their men and urge them forward. Lieutenant Colonel Hasselton was the first man to land through the surf and plant his colors on the island. Captain Hill and Lieutenant Jackson, of General Banks's staff, volunteered much valuable assistance.

I regret to mention in this communication the unsoldierlike conduct of Major Thompson, commanding 20th Iowa infantry, who constantly discouraged his men by complaining in their presence of the hardships of the march, and permitted them to scatter and straggle to the rear, losing more than half his men before he reached the north end of the island.

Lieutenant Colonel W. S. Dungan, 34th Iowa, reported to me shortly after the surrender with his regiment and battery F 1st Missouri light artillery on steamer *Warrior*. I caused the 34th Iowa to be disembarked on St. Joseph's island, leaving the battery for the present on board,

I am, sir, very respectfully, your obedient servant,

T. E. G. RANSOM,
Brigadier General Volunteers.

DESTRUCTION OF SALT WORKS IN CHOCTAWHATCHEE BAY.

Report of Commodore H. H. Bell.

UNITED STATES STEAM-SLOOP *PENSACOLA*,
Off New Orleans, January 2, 1864.

SIR: I have the honor to enclose herewith the report of Edwin Crissey, acting ensign in command of the steam-tender *Bloomer* to the frigate *Potomac*, upon the destruction of vast salt works in Choctawhatchee bay, with the co-operation of Acting Master W. R. Brown, commanding United States bark *Restless*, belonging to the squadron of Acting Rear-Admiral Bailey.

The duty appears to have been performed in a manner creditable to the officers concerned.

I have the honor to be your obedient servant,

H. H. BELL,

Commodore, Commanding W. G. B. Squadron pro tem.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Report of Acting Ensign Edwin Crissey.

UNITED STATES STEAMER BLOOMER,

East Pass, December 20, 1863.

SIR: I have the honor to report that on the afternoon of December 9, I started for West bay of St. Andrew's in the steamer Bloomer, and accompanying me the sloop Caroline. On the morning of the 10th came to anchor in St. Andrew's bay, and reported to Captain Brown, of the United States bark Restless, blockading the bay. An expedition was immediately formed to destroy the numerous works upon the bay. Captain Brown sent on board to assist in destroying the works three officers and forty-eight men. At six p. m. got under way and proceeded to Bear creek, at the head of North bay, to cut out a schooner, loaded with 100 bales of cotton, which lay four and a half miles up the creek. We found the water on the bar very low, and ran aground three times in trying to get over the bar, there not being water enough. At five p. m. proceeded to the salt works on West bay, destroying the salt works lined on each side of the bay for seven miles, belonging to private individuals, and numbering at least 198 different works, each averaging two boilers and kettles, which, with a large quantity of salt, were destroyed. Five hundred and seven kettles were dug up and rendered useless, and two hundred buildings of various sizes, used as storehouses, &c., were destroyed, together with twenty-seven wagons and carts. On the afternoon of the 14th we came to a large confederate government works, under the command of Mr. Clendenning, which turned out daily four hundred bushels of salt. This was one of the best located on West bay, being situated in a marsh, the water of which yielded seventy-five gallons of salt to one hundred gallons of water. It was, in fact, a complete salt village, covering a space of three-fourths of a square mile, employing many hands and sixteen oxen and mule teams constantly to haul salt to Eufala sound, and from thence conveyed to Montgomery, at which place it is selling at a fabulous price, \$40 and \$45 per bushel. At this place were twenty-seven buildings, twenty-two large steam boilers, and two hundred kettles, averaging two hundred gallons each, which cost the government \$5 per gallon, all of which were totally destroyed, together with storehouses containing salt, &c. This work, together with the other works, could not have cost less than three million dollars. Thirty-one contrabands, two of whom were females, belonging to these works, gave themselves up and assisted in destroying the works. This bay was considered a safe place to pursue the making of salt, and for seven miles on each side of the bay was one continued string of salt works. On the 15th proceeded to the bark Restless for wood and water. On the evening of the 18th Captain Brown, two officers and forty men, came on board. We proceeded to East bay for the purpose of destroying the works there. We burned and destroyed all the salt works on East bay that were left. A large number were burned and destroyed by the enemy to keep them from falling into our hands. There are two companies of infantry stationed on the bay to guard the salt works.

In all our work in destroying the salt works the men on shore were under cover of the steamer's guns, and occasionally shelling the woods. On the 19th, noon, we started for the ship, arriving there at four p. m. Nine p. m. started for the east end of Santa Rosa island; experienced heavy weather, at ten p. m. blowing a heavy gale from north-northwest, with a heavy sea, steamer rolling and steering badly; eleven p. m. drifting off shore, parted wheel-ropes, came to anchor, repaired wheel-ropes, slipped cable, and stood in shore with a heavy head of steam; saw sloop about one-fourth mile to the leeward; twelve, midnight, close in shore, the weather more moderate; six a. m. steaming along shore with

a light northerly wind, the sloop Caroline not in sight; arrived at East Pass on the 21st, four and a half p. m.; sloop Caroline not in sight.

Respectfully, your obedient servant,

EDWIN CRISSEY,
Acting Ensign, Commanding.

Commander ALEXANDER GIBSON,
Commanding United States Frigate Potomac.

Report of Commander A. Gibson.

UNITED STATES FRIGATE POTOMAC,
Pensacola, December 23, 1863.

SIR: Having learned that there were very extensive salt works about West bay of St. Andrew's, I thought I should be rendering good service by destroying them. I therefore, on the 9th instant, despatched the steamer Bloomer with the sloop Caroline, under command of Acting Ensign Crissey, for the purpose of effecting that object, which he has effectually done, as will be seen by the report of his operations which I have the honor to forward to you.

Ensign Crissey was aided in the work by Acting Master W. R. Brown, of the United States bark Restless, which vessel is stationed at St. Andrew's bay.

Respectfully, your obedient servant,

A. GIBSON, *Commander.*

Commodore H. H. BELL,
Commanding W. G. B. Squadron, New Orleans.

DESTRUCTION OF REBEL GUNBOAT IN MATAGORDA BAY, &c.

Report of Commodore H. H. Bell.

UNITED STATES STEAM-SLOOP PENSACOLA,
Off New Orleans, Louisiana, January 9, 1864.

SIR: I have the honor to enclose herewith two reports from Commander James H. Strong, United States steamer Monongahela, narrating some recent operations of the gunboats in concert with the troops at Matagorda bay. This is the latest information I have from the coast of Texas acquainting the department with the situation of affairs in that quarter.

The rebel gunboat destroyed was in Matagorda bay, and they have but two others there. The Estrella, drawing six feet water, was recently sent there for service on the interior waters, and appears to have arrived in time to be serviceable.

Very respectfully, sir, your obedient servant,

H. H. BELL,
Commodore, Commanding W. G. B. Squadron pro tem.
Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Commander J. H. Strong.

UNITED STATES STEAM-SLOOP MONONGAHELA,
Off Pass Cabello, Texas, December 28, 1863.

SIR: I have the honor to report my return to this place from the Rio Grande. On my arrival at the Rio Grande, on the 25th instant, I found the gunboat Penobscot there, she having been sent down by Captain Gillis to take a messenger. I found some sixty vessels anchored in Mexican waters, four steamers among them.

It seems that a large trade is still carried on there. Cargoes going in are taken up on the Mexican side above our line of pickets, and then carried across the river. Cotton is brought down the same way.

On Christmas eve there seemed to be almost a universal singing of confederate songs, firing guns, cheering for the rebels, &c., among the shipping. It was kept up nearly all night. I understood that only a few days ago a cargo of army wagons were landed there direct from New York, and cleared from the custom-house at New York. They were undoubtedly for the rebels, though nominally for the Mexican market.

The army expedition to Indianola and Lavaca was successful; the army now occupies both places. General Washburn is now waiting for re-enforcements and orders to move on.

At the mouth of the Brazos river the rebels have a fort, mounting at least twenty guns—so we learn from deserters and a partial reconnoissance; thirteen guns facing the sea, some of them heavy guns. Deserters also report that the rebels are removing guns from Galveston and taking them to Houston.

The boilers of this ship are in need of repairs. I have been obliged to haul fires three times (twice from one boiler and once from the other) since coaling at Galveston. I shall enclose the engineer's report to the fleet engineer to you. The ship also requires calking and other repairs.

At the request of General Washburn I have sent the Granite City up the peninsula, with General Ransom and one hundred troops on board, to cut off rebel pickets. The Sciota was directed to accompany her and assist in landing the troops, and then proceed to Galveston. * * * *

Respectfully, &c.,

J. H. STRONG, *Commander.*

Commodore H. H. BELL,
Com'dg W. G. B. Squadron, New Orleans.

Additional report of Commander J. H. Strong.

UNITED STATES STEAM-SLOOP MONONGAHELA,
Off Pass Cabello, Texas, January 1, 1864.

SIR: I have the honor to report to you that the reconnoissance which I mentioned in my communication of the 28th of December as about to be made by the Granite City and Sciota for the general, was made the next day and the troops landed. At half past three in the morning of the 30th ultimo the Granite City came down to me and reported that the troops were landed the day before in the morning, and that the Sciota went up with General Ransom to reconnoitre at the mouth of Brazos river, leaving the Granite City to protect the troops till she should return. During the day, both in the morning and afternoon, the troops were attacked by a large force of cavalry, (800 or 1,000 of them,) but were defended by the Granite City, she firing 140 rounds before the enemy was driven off. At 9 p. m. she left the Sciota to cover the troops until she could come down to me for assistance. I got under way immediately with

the Granite City and the Penobscot, which was anchored near me at the time, and went up to render as much assistance as possible. While steaming up there came on a fog so dense that it was impossible to see a cable's length, so we ran the distance and came to anchor to wait for it to clear away. I happened to fall in with the gunboat Estrella a short time before we came to anchor. I sent the Granite City in to reconnoitre and find the Sciota. In a short time she returned and reported that the troops were still safe, but that the cavalry had made several attacks during the night. The Sciota anchored close in to the breakers, and by shelling on either side of the troops kept the enemy off. As soon as it was possible to see, I went in with the Penobscot, Granite City, and Estrella, and found that after the Granite City had come out to me a rebel steamer on the inside came close and shelled our troops out of their position, forcing them to retreat down the beach. I then sent the Sciota, Granite City, and Estrella in close to the shore to protect the troops through the night, and as it was nearly dark, I came to anchor there so as to destroy the rebel steamer in the morning, if the weather would permit. During the night a norther came on, and in the morning the rebel steamer was ashore, probably driven on by the gale, but the weather would not admit of getting under way to destroy her at any time during the day. This morning there was a dense fog, and as soon as it cleared away I steamed in and found that the steamer had been destroyed by fire. I threw a 200-pound rifle shell at the wreck to ascertain if any persons were still remaining about there, and then returned to Pass Cabello and found that the Sciota, Granite City, and Estrella, having succeeded in getting the troops on board, had brought them here. After having seen all safe above, I sent the Penobscot to Galveston to report to Captain Gillis.

Very respectfully, your obedient servant,

J. H. STRONG, *Commander.*

Commodore H. H. BELL,

*Com'dg W. G. B. Squadron, U. S. Flag-Ship Pensacola,
New Orleans, La.*

LIST OF KILLED, WOUNDED AND PRISONERS OF THE UNITED STATES STEAMERS
CLIFTON AND SACHEM.

Letter of Rear-Admiral D. G. Farragut transmitting report of Acting Volunteer Lieutenant F. Crocker.

UNITED STATES FLAG-SHIP HARTFORD,
Off New Orleans, February 5, 1864.

SIR: With this I send a letter from Acting Volunteer Lieutenant Crocker, of the United States steamer Clifton, with a list of the killed and wounded in the affair at Sabine Pass. * * * * *

I am, very respectfully, your obedient servant,

D. G. FARRAGUT, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant Frederick Crocker.

CAMP GROCE, TEXAS,
November 9, 1863.

SIR: Your communication, under date of October 27, 1863, to Major General J. B. Magruder, asking the names of the killed, wounded, and captured officers

and crew of the late United States steamers Clifton and Sachem, has been this day referred to me with permission to answer.

I have the honor to forward you herewith a correct list of the captured officers, and, with the exception of the colored men, of the crew of the Clifton, and as near as I am able to ascertain, a correct list of the killed, wounded, and missing. I also forward similar lists of the Sachem, as handed me by Acting Volunteer Lieutenant A. Johnson.

In my former report I mentioned the name of my executive officer only. All the wounded have recovered, but of the missing it is known that many were drowned. I also include a list of officers and men of the signal corps, and of the 75th New York volunteers.

I am, very respectfully, your obedient servant,

FREDERICK CROCKER,

Acting Volunteer Lieutenant, U. S. Navy.

Commodore H. H. BELL,

Com'dg W. G. B. Squadron, off New Orleans, La.

List of the killed, wounded, and missing, United States steamer Clifton.

Killed.—Robert Rhodes, acting master and executive officer; Michael Driscoll, landsman; a negro, (contusion,) name unknown.

Of the 75th regiment New York volunteers.—L. D. Halleck, corporal, company B; G. T. Beardsley, private, company B; D. E. Parker, private, company B. H. Raymond, private, company A; James Benedict, private, company D.; W. W. Miller, private, company G; William F. Pray, private, signal corps. Total killed, 10.

Wounded.—F. J. Bradley, third assistant engineer; William Mahoney, landsman; Peter Brown, seaman; Morris Powers, second class fireman.

Of the 75th regiment New York volunteers.—E. N. Anderson, private, company B; E. L. Bradley, private, company B; W. H. Beebe, private, company G; John Campbell, private, company G; Lieutenant J. W. Dana, signal corps, slightly. Total wounded, 9.

Missing.—Twenty-one of the crew, names unknown, mostly colored.

Of the 75th regiment New York volunteers.—O. A. Brown, corporal; A. G. Borden, private, company A; R. S. Canfield, private, company B; F. Olford, private, company B; R. Tucker, private, company B; A. B. Brown, private, company G; J. Bump, private, company G. Total missing, 28.

Grand total.—Killed, 10; wounded, 9; missing, 28.

Very respectfully,

FREDERICK CROCKER,

Acting Volunteer Lieutenant, U. S. Navy.

List of officers and crew of the late United States steamer Sachem, at Sabine Pass, September 8, 1863.

PRISONERS.

Officers.—Amos Johnson, acting volunteer lieutenant; A. H. Reynolds, acting ensign; J. C. Henry, acting master's mate; W. E. Bridges, acting master's mate; A. E. Larrien, paymaster's clerk.

Petty officers.—John Taylor, boatswain's mate; Herman Spilker, quartermaster; J. C. McNerney, quartermaster.

Seamen.—Edward Foley, John Stewart, George Brown, Charles Brown, Thomas Hall, Thomas Mulman, Daniel Baker, George McClerran, William

Vorgan, John Swift, William Sutter, John Thompson, Alexander Ashton, John De Casta.

Landsmen.—John Imbush, Michael De Laney, James McVey, James Kelley, Thomas Milem, John Carey, M. J. Flynn, George M. Whiteman, James Stewart, William Wheaton, Peter Martin, John A. Andrews.

Engineers department.—John Hayes, Dennis Toomey, John McDonough.

KILLED.

Officers.—John Fraser, second assistant engineer.

Seaman.—John Williams.

Firemen.—William Robinson, Thomas Sullivan, Calvin Williams, Richard Turner, Thomas Ryan.

MISSING.

Officers.—John Munroe, third assistant engineer.

Seamen.—*Peter Benson, *G. W. Meeker.

Landsmen.—Peter Lee, Henry Brown, William Glenn, *George Horton, Randel Smith, Isaac Carter, William Wilson, John Chase, Willis Green, *William Lowe, *Samuel Smith, John Horton, John Rolles.

Very respectfully,

AMOS JOHNSON,

Acting Volunteer Lieutenant, U. S. Navy.

CAPTURE OF UNITED STATES SHIPS MORNING LIGHT AND VELOCITY.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

Mobile Bay, August 22, 1864.

SIR: I have the honor to forward herewith (marked No. 1) the report of Acting Master John Dillingham of the capture of the United States steamer Morning Light and prize schooner Velocity, on the 21st of January, 1863, in Sabine Pass, by the rebels.

Acting Master Dillingham was sent to the Pocahontas off that pass, on the 24th ultimo, by flag of truce, on a parole of six months, for the exchange of a Captain Fowler, of the rebel navy.

Under orders of Commodore Palmer he reported to me, and I directed him to return to New Orleans, and after making the best arrangement he could through Colonel Dwight for an exchange, to proceed north and report to the department.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Report of Acting Assistant Surgeon J. W. Sherfy.

CHAMPAIGN CITY, CHAMPAIGN COUNTY, ILLINOIS,

April 12, 1864.

SIR: At the request of Acting Master John Dillingham, late commander of the United States ship Morning Light, and yet a prisoner in Texas, I have the

NOTE.—Other reports show that those marked with a * reached the United States steamer Arizona in safety

honor of submitting the following report of the capture of that vessel on the 21st of January, 1863, off Sabine Pass. It also fulfils the order of Admiral Farragut, in his letter of permission to go north, dated March 21, 1864, a copy of which, with other papers referred to, is herewith enclosed.

I cannot claim for this report that technical accuracy of detail which would characterize one from Captain Dillingham himself, but present it simply as a correct memoranda of the main facts in connexion with that event.

An attack on the blockade at Sabine, consisting of the Morning Light, the schooner Rachael Seaman, Acting Master Hooper, and the schooner Velocity, Acting Master Hammond, had been threatened for several weeks. The two schooners previously stationed in the bay near Sabine City had come outside the bar to obtain a better position in the event of an engagement. A few days before this occurred, the Rachel Seaman had, pursuant to orders from Commodore Bell, at Galveston, gone to Pensacola for repairs.

Knowing the defencelessness of sailing vessels against equally armed steamers, Captain Dillingham had made urgent application for the addition of a steam gunboat to the force at Sabine, and also for a pivot gun for his own vessel, neither of which could be obtained. These applications had been made before the departure of the Rachel Seaman.

Early in the evening of the 20th the enemy's vessels were seen to come down the bay and anchor near the city. Apprehensive of an attack that night, every preparation was made for defence. There was at that time a dead calm; at dark Captain Dillingham made sail, and ordered the Velocity to do the same, to obtain if possible an offing more favorable for manœuvring the ship should the attack be delayed till morning. The calm continued all night, with scarcely a perceptible breeze, and the vessels merely drifted with the current a few miles down the coast, the Velocity coming to anchor early, not being able to control her course with the helm, and fearing she might drift nearer the shore. About 6½ o'clock on the morning of the 21st the enemy were seen coming seaward; a very light wind prevailed, and the Velocity was signalled to come up and keep near the ship, which awaited her approach, when all sail was made and we stood out to sea.

The enemy's force consisted of two cotton-clads of the very best construction; the steamboats Josiah Bell, with two twenty-four-pounder field-pieces, and the Uncle Ben, with a sixty-eight-pounder rifle; each vessel carrying a crew of two hundred and fifty men.

At half past eight o'clock they got in range with their rifle, firing at short intervals, but doing us little damage for a while; at nine o'clock they began with their light guns, and we replied, giving them alternately the port and starboard broadsides as rapidly as the ship could be worked; thus the engagement continued nearly two hours, when the enemy opened on us a severe fire from their small arms; about this time a shell from their rifle exploded on our forward port gun, dismounting it, killing one man, and wounding nearly the entire gun's crew. It was impossible for the men to remain at the guns under the galling fire from the enemy's sharpshooters. They had come within close range upon our port and starboard quarters, and from their elevated position completely swept our decks; an effort was now made to train the two aft guns upon the enemy, and fire through the cabin; but as it was impossible to get such a bearing as would offer a reasonable chance of inflicting any damage, and the men were now all driven from the other guns, the commander, deeming further resistance useless, reluctantly determined to surrender, and our flag was hauled down.

The ship was completely riddled in her upper works, and of five boats four were entirely destroyed; one man was instantly killed, one fatally, and five severely wounded, and a large number received slight injuries.

Before the surrender, eighty rounds of shot and shell had been discharged, and the men had thrown most of the small arms overboard. .

The Velocity had kept up a steady fire with her two howitzers, but the enemy paid little or no attention to her until the ship surrendered, when, she having followed our example, they took possession; she had no one injured on board. I have since heard that she was recaptured in attempting to run the blockade with cotton.

Though repeatedly struck, the cotton-clads were not seriously damaged. The enemy denied any loss, but it was afterwards said that four were killed and as many wounded.

It is not my intention to be the eulogist of Captain Dillingham, yet I may be allowed with propriety to say that his self-possession and bravery throughout the engagement elicited the admiration of both officers and men. The rebels have since repeatedly testified that the ship was skilfully and gallantly defended, and the personal courage and daring of its commander unsurpassed; regardless of himself, he remained upon deck amid such terrific volleys of musketry that his escape seems almost miraculous; his example infused a similar spirit among the officers and crew, and each did his part nobly.

I am impelled to be thus explicit in all the details of the engagement, that you may know that the Morning Light was not "pusillanimously" surrendered. We were all chagrined beyond measure upon reading in the Houston Telegraph a copy of Admiral Farragut's report to you, knowing that he had been most grossly deceived by ignorant or designing men.

The officers and crew were taken to Sabine City. Their personal property was generally respected, excepting twenty-nine contrabands, who were robbed of everything and treated with much indignity.

Having towed the ship as near the shore as the depth of water would permit, the confederates attempted to lighten her sufficiently, if possible, to get her over the bar. In this they did not succeed, and fearing the advent of gunboats from Galveston they burnt her; of the eight heavy guns they did not get off a single one; and strangely enough they did not get more than half the stores, though she was not destroyed until the second morning after the engagement.

On the 24th the officers and crew were sent to Houston, where I joined them on the 1st of February, having remained behind in charge of some wounded that could not be immediately removed. While at Sabine, Major O. M. Watkins, commander of the expedition against us, administered the enclosed parole to me and five others, fearing an attack from our vessels, and that we might be retaken. This parole will elicit your attention. I was informed at Shreveport that Commissioner Ould "unconditionally" released all surgeons, though I did not see his order to that effect.

The conduct of Major Watkins and the other confederate officers associated with him towards us was invariably courteous and obliging. He offered to send me by flag of truce to the fleet soon after my capture, but at the solicitation of the wounded, and in obedience to my own conviction of duty, I respectfully declined the offer.

On the 1st of May, the federal officers (excepting the surgeons) were sent to the Huntsville penitentiary, and for a while confined in cells, though subsequently treated less harshly.

June 11th, under some frivolous pretext, Doctor Cummings, of the forty-second Massachusetts volunteers, and I were arrested and placed in close confinement until the 14th, when we were sent with the men to "Camp Groce," near Hampstead.

About the 1st July, the officers at Huntsville were released from the penitentiary, and sent to "Camp Groce."

September 14, two hundred and fifty prisoners from the Sachem and Clif

ton, and, a few weeks later, their officers were added to our number. The latter were confined separate from the other officers, and no intercommunication permitted; other additions had been made, increasing our number to four hundred. Here we remained under close guard until December 9, when the commissioned officers were removed to "Camp Ford," near Tyler, Texas, and the non-commissioned officers and privates, having been paroled, were sent to "Camp Instruction," near Shreveport, Louisiana, with assurances of immediate exchange. I was graciously permitted to accompany them.

The condition of the prisoners in Texas and Louisiana is most deplorable. Their clothing is insufficient, and their health impaired. They are without money—their allotments having long ago run out, and their families, from whom they have not heard since their capture, are, in many cases, without adequate support. They have suffered much from cold and heat and fatigue, and a meagre supply of medicine and subsistence. Humanity dictates that everything in the power of the government should be done to accomplish their speedy release.

As to our treatment, when we consider the limited means of subsistence, and wretched tenements at the command of the confederate authorities, and the absence of skill and industry in applying the few facilities they did possess, it may probably with justice be said that many, if not most, of our discomforts and hardships were rather attributable to circumstances than to any perverse or malicious intention on the part of the rebels to maltreat us; but there were some things that could not bear so liberal a construction—the compelling of sick and enfeebled men, many of them without shoes, to make long marches; the neglect to provide adequate transportation when it was in their power to do so; the deception practiced upon our officers at Camp Groce, where, under reiterated promises of immediate exchange upon their arrival at Shreveport, they were induced to sell nearly all their clothing and other effects, and were then, without explanation or apology, detained at Camp Ford; their refusal or neglect to provide even the most needy of our men with clothing when they were suffering from want of it during the past unusually inclement winter; and the unwarrantable incarceration of our officers in the cells of a penitentiary. These and other instances of cruelty and wrong which might be mentioned, were not this report already, I fear, too long, cannot be viewed as justifiable to prisoners of war, and may appropriately be characterized as unusual and barbarous. There were numerous instances, however, of individual kindness that contrasted strongly with the harshness or indifference of others, and did much, at times, to alleviate our sufferings.

While at Houston I was permitted to visit the prisoners daily, and during the six months at Camp Groce I had almost the entire medical charge of them. There was a great deal of sickness, and my duties were exceedingly laborious.

After arriving at Shreveport, finding I had no means of attending the sick, now under the exclusive treatment of the confederate surgeons, who, I believe, aimed to do as well by them as their own soldiers, I asked to be released under the order of Commissioner Ould, thinking I might accomplish something towards effecting the exchange of our people. The request was granted, and I left Shreveport on the 17th of February, 1864, arriving in our lines, near Franklin, on the 9th of March, having been a prisoner nearly fourteen months. During the trip from Shreveport to Franklin the treatment of the confederates towards me was most liberal and courteous.

Enclosed you will find a copy of my parole from General Kirby Smith.

I represented to Major Generals Banks and Franklin and others the condition of the federals in Texas and Louisiana.

Arriving in New Orleans I reported to Commodore Palmer, when, after some delay in hearing from Admiral Farragut, I received his letter of permission to

go north, and took the first steamer for Cairo, and am again with my friends, after an absence of nearly three years.

I await your orders ; and if the exigencies of the service do not forbid it, I respectfully solicit a furlough, with the privilege of reporting, on or before its expiration, for duty in the South Atlantic or Gulf squadron, though I do not wish to urge a preference.

I have the honor to be, very respectfully, your obedient servant,

J. W. SHERFY,

Act'g Assistant Surgeon U. S. N., late of the Ship Morning Light.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Master John Dillingham.

UNITED STATES STEAMER POCAHONTAS,

Off Sabine Pass, July 25, 1864.

SIR : I arrived on parole to the blockading fleet yesterday, and take the first opportunity, after being eighteen months a prisoner of war in Texas, to report the capture of the United States ship Morning Light whilst under my command. On the afternoon of January 20, 1863, while blockading Sabine Pass, in company with prize schooner Velocity, two steamers were reported coming down Sabine lake. From information received from refugees, I knew them to be the confederate steamers J. H. Bell and Uncle Ben, which had been most formidably fitted up to attack my ship, and of which I had advised Commodore Bell, commanding the naval forces off Galveston. The ship being in very shallow water, and not sufficient wind to manage in an engagement, I got under way at 8 p. m. and ordered the Velocity to do the same, and keep company with the ship. It being the last part of a norther, the ship had no steerage way during the night.

My expectations of an early attack were confirmed at daylight by observing both steamers approaching from the town. I had the royal yards crossed, and after waiting for the Velocity to communicate, made all sail to southwestward, to get an offing, with a light, baffling air from the eastward. The foremost steamer, J. H. Bell, soon opened fire with a 64-pounder rifled gun, her shot cutting the main yard nearly in two and damaging the rigging in its wake. I returned her first fire from a rifled howitzer on the poop, which burst at the first discharge, wounding those in charge of it. I was now obliged to keep off and to use the broadside guns, while the attacking steamers kept in line, exposing nothing but their cotton-clad bows. The enemy's shot were thus repeatedly taking damaging effect to the ship, while our broadsides seemed not to materially damage the steamers. Both steamers, taking advantage of the light wind, soon shifted out of our range and advanced within musket range, and while they were annoying our topmen and others exposed above decks with musketry, seemed hesitating for an opportunity to board us on each quarter. In such an event, as our battery was unfortunately all forward of the mainmast, we should be entirely at their mercy. After expending several broadsides at the enemy, I hauled to the southward, watching for a chance to charge on and try to destroy one of the steamers at close range. Both steamers now separated for boarding us, as I expected, when I brought the ship to the wind, and gave the Uncle Ben two successive broadsides at near range, one shot taking effect at the water-line, at the same time the J. H. Bell managed to explode a shell on our deck, crippling the crew and gun No. 2, port side ; she then boarded our port quarter and commenced a most galling fire from her cotton barricade,

on our decks. I then had two guns taken out of the battery and ranged fore and aft to repel boarders, but none appeared in sight, while they had full command of our decks with musketry from their cotton-clad bulwarks. Finding nothing but a general massacre on our side would be the result of longer resistance, I ordered the flag hauled down, and requested the enemy to cease firing, at which they demanded an unconditional surrender. I surrendered the ship after about two hours' engagement at great disadvantage. The ship was most severely cut up by shot in all directions. The casualties were, one man shot all to pieces, one mortally and eleven seriously and about twenty slightly wounded. My officers and crew behaved in the most satisfactory manner throughout. Acting Masters H. W. Washburn and W. W. Fowler managed the two gun divisions with energy. Acting Master's Mate George H. Rice, who has been creditably mentioned in former engagements, showed extraordinary gallantry in hauling down the flag, assisted by Quartermaster T. H. Sheppard, under a most severe fire of musketry. The Velocity, in command of Acting Volunteer Lieutenant Hammond, surrendered at the same time with the ship, fortunately without casualties. The ship was towed back to the bar, and after being three days in the enemy's possession was burnt with about everything on board, on the approach of two gunboats from the westward.

My report being made up from long recollections after so long confinement, I may not, perhaps, do justice to those under my command in bringing them to favorable notice. Trusting the zeal they displayed up to its becoming useless to contend against an enemy numbering five to our one, with the advantage of steam and cotton barricades, will be appreciated by the government they were serving,

I have the honor to remain, most respectfully, your obedient servant,

JOHN DILLINGHAM,

Acting Master, U. S. N.

Hon. GIDEON WELLES,

Secretary of the Navy.

CAPTURE OF VESSELS AND REBEL OFFICERS IN MATAGORDA BAY.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP TENNESSEE,

Off New Orleans, April 20, 1864.

SIR: I have the honor to report to the department that on the night of the 28th of March Lieutenant Commander A. P. Cooke, commanding the United States steamer Estrella, blockading in Matagorda bay, discovered a light up the bay, and on approaching found a small schooner on fire, aground and deserted. Endeavors were made to save the vessel, which, however, proved fruitless. Nine bales of cotton and some loose cotton were taken from her.

I have further to report that on the 6th instant Lieutenant Commander Cooke made a cruise up the bay, and when off Indianola discovered a schooner and small sloop, both of which he captured, together with four prisoners, all of whom were in the rebel service. These he delivered over to the military authorities, retaining the vessels. The schooner is only of eight tons burden.

It appears that on the 3d instant the rebels sent a flag of truce to the point near the anchorage of the Estrella. On returning from boarding the schooner carrying the flag, the executive officer of the Estrella reported that there were several officers of the rebel gunboat J. F. Carr on board. The vessel, however, was not detained.

On the 5th instant the same parties came again with a flag of truce in another

schooner, upon some trivial errand, but went back again immediately, and it was on the following day that Lieutenant Commander Cooke made the reconnoissance above referred to, in which he captured the schooner last mentioned. Enclosed is his report of the circumstances, addressed to Captain Marchand.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander A. P. Cooke.

UNITED STATES GUNBOAT ESTRELLA,

Matagorda Bay, April 7, 1864.

SIR: I have the honor to report that on the 3d instant the enemy sent a flag of truce to this point in a schooner. I met her, and sent Acting Master Pomeroy to learn its object. Afterwards I communicated with the commanding general, who sent an officer to attend to the flag.

Mr. Pomeroy informed me there were several officers of the rebel gunboat J. F. Carr in the schooner. They came with the flag of truce, doubtless, to make a reconnoissance of our situation here. The weather prevented the schooner from returning till next day. On the 5th instant the same party came again in a different schooner, on a trivial errand, with a flag of truce, but returned immediately. On the morning of the 6th instant I took a cruise up the bay, and when off Indianola discovered the schooner which had been down the day before in a flag of truce lying in a bayou at the town. I fired a shot at her, whereupon a white flag was hoisted at her masthead, and two men came off in a small boat. They were detained as prisoners, and an armed boat sent in to bring out the schooner, and a little sloop which was lying there. Two other men were brought off with the schooner. I ascertained that the men were all in the employ of the enemy. They gave their names as follows: Captain Green Hall, C. S. N., commanding confederate gunboat J. F. Carr; Joseph R. Hanna, first pilot gunboat Carr; James Delaney, pilot transport steamboat Lucy Gwinn; and William Austin, commanding despatch boat Julia A. Hodges, which is the name of the schooner captured—a fast little vessel of eight tons burden. I brought the boats down to the anchorage at Pass Cavallo, and turned the prisoners over to the provost marshal of the forces at this point.

Very respectfully, your obedient servant,

A. P. COOKE,

Lieutenant Commander.

Captain J. B. MARCHAND,

Commanding Third Division W. G. B. Squadron,

United States Steam-Sloop Lackawanna.

CAPTURE OF THE U. S. STEAMERS GRANITE CITY AND WAVE.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD,

May 13, 1864.

SIR: I regret to inform the department of the capture in Calcasieu bay, near the Sabine river, of two vessels of my squadron—the steamer Granite City and steamer (tin-clad) Wave.

How the event took place has not yet been ascertained. I only know the simple fact without particulars.

By the next mail I may be able to give you definite information.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Detailed report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

Off Pensacola, May 18, 1864.

SIR : I have already informed the department, in my despatch No. 179, of the capture of the Granite City and the Wave at Calcasieu, and I regret to be obliged to report the additional loss of a boat and boat's crew of the New London at the same place.

The circumstances appear to be as follows : I had directed Captain J. B. Marchand, commanding the Texas division, to send into Matagorda bay a light-draught vessel, in addition to the Estrella, to protect the army, as a considerable portion of the force there had been withdrawn to assist General Banks when hard pressed in the Red river, and had named the Granite City as a proper vessel, from her draught, for that purpose.

Captain Marchand, on the 9th instant, despatched the New London (Acting Master Lyman Welles) to Sabine Pass, with the necessary orders to the commanding officer of the Granite City. After communicating with Commander Woolsey, senior officer there, Acting Master Welles proceeded to Calcasieu in search of the Granite City, neither Commander Woolsey nor Acting Master Welles being aware of the disaster that had occurred at Calcasieu.

Acting Master Welles reports that he anchored outside, about five miles from the Granite City, at 11.30 a. m., of the morning of the 10th instant, and tried to communicate with her by signals, but the weather being misty, he could not make out her answers, and sent in a boat with Captain Marchand's despatch, under the charge of his executive officer, Acting Ensign H. Jackson, accompanied by A. T. Vanzile, coast pilot, and four men, all armed. The boat did not return, but Acting Master Welles supposed that he was detained in consequence of the increasing wind and sea, which began to break heavily upon the bar.

The next morning he got under way and ran nearer in, until within $3\frac{1}{2}$ miles of the Granite City, when he again made signals, but without eliciting any reply. He then sent in a second boat with a flag of truce, in charge of Acting Ensign H. Z. Howard, who soon after returned with the following report : That Acting Ensign Jackson had approached the Granite City until, within distance of small arms, he saw the rebel flag at her peak, but supposed, as the men said, that it was flying as a joke, and fired on it, when he was immediately killed by a shot from the Granite City. The rest of the boat's crew were taken prisoners. He further reports that he was informed that the Granite City and Wave were captured on the morning of the 6th instant by the rebel land forces, after one hour's engagement.

Enclosed are copies of the report of Acting Master Lyman Welles and of Acting Ensign Howard, marked Nos. 1 and 2, and also a list of the officers and men killed and taken prisoners, and of the property captured, marked No. 3.

These are all the facts connected with the loss of the Granite City and Wave which have as yet come to my knowledge.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

HON. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Master L. Welles.

UNITED STATES STEAMER NEW LONDON,

Off Galveston, May 11, 1864.

SIR: I regret to inform you of the loss of the United States steamer Granite City and a tin-clad gunboat, name unknown, captured by the rebels at Calcasieu on the 6th instant, and a boat and boat's crew belonging to this ship on the 10th instant, under the following circumstances:

Pursuant to your orders, on the 9th instant I went with this ship to Sabine Pass and communicated with Commander M. B. Woolsey, senior officer there, and then proceeded to off Calcasieu, arriving at 11.30 a. m. on the 10th instant. I found that the Granite City was anchored inside, and I came to anchor in $2\frac{1}{2}$ fathoms, about five miles from her; set my numbers, but it being somewhat misty, and the wind blowing on shore, I could not make out her answer. I therefore sent in your despatch, in charge of Acting Ensign H. Jackson, executive officer, accompanied by A. T. Vanzile, coast pilot, in my 3d cutter, with cockswain and four men, all armed. I charged Mr. Jackson to be cautious in proceeding, and to return as soon as possible. The boat left the ship at 12 m.

He did not return, but I thought that the increasing wind and sea was the cause of his detention, as it began to break heavily on the bar.

This morning at daylight the wind having shifted to northwest, and sea smooth, I got under way and proceeded in-shore and came to anchor; the Granite City, bearing north-northwest about $3\frac{1}{2}$ miles distant, set her number, but there was no reply. At 9 a. m. we fired a gun. At 10.30 a. m. sent in a boat with flag of truce, in charge of Acting Ensign H. Z. Howard, a copy of whose report, marked A, I enclose, as also a list, marked B, of officers and men killed and captured, and statement, marked C, of property belonging to this ship captured by the enemy.

Very respectfully, your obedient servant,

L. WELLES,

Acting Master, Commanding.

Captain JOHN B. MARCHAND, U. S. N.,

Com'dg 3d Division, W. G. B. Squadron, off Galveston, Texas.

Report of Acting Ensign H. Z. Howard.

UNITED STATES STEAMER NEW LONDON,

May 11, 1864.

SIR: The loss of Mr. Jackson and boat's crew is as follows:

The boat got within distance of small arms on board the Granite City, with a confederate flag at the peak. Mr. Jackson thinking, as our men said, that the flag was flying as a joke or lark, fired on it. Immediately after he was shot dead by a shot from the Granite City. There was no other shot fired. The remainder of the boat's crew were taken prisoners on board the Granite City.

It was also stated that the Granite City and one tin-clad were captured on the morning of the 6th May by the rebel land forces, after one hour's engagement, and that Mr. Jackson might have known that they were captured, as the Granite City was so much shattered by shot.

This was stated to me by the officer in command of boat.

Respectfully, your obedient servant,

H. Z. HOWARD,
Acting Ensign.

L. WELLES,
Acting Master, Commanding.

List of officers and men in New London's boat.

Acting Ensign Henry Jackson, killed.
Coast Pilot A. T. Vanzile, prisoner.
Cockswain John Hurley, prisoner.
Seaman George Miller, prisoner.
Seaman Charles Wilson, prisoner.
Seaman George Curry, prisoner.
Ordinary Seaman John Dunn, prisoner.

List of property captured.

One boat, with oars, &c.
Seven Sharpe's carbines and equipments.
Four navy pistols.
Four navy revolvers.
Five navy swords.
One navy cutlass.
One hundred and twenty rounds ammunition for carbines.
Twenty-five rounds ammunition for pistols.
Six rounds ammunition for revolvers.
Fifty caps for revolvers.
Two hundred caps for carbines and pistols.

Additional report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
Off Mobile, May 23, 1864.

SIR: I have just received from Captain Marchand (whom I have recalled from the coast of Texas to re-enforce my blockading force here) two letters—one written by Acting Master Lamson of the Granite City, and the other by Acting Assistant Surgeon Boyden, of the Wave—from which it appears that they had come to the conclusion, as most of those gentlemen do, that there is no danger in the enemy's country so long as you do not see it. They were lying without steam or any precaution against attack, and the enemy, about three hundred infantry and four pieces of field artillery, opened upon them at the distance of perhaps one hundred yards. They say that each vessel made a most gallant defence, but finally had to surrender, having so many killed or wounded, while the letters show that there were only ten wounded on board the Granite City, two of whom have since died, and eight wounded on board the Wave, all flesh wounds. This was the desperate fighting that caused them to surrender. The enemy was on shore without cover of any kind.

It is very mortifying to see my vessels behave so badly. * * *

The assistant surgeon says the commander of the Wave fought a gun himself, and fought forty minutes longer than the Granite City, and his vessel received two shot through her boilers before he surrendered. He also says that a small amount of vigilance would have prevented the disaster. The soldiers who were on shore were also captured.

If I had any of my light-draught vessels I would try and recover them, and hope to do so yet; but I must confine myself to this place for the present, and as soon as I have some vessels I will send them there.

The letters were sent out by flag of truce.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Com'dg W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Letter of Rear-Admiral Farragut transmitting report of Acting Volunteer Lieutenant B. W. Loring.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

Off Mobile, June 9, 1864.

SIR: I forward herewith (marked No. 1) a report made to Commodore Palmer by Acting Volunteer Lieutenant Benjamin W. Loring, late commanding officer of the tin-clad Wave, captured in Calcasieu.

I find nothing in the report to change the views expressed by me in my despatch No. 199.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Report of Acting Volunteer Lieutenant B. W. Loring.

HOUSTON, TEXAS, May 9, 1864.

SIR: By flag of truce I inform you that the United States steamers Wave and Granite City, while lying at anchor in Calcasieu bayou, on the morning of May 6, at daylight, were attacked by a superior force of the enemy, consisting of a battery of artillery and several hundred sharpshooters, who were posted in a dense chaparral, about one hundred yards from the Granite City. Their incessant fire at her ports was so severe that, after discharging about thirty rounds from her guns, and nearly all the guns' crews being wounded, she was obliged to surrender. The Wave having received a shot through the steam-drum, escape became impossible. I surrendered her after a contest of one hour and thirty-five minutes. Both vessels are severely cut up.

The lieutenant of the squad of soldiers surrendered his command without firing a shot, although posted on the opposite side of the river. Our pickets that were posted on the line of the enemy's march (Sabine Pass) have not yet been heard from.

On board the Wave were five men severely wounded, (but will all recover;) five slightly wounded and able to march.

On board the Granite City were killed John W. Tindall, quartermaster; Joseph Johnson, seaman, mortally wounded; John Jacobs, quartermaster; William H. Hayden, ordinary seaman; Acting Ensign S. R. Tyrrell was dangerously wounded; Acting Ensign A. H. Berry, severely wounded; John Scott, seaman, one arm shot off; slightly wounded, eight. A boat's crew from the Granite City, consisting of eight men, under command of Acting Master's Mate Thomas R. Marshall, away above on night picket duty, were not present during the action, but were captured on their return. The officers and crew of the Wave behaved in the most gallant manner during the action. Ensign Howard, being severely wounded in the left hand, (losing one finger,) remained at his station. Captain Lamson, of the Granite City, informs me that his officers and men performed their duties to his entire satisfaction, remaining at their guns as long as there was enough to work them. The surgeons of both vessels remain behind in charge of the wounded, but will join us at this place. We are well treated and cared for.

Very respectfully, your obedient servant,

BENJAMIN W. LORING,
Late Commander of the Wave.

Commodore JAMES S. PALMER,
Commanding U. S. Naval Forces, New Orleans.

Respectfully forwarded.

J. S. PALMER, *Commodore.*

DISASTER TO BOAT'S CREW OF THE STOCKDALE.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
May 24, 1864.

SIR: I have to report the capture of Acting Ensign John Lowrie and Acting Third Assistant Engineer Samuel Lockwood, and the death from wounds of Acting Master's Mate Gilbert H. Moore, all of the United States steamer Stockdale, (tin-clad,) now stationed in the lake. The circumstances are detailed in the enclosed report (marked No. 1) of Acting Volunteer Lieutenant Thomas Edwards, commanding the Stockdale. I regret to say that the capture of the officers and the death of Mr. Moore were the consequence of the great indiscretion of the officers, or that of Acting Ensign Lowrie.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

Report of Acting Volunteer Lieutenant Thomas Edwards.

UNITED STATES STEAMER STOCKDALE,
Lake Pontchartrain, May 17, 1864.

SIR: It becomes my painful duty to respectfully report to you the loss of three of my officers—Acting Ensign John Lowrie and Acting Third Assistant Engineer Samuel Lockwood, taken prisoners, and Acting Master's Mate Gilbert H. Moore, severely wounded, and since died.

The circumstances of the capture are the following: On Monday morning, May 16, about six o'clock a. m., I went into the mouth of the Chefunctee river, where the smugglers make it a practice of running whenever the opportunity affords. After I came to anchor, the executive officer, Mr. Lowrie, reported to me he would like to go on the point at the mouth of the river and get some sand. I gave him the order to go, and send Mr. Moore as officer of the boat, with five men well armed, and to have the bow guns trained upon the point. The boat went to the point and got the sand and came on board. Not having enough sand, Mr. Lowrie said he would like to go himself this time. I told him to go and be back as soon as possible, as I was going to get under way. He went, but instead of going to the point after the sand, he went about four hundred yards up the river from the point into the mouth of a small bayou where it was thickly wooded, and the moment the boat struck the shore a whole company fired into them. The men immediately jumped overboard, (three colored men and one white man,) and the officers, by their staying in the boat, stopped to fight them. I think I immediately commenced firing my bow guns (30-pounder Parrotts) with five-seconds shell, and they left, but taking Mr. Lowrie and Mr. Lockwood with them, leaving Mr. Moore overboard, wounded. As I was lying about four hundred yards from where the boat landed, I immediately steamed up to where my men were, and got them and the boat, still shelling the woods, but wounded only two or three, which I have since learned. I then went to Mandeville, sent on shore by flag of truce to get my officers, if killed. I was informed that Mr. Lowrie was wounded in the shoulder, and Mr. Lockwood in the hand. I also gained intelligence that this was an expedition of cavalry, commanded by a Lieutenant Colonel Hill, for the purpose of capturing the Stockdale should she go into the Chefunctee river on Sunday night. For this purpose they had six boats at Louisburg, but on Sunday afternoon I went and took them all, and did not go into the Chefunctee river on Sunday night. They also had a man in a small boat to make a signal should I come in the river; him I took as a prisoner. I also have learned since that they have three companies of cavalry about three miles back of Louisburg. I also respectfully report the capture of a man in a small boat running the blockade on Sunday morning; he threw everything overboard before I reached him.

I have the honor to be, sir, very respectfully, your obedient servant,

THOMAS EDWARDS,

Acting Volunteer Lieutenant.

Commodore JAMES S. PALMER,

Commanding Naval Forces, New Orleans, La.

DESTRUCTION OF THE BLOCKADE RUNNER IVANHOE.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

July 2, 1864.

SIR: It gives me pleasure to be able occasionally to announce to the department the destruction of a blockade runner.

On the night of the 30th ultimo, at 11 p. m., a steamer attempted to pass into Mobile, but the vessels had been placed in anticipation of it, and the little despatch boat Glasgow was in the swash channel, and so soon as the eastern boat made the signal, "vessel running in," the Glasgow ran for the beach, soon discovered her, and fired five shots at her, when the fort opened upon the Glasgow, but the blockade runner was aground,

In the morning I sent the gunboats in to shell her.

I presume they have gotten her cargo out of her, but the vessel still lies on the beach, and I hope effectually to destroy her.

I do not know what vessel it is, but they say it is not the Denbeigh.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

July 6, 1864.

SIR: I am happy to announce to you the burning of the blockade runner which I informed you was run on shore by the Glasgow a few nights since under the forts. Yesterday, the 5th, I permitted Captain Drayton to send in a boat expedition, under the command of Lieutenant J. Crittenden Watson, my flag-lieutenant, composed of three boats from this ship, in charge of Lieutenant H. B. Tyson, Ensigns William G. Dana, William H. Whiting, and G. B. Glidden, and Master's Mate R. P. Herrick, and one boat from the Brooklyn, in charge of Ensign C. H. Pendleton and Assistant Surgeon William Commons. The boarding party was covered by the gunboats Metacomet, Lieutenant Commander J. E. Jouett, and Kennebec, Lieutenant Commander W. P. McCann. The duty was performed promptly; the vessel boarded without resistance, and set on fire. We discovered the flames twenty minutes before 1 a. m., and she burned until 3 a. m. The party all returned by 2.30 a. m. The whole was performed with great judgment and discretion.

The enemy's forces were lying within a short distance, but they did not open fire on our people until the flames burst out.

I take the liberty of enclosing a copy of Captain Drayton's report and my general order, and hope the conduct of those of the expedition will be worthy of your notice.

We have not as yet been able to ascertain the name of the vessel.

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Captain P. Drayton.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,

Off Mobile, July 6, 1864.

SIR: I beg leave to report that it being important to destroy the blockade runner which was chased on shore near Fort Morgan on the night of the 1st instant, and the fire of our vessels having apparantly failed to accomplish this object, Flag-Lieutenant Watson offered to go in and set her on fire.

For this purpose he was given (last evening) three of the Hartford's and one of the Brooklyn's boats, which were towed into position after dark by the Metacomet, Lieutenant Commander Jouett, and the Kennebec, Lieutenant Commander McCann; these vessels afterwards covered the movement. About 1 a. m. this

morning the blockade runner was boarded and set on fire in two places, from the effects of which she has, I should say, been rendered utterly useless. The boats then returned to the covering vessels, and were towed off to the fleet.

The whole affair was well managed, and very creditable to Lieutenant Watson and to his assistants, Lieutenant Tyson, Ensigns Whiting, Glidden, Dana, and Acting Master's Mate Herrick, of this vessel, and Ensign Pendleton, of the Brooklyn; and although offering, as it proved, few difficulties of execution, still there was every reason to suppose beforehand that the enemy would not, without a stubborn resistance, permit a vessel to be destroyed so near a strongly garrisoned fort, and immediately under the fire of its guns.

Very respectfully, your obedient servant,

P. DRAYTON, *Captain.*

Rear-Admiral D. G. FARRAGUT,

Com'dg W. G. B. Squadron, U. S. Flag-Ship Hartford, off Mobile.

General Order of Rear-Admiral D. G. Farragut.

[General Order No. 9.]

FLAG-SHIP HARTFORD,
Off Mobile Bay, July 6, 1864.

The admiral commanding has much pleasure in announcing to the fleet, what was anxiously looked for last night by hundreds, the destruction of the blockade runner ashore, under the rebel batteries, by an expedition in boats.

Three boats of the Hartford, under command of Flag-Lieutenant J. Crittenden Watson, and in charge of Lieutenant H. B. Tyson, Ensigns William S. Dana, William H. Whiting, and J. B. D. Glidden, and Master's Mate Richard P. Herrick, and one boat of the Brooklyn, in charge of Ensign C. H. Pendleton, were despatched for the purpose, and the boarding party was covered by the gunboats Metacomet, Lieutenant Commander James E. Jouett, and Kennebec, Lieutenant Commander William P. McCann.

Assistant Surgeon William Commons, of the Hartford, accompanied the expedition as medical officer.

The steamer was boarded and set on fire, and the entire conduct of the expedition was marked by a promptness and energy which shows what may be expected of such officers and men on similar occasions.

They have the thanks of the admiral commanding for the manner in which they performed their respective duties.

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Additional report of Captain P. Drayton.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
Off Mobile, July 8, 1864.

SIR: It being a matter of some interest to know the extent of injury done to the blockade runner by the burning to which she was subjected on the morning of the 6th instant, Lieutenant Watson volunteered to go in for the purpose of examining, and, if found necessary, of blowing her up last night.

Two armed boats from this vessel were given him, and accompanied by Lieutenants Tyson, Adams, and Jones, and Acting Master's Mate Hawthorne. He was taken in by the United States steamer Pinola, Lieutenant Commander

Stanton, but in the darkness the vessel could not be found, and the boats while going along the beach in search of her, were several times hailed, thus giving the alarm, so that on approaching the steamer they were received with heavy volleys of musketry and grape. Protected, as they were, however, by the darkness, only one man, William Hawkins, was struck, and he with a musket ball, from the effects of which he died to-day. The party, being too weak for attack under the circumstances, withdrew and returned to the Pinola without further accident.

Very respectfully, your obedient servant,

P. DRAYTON, *Captain.*

Rear-Admiral DAVID G. FARRAGUT,
Commanding West Gulf Blockading Squadron.

Forwarded.

D. G. FARRAGUT, *Rear-Admiral.*

Additional report of Rear-Admiral D. G. Farragut.

FLAG-SHIP WEST GULF BLOCKADING SQUADRON,
Off Mobile, July 12, 1864.

SIR: I have the honor to inform the department that, by the enclosed slip from a Mobile paper of the 5th instant, the blockade runner we destroyed last week, is the *Ivanhoe*, one of those named in our consular despatches.

We ran another on shore on the night of the 7th, very close under Fort Morgan, which made it more difficult to destroy her without subjecting our vessels to the similar risk of getting on shore. This steamer succeeded last night in getting off and running into the bay; she is also a new vessel, and we do not know her name; we shelled her at intervals for two days.

Very respectfully, your obedient servant,

D. G. FARRAGUT,
Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,
Secretary of the Navy, Washington.

DESTRUCTION OF THE BLOCKADE RUNNER MATAGORDA.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP TENNESSEE, WEST GULF BLOCKADING SQUADRON,
Off Mobile, July 16, 1864.

SIR: I have the pleasure to report to the department the destruction of a blockade runner off the coast of Texas, which Commander Woolsey informs me is the well-known steamer *Matagorda*. She was destroyed, on the morning of the 8th instant, by the *Kanawha*, *Penguin*, and *Aroostook*, after running out of Galveston.

I forward herewith the report of Lieutenant Commander B. B. Taylor, of the *Kanawha*.

Very respectfully, your obedient servant,

D. G. FARRAGUT, *Rear-Admiral.*

Hon. GIDEON WELLS,
Secretary of the Navy, Washington.

Report of Lieutenant Commander B. B. Taylor.

UNITED STATES GUNBOAT KANAWHA,
Off Galveston, Texas, July 8, 1864.

SIR: I have the honor to report, that while lying at my station, (main ship channel.) of the entrance into Galveston, last evening, 7th instant, a steamer was discovered at 11 o'clock, standing to the southwest close under the land. I immediately slipped the cable, spread fires, signalized the fleet, and started in pursuit, following as close in shore as was deemed safe, keeping the stranger in sight (although she was continually changing her course) until nearly day-break, when, finding she had stopped, and supposing she had run on shore, I ran down and spoke the steamer Penguin, blockading off San Luis Pass, ordering him to come up at daybreak to assist me in getting her off or destroying her. I then returned to the steamer and discovered that she was not ashore, but standing under the land to the northward and eastward, and throwing overboard her cotton. I immediately opened on her with my guns, and succeeded, after three shots, in driving her on shore. I kept up a brisk fire, being joined by the Penguin, until the crew were compelled to quit the vessel. I then sent in three boats, one from this vessel and two from the Penguin, under command of Acting Master Durham, of the Penguin, to see if she could be gotten off; if not, to set her on fire. The boats approached within about thirty yards of the vessel, when they were opened on by about 150 riflemen and compelled to return, the commanding officer being slightly wounded. The officer in charge reported that the vessel was sunk, and it would be impossible to get her off. We then recommenced firing, and shortly had the satisfaction of seeing the vessel in flames. I would state that the United States gunboat Aroostook joined us about half past six o'clock, and also opened fire on the steamer. We continued firing until the vessel was a complete wreck and on fire fore and aft. The blockade runner was a side-wheel, single-stack vessel, painted lead color, and very slow, the Kanawha having no difficulty in overhauling her.

Very respectfully, your obedient servant,

B. B. TAYLOR,
Lieutenant Commander.

Commander M. B. WOOLSEY,
*Commanding 3d Division W. G. B. Squadron,
U. S. S. Princess Royal, off Galveston, Texas.*

DESTRUCTION OF SALT WORKS ON BONSECOURS BAY.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
Mobile Bay, Ala., September 11, 1864.

SIR: I have the honor to forward to the department the report of Acting Volunteer Lieutenant George Wiggin, giving an account of the destruction of extensive salt works on Bonsecours bay, and a rough sketch showing their position on both sides of Bonsecours river.

There were fifty-five furnaces, in which were manufactured nearly two thousand bushels of salt per day, and their destruction must necessarily seriously inconvenience the rebels.

Acting Volunteer Lieutenant Wiggin has carried out my orders thoroughly.

Very respectfully,

D. G. FARRAGUT, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant George Wiggin.

UNITED STATES STEAMER TRITONIA,
Mobile Bay, September 10, 1864.

SIR: I have the honor to report that, in obedience to your orders, I left the anchorage off Fort Morgan, on Thursday morning, September 8, at 7 o'clock a. m., accompanied by the United States steamers Rodolph and Stockdale, also an army transport.

We arrived off Bonsecours bar at 10 a. m. I anchored this vessel and went on board the Rodolph with the pilot, and proceeded in over the bar, followed by the Stockdale; 10.30, came to anchor off Salt-house Point, in twelve feet of water, one mile above the bar.

I immediately sent on shore an armed boat's crew from each vessel, and, accompanied by Captains Upham and Edwards, proceeded to examine the salt works.

We found fifty-five furnaces, averaging eighteen pans or pots each, making a total of near one thousand, and capable of making two bushels of salt to a pan per day. We commenced the destruction of them by breaking the pans and furnaces, and cutting the pumps, tearing the brick work, &c. We did not finish breaking them until near five o'clock yesterday evening, when we set all the sheds covering the works, and also the quarters attached, on fire, some two hundred buildings altogether. The destruction was complete. I found some of the works well built and very strong, particularly one known as the Memphis Works, said to have cost \$60,000. This one we were obliged to blow up before we could get at the pans. Another work which was very strong, and well built, said to have cost \$50,000. These works were the largest, each having twenty-eight pans. The whole works covering an area of a square mile. I learned from the inhabitants that they averaged some two thousand bushels of salt per day.

There are about ten families living on the bay and river. They seem well disposed and glad to see us. The entrance is shallow; four feet of water can be carried in at low water. We saw no troops or heard of them nearer than twenty miles. I learned that everything has been destroyed in the vicinity of Fish river.

I regret very much to report that Mr. Trundy, acting master's mate, accidentally shot himself through the right hand, by his own revolver going off in his belt. He will lose a finger.

I am, sir, very respectfully,

GEORGE WIGGIN,
Acting Volunteer Lieutenant, Commanding.

Admiral D. G. FARRAGUT,
Commanding West Gulf Blockading Squadron.

SECOND EXPEDITION TO BONSECOURS BAY.

Report of Rear-Admiral D. G. Farragut.

FLAG-SHIP HARTFORD, W. G. B. SQUADRON,
Mobile Bay, September 13, 1864.

SIR: I had the honor in a previous despatch (No. 405) to report to the department the results of an expedition under Acting Volunteer Lieutenant George Wiggin, of the Tritonia, for the destruction of extensive salt works in Bonsecours bay.

On the night of the 10th instant I again despatched the same officer to Fish

river, for the purpose of getting possession of an engine used in a saw-mill on this stream, as well as to assist the army in procuring lumber at this place.

The tin-clads Stockdale and Rodolph were, as before, the vessels employed in the expedition, being the only steamers which, from their light draught, could be used for such purpose. An army transport called the Planter, with a barge in tow, containing some two hundred soldiers, formed part of the force.

On the morning of the 11th the vessels crossed Fish river bar, and proceeded up the river, which is represented as being very narrow and crooked, to Smith's mill. The engine had been taken from the mill and buried, but it was, after some difficulty, dug out, and, with the exception of the fly-wheel and bed-plate, removed safely. The army succeeded in obtaining about 60,000 feet of lumber and some live stock.

On their return, our vessels were attacked from Peter's Bluff, at one of the sharp bends of the river, by sixty or seventy rebels, armed with rifles, who had also felled several large trees across the stream. The fire was returned from our howitzers, and the Rodolph, in advance, broke through the obstructions, and all the other vessels followed in safety. The only casualties were the slightly wounding of one officer and two men on the Stockdale. The smoke-stacks of that vessel were knocked over, and a boat of the Tritonia was lost by being jammed between that vessel and the bank. The manner in which the expedition was carried out reflects credit on the officers engaged in it. I herewith forward (marked Nos. 1, 2, and 3) the reports of Acting Volunteer Lieutenant Wiggin, Acting Volunteer Lieutenant Upham, and Acting Master Bemis, together with a sketch of the localities, (No. 4.)

Very respectfully, your obedient servant,

D. G. FARRAGUT,

Rear-Admiral, Commanding W. G. B. Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington.

Report of Acting Volunteer Lieutenant George Wiggin.

UNITED STATES STEAMER TRITONIA,

Mobile Bay, September 12, 1864.

SIR: I have the honor to report that, in obedience to orders, I got under way at 11.30 on Saturday night, September 10, to look for the army transport Planter, but found that she had gone. I steamed up, and signalled to the Rodolph and Stockdale to get under way and follow.

We arrived off Fish river, and came to anchor at 3 o'clock a. m. At 6 o'clock saw the army transport near Grant's Pass, on the opposite side of the bay; 8.30 a. m. she stopped alongside, and reported that she had lost her way. I went on board the Stockdale with armed boat, accompanied by two officers and a pilot. I got under way, and steamed in at once over the bar, the Rodolph following. At 9.30 a. m. entered the river, which we found narrow and crooked, but very deep; some of the turns were so short that we had to use lines to swing the boats. We found 60,000 feet of lumber and some stock, which the army took on board of the barge. We also found the engine, which we brought off, with the exception of the fly-wheel and bed-plate.

The army transport did not get ready to leave until near dark, the Rodolph taking the lead, the transport next, and I brought up the rear in the Stockdale.

When about three-fourths of a mile, and in a short bend, just as we fouled the bank, we were attacked by the enemy; we immediately returned the fire with canister, shrapnell, and musketry. In getting clear we swept our smoke-stacks down, and also our flag-staff, derricks, &c. Here I lost my boat, with

five muskets and equipments, by being jammed between the steamer and the bank. It was very dark on the river, and about as much as Mr. Robert Moore (the pilot) and myself could do to keep the boat out of the woods.

For details please see Captains Upham and Bemis's report.

I learned from a refugee this morning that the rebels were under the command of Colonel Murray in person.

We got clear of the bank and steamed down to the mouth of the river, shelling the bank; as we came along, 9 o'clock a m., we came to anchor in Week's bay without further accident. At 5 a. m. this morning we got under way, and crossed over the flats and out into Mobile bay, bringing five feet of water all the way.

The officers and men of the Stockdale all behaved well, and also did my boat's crew, in charge of Mr. Jaschke, acting master's mate, who worked a howitzer, and superintended the powder division.

Mr. Horne, acting third assistant engineer, belonging to this vessel, did take a very active part in the affair, and deserves much credit for coolness and the good example that he set the others.

I am, sir, very respectfully, your obedient servant,

GEORGE WIGGIN,

Acting Volunteer Lieutenant, Commanding

Rear-Admiral D. G. FARRAGUT,

Commanding W. G. B. Squadron, Mobile Bay, Ala.

Report of Acting Volunteer Lieutenant George D. Upham.

UNITED STATES STEAMER RODOLPH,

Mobile Bay, September 12, 1864.

SIR: Agreeable to your instructions, I got under way at 12 30 a. m., 11th instant, and ran across the bay, in company with the Tritonia and Stockdale; anchored off the mouth of Fish river at 3 a. m.; 8. 30 a. m. got under way and proceeded up the river. At 11.30 made fast to the bank at Smith's mill, where we remained until 6.30 p. m., when I started down the river, followed by the army transport Planter, with barge of lumber in tow, and the Stockdale; cleared ship for action. When abreast of Peter's Bluff, I stopped in order to run a line to swing around the bend, when a party of rebels (should judge some fifty or sixty) opened fire on us with musketry, several shots going through our armor; returned their fire with canister, shell, and rifles. After getting through the bend, where the river is very narrow, I discovered that obstructions had been thrown across the river since we had passed up in the morning; they consisted of three large pine trees from each bank, extending entirely across the river; succeeded in breaking through them with little damage to the vessel, and proceeded down the river. Came to anchor in Week's bay, at mouth of river, at 8.30 p. m., in order to protect the steamer Planter and lumber barge, which was aground; 5 a. m. this day got under way, proceeded across the bar; 9.30 a. m. anchored at the fleet in Mobile bay. I am happy to state that no one was wounded on board of this vessel.

The amount of ammunition expended was six rifle shells, 30-pounder Parrott; eight canister, 24-pounder howitzer; two shrapnell.

I am, sir, very respectfully,

GEORGE D. UPHAM,

Acting Volunteer Lieutenant, Commanding.

Acting Vol. Lieut. GEORGE WIGGIN,

Commanding Expedition.

Report of Acting Master S. N. Bennis.

UNITED STATES STEAMER STOCKDALE,
Mobile Bay, Alabama, September 12, 1864.

SIR: In obedience to your orders, and in accordance with signals previously arranged, at 12.30 a. m., September 11, I got under way, and followed the United States steamers Tritonia and Rodolph up Mobile bay. At 3.20 a. m. came to anchor off the mouth of Fish river. At 6 a. m. I had the honor to receive you on board as the commander of the expedition. At 8 a. m. the army steamer Planter, with a barge in tow and about 200 troops, came up to us. At 8.30 a. m. got under way, crossed the bar, and proceeded up Fish river in company with the Rodolph and Planter. At 11.30 a. m. arrived at Smith's mills, and made fast alongside of the Planter; remained there until 6.30 p. m., then cast off and proceeded down the river, following the Rodolph and Planter. When abreast of Cottrel's wood landing, a party of about sixty or seventy rebels fired upon us with rifles. We immediately returned the fire with canister and shrapnell from 24-pounder howitzer, and with shell from 30-pounder Parrott rifles. The river being very narrow, and the bends very short, unfortunately this vessel in working got against the bank of the river and under some heavy trees, which knocked down and injured our smoke-stacks, and caused some damage to the upper light work. At 8.30 p. m. came to anchor in Fish bay, covering the Planter, who was aground on the bar.

Acting Master's Mate F. R. Jaschkee, of the Tritonia, has my thanks for his gallant conduct in taking charge of two 24-pounder howitzers, and firing them with precision. I trust that his good behavior will receive the consideration of Rear-Admiral D. G. Farragut. The officers and men of this ship behaved well. I regret to have to report that one officer and two men were slightly wounded.

The following is the amount of ammunition expended, viz: 15 shrapnell, 15 canister, and nine shells from 24-pounder howitzers; 20 5-second shell from 30-pounder Parrott rifles.

I am, sir, very respectfully, your obedient servant,

SPIRO V. BENNIS,
Acting Master, Commanding.

Acting Volunteer Lieut. GEORGE WIGGINS,
Commanding Expedition.

MISSISSIPPI SQUADRON.

RED RIVER EXPEDITION.

CO-OPERATION WITH THE ARMY UNDER MAJOR GENERAL BANKS.

MISSISSIPPI SQUADRON, FLAG-SHIP BLACK HAWK,
Off Red River, March 2, 1864.

SIR: I came down here anticipating a move on the part of the army up towards Shreveport; but as the river is lower than it has been known to be for years, I much fear that the combined movement cannot come off without interfering with plans formed by General Grant.

General Sherman has gone to New Orleans to make arrangements with General Banks, and I am expecting his return every day. In the mean time the gunboats are up the Atchafalaya and Black rivers, destroying bridges and stores, and endeavoring to destroy 8,000 cattle collected at Sicily island.

The Mississippi river is very quiet, and the rebels retreated into the interior on hearing of the advance of the gunboats.

I am, sir, very respectfully, your obedient servant,
 DAVID D. PORTER, *Rear-Admiral.*

HON. GIDEON WELLES,
Secretary of the Navy, Washington, D. C.

CAPTURE OF SIMMSPORT AND FORT DE RUSSY.

Report of Rear-Admiral D. D. Porter.

MISSISSIPPI SQUADRON, FLAG-SHIP BLACK HAWK,
Fort DeRussy, Red River, March 15, 1864.

SIR: I had the honor to report to you that I was about to ascend Red river with a fleet of gunboats, in company with a portion of General Sherman's command, or that of General Banks, whichever concluded to go.

On the 7th of March I had assembled at the mouth of Red river a large fleet of ironclads, composed of the following vessels:

Essex, Commander Robert Townsend.
 Benton, Lieutenant Commander James A. Greer.
 Lafayette, Lieutenant Commander J. P. Foster.
 Choctaw, Lieutenant Commander F. M. Ramsey.
 Chillicothe, Acting Volunteer Lieutenant S. P. Couthouy.
 Ozark, Acting Volunteer Lieutenant George W. Browne.
 Louisville, Lieutenant Commander E. K. Owen.
 Carondelet, Lieutenant Commander J. G. Mitchell.
 Eastport, Lieutenant Commander S. L. Phelps.
 Pittsburg, Acting Volunteer Lieutenant W. R. Hoel.

Mound City, Acting Volunteer Lieutenant A. R. Langthorne.

Osage, Lieutenant Commander T. O. Selfridge.

Neosho, Acting Volunteer Lieutenant Samuel Howard.

Ouachita, Lieutenant Commander Byron Wilson.

Fort Hindman, Acting Volunteer Lieutenant John Pearce.

And the lighter boats :

Lexington, Lieutenant George M. Bache.

Cricket, Acting Master H. H. Gorringe.

Gazelle, Acting Master Charles Thatcher.

Black Hawk, Lieutenant Commander K. R. Breese.

I received communications from General Banks informing me that he would be in Alexandria on the 17th March, and I made my dispositions to meet him there. On the 11th instant part of General Sherman's command, ten thousand men, under the command of Brigadier General A. J. Smith, joined me in transports at the mouth of Red river, and next morning early the gunboats started up the river, followed by the transports. There was just sufficient water to allow the larger boats to pass. By previous arrangement, Lieutenant Commander Phelps, in the Eastport, was ordered to push on up with his vessel and those that could keep with him, and clear away the heavy obstructions the rebels had placed in the river, and to amuse the fort until the army could land at Simmsport and get into the rear of the enemy's works, which could be done by making a march of thirty miles.

The Benton, Pittsburg, Chillicothe, Louisville, Mound City, Carondelet, Ouachita, Lexington, and Gazelle turned off to the left into the Atchafalaya, followed by the troops, while the others went on up the river. The gunboats arrived at Simmsport about twelve o'clock, and found the enemy posted in force about three miles back. The Benton landed her crew and drove in the pickets. The army came along in about half an hour more and landed the next morning, taking possession of the enemy's camping ground, the latter retreating towards Fort DeRussy. That night General Smith concluded to follow them by land, while I proceeded up Red river with all the gunboats and transports. In the mean time the Eastport had reached the obstructions, and, with the vessels that kept pace with her, had commenced the work of demolition on the formidable barricade, on which the rebels had been employed five months. They supposed it impassable, but our energetic sailors, with hard work, opened a passage in a few hours. The obstructions consisted of heavy piles driven into the mud, and braced in every direction ; they were also clamped together with heavy iron plates and chains.

The Eastport and Neosho got through about four o'clock in the afternoon, and proceeded up to the fort, which at that moment was being surrounded by the troops under General Smith, who had marched from Simmsport since daylight. A brisk musketry fire was going on between the rebels and our troops, and they were so close together it was difficult to distinguish the combatants. The Eastport opened her batteries, but, fearing to injure our own men, ceased firing, when our troops proceeded to the assault and carried the place. In a few moments, and with small loss, two hundred and fifty prisoners, eight heavy guns, and two field-pieces fell into our hands, and all the munitions of war.

The main body of the enemy, 5,000 strong, under the rebel General Walker, made their escape. They left the fort, it was said, to give battle to our troops, and left a garrison of 300 men to defend it. Our army came in by a different road from what they expected and made short work of them. Among the guns captured was one of the Indianola's 9-inch and one belonging to the Harriet Lane. The rest of the guns were 24 and 32 pounders and one 160-pounder rifle.

As soon as the fort was in possession of the troops I sent off up the river the fleetest gunboats I had, to cut the enemy off, if possible, or harass them until

our troops could be placed on the transports. By sunset the transports will be in Alexandria and ahead of the rebels, and I hope the latter will be cut off.

These works have been made much more formidable than they were last year, and the loss of guns must be severely felt by the rebels, as they have only 15 more heavy ones in this section of the country. The whole affair has been well managed; the troops made a splendid march and attack, and the officers in command of the gunboats and transports have shown great zeal and industry in getting up the river and through the obstructions which the rebels deemed impassable.

I forgot to mention in my last report that in the recent attack on Trinity by the gunboats, a number of negroes were recaptured who were captured by the enemy in a recent attack upon Goodrich's landing.

I enclose herewith a list of the guns captured at Fort De Russy, with their numbers, as some of them appear to be heavy guns. The Ordnance bureau may be able to account for them.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

List of guns captured at Fort De Russy water battery.

One 32-pounder, 33 cwt., F. P. F., No. 227, navy, in barbette, J. S. C. Proven 1847.

One 31-pounder, 33 cwt., F. P. F., No. 226, navy, in barbette, J. S. C. Proven 1847.

Two 9-inch Dahlgren guns. No marks could be discovered on these guns, but they bore all the evidence of having been in service in the navy, the remains of gun-blackening being on them. Both lugs were cut for locks with the usual composition; piece fitted in to spare lug.

One 32-pounder, 60 cwt., 1827, navy gun.

One 32-pounder United States rifled, marked W. J. W., No. 289.

This gun is an old army 32-pounder, rifled, with band shrunk on the breech.

Two 24-pounder siege guns, two 6-pounder field-pieces, in hill battery.

MOVEMENT UPON ALEXANDRIA.—AFFAIRS IN THAT PLACE.

Report of Rear-Admiral D. D. Porter, Mississippi Squadron.

FLAG-SHIP BLACK HAWK,

Off Alexandria, La., March 16, 1864.

SIR: I have the honor to inform you that I arrived at this place this afternoon. As soon as the forts were surrendered, I pushed on the fastest vessels, Ouachita and Lexington, followed by the Eastport, to Alexandria. The Ouachita arrived here as the last of a fleet of transports passed over the falls. The rebels set fire to a large ferry-boat, and one of the boats grounding on the falls, was also burnt, to prevent her falling into our hands. As no reliable pilot could be procured to take our boats across the falls, the transports will have to escape for the present, but are sure to be captured or destroyed before the month is over. The surrender of the forts at Point De Russy is of much more importance than I at first supposed. The rebels had depended on that point to stop *any advance* of army or navy into this part of

rebeldom. Large quantities of ammunition, best engineers, and best troops were sent there, and in two or three months more it would have been a most formidable place. As it was, it was not complete (though the guns were in position,) and would have stood a very poor chance if attacked in force. The works have been laid out by a Colonel De Russy, and are of the most extensive and formidable kind. Colonel De Russy, from appearances, is a most excellent engineer to build forts, but don't seem to know what to do with them after they are constructed. The same remark may apply to his obstructions, which look well on paper, but don't stop our advance. The efforts of these people to keep up this war remind one very much of the antics of Chinimen, who build canvas forts, paint hideous dragons on their shields, turn smersets, and yell in the face of their enemies, to frighten them, and then run away at the first sign of an engagement.

It puts the sailors and soldiers out of all patience with them, after the trouble they have had in getting here. Now and then the army have a little brush with their pickets, but that don't often happen. It is not the intention of these rebels to fight. The men are tired of the war, and many of their officers are anxious to go into cotton speculation. A large trade has been carried on between this and New Orleans, the rebels receiving supplies for their cotton. There is a surprising abundance of every kind of food in this country, and no suffering among the people, except for luxuries. It would be folly to suppose they could all be starved out. The only way is to take possession of this rich region, hold it with a strong military and naval force, and enforce the laws.

There are some good Union men here, who have suffered much. I hope the day of their delivery has come.

General Smith has left a good force at the forts (and I left the Benton and Essex) to destroy them effectually, which will be some labor. We have seven or eight thousand troops in this city, and are expecting to hear soon of General Banks's arrival. He has been delayed by storms, which have made the roads heavy.

The force that left the forts with a party under General Polignac from Harrisonburg have gone out to meet General Banks, who will soon dispose of them, and the chances are that, when all our cavalry now approaching with General Banks get after them, the rebels will be captured or scattered, not to unite again for some time.

I am, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

P. S.—I beg leave to mention, as a proof of the rapidity with which this portion of General Sherman's command, under Brigadier General A. J. Smith, did their work, they marched twenty-eight miles, starting at daylight; built a bridge which cost them over two hours' hard work; had a sharp skirmishing and artillery attack of two hours, and had possession of the forts, all intact before sunset.

It is one of the best military moves made this war.

I beg leave to enclose copy of Lieutenant Commander S. L. Phelps' report.

Very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Instructions from Admiral Porter to Lieutenant Commander S. L. Phelps.

FLAG-SHIP BLACK HAWK,
U. S. Mississippi Squadron, Red River, March 12, 1864.

SIR: You will proceed at once up the Red river with the vessels I will detail to follow you, and commence removing the obstructions in the river, while in the meantime I will take a tour into the Atchafalaya, and land the troops at Simmsport for the purpose of reconnoitring, &c. If you remove the obstructions, move up within a short distance of Fort De Russy, but make no attack until I get up with the main force, though, if there is any force at De Russy, you can amuse them by feints until the army get into their rear. Take every precaution against torpedoes, and protect your men against sharpshooters.

Very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Lieutenant Commander S. L. PHELPS,
Commanding Eastport.

Report of Lieutenant Commander, S. L. Phelps.

UNITED STATES IRON-CLAD RAM EASTPORT,
Alexandria, Louisiana, March 16, 1864.

SIR: In obedience to your order of the 12th instant, I proceeded up Red river, the Lafayette, Choctaw, Osage, Neosho, Ozark, Fort Hindman, and Cricket in company, meeting with no obstacle till we reached the obstructions eight miles below Fort De Russy, on the 14th instant. The great length and draught of the Lafayette and Choctaw rendered it difficult for them to navigate this narrow and crooked river, and our progress was slow. Near the head of the Rappions were works for light artillery, commanding a difficult turn in the river, which had been recently abandoned.

The obstructions consisted of piles driven across the river, supported by a second tier of shorter ones, on which rested braces and ties from the upper ones. Immediately below these is a raft of timber well secured across the river, and made of logs which do not float. Finally, a forest of trees had been cut and floated down upon the piles from above. The river had broken through these obstructions, and had partially undermined the rifle-pits on the right bank. The Fort Hindman removed a portion of the raft, when I ran this vessel up, and, by both pulling and ramming, broke out the piles and framework still obstructing the passage of vessels. This work consumed nearly the entire day. The Osage, Fort Hindman, and Cricket followed me through, and we hastened up to the fort.

For a short time there had been rapid artillery firing, which ceased as we came in sight of the works, then about sunset, except three shots fired by the rebels from a gun in an angle of the water battery. We could see the enemy using musketry from the parapets of the rear works, but could see nothing of the attacking force. An officer from General Smith had reached the vessel, notifying me of the approach of his force, but with no advice as to time or plan of attack.

The line of fire of the gunboats would have passed directly to the rear of the works, injuring our own people more than the enemy in his works. I fired a short-fuzed shell at an elevation as a signal gun, and then ventured one 100-pounder rifle shell at the water battery, which shell, burst over it and the enemy ran from it. A few moments after this a white flag was displayed from the

The first part of the report deals with the progress of the work during the year. It is divided into two main sections, the first of which deals with the work done in the field, and the second with the work done in the laboratory. The first section is divided into three parts, the first of which deals with the work done in the field during the summer months, the second with the work done during the autumn months, and the third with the work done during the winter months. The second section is divided into two parts, the first of which deals with the work done in the laboratory during the summer months, and the second with the work done during the autumn months. The report is written in a clear and concise style, and is well illustrated with diagrams and tables. It is a valuable contribution to the knowledge of the progress of the work, and is well worth reading.

CASEMATED BATTERY,

Doubly plated with railroad iron, at the bend near Fort De Russey, Red river, Louisiana, showing effects of one shell and three solid shot fired from a 100-pounder Parrott rifle on board the United States steamer Essex, at the distance of about 550 yards, March 16, 1864.

A percussion shell was the first one fired, striking the point marked *a*, and tearing out the iron over a surface 12 inches long (vertically) by 8 inches wide. Four solid shot succeeded; two of them struck full and fair within six feet of the hole made by the shell, one struck the crest at *b*, and one struck the talus of the escarp just below the berm and beneath the middle port-hole. The solid shot broke, shattered and drove in the iron, made holes in the heavy oak backing from 18 to 30 inches long by 8 to 11 inches wide, and buried themselves deeply, the but of one being two feet below the exterior surface.

rear works, some six hundred yards from the water battery, and which alone had been attacked.

The guns and works were captured uninjured, and 185 prisoners fell into General Smith's hands, those of the enemy occupying the water battery making good their escape. General Walker, the rebel commander, had marched out with 5,000 men ostensibly to attack our approaching land force, leaving a garrison of but 300 men to defend works incomplete and of considerable extent, and which, if complete, had been of great strength.

Your order of the 14th instant was delayed some five hours beyond the time necessary in reaching me, and, in consequence, I did not reach this place till the evening of the 15th, a short time after the lighter vessels pushed on ahead, and which had arrived one half hour too late to capture six steamers which had succeeded in getting over the falls, and escaping with one exception, the steamer *Countess*, burned by the enemy after grounding on the falls. Had your order duly reached me, we no doubt would have captured the steamers. By morning nine gunboats had arrived, and I landed a force of 180 men to occupy the town, and to seize the rebel property. This force, under Lieutenant Commander Selfridge, was in occupation of the place when you arrived. Seven prisoners of war were captured by the pickets.

I am, very respectfully, your obedient servant,

S. L. PHELPS, *Lieutenant Commander.*

Rear-Admiral DAVID D. PORTER, U. S. N.,
Commanding Mississippi Squadron.

EFFECTS OF RIFLE SHOT FROM THE ESSEX UPON AN IRON-CASEMATED BATTERY.

MISSISSIPPI SQUADRON,
Off Alexandria, Louisiana, March 20, 1864.

SIR: I enclose a sketch of an iron-casemated battery, showing the effects of four rifle shot from the guns of the *Essex*, the experiment having been tried to test the work. The distance fired from was 550 yards. This is one of the strongest works ever built of earth and iron, and was supposed capable of effectually resisting our iron-clads.

Ten 100-pounder rifles, ten 11-inch guns, twenty 9-inch guns, six 30 pounder rifles, and 8 eight-inch guns would have been brought to bear on this work at one time, to say nothing of fifty guns firing shrapnell. The result can be easily imagined.

I send the sketch for the information of the Bureau of Ordnance.

Yours, respectfully,

D. D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,
Secretary of the Navy.

CONDITION OF AFFAIRS ON THE RED RIVER.

(No. 97.)

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Alexandria, Louisiana, March 29, 1864.

SIR: Being about to leave for Shreveport, or as high up the river as I can get, I have the honor to report progress.

After a great deal of labor, and two and a half days' hard work, we succeeded

in getting the Eastport over the rocks on the falls, hauling her over by main force; now and then a rise of an inch or so of water would help her along, and she finally was enabled to pass the advance of the army, encamped on the bank of the river twenty-five miles above Alexandria. Other vessels got through, and a few more remain to be got over, when we will push on to the end. It is very slow work getting over these rocks, but as yet we have met with no accidents. One hospital ship, belonging to the marine brigade, sank on the falls by striking on the rocks, but all the rest of the transports went over safely. I shall only be able to take up a part of the force I brought with me, and leave the river guarded all the way through. The rebels are retreating before the army, and, as usual, are destroying everything that can fall into our hands, treating public and private property alike. This is the last hold they will have in this country, and they seem determined to wreak their vengeance on the unoffending inhabitants who have some little cotton to dispose of. Their destructiveness has been a death blow to the rebellion in this State, and General Dick Taylor has left a name behind him to be execrated when the rebellion is long past.

Confedrate money is worth here one-quarter of a cent on the dollar, or the most I have heard offered is three cents. The currency of a country is the best proof of its prosperity.

The health of the squadron, I am happy to say, continues good.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

OCCUPATION OF GRAND ECORE.—MOVEMENTS TOWARDS SHREVE- PORT.—RETURN TO GRAND ECORE.

FLAG-SHIP CRICKET, MISSISSIPPI SQUADRON,

Off Grand Ecore, Louisiana, April 14, 1864.

SIR: I had the honor of reporting to you the movements of the squadron as far as Alexandria, and the intention of General Banks to move on at once to Shreveport. He deemed the co-operation of the gunboats so essential to success that I had to run some risks and make unusual exertions to get them over the falls.

The army started on the appointed day, and I pushed up the gunboats to cover them, if they should be needed, as fast as they got over the falls. The vessels arrived at Grand Ecore without accident, and had good water, the river apparently about to reach its usual stage at this season. The Cricket, Eastport, Mound City, Chillicothe, Carondelet, Pittsburg, Ozark, Neosho, Osage, Lexington and Fort Hindman, Louisville and Pittsburg, were the vessels sent up, and a fleet of 30 transports followed them.

Grand Ecore was occupied by our forces without opposition. The works deserted. Lieutenant Commander Phelps captured one 32-pounder on the river, below Grand Ecore, which he destroyed, making 22 guns captured from the enemy since we entered the river.

The army had arrived at Natchitoches, near Grand Ecore, when I got up here, and was preparing for an immediate march. As the river was rising very slowly, I would not risk the larger vessels by taking them higher up, but started on the 7th of April for Shreveport with the Cricket, Fort Hindman, Lexington, Osage, Neosho, and Chillicothe, with the hope of getting the rest of the vessels along when the usual rise came. Twenty transports were sent along, filled with army stores, and with a portion of General A. J. Smith's division on board. It was intended that the fleet should reach Springfield

landing on the third day, and then communicate with the army, a portion of which expected to be at Springfield at that time. I found the difficulties of navigation very great, but we reached the point specified within an hour of the time appointed. At this point we were brought to a stop, the enemy had sunk a very large steamer (the *New Falls City*) right across the river, her ends resting on each bank, and her hull, broken in the middle, resting on the bottom. This was a serious obstruction, but I went to work to remove it. Before I commenced operations, however, a courier came in from General Banks, bringing the unpleasant and most unexpected news, "Our army has met with a reverse" and was falling back to Pleasant Hill, some 60 miles in our rear. Orders also came to General A. J. Smith to return to Grand Ecore with the transports and the troops he had with him. Here was an end to our expedition for the present, and we reluctantly turned back, after having nearly reached the object we were aiming at. The information we received was of a very unsatisfactory kind, and we did not know really what was the exact state of affairs, no letters having been sent by post courier.

It would be very difficult to describe the return passage of the fleet through this narrow and snaggy river. As long as our army could advance triumphantly it was not so bad; but we had every reason to suppose that our return would be interrupted in every way and at every point by the enemy's land forces, and we were not disappointed. They commenced on us from high banks, at a place called Coushatta, and kept up a fire of musketry whenever an opportunity was offered them. By a proper distribution of the gunboats I had no trouble in driving them away, though from the high banks they could fire on our decks almost with impunity. As we proceeded down the river they increased in numbers, and as we only made thirty miles a day, they could cross from point to point and be ready to meet us on our arrival below. On the left bank of the river a man by the name of Harrison, with 1,900 cavalry and four or five pieces of artillery, was appointed to follow us down and annoy us. It was very fortunate for us that this person and his command were lately severely handled by a gunboat (a few weeks ago,) which made them careful about coming within range. On the evening of the 12th instant we were attacked from the right bank of the river by a detachment of men of quite another character. They were a part of the army which two or three days previous had gained success over our army, and flushed with victory, or under the excitement of liquor, they appeared suddenly upon the right bank and fearlessly opened fire on the *Osage*, Lieutenant Commander T. O. Selfridge, (iron-clad,) she being hard aground at the time with a transport (the *Black Hawk*) alongside of her, towing her off. The rebels opened with two thousand muskets, and soon drove every one out of the *Black Hawk* to the safe casemates of the monitor. Lieutenant Bache had just come from his vessel, (the *Lexington*,) and fortunately was enabled to pull up to her again, keeping close under the bank, while the *Osage* opened a destructive fire on these poor deluded wretches, who, maddened with liquor and led on by their officers, were vainly attempting to capture an iron vessel. I am told that their hootings and actions baffle description. Force after force seemed to be brought up to the edge of the bank, where they confronted the guns of the iron vessel, only to be cut down by grape-shot and canister. In the mean time Lieutenant Bache had reached his vessel, and, widening the distance between him and the *Osage*, he opened a cross-fire on the infuriated rebels, who fought with such desperation and courage against certain destruction, that it could only be accounted for in one way. Our opinions were verified on inspection of some of the bodies of the slain—the men actually smelling of Louisiana rum! This affair lasted nearly two hours before the rebels fled. They brought up two pieces of artillery, one of which was quickly knocked over by the *Lexington's* guns, the other they managed to carry off. The cross-fire of the *Lexington* finally decided this curious affair of

a fight between infantry and gunboats. The rebels were mowed down by her canister, and finally retreated in as quick haste as they had come to the attack, leaving the space of a mile covered with dead and wounded, muskets and knapsacks. A dying rebel informed our men that General Greene had his head blown off, which I do not vouch for as true. If true, it is a serious loss to the rebels. Night coming on, we had no means of ascertaining the damage done to the rebels. We were troubled no more from the right bank of the river, and a party of 5,000 men who were marching to cut us off were persuaded to change their mind after hearing of the unfortunate termination to the first expedition. That same night I ordered the transports to proceed on, having placed the gunboats at a point where the rebels had a battery. All the transports were passed safely, the rebels not firing a shot in return to the many that were bursting over the hills. The next morning, the 13th instant, I followed down myself, and finding at Compte, six miles from Grand Ecore by land, that they had got aground, and would be some time getting through, I proceeded down in this vessel to Grand Ecore, and got General Banks to send up troops enough to keep the guerillas away from the river. We were fired on as usual after we started down, but when I had the troops sent up, the transports came along without any trouble. This has been an expedition where a great deal of labor has been expended, a great deal of individual bravery shown, and on such occasions the commander-in-chief is apt to find out the metal of which his officers are made, and on future occasions it will enable him to select those who will not likely fail in the time of need. To Lieutenant Commander T. O. Selfridge, commanding the Osage, and Lieutenant George M. Bache, commanding the Lexington, I am particularly indebted for the gallant manner in which they defended their vessels, and for their management during the expedition, always anticipating and intelligently carrying out my wishes and orders.

I found the fleet at Grand Ecore somewhat in an unpleasant situation—two of them being above the bar, and not likely to get away again this season, unless there is a rise of a foot. I could not provide against this, when over a hundred miles up the river. If nature does not change her laws, there will no doubt be a rise of water; but there was one year, 1846, when there was no rise in the Red river, and it may happen again. The rebels are cutting off the supply by diverting different sources of water into other channels; all of which would have been stopped, had our army arrived as far as Shreveport. I have done my best (and so have the officers and men under my command) to make this expedition a success throughout, and do not know that we have failed in anything we have undertaken. Had we not heard of the retreat of the army, I should still have gone on to the end. A wise Providence, which rules and directs all things, has thought proper to stay our progress and throw impediments in the way, for some good reason.

We have nothing left but to try it again, and hold on to this country with all the force we can raise. It is just as valuable to us and important to the cause as any other portion of the Union. Those who have interests here, and are faithful to the government, have a right to expect our protection, and when this part of Louisiana is conquered, we hold Arkansas and all the right bank of the Mississippi without firing another gun.

There is a class of men who have during this war shown a good deal of bravery and patriotism, and who have seldom met with any notice from those whose duty it is to report such matters. I speak of the pilots on the western waters. Without any hope of future reward, through fame or in a pecuniary way, they enter into the business of piloting the transports through dangers that would make a faint-hearted man quail. Occupying the most exposed position, a fair mark for a sharpshooter, they are continually fired at, and often hit, without so much as a mention being made of their gallantry. On this expedition they have been much exposed, and have showed great gallantry in

managing their vessels while under fire in this, to them, unknown river. I beg leave to pay this small tribute to their bravery and zeal, and must say, as a class, I never knew a braver set of men. I also beg leave to mention favorably Acting Master H. H. Gorringe, commanding this vessel. He has shown great zeal, courage, and ability during this expedition, serving his guns rapidly and well, at his post night and day, ready for anything, and assisting materially in getting the transports by dangerous points. Mounting one of his 24-pounder howitzers on his upper deck, he was enabled to sweep the bank in all directions, and one or two fires had the desired effect. He was of great service to me throughout the expedition; was slightly wounded, but nothing of consequence, (owing to his exposing himself so much.)

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

OPERATIONS OF THE GUNBOATS.—SINKING AND DESTRUCTION OF THE EASTPORT.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Off Alexandria, La., April 17, 1864.

SIR: I have the honor to report my arrival at this point for a few hours. I shall return to Grand Ecore in two hours. I had succeeded in getting all the large vessels over the bar at Grand Ecore, and in a fair way of getting down as far as Alexandria, when I heard the Eastport had sunk eight miles below. I sent down at once and found it to be so; she was five hours sinking, said to be done by a torpedo; she don't seem to be damaged much. I came down for my steam-pump boats; have one alongside the Eastport already, and take another up with me to-day. There will be trouble getting her up if the river ever rises again; the water comes as high as her gun-deck; her guns and heavy articles have been taken off. I came here and found trouble at Fort Pillow; the policy pursued, in not defending the strong posts where so much blood and treasure have been expended, will always cause these difficulties. I had two boats up there, but the negro and invalid garrison were not strong enough to do their part. I have sent the Essex, Benton, Choctaw, Lafayette, Ouachita, and Avenger up to Fort Pillow to prevent any permanent landing there. I sent an expedition up the Washita as far as Munroe, which captured 3,000 bales of confederate cotton, brought away 800 negroes, and destroyed much rebel property. The expedition was under Lieutenant Commander Foster, and was particularly successful. I am bringing up light-draught vessels to take the place of the heavy boats during the low water. We have only eight feet of water between this and Grand Ecore, and many lumps exist. This expedition, and the failure of the army to advance, has given me a great deal of trouble; but I don't despair of getting out of it. It is only a matter of want of water, and I cannot think that this river would fail to rise while all the others are booming. Being constantly engaged in providing for the many curious cases that are daily occurring, I hope you will excuse me for not making fuller reports.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Rear-Admiral D. D. Porter.

FLAG-SHIP CRICKET, MISSISSIPPI SQUADRON,
Off Alexandria, La., April 28, 1864.

SIR: I had the honor to inform you, in my communication No. 106, of the sinking of the Eastport while proceeding down to Alexandria, caused by the explosion of a torpedo under her bottom, and near her bow. On hearing this bad news I proceeded at once to the vessel and found her sunk to the gun-deck, the water over it on one side.

I saw that no time was to be lost, and went at once to Alexandria, in hopes of finding one of our steam pump-boats, then due. Lieutenant Commander Phelps had already sent a tug down for the same purpose, and as I passed over the falls, the pump-boat hove in sight and proceeded on up. An hour after, the other boat came up, and I sent her up also, being confident that the Eastport would now be raised.

I had ordered all her guns taken out and all her ammunition transferred to other vessels, which was done by the time I reached her again, forty-eight hours after the pump-boats went up.

I was detained a day in Alexandria, making a different disposition of the vessels in the Mississippi, owing to the report of the capture of Fort Pillow by the rebels. I sent some of the heavy iron-clads up there with orders to remain, and also changed the destination of various vessels in the different rivers.

When I returned to the Eastport, I found her in a fair way of being afloat, though all the heavy steam-pumps together did not do more than slightly decrease the water. The leak had to be stopped by bulkheading. Lieutenant Commander Phelps went to work vigorously to endeavor to save his vessel, and he was seconded by his officers and crew. I don't think I ever witnessed harder work than was performed by the officers and crew of the Eastport, and it seemed to be the determination of all on board that she should not fall into the hands of the enemy, if it could be helped.

I felt confident that the Eastport would be saved, if time permitted, but I had a faint idea that our army were about to fall back on Alexandria, when it would become necessary to destroy the Eastport, or perhaps some other vessels.

On my arrival at Grand Ecore, I found that preparations were making to move the army in the direction of Alexandria, and I ordered the large vessels at once below the bars with orders to proceed slowly to Alexandria, keeping with me six of the lighter draught vessels to cover the land forces, and give protection to the transports.

The day after my return to Grand Ecore orders were issued for the army to move to Alexandria. The Eastport was not yet afloat, and I thought our chance of saving her very small, unless we were certain of having no enemy to annoy us after the army left. On the 20th of April I went down to the Eastport again, and after informing the commander how matters stood, we concluded that it was necessary to run some risks, if we wished to save the vessel. She was now slightly resting on the bottom on one side, and steam had been raised on her.

On the 21st she started in tow of the pump-boat Champion No. 5, and with the pump of Champion No. 3 transferred to the Eastport, and connected with her boilers. This arrangement, with the addition of one or two syphon pumps, kept the water out of the fire-room, and confined it to the bow.

I waited at a point eight miles below Grand Ecore, and sent up a gunboat to convoy down all the transports that were left up, this vessel bringing up the rear, towing a flat on which were all the Eastport's guns.

On the first day the Eastport made twenty miles down the river, but at 6 o'clock in the evening she grounded, from not being in the channel, and the

first of our difficulties commenced in getting her over the bars and other obstructions which abound in this river.

It would be impossible to give an adequate idea of the difficulties of the navigation from the 21st of April up to the 26th, the time when it was no longer considered possible to get the Eastport over the sand bars and logs, now increasing, unless time was allowed to remove them, and the enemy were kept from annoying us while we were at work.

The lieutenant commander commanding the Eastport, S. L. Phelps, had done all that man could do to save his vessel, and felt it to be a matter of pride to get her to Alexandria.

She had grounded eight times badly, and each time under circumstances where it was very doubtful if she would come off; but the commander's confidence never deserted him, and I could not help but admire his coolness and faith in getting his vessel to Alexandria, when I knew there were places to pass below with much less water on them.

I determined that I would never leave this vessel to her fate as long as the commander felt a hope of getting her down.

He worked with almost superhuman efforts to accomplish the object in view, sleeping apparently neither night nor day; everybody worked, and went through privations of all kinds, and I must say that, mentally, I never went through so much anxiety in my life.

On the sixth day of this labor of hauling the Eastport over the bars, and after congratulating ourselves that we had passed every impediment, orders were given to fill up with fence-rails for fuel, and we started down stream, with the expectation of making at least thirty miles that day. The vessel had already been brought sixty miles on her way, and sixty more would bring her within our lines.

The army, though, were sixty miles ahead of us, and the report was that the rebels were following in their rear, also opposing them in front, and we might naturally expect, when the army arrived safely in Alexandria, that the whole power of the enemy would be directed to cutting off my small force of three light draughts, and the Eastport, without any guns; indeed, we had already received notice that such were their intentions.

On April 25th I made signal to pass down stream, and had scarcely started before the Eastport was hard aground, and this time in a position where even the commander's hopes of relieving her failed. The difficulty here was a want of water, and the bed of the river was filled with logs over which it would be impossible to get the vessel unless we had the time.

We tried to lighten her by removing her iron plating, but this we found to be labor beyond our power; the plates could not be removed in a short time, and that plan was abandoned at once.

I had determined to remain by the Eastport until she was safe within our lines, or blown up, to prevent her falling into the hands of the enemy.

On two occasions I had given the commander preparatory instructions relative to her destruction, thinking her time had come; but, still hopeful and persistent, he stuck to the work, and deserved to have met with greater success.

Every effort was made to get the Eastport off from what proved to be her final resting-place.

The gunboat Fort Hindman (whose commander has worked to save the Eastport with a zeal I never saw surpassed) succeeded, with her steam capstan, in moving her bow, but only enough to get into a worse position right across the channel, with a bed of logs under her, and from that place it seemed that no human power could move her. The commander having admitted there seemed no hope of getting her off, unless we had time, and our rear protected, I gave the order to destroy her.

One ton of powder was placed in her in various positions, she was filled with

such combustibles as we could procure, and at 1.45 p. m., April 26, the Eastport was blown up, Lieutenant Commander Phelps applying the match, and being the last one to leave the vessel. He had barely time to reach the boat when the Eastport blew up, covering the boat with fragments of wood. Seven different explosions followed, and then the flames burst forth in every direction.

The vessel was completely destroyed—as perfect a wreck as ever was made by powder. She remains a troublesome obstruction to block up the channel for some time to come. All stores, &c., were removed, and such parts of the machinery as could be made available by the rebels.

There was nothing but the iron plates left behind, which finally fell inside the hull. Some fell out-board, as the fire burnt away the wood to which they were attached, and will soon disappear under the sands.

I would have brought away every piece of iron, had I not been warned that I had overstaid my time.

Gangs of guerillas began to hover on the left bank of the river, and just previous to blowing up the Eastport we were attacked by a heavy force on the right bank.

This vessel was lying tied to the bank, and I was backing out from the Eastport in the Hindman, to give the former a chance to blow up without injury to any one. The rebels selected this moment to make their attack, and rising suddenly from the bank opened on our little squadron with 1,200 muskets, and then made a rush to board the Cricket.

The enemy, however, were properly met and repelled, and the Cricket, dropping out from the bank, opened on them with grape and canister; and with a heavy cross-fire from the two other vessels, the rebels were routed in five minutes. After this we blew the Eastport up, and proceeded down the river.

We were not molested until we had gone about 20 miles, at a point above Cane river. When rounding the point, the vessels in close order and ready for action, we descried a party of the enemy with artillery on the right bank, and we immediately opened fire with our bow guns. The enemy immediately returned it with a large number of cannon, eighteen in all, every shot of which struck this vessel.

The captain (Acting Master H. H. Gorringer) gave orders to stop the engines for the purpose of fighting the battery and covering the boats astern; I corrected this mistake and got headway on the vessel again, but not soon enough to avoid the pelting shower of shot and shell which the enemy poured into us, every shot going through and through us, clearing all our decks in a moment.

Finding the guns not firing rapidly, I stepped on the gun-deck to see what was the matter. As I stepped down, the after gun was struck with a shell and disabled, and every man at the gun killed and wounded. At the same moment the crew from the forward gun were swept away by a shell exploding, and the men were wounded in the fire-room, leaving only one man to fire up.

I made up a gun's crew from the contrabands, who fought the gun to the last moment. Finding that the engine did not move, I went into the engine-room and found the chief engineer killed, whose place was soon supplied by an assistant. I then went to the pilot-house and found that a shot had gone through it and wounded one of the pilots. I took charge of the vessel, and as the battery was a very heavy one I determined to pass it, which was done under the heaviest fire I ever witnessed.

I attempted to turn her head up stream to attack with our two bow guns, the only guns left, but as this was impracticable, I let her drift down around the point and shelled the enemy's batteries in the rear. This disturbed them for a moment, and enabled the light-draught Juliet and pump-boat Champion, lashed together, to escape from under the bank, where they had drifted.

The Juliet had her steam-pipe cut and became disabled, having drifted clear from under the guns of the enemy and close into the bank, where the guns could

not be depressed to reach them, and from whence the Champion towed her in safety when the Hindman opened her batteries, and this vessel was firing into the rear of the enemy's batteries.

Seeing that the Hindman did not pass the batteries, the Juliet disabled, and that one of the pump-boats had her boiler exploded by a shot, I ran down to a point three or four miles below, where I had ordered two iron-clads to be ready to meet me in case of emergency.

Unfortunately, I ran on shore a short time after passing the batteries, and remained there three hours, took fire in the mean time from the explosion of some cartridges, the box containing which had been struck by the enemy's shot. It was after dark when I reached the appointed place, where I found the Osage lying opposite a field battery of the enemy, which they had been shelling throughout the day.

The Lexington had been hard at work at them, and had been hulled fifteen times, with only one man killed. The firing above had ceased, and as the channel was very intricate, I could not send her up to the assistance of the vessels without danger of her getting aground. I knew that they were all above the batteries, and was in hopes that the Hindman had silenced them.

Lieutenant Commander Phelps had two vessels in charge, the Juliet and Champion, which he wished to get through safely. He kept them out of range until he could partially repair the Juliet, and then starting under a heavy fire he made a push by. Unfortunately the pump-boat was disabled and set fire to and burnt up. The Hindman had her wheel-ropes cut away and drifted past, turning round and round, and getting well cut up in going by.

The Juliet was cut to pieces in hull and machinery; had fifteen killed and wounded. Four miles below they met the Neosho going up, too late to cover them. Had she arrived in time she could likely have cleaned out the batteries, at least diverted the fire of them until the passage of the boats.

I enclose the report of Lieutenant Commanding Phelps, from the time of his first misfortune until his arrival at this place, where I now am with all the fleet, having lost none of the gunboats, but very much surprised that I have any left, considering all the difficulties encountered. When the rebels had followed our army to the point where they could effect no more, all their attention was turned to the little squadron I had escorting the Eastport.

Every man and gun was brought to the river, and we had to contend against such odds that it seemed impossible to escape destruction or very severe handling. No vessels were ever better fought, and none of this class (mere thread-paper vessels) were ever under so hot a fire.

In five minutes the Cricket was struck thirty-eight times with solid shot and shell, with a loss of twenty-five killed and wounded—half her crew; the Juliet about the same, with fifteen killed and wounded. The Hindman lost three killed and four or five wounded.

I may have lacked judgment in not blowing the Eastport up sooner, when I found that we were a secondary consideration to the army; but as I had staid behind myself to see the last transport through safely, I could not do less with one of my own vessels.

I was unable to keep up communication with the army; as the means of communication were with them, and as they marched along faster than I calculated, (forty miles in one day, when I supposed they would only go twenty,) I was more in their rear than I should have been. This arose from my desire to save the Eastport, and hoping that some signal success on the part of the army (which I felt confident was able to whip all the rebels in that part of the country) would dispose of the enemy altogether.

From the beginning of this expedition up to the present time the officers and men of this squadron have worked with superhuman zeal, and overcome difficulties which seemed insurmountable. The success of the expedition depended

entirely on the success of the navy in getting the transports safely to an appointed place—Springfield landing—which would have put us in communication with the army, and then in possession of all their materials of war.

This we accomplished; and when the army returned, unexpectedly, we fought our way back again without the loss of any kind, excepting men, inflicting a loss of five hundred men on the enemy, killed their best general, Greene, and a number of his officers.

On our way down to Alexandria obstacles were overcome enough to appal the stoutest heart. Guns had to be taken out of vessels and then jumped over sand-bars and logs, and the squadron arrived here in time to prevent any attack on our reserve stores.

The difficulty about water is a most unusual one, and we must certainly have a rise of the few feet we want before the end of the season. All the rivers are booming at this time, and it should be so here. I am no more responsible for the failure of water here than I would be if the Mississippi went dry at this season—a thing that never happened yet.

I came up here with the river on the rise, and water enough for our largest vessels; and even on my way up to Shreveport from Grand Ecore the water rose, while it commenced falling where I left the largest gunboats. Falling or not, I could not go back while in charge of the transports and the material on which an army of thirty thousand men depended. Nothing would justify me in doing so.

I have still confidence in a good Providence, which I am sure will not desert us, and confidence that the nation will not permit this fleet to be sacrificed when it has so well performed its part in what should have been a complete success.

In conclusion, I beg leave to mention the brave, cool, and zealous manner in which Lieutenant Commander Phelps worked to get his vessel out of her difficulties, never losing his faith for a single moment; also the handsome manner in which he brought the two fragile gunboats past those heavy batteries, cheating the enemy of the prize they had promised themselves.

To Acting Volunteer Lieutenant John Pearce, commanding the Fort Hindman, great praise is due for the efforts he made night and day to get the Eastport off, working his officers and men until they could hardly stand.

Acting Master George W. Rogers, of the Pittsburg, deserves great credit for the manner in which he worked at the bulkheads of the Eastport, up to his middle in water, for eight days; to him we intrusted the duty of stopping the leak, which he fairly accomplished under the most trying circumstances.

Acting Master J. S. Watson defended his vessel in the most gallant manner, and never was a vessel more cut up.

Where all do their duty it is hard to discriminate; but when the record of this expedition is overhauled, the names of Commander R. Townsend, commanding Essex; Lieutenant Commander S. L. Phelps, Eastport; Lieutenant Commander Watson Smith, Chillicothe, (temporarily;) Lieutenant Commander K. R. Breese, Black Hawk; Lieutenant Commander J. P. Foster, Lafayette; Lieutenant Commander J. A. Greer, Benton; Lieutenant Commander E. K. Owen, Louisville; Lieutenant Commander J. G. Mitchell, Carondelet; Lieutenant Commander F. M. Ramsay, Choctaw; Lieutenant Commander T. O. Selfridge, Osage; Lieutenant Commander Byron Wilson, Ouachita; Lieutenant Commander George M. Bache, Lexington; Lieutenant Commander S. W. Terry, Benefit, (naval transport;) Acting Volunteer Lieutenant W. R. Hoel, Pittsburg; Acting Volunteer Lieutenant Samuel Howard, Neosho; Acting Volunteer Lieutenant George W. Browne, Ozark; Acting Volunteer Lieutenant A. R. Langthorne, Mound City; Acting Volunteer Lieutenant John Pearce, Fort Hindman; Acting Master H. H. Gorringer, Cricket; Acting Master J. S. Watson, Juliet; Acting Master Charles Thatcher, Gazelle,—should stand promi-

ment, having zealously performed everything required of them with an ability deserving of the highest praise.

I deem it necessary to send you a bearer of despatches, who will explain to you fully the condition of the fleet.

I am, sir, very respectfully, your obedient servant,

DAVID PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

PERILOUS SITUATION OF THE FLEET.—FALLING BACK OF THE ARMY.

FLAG-SHIP CRICKET, MISSISSIPPI SQUADRON,
Below Grand Ecore, La., April 23, 1864.

SIR: In my last communication I informed you of the sinking of the Eastport by a torpedo about eight miles below Grand Ecore. The moment I heard of it I went down to Alexandria and sent a despatch vessel for our two steam pump-boats; one was coming over the falls as I passed down and the other fortunately came in sight an hour afterwards. They were both sent up and set to work to raise the sunken vessel. She was so much shattered in the bottom that I almost despaired of effecting anything. The same day that the boats arrived up General Banks gave orders for the army to prepare to move on to Alexandria, and as Grand Ecore was only four miles from us by land, the chances were that the rebels would mount numerous artillery on the bluff close at hand, and prevent our working. Nevertheless we went to work, and proceeded until the vessel was raised, the pumps working all the time, and we unable to get at the leak. Lieutenant Commander Phelps worked with great perseverance, coolness, and patience under these unpleasant circumstances. The same day the army moved we moved down with the Eastport with her own steam and one steam-pump alongside of her, barely keeping her free, and the leak not discovered. We started very fair, and made in a few hours twenty miles down river, having sent convoy to bring down the transports, which were taken safely to Alexandria. But the Eastport got out of the channel, and it seems impossible to move her ahead. Everything that man can do has been done, and I shall persevere until attacked here, or until the falling water endangers the other vessels. There will be but one course for me to pursue, that is, to perform the painful duty of destroying the Eastport to prevent her falling into the enemy's hands. I have no certainty of getting her down as far as Alexandria; the water has fallen too much to leave her here, with our army retreating to Alexandria, and with 25,000 rebels (if victorious) assailing us at every point. We can fight them to the last. At this time the rebels are following our army, and the artillery and musketry can be heard quite distinctly. We do not know the result. Had the army held Grand Ecore a fortnight, we would with certainty have saved the vessel, and will do so now if we can find water to get her down. She has a great deal of water in her, which increases her draught and makes her very heavy; her pumps cannot get it all out, nor can we find the place where she is injured. The unfortunate issue of this expedition has thrown the gunboats into a bad predicament. When I came up here the water was rising, and all our vessels navigated the river to Grand Ecore with ease, and with some of them I reached Springfield landing—the place designated by General Banks for the gunboats to meet the army. My part was successfully accomplished; the failure of the army to proceed, and the retreat back to Grand Ecore, left me almost at the mercy of the enemy. Fortunately we got through without any accident or serious disaster from the enemy's fire. I soon saw that the army would go to Alexandria again, and we

would be left above the bars in a helpless condition. I went to work immediately to get the heavy boats below, which I succeeded in doing by great exertions on the part of the commanders. I kept the lighter draught vessels to cover the army if they should need it, and to take the transports down safely, all of which was done. The vessels are mostly at Alexandria, above the falls, excepting this one and two others I kept to protect the Eastport. When the rebels heard we had arrived at Grand Ecore, they commenced turning the source of water supply off into the lakes, which would have been remedied had the army succeeded in getting to Shreveport. I cannot blame myself for coming up at the only season when the water rises. All the rivers are full and rising, but the Red river is falling at the rate of two inches a day—a most unusual occurrence; this river always being full until the middle of June. Whether we will yet have a rise it would be impossible for any one to foresee. It seems like an impossibility that we could be caught in such a predicament in the time of rising water, but such may be the case. If General Banks should determine to evacuate this country, the gunboats will be cut off from all communication with the Mississippi. It cannot be possible that the country would be willing to have eight iron-clads, three or four other gunboats, and many transports sacrificed without an effort to save them. It would be the worst thing that has happened this war. I beg leave, most respectfully, to call your earnest attention to this matter. I shall remonstrate with all the energy I am capable of against being left here and have to destroy my vessels, and I hope, sir, that you will see, in the position wherein I am placed, strong reasons for holding this country, and reenforcing the army with troops, to do it with a certainty. Two months are left yet in which to expect a rise; but many say it will not come—the wish, perhaps, being father to the thought. It would be hard indeed, after co-operating with the army, and the navy performing successfully all that was required of it, to be left in a position where we would have to surrender or blow up. I will promise you the latter. I have no hope of getting the Eastport down, though the commander is still very sanguine. If we could get her within forty miles of Alexandria we could save her; or if it rises there will be no trouble at all. If the enemy bring on their heavy artillery, the people on the steam-pumps will not be able to work at all. With the gunboats alone and untrammelled, I should not be afraid of any force the rebels could bring to bear upon us, being confident that we could beat them off if they came in strong force. Whatever may happen I shall hope for the best, but consider it my duty to anticipate events, and run no risk of losing this squadron.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CAPTURE OF THE UNITED STATES STEAMERS COVINGTON AND SIGNAL.

Report of Acting Volunteer Lieutenant George P. Lord.

UNITED STATES STEAMER CHILLICOTHE,

Above Alexandria Falls, May 8, 1864.

SIR: It is with feelings of regret that I report the loss of the United States steamer Covington, and most respectfully submit the following report:

I left Alexandria, convoying the steamer Warner, at 8 o'clock on the morning of May 4, 1864. While passing Wilson's plantation the Warner was fired into by about one hundred infantry, losing one man. I fired my stern guns at

them for some time, and passed on. After proceeding about $1\frac{1}{2}$ miles further Mr. McClossy, a pilot belonging to the General Price, struck the stern of the vessel against a bar, thereby breaking the port rudder badly and shivering the tiller. I told him hereafter Mr. Emerson, my other pilot, would manage her. I tied up all night about a mile from the Red House, and commenced repairing my rudder and tiller. At about 5 o'clock I was joined by the United States steamer Signal. Both of us kept up through the night an irregular fire on the right hand shore going down, as they had fired upon us with infantry while we were repairing.

At $4\frac{1}{2}$ o'clock in the morning we all got under way—the Warner in the lead, Covington next, and the Signal last. At Dunn's bayou (on the right going down) we were fired upon by two pieces of artillery and infantry. The Covington was hit by this battery only three times, and the Warner's rudders were disabled; but she still continued down stream until she came to a short point in the river, when she went into the bank. She had no sooner struck the bank when a rebel battery (on the right-hand shore going down) and from 4,000 to 5,000 infantry opened on her and my vessel. The Covington and Signal immediately commenced firing. Almost every shot either struck the boilers, steam-pipe, or machinery of the Warner, as she was only about one hundred yards from the battery. After we had engaged the battery about three hours the Warner hoisted a white flag. We still kept up our fire, and I sent a party from my vessel under a severe fire to burn her, but the colonel in charge sent me word that there were nearly 125 killed and wounded, and requested that I would not burn her, which was granted. A short time after this I was informed that the Signal was disabled. I immediately rounded to, and went alongside of her, took her in tow and started up stream, but my rudders became disabled and the Signal got adrift. (It was impossible to pass the Warner, so Mr. Emerson, my pilot, informed me.) Knowing that the Signal would drift down on the Warner, and the rebels could immediately board her, I ordered the commanding officer to anchor her, which was done.

Finding it impossible to handle my vessel, and fearing I should get on the side where artillery and infantry were, I went over on the other bank and made fast, head up stream. I used my stern guns on the lower battery and my broadside on the infantry abreast of us, and my bow guns on a battery that was ahead of us, which had been brought down from Dunn's bayou. My escape-pipe was cut while alongside of the Signal, causing a great deal of steam to escape, and making the impression that the boilers had been struck. The men, however, soon rallied, and kept up a brisk fire on the enemy. Most of the soldiers and officers, among whom were Colonel Sharp, of the 156th New York volunteers, Colonel Rainor, 129th Illinois, (wounded in both legs,) Lieutenant Simpson, aide-de-camp to General Banks, and Acting Assistant Paymaster Chester, went over on the Signal. The Signal getting adrift from us, they were not able to return to my vessel. After I had been tied to the bank an hour or so my steam-drum was cut, and a shell struck under the boilers, letting out all the water. My ammunition gave out; my howitzers were disabled by the bracket bolts drawing out, and every shot coming through us, with one officer and a good many of men already killed, I determined to burn my vessel. I spiked the guns, had coals of fire strewn on the decks, and myself and executive officers set fire to the cotton which was on the guard alongside of the engines. I saw it burning finely before I left, and feel sure she was destroyed. While leaving the vessel to get up on the bank a terrible fire of infantry was opened on us, and some were killed in going up. I collected my officers and men all together, and found I had with me 9 officers and 23 men, (my crew was composed of 14 officers and 62 men,) and started through the woods for Alexandria at 20 minutes of 11 o'clock. When within ten miles of Alexandria we were fired upon by rebel cavalry, thereby scattering us. I am glad to say that they

have nearly all arrived here safe, with the exception of Acting Third Assistant Engineer Syms, who was wounded in the head while fighting a few guerillas who had fired into a party of my men while close to Alexandria. He has since arrived safe. The whole action lasted about five hours, and the Covington was badly riddled from stem to stern, there being no less than 5 shots in her hull, and some 40 or 50 in her upper works. The officers and men behaved with great gallantry, and with the exception of a few this was their first action. Acting Master's Mate C. W. Gross was killed by a shot that came through the shell-room. The officers and men lost all of their personal effects; the only things that were saved being the signal book and the despatches intrusted to my care, which were returned to you. The arms that were brought with us I turned over to Acting Master H. Gorringe, of the Cricket, taking a receipt for the same.

In conclusion, I most respectfully beg that a court of inquiry may be called to determine whether the honor of our flag suffered in my hands.

Very respectfully, your obedient servant,

GEORGE P. LORD,
Acting Volunteer Lieutenant, United States Navy.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 29, 1864.

SIR: I enclose a report of the surgeon of the Signal, who was released unconditionally by the rebels. It only corroborates all the reports I have received of the gallant defence of this vessel, which I am told was a most perfect wreck when she fell into the hands of the enemy, who were much chagrined that so frail a vessel had contended so long against seven guns placed in position to get a cross-fire on her.

I have the honor to be, very respectfully, your obedient servant,

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Assistant Surgeon N. Brewster.

UNITED STATES STEAMER NEW NATIONAL,
Mound City, June 27, 1864.

SIR: Agreeably to your request, I have the honor of submitting the following report of the loss of the United States steamer Signal:

Leaving Alexandria on the 4th of May, she proceeded down the river, and anchored at night in company with United States steamer Covington and transport Warner. Starting again at daylight, we had proceeded but a short distance when the enemy opened on us with a battery of two guns, and from several others as we passed on. Their fire was promptly returned, and continued until 9 o'clock, when it ceased for a few minutes, and the opportunity was seized for distributing bread, as breakfast had not been served. The firing soon commenced again, and continued until near noon, when the order was passed for all hands to prepare to abandon and burn the ship, having been totally disabled for more than an hour, the Warner flying a white flag, and the Covington nearly consumed, exploding her magazine soon after. Preparations were made and a part of the men had safely passed up the bank, when the

order was countermanded; it being deemed a useless waste of life for more to attempt it, and wholly impossible to remove the wounded, under the fire of the batteries, and several hundred sharpshooters, and the white flag was raised.

My station was unfavorable for observation, and my professional duties occupied considerable of my time; but I take pleasure in bearing testimony to the good conduct of those stationed near me, and with whom I came in contact during the action. Acting Volunteer Lieutenant E. Morgan, commanding, appeared to be coolly attending to his duties. Acting Ensign C. P. Bragg, executive officer, Ensign W. F. Loan, and Acting Master's Mate R. P. Croft, had charge of the divisions, and, cheering the men by voice and example, held them to their stations, despite the withering fire of the enemy's sharpshooters through the open ports, and were ably seconded by the captains of the guns. To the coolness of the engineers in shutting off the steam and emptying the boilers, when the steampipe was cut, the safety of many is owing. The pilot, Perry Wilkes, left his wheel only when it was disabled in his hand by a bursting shell. I would make special mention of Acting Ensigns Bragg and Loan, who went out in full view of several hundred sharpshooters and let go the anchor; and again to ship the cable, this time assisted by John Fighland (seaman,) who was here disabled by his second wound. Michael McCormic (boatswain's mate) and Timothy O'Donahu (seaman,) captains of guns, were wounded early in the day, but stood to their guns until ordered away. George Butts, gunner's mate, and Charles Aster, quarter gunner, were on the sick list, but did duty during the whole engagement. Several whose names I have forgotten returned to their guns when their wounds had been dressed, and, with few exceptions, all stood to their work, using muskets when their guns could not be brought to bear.

I am, sir, most respectfully, your obedient servant,

N. BREWSTER, *Acting Assistant Surgeon.*

Rear-Admiral D. D. PORTER.

Partial list of casualties on board the Signal.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mound City, June 29, 1864.

Sir: I beg leave to enclose a partial list of the wounded on board the United States steamer Signal at the time of her loss.

I have the honor to be your obedient servant,

DAVID D. PORTER.

Hon. GIDEON WELLES,
Secretary of the Navy.

UNITED STATES STEAMER NEW NATIONAL,
June 27, 1864.

SIR: I have the honor to submit the following report of the condition of the sick and wounded captured by the enemy on the 5th of May, and left in my care in the Confederate States hospital at Cheneyville, Louisiana:

Chas. Allen, second-class fireman, Signal, sick.

Michael Lyons, coal-heaver, Signal, wounded.

A. J. Shiver, seaman, Signal, wounded.

John Highland, seaman, Signal, wounded.

Gabriel Frear, landsman, Signal, wounded.

Isaac Highland, seaman, Covington, wounded.

Lewis Jones, quartermaster, Signal, wounded.

They were paroled on the 16th of June, and delivered to Colonel Dwight, United States army, on the 17th, who transferred them to the United States steamer General Bragg. I reported on board the United States steamer Choctaw on the 18th, and received orders to remove the wounded to hospital Pinkney and report to you for duty.

In obedience I took passage on the New National, and took to the hospital all except Lewis Jones, quartermaster of the Signal, whose time has expired, and Isaac Highland, ordinary seaman, Covington, entirely recovered. They are on board that vessel now awaiting orders.

I have submitted, through the fleet surgeon, a detailed report of the casualties on board the Signal.

I am, sir, very respectfully, your obedient servant,

N. BREWSTER,

Acting Assistant Surgeon, U. S. Steamer Signal.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron.

ENGAGEMENT BETWEEN THE UNITED STATES STEAMER CURLEW AND REBEL BATTERY OPPOSITE GAINES'S LANDING.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Mound City, June 3, 1864.

SIR: I have the honor to enclose herewith a report of Acting Ensign H. B. O'Neill, commanding United States steamer Curlew, giving an account of an attack made upon that vessel, on the morning of May 25, by a rebel battery of ten or twelve guns, opposite Gaines's landing. It appears that, although taken somewhat by surprise, all were quickly at their stations, and behaved well during the engagement, which lasted about twenty minutes.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Ensign H. B. O'Neill.

UNITED STATES STEAMER CURLEW,

May 24, 1864.

SIR: I have the honor to report to you that at 5 o'clock this morning, when opposite Gaines's landing, Arkansas, we were fired into from a battery on shore, consisting of ten, if not of twelve, guns. At least six full volleys were fired at us. One 12-pound shell struck the casemate of this vessel, lodging upon the ground without exploding. Two 6-pound solid shot went through the casemates about midships on port side, just above the deck, without doing any material injury. Shrapnel flew thick around, two or three small balls penetrating the cabin.

One of their guns evidently was of large calibre, as several shots went far over and beyond the vessel. No one on board was injured, although several of

the crew had narrow escapes. Notwithstanding the crew was just turning out of their hammocks, and having been but little accustomed to such attacks, they acted with coolness and promptness during the engagement, which lasted about twenty minutes, working the guns with alacrity—firing twenty-eight rounds with a good degree of precision. Some of the shots from our gun were seen to strike in their midst.

The United States steamer Tylor being about two miles in advance of us, I blew the whistle to notify her that I was engaging a battery. Before she arrived they left the ground.

After consultation with the commander of the Tylor, it was deemed best, the battery having left, to proceed on our way.

Some distance above we met the transport steamer Nicholas Longworth, when we were ordered by Lieutenant Commander James M. Prichett, of the Tylor, in company with the United States steamer Romeo, to return and convoy her below where the battery was, which we did, without meeting any further difficulty. This caused a delay in our arrival at Cairo of at least twelve hours.

Very respectfully, your obedient servant,

H. B. O'NEILL,
Acting Ensign, Commanding.

Rear-Admiral D. D. PORTER,
Commanding Mississippi Squadron.

PASSAGE OF THE FALLS BY THE FLEET.

Report of Rear-Admiral D. D. Porter

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,
Mouth of Red River, May 16, 1864.

SIR: I have the honor to inform you that the vessels lately caught by low water above the falls at Alexandria have been released from their unpleasant position. The water had fallen so low that I had no hope or expectation of getting the vessels out this season, and as the army had made arrangements to evacuate the country, I saw nothing before me but the destruction of the best part of the Mississippi squadron.

There seems to have been an especial providence looking out for us in providing a man equal to the emergency. Lieutenant Colonel Bailey, acting engineer of the 19th army corps, proposed a plan of building a series of dams across the rocks at the falls, and raising the water high enough to let the vessels pass over. This proposition looked like madness, and the best engineers ridiculed it; but Colonel Bailey was so sanguine of success that I requested General Banks to have it done, and he entered heartily into the work. Provisions were short and forage was almost out, and the dam was promised to be finished in ten days, or the army would have to leave us. I was doubtful about the time, but had no doubt about the ultimate success, if time would only permit. General Banks placed at the disposal of Colonel Bailey all the force he required, consisting of some three thousand men and two or three hundred wagons. All the neighboring steam-mills were torn down for material, two or three regiments of Maine men were set to work felling trees, and on the second day after my arrival in Alexandria from Grand Ecore the work had fairly begun. Trees were falling with great rapidity; teams were moving in all directions, bringing in brick and stone; quarries were opened; flatboats were built to bring stone down from above; and every man seemed to be working with a vigor I have seldom seen equalled, while perhaps not one in fifty believed in the success of the undertaking.

These falls are about a mile in length, filled with rugged rocks, over which at the present stage of water, it seemed to be impossible to make a channel.

The work was commenced by running out from the left bank of the river a tree dam, made of the bodies of very large trees, brush, brick, and stone, cross-tied with other heavy timber, and strengthened in every way which ingenuity could devise. This was run out about three hundred feet into the river; four large coal barges were then filled with brick and sunk at the end of it. From the right bank of the river cribs filled with stone were built out to meet the barges. All of which was successfully accomplished, notwithstanding there was a current running of nine miles an hour, which threatened to sweep everything before it.

It will take too much time to enter into the details of this truly wonderful work. Suffice it to say, that the dam had nearly reached completion in eight days' working time, and the water had risen sufficiently on the upper falls to allow the Fort Hindman, Osage, and Neosho to get down and be ready to pass the dam. In another day it would have been high enough to enable all the other vessels to pass the upper falls. Unfortunately, on the morning of the 9th instant, the pressure of water became so great that it swept away two of the stone barges, which swung in below the dam on one side. Seeing this unfortunate accident, I jumped on a horse and rode up to where the upper vessels were anchored and ordered the Lexington to pass the upper falls, if possible, and immediately attempt to go through the dam. I thought I might be able to save the four vessels below, not knowing whether the persons employed on the work would ever have the heart to renew their enterprise.

The Lexington succeeded in getting over the upper falls just in time, the water rapidly falling as she was passing over. She then steered directly for the opening in the dam, through which the water was rushing so furiously that it seemed as if nothing but destruction awaited her. Thousands of beating hearts looked on anxious for the result. The silence was so great as the Lexington approached the dam that a pin might almost be heard to fall. She entered the gap with a full head of steam on, pitched down the roaring torrent, made two or three spasmodic rolls, hung for a moment on the rocks below, was then swept into deep water by the current, and rounded-to safely into the bank. Thirty thousand voices rose in one deafening cheer, and universal joy seemed to pervade the face of every man present.

The Neosho followed next; all her hatches battened down, and every precaution taken against accident. She did not fare as well as the Lexington, her pilot having become frightened as he approached the abyss and stopped her engine, when I particularly ordered a full head of steam to be carried; the result was that for a moment her hull disappeared from sight under the water. Every one thought she was lost. She rose, however, swept along over the rocks with the current, and fortunately escaped with only one hole in her bottom, which was stopped in the course of an hour.

The Hindman and Osage both came through beautifully without touching a thing, and I thought if I was only fortunate enough to get my large vessels as well over the falls, my fleet once more would do good service on the Mississippi.

The accident to the dam, instead of disheartening Colonel Bailey, only induced him to renew his exertions, after he had seen the success of getting four vessels through.

The noble-hearted soldiers, seeing their labor of the last eight days swept away in a moment, cheerfully went to work to repair damages, being confident now that all the gunboats would be finally brought over. These men had been working for eight days and nights up to their necks in water in the boiling sun, cutting trees and wheeling bricks, and nothing but good humor prevailed among them. On the whole, it was very fortunate the dam was carried away, as

the two barges that were swept away from the centre swung around against some rocks on the left, and made a fine cushion for the vessels, and prevented them, as it afterwards appeared, from running on certain destruction.

The force of the water and the current being too great to construct a continuous dam of six hundred feet across the river in so short a time, Colonel Bailey determined to leave a gap of fifty-five feet in the dam, and build a series of wing dams on the upper falls. This was accomplished in three days' time, and on the 11th instant the Mound City, Carondelet, and Pittsburg came over the upper falls, a good deal of labor having been expended in hauling them through, the channel being very crooked, scarcely wide enough for them. Next day the Ozark, Louisville, Chillicothe, and two tugs also succeeded in crossing the upper falls. Immediately afterwards the Mound City, Carondelet, and Pittsburg started in succession to pass the dam, all their hatches battened down and every precaution taken to prevent accident. The passage of these vessels was a most beautiful sight, only to be realized when seen. They passed over without an accident except the unshipping of one or two rudders. This was witnessed by all the troops, and the vessels were heartily cheered when they passed over. Next morning at 10 o'clock the Louisville, Chillicothe, Ozark, and two tugs passed over without any accident except the loss of a man, who was swept off the deck of one of the tugs. By 3 o'clock that afternoon the vessels were all coaled, ammunition replaced, and all steamed down the river, with the convoy of transports in company. A good deal of difficulty was anticipated in getting over the bars in lower Red river; depth of water reported only five feet; gunboats were drawing six. Providentially, we had a rise from the back-water of the Mississippi, that river being very high at that time; the back-water extending to Alexandria, one hundred and fifty miles distant, enabling us to pass all the bars and obstructions with safety.

Words are inadequate to express the admiration I feel for the abilities of Lieutenant Colonel Bailey. This is, without doubt, the best engineering feat ever performed. Under the best circumstances a private company would not have completed this work under one year, and to an ordinary mind the whole thing would have appeared an utter impossibility. Leaving out his abilities as an engineer, the credit he has conferred upon the country, he has saved to the Union a valuable fleet, worth nearly two million dollars. More, he has deprived the enemy of a triumph which would have emboldened them to carry on this war a year or two longer; for the intended departure of the army was a fixed fact, and there was nothing left for me to do, in case that event occurred, but to destroy every part of the vessels, so that the rebels could make nothing of them. The highest honors the government can bestow on Colonel Bailey can never repay him for the service he has rendered the country.

To General Banks personally I am much indebted for the happy manner in which he has forwarded this enterprise, giving it his whole attention night and day, scarcely sleeping while the work was going on, tending personally to see that all the requirements of Colonel Bailey were complied with on the instant.

I do not believe there ever was a case where such difficulties were overcome in such a short space of time, and without any preparation.

I beg leave to mention the names of some of the persons engaged on this work, as I think that credit should be given to every man employed on it. I am unable to give the names of all, but sincerely trust that General Banks will do full justice to every officer engaged in this undertaking, when he makes his report. I only regret that time did not enable me to get the names of all concerned. The following are the names of the most prominent persons:

Lieutenant Colonel Bailey, acting military engineer, nineteenth army corps, in charge of the work.

Lieutenant Colonel Pearcall, assistant.

Colonel Dwight, acting assistant inspector general.

Lieutenant Colonel W. B. Kinsey, 161st New York volunteers.

Lieutenant Colonel Hubbard, 30th Maine volunteers.

Major Sawtelle, provost marshal, and Lieutenant Williamson, ordnance officer.

The following were a portion of the regiments employed: 29th Maine, commanded by Lieutenant Colonel Emmerson; 116th New York, commanded by Colonel George M. Love; 161st New York, commanded by Captain Prentiss; 133d New York, commanded by Colonel Currie.

The engineer regiment and officers of the thirteenth army corps were also employed.

I feel that I have done but feeble justice to the work or the persons engaged in it. Being severely indisposed, I feel myself unable to go into further details. I trust some future historian will treat this matter as it deserves to be treated, because it is a subject in which the whole country should feel an interest, and the noble men who succeeded so admirably in this arduous task should not lose one atom of credit so justly due them.

The Mississippi squadron will never forget the obligations it is under to Lieutenant Colonel Bailey, acting military engineer, of the nineteenth army corps.

Previous to passing the vessels over the falls I had nearly all the guns, ammunition, provisions, chain-cables, anchors, and everything that could affect their draught, taken out of them.

The commanders were indefatigable in their exertions to accomplish the object before them, and a happier set of men were never seen than when their vessels were once more in fighting trim.

If this expedition has not been so successful as the country hoped for, it has exhibited the indomitable spirit of eastern and western men to overcome obstacles deemed by most people insurmountable. It has presented a new feature in the war, nothing like which has ever been accomplished before.

I regret to inform you, among the misfortunes of this expedition, of the loss of two small light draught-gunboats—the Signal and Covington. I sent them down from Alexandria to convoy a quartermaster's boat, the Warner, loaded with cotton and some four hundred troops on board, not knowing that the enemy had any artillery on the river below us, or anything more than wandering gangs of guerillas, armed with muskets, which these vessels were competent to drive off. It appears, however, that the rebels were enabled to pass our advance force at night with six thousand men and some twenty-five pieces of artillery. With these they established a series of batteries at a place called Dunn's bayou, thirty miles below Alexandria—a very commanding position. These batteries were so masked that they could not be seen in passing, even by the closest observation.

The first notice the vessels received of the battery was a furious fire which opened on the quartermaster's boat, the Warner, piercing her boilers, and completely disabling her. At the same time six thousand infantry opened with musketry, killing and wounding half the soldiers on this vessel. She drifted in to the opposite bank, where a number managed to make their escape in the bushes, though many were killed in attempting to do so.

The Signal and Covington immediately rounded to and opened their guns on the batteries, and pushed up endeavoring to rescue the Warner from her perilous position. They had, however, as much as they could do to take care of themselves, the cross-fire of the three batteries cutting them up in a terrible manner. Their steam-pipes were soon cut, and their boilers perforated with shot, notwithstanding which they fought the batteries for five long hours, the vessels being cut all to pieces, and many killed and wounded on board.

Acting Volunteer Lieutenant George P. Lord, commanding the Covington, having expended all his shot, spiked his guns, set fire to his vessel, and escaped with what was left of his crew to the shore, and his vessel blew up.

The Signal, Acting Volunteer Lieutenant Edward Morgan, still fought her guns for half an hour after the destruction of the Covington. He found it im-

possible to destroy his vessel by burning, her decks being covered with wounded, and humanity forbade him sacrificing the lives of the noble fellows who had defended their vessel so gallantly. He gave permission to all those who wished to escape to do so. Some of them attempted to get off by climbing up the bank. Many were killed while doing so by the murderous fire of musketry poured in from the opposite side. The captain remained by the vessel and was captured, if he remained alive; but I have no information regarding him. The rebels took the guns off of her, and placed her across the channel as an obstruction. Sunk her.

General Banks, on hearing the news, sent out cavalry to hunt for the unfortunate men, many of whom were picked up and brought into Alexandria. A number escaped down river, and went aboard some light-draught gunboats that were coming up at the time to the scene of action, but were driven back by the superior artillery of the enemy.

I feel very much for the poor fellows who fell into the rebels' hands, as the latter have been very merciless to some of the prisoners they have taken, and committed outrages at which humanity shudders.

The vessels will all return to their stations in a few days, as there is no prospect, under present circumstances, of renewing operations in this part of Louisiana, the season having passed for operating with any chance of success.

I am sorry to see that the rebel guerillas have become quite troublesome on the Mississippi since I left, all of which will be rectified within the coming week.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Additional report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Off Mouth of Red River, La., May 19, 1864.

SIR: In my report in relation to the release of the gunboats from their unpleasant position above the falls, I did not think it prudent to mention that I was obliged to destroy eleven 32-pounders—not having time to haul them from above the falls to Alexandria, the army having moved and drawn in all their pickets. The best guns were hauled first. The 32-pounders were old guns, and would have been condemned on the first opportunity. For the same reasons, I also omitted to mention that I was obliged to take off the iron from the sides of the Pook gunboats and from the Ozark, to enable them to get over. Not being able to haul this iron around the falls to Alexandria, from want of wagons, I ordered the gunboats to run up the river at night to a point where they could find from five to six fathoms of water, where the iron was thrown overboard, and where, in a few moments, it would sink many feet under the quicksands, thus leaving no possible chance for the rebels to recover it.

The Pook vessels run so much better without this iron than they ever did before, and it never having been of any use to them, I propose leaving it off altogether. Their forward casemates are still heavily protected with iron, and as they always fight bow on, it is all they should carry. Besides, they are getting old, and having done a great deal of service without any repairs, they cannot bear the weight. They now run from two to two and a half knots faster than before.

The Ozark is a miserable vessel. Her turret has ceased to work altogether, and is about twice as high and heavy as it should be. I really do not know

what can be done with her, unless it is to take the turret off, and, with some additional strengthening, put casemates about her. This, when done, will enable her to lie at some of the points on the river where a formidable vessel is required.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER,

Rear-Admiral, Commanding Mississippi Squadron.

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Congratulatory Letter to Rear-Admiral D. D. Porter.

NAVY DEPARTMENT,

May 31, 1864.

SIR: The department acknowledges the receipt of your interesting report of the 16th instant, giving a detailed and graphic account of the rescue of the Mississippi squadron from its perilous position above the falls at Alexandria, Red river, and of the aid which you received through the indomitable perseverance and engineering skill of Lieutenant Colonel Bailey, acting military engineer of the 19th army corps.

It is with no ordinary feelings of pleasure that the department learns of the safe passage of that valuable squadron, threatened as it was with inevitable capture or destruction, and congratulates you and your command that the fleet which had borne such a conspicuous part in many of the great events of the war has been spared to the country for future usefulness and renown.

You will tender the thanks of the department to the officers and men of the army for the cheerful aid given you in this great emergency, without which the squadron would unavoidably have fallen into the hands of the rebels or been destroyed. While regretting the loss of the steamers Signal and Covington, and lamenting for the brave men who fell in the engagement with the enemy, the department takes great pleasure in expressing its admiration of the gallant manner in which those vessels were defended, and has reason to believe that the officers and men did their whole duty nobly and faithfully.

Very respectfully,

GIDEON WELLES,

Secretary of the Navy.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron, Cairo, Illinois.

ASSISTANCE RENDERED THE ARMY.

FLAG-SHIP BLACK HAWK MISSISSIPPI SQUADRON,

Off Cairo, Illinois, May 26, 1864.

SIR: I have the honor to report my arrival at this place, four days from Red river. The army had all crossed the Atchafalaya, and General Smith's division had embarked; the gunboats covered the army until all were over. General Smith, who brought up the rear, turned upon the rebels with a part of his command under General Mower, killed and wounded a number, captured 180 prisoners, and two field pieces. This makes eight or nine field-pieces captured by General Smith, besides the guns captured at Fort De Russy, in all of which

captures General Mower bore a conspicuous part. It is just such men we want to lead our soldiers.

The river is quiet between this and Red river. The rebels had a battery on the banks below Tunica bend, but the gunboats drove it away after a short action.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

CAPTURE OF THE STEAMER CHAMPION (PUMP BOAT.)

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK MISSISSIPPI SQUADRON,

Mound City, June 26, 1864.

SIR: I enclose a report from Pilot Wm. Maitland, who lately escaped from the rebels. He was the pilot who volunteered to take the Champion, No. 5, (pump boat,) past the batteries up Red river. His report gives an account of the fate of the Champion, and also an account of the lamentable fate of those on board; and though the news is painful to the friends of the parties who were on the boat, it is as well that they should know the worst.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Pilot Wm. Maitland.

MOUND CITY, June 25, 1864.

SIR: On the morning of the 27th of April I volunteered my services to pilot the steamer Champion, No. 5, by the rebel batteries, in company with the gunboats Fort Hindman and Juliet, all of which had failed to get past them the night previous.

We started at about 8 o'clock, the Fort Hindman, having the Juliet in tow, taking the lead. When nearly opposite the batteries, a shell entered the pilot-house of my boat, which wounded me in both legs, causing me to drop on my knees, depriving me from working the wheel; the boat then ran into the bank of the river, on the same side with the batteries: another shell struck her at this time, which wounded me in six other places; and still another, which cut away the bell-rope and speaking-trumpet. Recovering sufficiently from my wounds, I rung the starboard bell, and had the boat backed across the river to the opposite side from the enemy. I then left the pilot-house and jumped overboard and swam ashore, the enemy keeping up a heavy fire upon the boat until she sunk, which was in about a half-hour afterwards.

She now lies with her head up stream, her hurricane deck, on the port side, under water; starboard side the boiler deck, ditto. From what I could learn, the rebels are trying to raise her, with poor prospects of success. Captain Roberts, and a deck hand named Michael Calvin, were killed. Pat. Gorman, a deck hand, wounded and prisoner; since paroled (on the 17th;) the balance of the crew were taken prisoners, and sent to Tyler, Texas.

I learned that as the *Champion*, No. 3, approached the batteries the previous night, a twelve pound-shot entered her starboard boiler, which caused it to explode. Captain Stewart and three engineers, whose names are unknown to me, were scalded to death; also the cook. Michael Shields was wounded and taken prisoner, but since paroled. All the contrabands on board, some one hundred and fifty to two hundred, were scalded to death, excepting fifteen. The rebels have repaired the boilers of this boat, and she is now running on the river below Alexandria. She, in company with the steamer *Frolic*, came out to the mouth of the Red river, under a flag of truce, with wounded officers. I think, as near as I could learn from the rebels, that the battery consisted of eighteen guns, two of which were of Nims's battery, captured from General Banks's army. A captain and lieutenant were among the killed on the rebel side.

Very respectfully, your obedient servant,

WM. MAITLAND, *Pilot*.

Rear-Admiral, DAVID D. PORTER,
Commanding Mississippi Squadron.

MISCELLANEOUS REPORTS.

OPERATIONS ON THE TENNESSEE AND CUMBERLAND RIVERS.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP *BLACK HAWK*, MISSISSIPPI SQUADRON,
Cairo, December 2, 1863.

SIR: In the operations lately carried on up the Tennessee and Cumberland rivers, the gunboats have been extremely active, and have achieved with perfect success all that was desired or required of them. As soon as I heard of General Sherman's move from Memphis for Corinth, I commenced assembling the most suitable vessels at the mouths of the Cumberland and Tennessee rivers. The water was very low in the Ohio, and Lieutenant Commander Le Roy Fitch was obliged to force his vessels, drawing thirty inches, over bars where there were only twenty-six inches of water; he succeeded in getting over (though with some damage to the vessel) in time to convoy any transports that might be ready; and, despite the guerillas on the banks, has taken through safely all the steamers and stores so much needed by our army.

A fortunate rise of water enabled me to get the gunboats, under Lieutenant Commander Phelps, up the Tennessee as far as Eastport; a few hours after, General Sherman arrived at Iuka. With the help of our barges, General Sherman's troops were all ferried over in an incredibly short time by the gunboats, and he was enabled to bring his formidable corps into action in the late battles at Chattanooga, which has resulted so gloriously for our arms.

Later, we got the transports all up with provisions, and have held Eastport and thereabouts, threatening any party that might attempt to cut our communications. I have just received a telegraph from General Grant, desiring that Eastport should be evacuated, and the troops conveyed to Columbus, Kentucky. I have made all the necessary arrangements for this move, and sixteen transports left Paducah to-day, at 4 o'clock, to bring down the troops. I have been obliged to employ eighteen gunboats on this duty, (which has weakened other points,) and now will be able to dispense with some of them, and employ them elsewhere to great advantage. The rebels are evidently making a move towards the river on both sides with numerous artillery, to carry out their plan of stopping transportation; they attacked the gunboat *Signal* a few days ago

with six pieces of artillery, and after a smart fight wounded five of her men, putting eight shots through and through her; the Choctaw opened on them, and soon drove them away, since which time they have not been heard from.

Having so few troops on the river at this moment emboldens the guerillas, and they are assembling about Port Hudson, evidently with the intention of getting into it again, if they can.

I would earnestly recommend that every large gun be dismounted from that place; they are of no use there, and are in the same position they occupied when the fort capitulated, commanding the water only. I will promise that the gunboats will keep all field batteries at a respectful distance; but, with the small garrison at Port Hudson, an energetic enemy might get possession, and we would for a time be blocked again, though it would be for a short time.

Port Hudson is the only place on the river where the rebels would have a chance of success; a surprise is feasible, and the only way to prevent it is to move the guns, which only command the water, where no foes can be expected.

General Sherman recommended me to urge upon General Banks the propriety of pursuing this course; but as he is not within reach, I earnestly recommend it to the department.

With the water a little higher, and some more gunboats below, we will make the banks of the river uncomfortable for field artillerists.

Now that General Banks has gone to Texas with a majority of the troops, the entire length of the river, with the exception of points garrisoned by our troops, is open to the raids of the guerillas and between Natchez and Port Hudson, on both sides, there are assembling now about twenty-five thousand men, with thirty or forty pieces of artillery; the deserters say seventy-five pieces, and Lieutenant Commander Foster reports seventy-five pieces between Red river and Bayou Sara. The latter report I have no confidence in, but am sure that the rebels will make a bold push, in the absence of so many troops, to get possession of this river again.

I am sure they meditate an attack on Columbus.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander F. M. Ramsay.

UNITED STATES STEAMER CHOCTAW,
Off Mouth of Red River, November 23, 1863.

SIR: I have the honor to report that on the afternoon of the 21st instant the steamer Black Hawk came down the river, bound to New Orleans. I warned her captain and the treasury agent of the danger below us, and offered to convoy them by it, if they would wait until the morning. The offer was declined, and the Black Hawk proceeded down the river. When about half a mile below us she was fired into by a rebel field battery concealed in the woods. I immediately opened on the battery with the stern guns and the 100-pounder on the flat. Seeing that the Black Hawk was damaged, I got under way and went to her assistance. Finding her ashore opposite Hog Point, with her "texas" on fire and her steering apparatus disabled, I took her in tow and brought her up to this place to repair.

I expended four 100-pounder and nine 30-pounder shells, six 9-inch shell, one shrapnell, and three canister.

The Red river has risen a little. I had it sounded at the mouth of Old river to-day, and found nine feet, and the current setting up. This ought to make about five feet on the bar, near the head of the island.

Very respectfully, your obedient servant,

FRANK M. RAMSAY,

Lieutenant Commander, Com'dg Third Dist., Miss. River.

Rear-Admiral D. D. PORTER,

Commanding Mississippi Squadron.

OPERATIONS NEAR NATCHEZ, MISSISSIPPI.

Letter of Rear-Admiral Porter transmitting various reports.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Cairo, December 6, 1863.

SIR: I have the honor to enclose herewith, for your information, copy of letter from Lieutenant-Commander James A. Greer, commanding Benton, giving account of affairs on the river, and also copy of letter from Acting Master W. E. H. Fentress, late commanding United States steamer Rattler, dated Libby Prison, Richmond, Va.

I am, sir, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander James A. Greer.

UNITED STATES STEAMER BENTON,

Off Natchez, November 24, 1863.

SIR: I have the honor to inform you that the Forest Rose has returned to this district, and is now guarding from Grand Gulf to St. Joseph's. I have been informed by the commanding officer of the Pittsburg that a citizen told him of about 12,000 bales of C. S. A. cotton within from twelve to twenty-five miles of Grand Gulf, in different lots.

Since my last report the rebels have shown themselves three times between this and Rodney. They fired upon the St. Louis and Nebraska with musketry, doing no damage. On the 21st they fired into the Welcome, just above Waterproof, with artillery (6-pounders) and musketry, cutting the boat up a good deal, but hurting no one. The Curlew went to her assistance, but saw nothing of the rebels.

On Sunday General Gresham, who was on his way to Vicksburg with his brigade, under convoy of the Curlew, landed a regiment at Duncan's, and marching over to Waterproof captured nine rebel soldiers; the artillery, I understand, made their escape.

A large part of the garrison at this place has been removed. General Smith is now in command, with one brigade and one regiment. They are, I understand, to be relieved in a day or two by a small force of troops, not veterans. This is an important point, and should be well garrisoned. If there is not a larger force there, I understand it is to be left. There will be an attack made by the rebels, who are in force some miles back.

Please inform me what disposition shall be made of the effects of the men of the *Rattler*, captured at Rodney.

Very respectfully, your obedient servant,

JAMES A. GREER,

Lieutenant-Commander, Com'dg Fourth Dist., Miss. Squadron.

Rear-Admiral DAVID D. PORTER,

Commanding Mississippi Squadron.

Statement of Acting Master W. E. H. Fentress.

LIBBY PRISON,

Richmond, Va., November 15, 1863.

SIR: I have the honor to forward you the report of my unfortunate capture, together with Acting Ensign S. Strunk and fifteen seamen belonging to the United States steamer *Rattler*.

On the 12th September (the steamer *Rattler* lying off Rodney, Mississippi,) I went on shore to attend divine service, which was performed in a church not two hundred yards distant from the steamer, and in open view. I had been stationed at Rodney since the Texas expedition, and had never seen or heard of an enemy near that point. I had taken many negroes who were from the neighborhood, and all reported no rebels in that vicinity. I do not, sir, wish to excuse myself, for I am aware that excuses are of little value with you, when an officer is at fault; but, sir, I do crave your forbearance in this most unfortunate mistake of mine.

We had just entered and were seated in the church when a squadron of fifty cavalry dashed upon us and opened fire from the windows and doors. I endeavored to stop this brutal fire upon unarmed men, but was fired upon by the fiends, and slightly wounded in the back. My hands were tied, and I was made fast to a horse, and compelled to keep pace with him for five miles. My treatment since my capture has been brutal; but, inhuman as it is, sir, I would be happy if I knew that *your* displeasure was removed, and that I might again retrieve my character in the Mississippi squadron under your command.

May I beg, sir, that you will drop me a line in my present miserable condition?

I have the honor to be, sir, your most obedient servant,

WALTER E. H. FENTRESS,

*Acting Master U. S. N., late Com'dg U. S. S. *Rattler*.*

Rear-Admiral DAVID D. PORTER,

Commanding Mississippi Squadron.

OPERATIONS ON THE LOWER MISSISSIPPI.

Letter of Rear-Admiral Porter transmitting various reports.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Cairo, December 31, 1863.

SIR: I have the honor to enclose herewith copies of communications from Lieutenant Commander James A. Greer, Lieutenant Commander James P. Foster, and Acting Ensign E. F. Brooks, in relation to the state of affairs on the lower Mississippi, and remain, sir,

Very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Lieutenant Commander James P. Foster.

UNITED STATES STEAMER LAFAYETTE,
Off Bayou Sara, La., December 22, 1863.

SIR: I send you the reports of Acting Ensign E. F. Brooks, in the command of the Neosho, and William P. Lee, acting ensign, commanding United States steamer Signal, of the 10th instant, in relation to what was done in regard to the firing into the Von Phul. I cannot approve of the course these vessels pursued upon their return, inasmuch as they did not see an enemy to fire at, but shelled the banks where the enemy was last seen. My orders have been explicit to the officers of my command not to fire without seeing an enemy.

From the above reports you will see what was done on the occasion. The Von Phul was first fired into within sight of this vessel; and upon my arriving at the scene of action I was met at all points with flags of truce, and the enemy had withdrawn their batteries. I notified them that upon a repetition of such an occurrence I would destroy every house in the neighborhood, if I was not promptly informed when the enemy was in the neighborhood.

I am, sir, very respectfully, your obedient servant,

JAMES P. FOSTER,

Lieutenant Commander, Com'dg 2d District, Miss. Squadron.

Rear-Admiral DAVID D. PORTER,

Commanding Miss. Squadron, Cairo, Illinois.

Report of Lieutenant Commander James A. Greer.

UNITED STATES STEAMER BENTON,
Off Natchez, December 22, 1863.

SIR: I have the honor to inform you that since my last report the rebels have fired upon one boat in my district, viz: the Brazil, on the 11th instant, from the Mississippi side, in Rodney bend; two women were killed and four men wounded. The men firing belonged to West Adams's force, and had four guns in addition to muskets. The Rattler went immediately to the point and drove the rebels off, they not firing a shot at her.

On the 11th instant a force of sixty rebels, under a Major Bradford, came in to attempt to destroy the Indianola. The Carondelet opened fire on them, and drove them off. Acting Master Gipson, hearing that the rebels were coming back, went on shore with thirty men; the rebels were there again, but on his approach retreated without firing a gun. There are now some negro soldiers stationed at Davis's place.

* * * * *

Very respectfully, your obedient servant,

JAMES A. GREER,

Lieutenant Commander, Comd'g 4th District, Miss. Squadron.

Rear-Admiral DAVID D. PORTER,

Commanding Mississippi Squadron.

Report of Acting Ensign E. F. Brooks.

UNITED STATES STEAMER NEOSHO,
Off Bayou Sara, Louisiana, December 12, 1864.

SIR: I have the honor to submit the following report: At 2.30 p. m., December 8, the steamer Von Phul came alongside (at our anchorage off Morganzia)

and reported she had been fired into by a rebel battery, five miles below that point, killing the captain, and mortally wounding the barkeeper. At 4.25 got under way and steamed up the river, having in convoy the steamer Von Phul; when about three miles above Morganzia, the rebels opened on the steamer with four pieces of artillery, 12-pounder smooth-bores and 20-pounder rifle guns. She was struck twenty times; three of the shot passing through her hull below the water-line, one cutting off her supply pipe, another penetrating her port boiler. I opened on the battery immediately, and silenced it after firing fifteen rounds—one from the howitzer, and fourteen from the great guns. I have since ascertained, from a reliable source, that the rebel loss was five killed, and several wounded.

After driving the battery from the levee, I proceeded up the river to the assistance of the disabled steamer, and found her tied up to the opposite bank.

The steamer Atlantic, Captain Harry McDougal, on her way to New Orleans, finding the Von Phul in a disabled condition, lay alongside, and made fast to her. Every credit is due to Captain McDougal, who, on learning that the rebels were seen to limber up their pieces, and start up stream, generously volunteered to tow the disabled boat to Red river; and, at the risk of his own boat, afforded protection to the Von Phul and her passengers. The ladies, for better safety, were received on board the Neosho. I am happy to state that both boats, convoyed by the Neosho, reached the mouth of Red river without further interruption. M. A. Miller, surgeon of the Neosho, who was sent on board of the Von Phul, and accompanied her to Red river, has reported to me the following list of casualties as occurring on board, viz:

Killed.—Captain Gorman.

Mortally wounded.—Murray, bar-keeper, (since dead,) and deck hand, (name unknown.)

Severely wounded.—Deck hand, (name unknown,) thigh amputated, (since dead;) Hamlin, of St. Louis, and two other passengers.

Slightly wounded.—Four other passengers.

At 9.20 a. m., December 9, got under way and steamed down the river, in company with United States steamer Signal, conveying the following boats, viz: Atlantic, J. J. Roe, Diligent, and Sunshine. When off the point where a rebel battery was stationed, we commenced shelling the shore, and kept it up until we had passed the rebel position of the day before. Leaving the Signal at Morganzia, I proceeded with convoy to report to you at this point.

Very respectfully, your obedient servant,

E. F. BROOKS,

Acting Ensign, Commanding pro tem.

Lieut. Commander J. P. FOSTER,

Commanding Second Division, Miss. Squadron.

RECONNOISSANCE UP CUMBERLAND RIVER.

Report of Rear-Admiral D. D. Porter.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Cairo, January 27, 1864.

SIR: I beg leave to enclose herewith a copy of a communication received from Lieutenant Commander Le Roy Fitch, regarding a reconnoissance up the Cumberland river.

I have the honor to be, very respectfully, your obedient servant,

DAVID D. PORTER, *Rear-Admiral.*

Hon. GIDEON WELLES,

Secretary of the Navy, Washington, D. C.

Report of Acting Volunteer Lieutenant H. A. Glassford.

U. S. S. REINDEER, 8TH DISTRICT, MISSISSIPPI SQUADRON,
Off Nashville, Tennessee, January 3, 1864.

SIR: I have the honor to submit the following report: In obedience to your orders of 22d ultimo, I at once proceeded to Nashville, and on arrival called upon Major General Grant, to learn his wishes.

The objects of the expedition, as stated by the general, were—

1st. To convoy some steamers with army supplies to Carthage.
2d. To ascertain if any coals were upon the river in condition for shipment, and the prospect for getting it to Nashville.

3d. To reconnoitre the river, if possible, as far up as Big South Fork, the head of steamboat navigation. The army gunboat Silver Lake No. 2 was put under my command and accompanied me.

On the 26th ultimo, at daylight, I got the convoy under way, at Nashville, and on the 28th ultimo, at 12.45 p. m., reached Carthage safely, and without interruption from the enemy.

On the 29th ultimo, at daylight, with the Silver Lake No. 2 in company, I proceeded up the river, which, during the night previous, had shown indications of a considerable rise.

Jackson county was represented to me as the seat of operations of several guerilla bands, and it fully merits its reputation, for we had scarcely touched the county line before guerillas were discovered on the look-out for us; from the windings of the river, news of our departure and direction from Carthage could easily be sent in advance of us, and no doubt was, for the whole region seemed roused. During the day we were attacked at the following places: At Ray's ferry by a party of ten or twelve men; at Flynn's creek, or Lick, by a party of fifteen or twenty; at Gainesboro' by a party of forty or fifty; at Ferri's wood-yard by a party of fifteen or twenty; and at Celina (two miles below) by a party of eighty or one hundred.

In every instance positions were selected on the tops of precipitous bluffs or cliffs, inaccessible by attack in front, and requiring a long detour to reach them in the rear with a land force. Their positions availed them nothing, however, against the guns of this vessel, and those of the Silver Lake No. 2; they were completely shelled out of them, whenever they let us see them, after a few volleys.

At the mouth of Obey river I found a small quantity of coal, partly burned by the rebels. The Silver Lake No. 2 being out of fuel, I directed her to take it, and took a position to cover her. Soon after I observed some uneasiness among the people on shore and backed off, and about half a mile down stream discovered the head of what I have since ascertained was a body of guerillas, all mounted. These I dispersed with a few rounds of shrapnell and canister. Their intention was to surprise us, thinking both gunboats were in the Obey river, jammed among the branches of the trees which overhung the banks. I have reason to believe that several were killed by our fire.

From the Obey river to Creelsboro' I saw no rebels in arms; the citizens exhibited considerable gladness at the sight of the gunboats, cheering for the Union, &c. We reached Creelsboro' at 12.30 p. m. on the 31st ultimo, and there the river gave unmistakable signs of a fall, the weather set in cold and frosty, and by morning a fall of four feet had taken place; under these circumstances I thought it unwise to proceed further, though I would like to go as far as Big South Fork, so as fully to satisfy the desire of General Grant in regard to coal. I cannot think, however, that anything was lost, as, from all accounts I can gather, there were no coal barges ready to come down, if the stage of the river allowed, which it did not. There is no doubt whatever that a large quan-

tity can be brought out from this source by proper arrangements on the February rise, which was the one usually selected by coal-men in peaceable times.

On the Obey river, about fifty miles up, near Olympus, is a coal mine partly worked by the rebels in 1861, who mined about 500,000 bushels and left it on the bank. This could be got to Nashville on the same February rise, if barges were built and the work protected by the troops. On my up trip I destroyed several flatboats (used for ferry purposes) in Jackson county, but have reason to think that many more are concealed in the numerous creeks tributary to the Cumberland.

In obedience to the orders of Rear-Admiral Porter, I would have destroyed Gainesboro' which is a rendezvous of these roving bands of robbers, but Governor Johnson purposes to establish a military post there, and will need the buildings. On the 1st I left Creelsboro' and on the 2d reached Carthage, meeting with no interruption whatever, the inhabitants seeming to have deserted the river banks altogether. * * * * *

In the several skirmishes reported above, as well as in the other duties of the vessel, it gives me great pleasure to speak in high terms of the courage and efficiency of Mr. Sears, acting ensign and executive officer, and of the other officers of this vessel, all of whom performed their several duties zealously and well.

The army gunboat Silver Lake No. 2 was well handled, and the co-operation of her commanding officer, Lieutenant Roberts, United States army, was hearty and complete.

Acting Ensign Wm. H. Hall, as soon as the rebels opened their fire, sent a request to be permitted to take charge of any division I might designate. I acceded to his desire, and put him in charge of Acting Master's Mate Lewis, absent on duty. I am glad to report favorably of his conduct on this occasion, as he is now under arrest, and this statement may benefit him.

I omitted to mention that one hundred and forty sharpshooters, under Lieutenant Colonel Cropsey, were put on board the transports and the army gunboat.

On my arrival at Carthage from Creelsboro' I found the steamers still loaded. Apprehending that the objects of the expedition had been accomplished as far as possible under the circumstances, and bearing in mind your order to rejoin you as soon as I could, I left all three there, with the Silver Lake No. 2 to guard and convoy them back to Nashville, when discharged. I reached Nashville at 5 p. m. to-day.

Colonel Cropsey will report to General Grant particulars of the information obtained on the reconnoissance, in so far as they refer to the interior of the counties bordering on the river, their military wants, &c.

I have the honor to be, very respectfully, your obedient servant,

H. A. GLASSFORD,

Acting Volunteer Lieutenant, Commanding.

Lieut. Commander LE ROY FITCH,

Com'dg 8th Dist. U. S. Mississippi Squadron, U. S. S. Moose.

Rear-Admiral Porter's views upon iron-clads.

FLAG-SHIP BLACK HAWK, MISSISSIPPI SQUADRON,

Cairo, February 16, 1864.

SIR: I have the honor to report that I have made a visit to Cincinnati to examine the iron-clads there, and see what prospect there was of getting some of these vessels into immediate service. * * * * *

It is much to be regretted that the boats at Cincinnati are not finished, as I am certain they would accomplish all that can be done by monitors. No complaint, however, can be justly made against the contractors for want of activity in the performance of the work on these boats.

When I visited Cincinnati a little over a year ago no preparations were then made to commence these vessels. Now they are in a fair way of being completed, and I think can all be put in the water and ready to operate against an enemy by the first of June.

When the government do get these boats, they may rest assured of receiving as good monitor-built vessels as have yet been contracted for; for though I have not seen many to which I can compare them, I am glad to say that in workmanship, model, and probably in speed, these vessels will be equal, if not superior, to any monitors yet built, at least of those that I have seen. I can only draw comparison between these and the first Ericsson monitor, which I was sent by order of the department to examine. I remember pronouncing that vessel "a perfect success," "and capable of defeating anything that then floated." I was looked upon at that time as something of an enthusiast, as my opinions were widely at variance with those of some scientific gentlemen. The results have justified me in forming a high estimate of the monitor principle, and I was pleased to see that on our western waters we can build them as well, if not better, than in the workshops of the north. No better proof is wanted of the ability of the west to supply all demands of the government for iron-clad vessels than is given in those building at Cincinnati. The work is perfect in every respect, and put together so well that it may be compared to joiner's work. The hulls are as strong as can possibly be desired, the speed will be good, and the only fault in the vessels, if they have any, is the "overhang" aft, which is of no consequence in a smooth sea, but must be injurious when the monitors have to go from port to port.

The nearest to completion of these monitors is one of those in the Greenwood building; she can be launched in a month, and I am of opinion, when finished, could commence at Cairo, and, going down the river, could destroy every vessel we have on these waters, unless they took advantage of their greater speed and run away. The heaviest and best vessel we have, the Benton, would stand a poor chance against the monitor alluded to. If she failed to sink the Benton with shot, she could surely do it with her beak or ram, which is not the least formidable thing about her; this is saying a great deal, for the Benton is a very formidable vessel, and since she has been under my command has been struck 130 times in the hull, without any apparent damage. Three of the monitors at Cincinnati are on the improved Ericsson plan, while the two light-draughts building at the Hamilton Works are to be submerged when going into action. I do not like that as well as the Ericsson model, as there is more machinery about them than is desirable; simplicity of arrangement being the object to be aimed at in vessels-of-war. The plan of these latter-mentioned vessels is a good one, provided their armor and backing is strong enough to stand heavy shot, which I think will be the case if they only encounter the ordinary rifle projectile.
